

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

founded in 1863, for the Study of, and the Publication of Works on, the Science of Man. Gentlemen wishing to join this Society may obtain Conditions of Membership from the Assistant Secretary, at the Rooms of the Society, No. 4, St. Martin's-place, Trafalgar-square, W.C.

HIGH SCHOOL OF GLASGOW.

In consequence of the retirement of one of the Classical Masters and the death of another, and the re-arrangement of the Classical Department, there will be VACANCIES in October for a HEAD MASTER, a SECOND MASTER, and an ASSISTANT MASTER, all in the Classical Department.

The Head Master and the Second Master hold their appointments for life, the Assistant Master during the pleasure of the Town Council. The Head Master will have an endowment of 1000. per annum, in addition to his share of Fees; and the Emoluments are expected to be not less than 4500. for the Head Master, 3500. for the Second Master, and 1800. for the Assistant, with the prospect of considerable increase.

Particulars may be obtained of Mr. MORAN, Town Clerk, City Chambers, Glasgow; and applications, with copies of testimonials, may be lodged with him on or before 31st July.

City Chambers, Glasgow, 27th June, 1866.

COLLÈGE COMMUNAL de BOULOGNE.

SURMER.—The Sons of ENGLISH GENTLEMEN are here PREPARED for the EXAMINATIONS for Admission to Woolwich, Sandhurst, direct Commissions, Indian Civil Service, Home Service, Matriculation, and all other Examinations in the Universities. The Course of Instruction comprises Mathematics, Classics, Modern Languages, History and Literature. Pupils are received as Boarders, Half-Boarders, and Day Scholars. Added to this Institution is a Junior College for the reception of Youths from six to ten years of age.—For particulars apply to M. BLANCHET, Officier de l'Université, Boulogne-sur-Mer; or the Warden, who may be obtained of M. LE PRINCE, 261, Regent-street, London, W.

ST. ANDREW'S COLLEGE, BRADFIELD.

On the 16th July there will be a COMPETITIVE EXAMINATION of Boys under Fourteen Years of Age, for Exhibitions, value 500. a year, on their Admission to this school. Printed forms, with all necessary information, may be obtained on application, either in person or by letter, to the Warden, at the College, or to the Secretary, J. H. PATTERSON, Esq., 1, Elm-court, Inner Temple, London.

Bradfield, Reading, June, 1866.

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

The Course of Study embraces the ordinary English branches, Drawing, Land-surveying, the Classical and Modern Languages, the Natural Sciences, and Practical Chemistry form a prominent feature, and instruction in them is very efficiently provided for.

For terms and further particulars, apply to CHARLES WILLMORE, Principal.

ST. EDWARD'S SCHOOL, OXFORD.—The

object of this School is to combine careful Religious Training under a Clergyman and Graduate of the University, with a First-rate Modern Education. Day Boys are not received. Terms, including Classics, Mathematics, Book-keeping, French, History, Geography, Drawing, Singing, and the Elements of Physical Science, Twenty-five Guineas per annum, paid quarterly in advance. Washing and the Use of Books Two Guineas extra. Address the Rev. F. W. FAYN, M.A., Head Master, or the Rev. T. CHAMBERLAIN, M.A., Christ Church, Oxford, stating age and previous place of Education.

PRIVATE TUTOR.—A former CAPTAIN of

a Public School, and at present a SCHOLAR of Christ's College, Cambridge, desires a TUTORSHIP during this Long Vacation, or its part.—Address H. J., Carlton-terrace, 15, Ely-road, Oxford.

FRENCH PROTESTANT SCHOOL,

ST. JOHN'S WOOD, London.—The Wife of a Clergyman, whose daughter is at the above Establishment, takes this method of drawing attention to it, as affording the educational advantages of a residence in Paris, without its dangers, at a very moderate cost. The Advertiser most heartily offers this tribute, entirely un solicited, and will be very pleased, if referred to, to give any information required.—Address T. C. S., Post-Office, Marton, near Gainsborough, Lincolnshire.

A GRADUATE, with Honours, of the Univer-

sity of London, is desirous of giving INSTRUCTION in Classics, Mathematics, French, and Hebrew.—Address ERN. HAMMIS, 23, Collingwood-street, N.E.

THE UPPER and MIDDLE SCHOOLS for

first-class BUSINESS TRAINING will RE-OPEN, MONDAY, July 23rd.—Prospectuses and Examiners' Reports on every Pupil forwarded on application. Terms inclusive. Holidays short. JOHN YEATS, LL.D. Peckham, London, S.E.

PROTESTANT EDUCATION IN PARIS.

—DR. KORNEMANN'S PROTESTANT INSTITUTION, 13, RUE DE BOULOGNE, Paris, is highly recommended by the Rev. G. Monod and E. de Pressensé, of the French Protestant Church.

A CHRISTIAN LADY, of ability and expe-

rience, requires a SITUATION as Superintendent of Domestic Affairs in a Household, or Companion to a Lady, at Home or Abroad. A liberal salary expected.—Address E. D. B., care of Miss Price, High-street, Weston-super-Mare.

GREAT MALVERN.—There are a few

VACANCIES in an old-established, first-class SCHOOL, where pupils of good social position only are received. Malvern is proverbially healthy; and the air is peculiarly suitable for delicate constitutions.—For terms, full particulars, and references, address Mrs. GILBERT, Elm-dale, Malvern.

A YOUNG LADY would undertake the charge

of, and give Lessons in the English and French Languages, together with Pianoforte Music, to TWO or THREE PUPILS, not exceeding Nine Years of Age, for two months, from July 18th next, remuneration, reasonable. Board and Residence in the Country, and travelling expenses. Unexceptionable references.—Address O. E., Mr. Cook's, Stationer, 64, Edgware-road.

HIGH CLASSICS, LOGIC, METAPHY-

SICS, ETHICS, &c.—A FIRST-CLASSMAN IN CLASSICS, three of whose Pupils passed at the East India C.E. Examination, gives PRIVATE LESSONS in Chambers.—Address D. C. L., 28, Museum-street, W.C.

NORTH WALES.—CARMARVON GRAMMAR

SCHOOL, an establishment for a limited number of Young Gentlemen, combining the efficiency of the Public Schools with the comforts and careful training of a Private Institution, will RE-OPEN JULY 21st.—Terms and Names of Pupils successful at the different Public Examinations on application to the Principal, J. EVANS, M.A. Locality healthy and most beautiful.

CIVIL SERVICE EXAMINATIONS.—

CANDIDATES are PREPARED by a Gentleman in H.M. Civil Service, who obtained his appointment by competition, and who is assisted by thoroughly qualified Tutors.—References to former Pupils in all Departments of the Service.—Address E. V. JOHN, 4, Gordon-street, Gordon-square, W.C.

A LADY who has long been successfully engaged

in Tuition, both in England and on the Continent, intends, immediately after the Midsummer Vacation, to COMMENCE a FIRST-CLASS SCHOOL, for the Education of Gentlemen's Daughters. Her house is beautifully situated in one of the healthiest parts of England, and the domestic arrangements will be those of a private family. The best references to Clergymen and others.—Address Mrs. E. H. T., Severn House, Sneyd Park, Clifton, Bristol.

THE COMMERCIAL, ENGINEERING and

SCIENTIFIC COLLEGE, HESTER, offers a thoroughly sound English Education, together with instruction in the Modern Languages and Classics.

In the Upper Classes particular attention is given to Mathematics, Mechanics, Chemistry, Physical Science, and Drawing. The College has been recognised by the Secretary of State for India, "as possessing efficient Classes for Civil Engineering, Chemistry, and Physics."

Apply to the Rev. ARTHUR RIGG, College, Chester.

THE CLAPHAM GRAMMAR SCHOOL,

LONDON.
Head-Master—Rev. ALFRED WRIGLEY, M.A. F.R.S. &c.
Professor of Mathematics and Classics in the late Military College, Addiscombe.

Pupils are prepared for the Universities, the Civil and Military Examinations, &c. On the School Premises are a Gymnasium, Swimming Bath, Laboratory and Observatory. The names of more than twenty Cambridge Wranglers, including that of a Senior Wrangler of several First-class Oxford men, and of many highly-distinguished in the Civil and Military Examinations, are on the Honour List. Pupils will assemble on the 10th of August.

MR. HODGSON, of 87, CHANCERY-LANE, Son

of Mr. SAMUEL HODGSON, and Nephew of Mr. EDMUND HODGSON, is prepared to UNDERTAKE SALES of Literary and other Property, and to advance two-thirds thereon prior to Sale.

MR. CONDER, AUCTIONEER and VALUER, of

11, SOUTHAMPTON-BUILDINGS, W.C., being AGENT to the Royal Exchange Assurance Corporation, will be happy to insure any property against loss by Fire.

The Government duty is now 1s. 6d. per 1000. Life insurances also effected.

THE PRESS.—WANTED, on a Provincial

Daily Paper, an ASSISTANT EDITOR. He will be required to write a daily summary of news, and occasional leaders; and also to take part in the Sub-editing.—Address, enclosing references, as to respectability and general efficiency, to B., care of W. Ley, Esq., 44, Lincoln's Inn-fields, London.

THE PRESS.—The Advertiser requires an

Engagement on a London Journal, as LITERARY, MUSICAL, and DRAMATIC CRITIC. He now is, and has for some time been, on the staff of an important Country Newspaper, and can produce satisfactory proofs of his efficiency. Terms a secondary consideration. Sixna, 6, St. Augustine-road, Camden-town, N.W.

REPORTER.—An Experienced and thoroughly

Competent REPORTER WANTED for a Provincial daily Newspaper.—Address X.Y.Z., care of Mr. Bull, 27, Essex-street, Strand, London.

A VERBATIM REPORTER, experienced in

Sub-editing and Newspaper Management, is OPEN TO AN ENGAGEMENT.—Address W.C., Messrs. C. Mitchell & Co., Red Lion-court, Fleet-street, London.

THE PRESS.—A Young Man, respectably

connected, well educated, and properly qualified, offers his Services as PUBLISHER, or ASSISTANT-PUBLISHER, or READER. First-class references, and security if desired.—ALPHA, Post-office, King-street, Covent-garden, W.C.

PHYSICIAN and SECRETARY.—An Expe-

rienced PHYSICIAN, who has travelled much, and is well acquainted with Politics, Literature and Business, wishes an APPOINTMENT, at Home or Abroad, as Physician and Secretary to a Gentleman or Family.—Address to BERNARD, care of Messrs. Street Brothers, 11, Serle-street, Lincoln's Inn, W.C.

A GENTLEMAN of great experience is OPEN

TO AN ENGAGEMENT on a Daily Weekly Journal as THEATRICAL and MUSICAL CRITIC and REVIEWER. Would not object to Assist in the Editorial or Sub-editorial Departments.—SIXMA, Adams & Francis, 59, Fleet-street, E.C.

MEDICAL.—Any Gentleman wishing to retire

from the more arduous duties of a really good Practice would find in the Advertiser a desirable PARTNER. London or within 20 miles preferred. Terms liberal.—Address A. B., care of Messrs. Watkins, Baker & Baylis, Solicitors, Backville-street, London.

MENTAL AFFECTIONS.—A Physician,

residing within an easy distance of London by rail, has at the present time VACANCIES in his house for TWO LADIES and ONE GENTLEMAN. This House has been established over 20 years for the reception of ten high-class Patients only.—Address M. D., care of Messrs. Whicker & Blaise, 67, St. James-st., S.W.

PRACTICAL CHEMISTRY.—THE LABORA-

TORY, 20, GREAT MARLBOROUGH-STREET, is open for Daily and evening instruction, under the direction of Mr. VACHER.—Analyses undertaken.

ITALY.—A GENTLEMAN, residing in Italy,

who knows the Country thoroughly, and has some interest in it, whose time is wholly unoccupied, wishes to secure an AGENCY of BUSINESS, to give him some occupation.—Address M. E., Mr. Lindley's, 19, Catherine-street, Strand.

TO MUSEUMS.—FOR SALE, at less than

their Cost, a number of well-finished GLASS CASES, with polished Oak Frames, made for a Museum.—Apply to Mr. DAWKINS, Weymouth.

NEW SILKWORM.—The superb BOMBYX

CYTHRA feeds on leaves of the *Adiantum plaudosum*, &c. For Eggs apply to Dr. WALLACE, Colchester, Essex.

STAR and GARTER HOTEL, Richmond Hill,

Surry. The spacious and comfortable, commanding the finest view which Richmond Hill affords, is now completed, and open to the Public. The New Family Hotel, adjoining the Tavern, was opened on the 20th February last.

DAVID LAWRENCE, General Manager.

A PROSPECTUS of a New Work on the

LIFE and WRITINGS of SHAKESPEARE, printed for Subscribers only, to be profusely illustrated by Wood Engravings, will be sent free to any persons forwarding their Names and Addresses, legibly written, to J. O. HALLIWELL, Esq., No. 6, St. Mary's place, West Brompton, near London.

ADAMS & FRANCIS insert ADVERTISE-

MENTS in all the London, Country, Colonial, and Foreign Newspapers and Periodicals.

* A Card, containing List of London Papers, to be had on application to—

ADAMS & FRANCIS, 59, Fleet-street, E.C.

TO COUNTRY EDITORS.—FOR SALE, a

complete File of the 'SPECTATOR,' from 1843 to 1863 inclusive, with Index complete, in good condition, half bound in calf.—Apply to C. MITCHELL & Co., Newspaper Print Directory Offices, 13 and 15, Red Lion-court, Fleet-street, E.C.

THE ATHENÆUM for GERMANY and EASTERN EUROPE.—Mr. ALPHONS DÜRR, of Leipzig, begs to announce that he has made arrangements for a weekly supply of **THE ATHENÆUM JOURNAL**. The Subscription will be 1 thaler for three months; 3 thalers for six months; and 6 for twelve. Issued at Leipzig on Thursday.

Orders to be sent direct to ALPHONS DÜRR, Leipzig, Germany.
* German Advertisements for the **ATHENÆUM JOURNAL** also received by ALPHONS DÜRR, as above.

RAFFAELLE.—Now on View, at the Office of the Arundel Society, Two highly-finished WATER-COLOUR DRAWINGS, by Signor Mariannucci, from the Frescoes of the 'HELIOPOLEUS' and the 'MIRACLE OF BOLSENA,' in the Stanza of the Vatican. SHELLS, FOSSILS, MINERALS.—Mr. R. DAWSON, WYEMOUTH, will, on application, send an abridged CATALOGUE of his extensive Stock, in the following Departments:—

1. FOREIGN SHELLS.
2. BRITISH SHELLS.
3. FOSSILS AND ROCKS.
4. MINERALS.
5. PUBLICATIONS.

"BURROW'S LANDSCAPE and SEA GLASSES are remarkable for their TRANSPARENT CLEARNESS and POWER of DEFINING REMOTE OBJECTS."—*Shipping Gazette*.

25 13s. 6d., 25 8s. 6d.
Special Mounts for India. Catalogues gratis.
Address—W. & J. BURROW, MALVERN.
London: Arnold, 73, Baker-street; Wales & Co. 32, Ludgate-hill.

CALLAGHAN'S OPERA and RACE GLASSES.—23 A, New Bond street, W., corner of Conduit-street. N.B.—Sole Agents for the celebrated Opera and Race Glasses made by Volkänder, Vienna. The New Aluminium Glasses in great variety.

GEOLOGY.—ELEMENTARY COLLECTIONS.—To illustrate the New Edition of 'Lyell's Elements of Geology' and facilitate the important study of Mineralogy and Geology, can be had at 2s. 5s. 10s. 20s. to 500 guineas; also single Specimens of Minerals, Rocks, Fossils, and Recent Shells, Geological Maps, Hammers, all the recent Publications, &c., of J. FERNAN, Mineralogist to Her Majesty, 148 Strand, London. Private Instruction is given in Mineralogy and Geology by Mr. FERNAN, F.G.S., 148, Strand, W.C.

CONCHOLGY.—A Remarkable Collection of Shells, &c.—An Ebonyed Glazed Cabinet, inlaid with Brass, 4 feet in height, 4 feet broad, and 22 inches in depth, fitted with sixteen Sliding Trays, containing a rare and valuable Collection of English and Foreign Shells and Conchological Fossils, comprising upwards of 1,100 Specimens, in the finest preservation, arranged, labelled, and catalogued according to the Linnean System. A Manuscript Catalogue accompanies the Collection, making reference thereto easy and agreeable. The Cabinet is surmounted with a three-tier bookshelf, with a Plate-glass Back, forming, with the Cabinet beneath a handsome piece of Furniture, and admirably adapted for the reception of a Select Library of Books on Conchology and the kindred Natural Sciences. Price only 35l.

This valuable Collection and the original cost of which it is impossible to estimate, can be had at a low price, now, who, in furtherance of the cause, will either time or money to obtain the finest and most interesting part of the collection. And, as the opportunity to commence, this most interesting and valuable collection, which is a handsome and useful piece of furniture, and a library or drawing-room, would be a great advantage, and a great source of pleasure and money.

BIRMINGHAM and EDGBASTON PROPRIETARY SCHOOL.

A MASTER will be WANTED, After Midsummer, to Teach the French and German Languages, from the Elements to the Work of very Advanced Classes. A thoroughly good accent, as well as sound grammatical knowledge, and an acquaintance with the chief writers in each language, will be considered indispensable. The hours of attendance are six on four days of the week, and three on two days. The rest of the Master's time will be at his own disposal, but he will not be allowed to take boys between the ages of eight and eighteen as private pupils, unless they are also pupils of the school. It is requisite that he should be a judicious and firm disciplinarian. The Salary is 130l. per annum. The Master has the option of occupying, at a low rental, a house forming part of the school buildings, and may take pupils of the school as boarders. Candidates are requested to send in their applications and testimonials on or before the 15th of July next, to the Secretary, EDWARD CARTER, 33, Waterloo-street, Birmingham, from whom all further particulars may be learnt.

A WELL-KNOWN PUBLISHER, having excellent opportunities for extending his Business beyond the limits of his present Capital, wishes to MEET with a GENTLEMAN willing to invest about 2,000l. in accordance with the Act which limits the liability of a sleeping Partner to the sum invested. A Gentleman of any business tastes would find this a good opportunity for safe and profitable investment and agreeable occupation, as arrangements might be made for the employment of his talents on equitable terms, without further liability. An active business Partner, capable of taking charge of the financial and legal details, would be considered a valuable acquisition. For particulars apply to F. L. S. Cary of Messrs. Stephens & Matthews, Solicitors, 29, Essex-street, Strand.

THE ATTENTION of BOOK-BUYERS is called to a CATALOGUE of CHOICE BOOKS, of 76 pages 4to, comprising about 2,000 articles in all Classes of Literature, many in handsome bindings by the best binders, and all in fine library condition. Sent free on the receipt of six stamps, by THOMAS HAYES, 49, Cross-street, Manchester. See Selection from Catalogue in *Athenæum* of 20th ult. No. 2018, page 376.

THE ROCKY MOUNTAINS.—This grand PICTURE, which has created such unparalleled interest in the United States, is NOW ON VIEW at T. M'LEANS New Gallery, 7, HAYMARKET, next the Theatre. Admission, 1s.

Just out, price 1s.; post free, 14d.: 100 octavo pages.

WITCHCRAFT, Credulity, Superstition, Parliamentary Reform, and other matters. Observations suggested by the Cattle Plague. By H. STRICKLAND CONSTABLE, Warrand, Hull.

"I have read your pamphlet with much interest. People believe in contagion as they used to believe in witchcraft, and as fools now believe in spirit rapping."—*Extract from a Letter from Sir George Cholmeley.*

London: Dalton & Lucy, Booksellers to the Queen and H.R.H. the Prince of Wales, 28, Cockspur-street, Charing Cross.

Third Edition, enlarged to 36 pages, price 6d.

THE CATTLE PLAGUE: with Remarks upon the Drainage of Farm Buildings and Stables. By H. STRICKLAND CONSTABLE, Esq.

"Though the pamphlet is as entertaining as 'Punch,' it provides something better than amusement: for every stroke of satire hits at a bump, and every anecdote points an argument."—*Exeter and Plymouth Gazette.*

London: Dalton & Lucy, 28, Cockspur-street; Hamilton & Co. Asternoster-row.

On and after July 25, 1866, will be published,

A PAMPHLET ON STEAM AS THE MOTIVE POWER IN EARTHQUAKES AND VOLCANOES. By R. A. PEACOCK, Esq. C.E., Jersey.

"I have no doubt that Mr. Peacock's conclusion is a right one. I have not the least doubt that steam escapes from the earth when it gets vent, and when it does not get vent it causes undulation."—*Remark by the President of the Geological Section at Birmingham, Sept. 20, 1865.*

A prepaid Copy of the Pamphlet will be sent to any address by the Author on receipt of 1s. 6d. in stamps.

Just published, in fcap. 8vo. cloth extra, price 5s.

THE MERRY BRIDAL O' FIRTHMANS; and other Poems and Songs. By JAMES SMITH.

"The collection is certainly a rich and remarkable one, containing many amusing and really pathetic and descriptive verses, imbued with the true spirit of poetry and song. It will say little for the taste of his fellow-countrymen, or their appreciation of genuine and native talent, if this handsome collected edition of James Smith's poems—many of which have become very popular as set to music—be not immediately and warmly welcomed."—*Scotsman.*

"James Smith is unmistakably a poet, musical, tender, and true. With a sense of humour which, from Carlyle downwards, is almost universally seen bound up with a great sadness, he combines a pathetic sweetness and a command of wailing melody sure to find its way to the popular heart, and to make him a household favourite, especially where mourning mothers have to weep over 'wee, wee shoon,' that death has suddenly made empty."—*Daily Review.*

Edinburgh: William P. Nimmo. London: Simpkin, Marshall & Co. And all Booksellers.

Now ready, price 2s. 6d. post 8vo. cloth boards.

NERVOUS AND DELICATE HEALTH.

(Its Symptoms and Causes; with Hints on Medicinal, Dietetic and general Hygienic Self-management.) By J. WILLIAMS, M.D., F.R.C.S., of St. John's College, Oxon, late House-Surgeon to the Lock Hospital.

London: Free by post from the Author, 17, Conduit-street, Regent-street; and of all Booksellers.

ENGINEERING SCHOOL CLASS-BOOKS.

In crown 8vo. 4s. 6d. bound, with 220 newly-engraved Diagrams.

I.

EUCLID'S ELEMENTS OF PLANE GEOMETRY, with EXPLANATORY APPENDIX, and SUPPLEMENTARY PROPOSITIONS for Exercise. Adapted for the Use of Schools, or for Self-instruction.

By W. D. COOLEY, A.R.

Author of the 'History of Maritime and Island Discovery,' 'The Negroland of the Arabs,' &c.

"This is the best edition of the Elements which has yet appeared. By the occasional use of algebraic symbols for words, the author has both shortened and simplified the reasoning."—*Athenæum.*

"Mr. Cooley has produced an edition of Euclid's Elements, which for brevity, clearness and discerning attention to the wants of learners, cannot be easily surpassed."—*Dublin University Magazine.*

"The introductory essay to this edition of Euclid, 'On the Study of Mathematics,' contains some sensible and judicious remarks, especially as the Editor intends his book for the use of schools. . . . On the whole, we consider the Editor to have done all that could be done to make the study of Euclid easy to beginners."—*Cambridge Chronicle.*

II.

Uniform with the 'Elements,' price 3s. 6d.

COOLEY'S GEOMETRICAL PROPOSITIONS DEMONSTRATED; or, a Supplement to Euclid: being a KEY to the Exercises appended to the 'Elements,' for the use of Teachers and private Students. Upwards of 120 Propositions, deduced from the First Six Books of Euclid, are illustrated in it by new Diagrams.

"The propositions are demonstrated, in most instances, in the plainest and nearest manner; so that the work may justly claim, what it professes, to be a HELP TO TEACHERS."—*Scholastic Journal.*

III.

New Edition—Fcap. 8vo. price 1s. 6d.

COOLEY'S FIGURES OF EUCLID; being the Diagrams illustrating the 'Elements,' with the Enunciations printed separately for Use in the Classroom.

Whittaker & Co. Ave Maria-lane, London.

Fcap. 8vo. elegant cloth, price 51s.

A T H E N Æ A I S;

Or, THE FIRST CRUSADE.

By WILLIAM STIGAND.

"Mr. Stigand, who has already published a volume of shorter pieces, now enters the field as an English rival to Tasso, and favours us with a poem on the First Crusade, extending over more than three hundred pages, and including the most elaborate descriptions, as well as a definite story wrought out with a great variety of incidents. The Italian poet's epic was so admirable in its kind and has been so well rendered into English by Fairfax and Whiffles, that to go over much the same ground again was rather a bold enterprise. Yet we will not say it is altogether failed. 'Athenæia' is unquestionably a striking work."—*London Review*, May 30, 1866.

"Having spoken of this volume as a portion of a great undertaking, let us add that it is no dissipated fragment, but a part that has in itself the charm of artistic completeness."—*Athenæum*, June 16, 1866.

"It is impossible to do justice to a poem such as this in the short space of a newspaper review; we can but indicate what we think the most noteworthy points. . . . Pleasant and poetical is the description of a ship at sea a little farther on. . . . We hope the pithiness we have given our readers of this new Epic will induce them to make themselves speedily better acquainted with it."—*John Bull*, June 16, 1866.

London: Edward Moxon & Co. Dover-street.

Just published, price 6s.

BRAITHWAITE'S RETROSPECT, New Volume, from January to June, containing Abstracts of the most Practical Papers in all the Medical Journals and Transactions of Medical Societies for the last six months; each Volume also contains a Small Dictionary or Synopsis of Medical Treatment.

Also for the above period, separately, price 2s. 6d.

'MIDWIFERY and the DISEASES of WOMEN.' By WM. BRAITHWAITE, M.D., late Lecturer on Diseases of Women in the Leeds School of Medicine; and JAMES BRAITHWAITE, M.D.

London: Simpkin, Marshall & Co.

Edinburgh: Oliver & Boyd. Dublin: Hodges, Smith & Co.

Just published, in royal 8vo. 388 pages, price 7s. 6d.

THE PATENTEE'S MANUAL: a TREATISE on the LAW and PRACTICE of LETTERS PATENT, especially intended for the Use of Patentees and Inventors.

By JAMES JOHNSON, of the Middle Temple, Barrister-at-Law; and JOHN HENRY JOHNSON, Esq., late G.E. Solicitor, and Patent Agent, Lincoln's Inn-fields, and Glasgow.

THIRD EDITION, revised and enlarged. Although the statutes and judicial decisions are expounded in plain and popular language, this work contains a concise but ample and strictly accurate examination of the law, with an examination of the decided cases to the latest date. The practical acquaintance with the subject possessed by the authors, has ensured a treatment of it from a practical point of view. A summary of the most modern decisions on the new practice in the Court of Chancery as to the proceedings for injunctions and damages, is given.

London: Longmans, Green, Reader, and Dyer.

Strand.

JUST PUBLISHED,
WITH NUMEROUS PLANS,
Quarto, 11. 8s.

THE OPERATIONS OF
WAR
EXPLAINED and ILLUSTRATED.

By EDWARD BRUCE HAMLEY,
Colonel in the Army, and Lieut.-Colonel Royal Artillery;
formerly Professor of Military History, Strategy,
and Tactics at the Staff College;
Member of the Council of Military Education.

Extracts from Reviews.

TIMES.

"In this comparative dearth of knowledge, Colonel Hamley's treatise on the Operations of War is, we do not hesitate to say, the best that has been written in the English language, and may vie with any of its Continental rivals. . . . In carrying out this plan, too, he has displayed remarkable industry and acuteness; he has sustained his positions in a masterly manner, and his style, though not rhetorical or ornate, is always clear and fitted to the subject. . . . Few educated Englishmen at this juncture can read it without considerable satisfaction."

PALL MALL GAZETTE.

"This is the right book at the right time. . . . When, as at present, Europe seems just entering on a period of war, the need is for a clear and systematic work which will give us sound rules of judgment, methodize our reflections, enable us to estimate the real moment of current operations, and endow us, in some degree, with the power of foretelling military results. Colonel Hamley's book before us is well qualified to satisfy this want. It enables, nay, it compels, the reader to form conclusions for himself, and the final result of its perusal is a certain degree of military wisdom as well as knowledge—a clue to the future as well as, for the first time, a comprehension of the past."

UNITED SERVICE MAGAZINE.

"On all matters relating to the practice of the profession it forms the most perfect book of reference that has been published."

DAILY NEWS.

"That is the use of the book to the general reader. It furnishes him with facts, principles, and arguments; it trains his mind to look methodically on campaigns; teaches him to select what is necessary and discard what is not; and supplies him with the means of testing the soundness of the course pursued, or intended to be pursued, in any given case. The careful general reader, if he have a natural aptitude for military studies, will, by the time he reaches the end of the book, find himself better able to understand why a particular campaign is a masterpiece of warfare, why the general who planned and fought it is a great captain. That is the literary and general use of the work. It will have other uses for the soldier student who may be called on to show his *avoir faire* in actual service. He will derive from its pages by diligent study the most important lessons."

EXAMINER.

"As we are doomed to read about movements of armies, bases of operations, fronts, rears, flanks, tactics, and order of battle for some time to come, let us get what help we can to the understanding of such military facts as Mr. Reuter furnishes, and such few details as may come from newspaper correspondents who, having no ignorance to hide under fine writing, shall be graciously pleased to tell us simply what we want to know. So we may as well be wise betimes, and sit at the feet of Colonel Hamley, thanking him for a book so apt to the time in which it appears as this explanation of the Operations of War which an expert military teacher gives to the English public just as a great European war is breaking out. . . . All who take any strong interest in the subject should study the book itself, which is rich in maps, plans, and illustrative details, and is so clear and full in its exposition of military principles that, although really a professional and scientific work, it may be read with equal satisfaction by civilians and soldiers."

ATHENÆUM.

"It has been reserved for Colonel Hamley to crown the edifice with a work of which it is not too much to say that it is a complete handbook of the art of war."

WILLIAM BLACKWOOD & SONS,
Edinburgh and London.

MR. MURRAY'S
HANDBOOKS FOR ENGLAND.

HANDBOOK of TRAVEL TALK,
for the Use of FOREIGNERS in ENGLAND. In
French, German, Italian, and English. 16mo. 3s. 6d.

HANDBOOK for MODERN LONDON.
A Guide to all the Sights and Objects of Interest in the
Metropolis. Map. 16mo. 3s. 6d.

HANDBOOK for KENT and SUSSEX
—Canterbury, Dover, Ramsgate, Sheerness, Rochester,
Chatham, Woolwich, Brighton, Chichester, Worthing,
Hastings, Lewes, Arundel, &c. Map. Post 8vo. 10s.

**HANDBOOK for SURREY and
HANTS**—Kingston, Croydon, Reigate, Guildford,
Winchester, Southampton, Portsmouth, and the Isle
of Wight. Map. Post 8vo. 10s.

**HANDBOOK for BUCKS, BERKS,
and OXON**—Windsor, Eton, Reading, Aylesbury,
Uxbridge, Wycombe, Henley, Oxford, and the Thames
from Maidenhead, and Windsor. Map. Post 8vo.
7s. 6d.

**HANDBOOK for WILTS, DORSET,
and SOMERSET**—Salisbury, Chippenham, Weymouth,
Sherborne, Wells, Bath, Bristol, Taunton, &c. Map.
Post 8vo. 7s. 6d.

**HANDBOOK for DEVON and CORN-
WALL**—Exeter, Ilfracombe, Linton, Sidmouth, Daw-
lish, Teignmouth, Plymouth, Devonport, Torquay,
Launceston, Truro, Penzance, Falmouth, &c. Map.
Post 8vo. 10s.

HANDBOOK for YORKSHIRE. Map.
Post 8vo. [Just ready.]

**HANDBOOK for DURHAM and
NORTHUMBERLAND**—Newcastle, Darlington,
Gateshead, Bishop Auckland, Stockton, Hartlepool,
Sunderland, Shields, Berwick-on-Tweed, Morpeth,
Tynemouth, Coldstream, Alnwick, &c. Map. Post
8vo. 9s.

HANDBOOK for the LAKES—West-
moreland, Cumberland, &c. Map. Post 8vo.
[Just ready.]

**HANDBOOK for NORTH and SOUTH
WALES**—Bangor, Carnarvon, Beaumaris, Snowdon,
Conway, Menai Straits, Carmarthen, Pembroke, Tenby,
Swansea, the Wye, &c. Map. 2 vols. post 8vo. 12s.

HANDBOOK for IRELAND—Dublin,
Belfast, Donegal, Galway, Wexford, Cork, Limerick,
Waterford, the Lakes of Killarney, Coast of Munster,
&c. Maps. Post 8vo. 12s.

**HANDBOOK to the SOUTHERN
CATHEDRALS of ENGLAND**—Winchester, Salis-
bury, Exeter, Wells, Rochester, Canterbury, and
Chichester. Illustrations. 2 vols. post 8vo. 24s.

**HANDBOOK to the EASTERN
CATHEDRALS of ENGLAND**—Oxford, Peter-
borough, Ely, Norwich, and Lincoln. Illustrations.
Post 8vo. 18s.

**HANDBOOK to the WESTERN
CATHEDRALS of ENGLAND**—Bristol, Gloucester,
Hereford, Worcester, and Lichfield. Illustrations.
Post 8vo. 16s.

* Worcester, Gloucester, and Hereford may be had sepa-
rately, price 2s. 6d. each.

At every Bookseller's and at all Libraries, in 2 vols. crown 8vo. 21s.

"A BRIGHTER BOOK OF TRAVEL WE HAVE NOT SEEN FOR MANY A DAY."—*Athenæum*.

UP THE COUNTRY.

By the Hon. EMILY EDEN,

Author of

'The Semi-Attached Couple' and 'The Semi-Detached House.'

London: RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

NEW BOOKS, NEARLY READY.

The FAIRE GOSPELLER, Passages in the Life of MISTRESS ANNE ASKEW: recorded by yet unworthy pen of Nicholas Moldwarp, B.A., and now first set forth by the Author of 'Mary Powell.' In 1 vol. cr. 8vo. [On Monday next.]

LIFE of the MARCHESSA GIULIA FALLETTI di BAROLO, Reformist of the Turin Prisons. By SILVIO PELLICO, Author of 'Le Mie Prigioni.' From the Original by Lady GEORGINA FULLARTON. 1 vol. post 8vo. with Portrait.

AFTER the STORM; or, Brother Jonathan and his Neighbours in 1863-64. By J. E. HILARY SKINNER, Barrister-at-Law, Author of 'The Tale of Danish Heroism.' In 2 vols. post 8vo.

THRICE HIS: a Novel. In 3 vols. post 8vo.

Now Ready at all Libraries and Booksellers'.

A Missing Link in Natural History.

The NATURALIST in VANCOUVER ISLAND and BRITISH COLUMBIA. By JOHN KEAST LORD, F.Z.S., late Naturalist to the British North American Boundary Commission. 2 vols. crown 8vo. with many beautiful illustrations. 34s.

"A pleasant narrative of adventure, interspersed with animated descriptions of the habits of such members of the animal kingdom as from their importance and novelty demand special notice. We have not named half the interesting features in these volumes relating to fish, for from sticklebacks to halibut Mr. Lord is equally illustrative and equally entertaining. His enterprise as a naturalist has been productive of solid advantage to science in the form of numerous hitherto unknown species in more than one department."—*Land and Water*.

BERTHA DEVREUX: an Incident in the Wars of the Roses. In Six Cantos. 1 vol. crown 8vo. 3s. 6d.

ALL in the DARK: a New Novel. By JOSEPH SHERIDAN LE FANU, Author of 'Uncle Silas,' and 'Guy Devenish.' 2 vols. post 8vo. "This is a book which deserves to be reprinted many times in years to come."—*Examiner*.

PLAIN JOHN ORPINGTON: a Novel. By the Author of 'Lord Lynn's Wife' and 'Lady Flavia.' 3 vols. post 8vo.

A New Sporting Novel.

PAUL PENDRIL. 1 vol. post 8vo.

"A narrative of sport and adventure in Corsica. It is a very capably-written story, and highly entertaining."—*Morning Star*.

THE INGOLDSBY LEGENDS;

Or, MIRTH and MARVELS.

SEVENTY-THIRD THOUSAND.

I. THE LIBRARY EDITION, 2 vols. 8vo.

Containing the Life of Ingoltsby, and all his Writings, Prose and Poetical, with the Original Engravings by Cruikshank and Leech. 21s.

II. THE POPULAR EDITION. Fcap. 8vo. 5s.

London: RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW WORKS.

FIELD-MARSHAL VISCOUNT

COMBERMERES MEMOIRS AND CORRESPONDENCE. From his Family Papers. By the RIGHT HON. MARY, VISCOUNTESSE COMBERMERE and Capt. W. W. KNOLLYS. 2 vols. 8vo. with Portraits, &c. 30s. bound.

"To the last this noble soldier and most perfect gentleman took cheerful part in the duties and pleasures of life, leaving to his only son the inheritance of a great name, and to a sorrowing widow the task of recording how the bearer of the name won for it all his greatness. This has been done evidently as a labour of love by Lady Combermere, and she has been efficiently assisted in the military details by Capt. Knollys. Apart from the biographical and professional details, the volumes, moreover, are full of sketches of persons of importance or interest who came into connexion with Lord Combermere."—*Athenæum*.

"A welcome and gracefully-written memorial of one of the greatest of England's soldiers and worthiest of her sons. It is a most interesting work."—*Morning Post*.

The SPORTSMAN and NATURALIST

IN CANADA; or, Notes on the Natural History of the Game, Game-Birds, and Fish of that Country. By MAJOR W. RUSK KING, F.R.G.S., F.S.A.S. Royal 8vo. illustrated with beautiful Coloured Plates and Woodcuts. 20s. bound.

"A goodly volume, splendidly illustrated. It is an important contribution to natural history, and a work the intending traveller will consult once and again. The book will take its position in the foremost rank of works of its class. Of recent British travellers few can vie with its author in close observation of nature, and in those graces of style and scholarship which make the information contained in his volume as pleasant to obtain as it is valuable to preserve. In fact, since the works of Elliot Warburton and Kinglake, no book of travels with which we are acquainted has been written in a style more clear, forcible, and picturesque."—*Sunday Times*.

PRISON CHARACTERS DRAWN

from LIFE. By a PRISON MATRON, Author of 'Female Life in Prison.' 2 vols. 12s.

"These volumes are interesting and suggestive."—*Athenæum*. "A woman lodged among imprisoned women, with a kindly sympathy, a quick eye, and a mind apt to record clearly its well-directed observations, has something to tell that thousands will be glad to learn. Her quick-witted transcripts of living character are living men."—*Examiner*.

THE BEAUTIFUL in NATURE and ART.

By Mrs. ELLIS, Author of 'The Women of England,' &c. 1 vol. with Portrait, 10s. 6d. bound.

"The author of 'The Women of England' has written a book which deserves to be highly commended. It is intended for the young of her own sex, and will be strange if they do not find it attractive as well as useful and instructive. It is the work of a keen-sighted, thoughtful, sensible and experienced writer."—*Illustrated News*.

SPORT and SPORTSMEN.

By CHARLES STRETTON, Esq. 8vo. with Illustrations, 15s. "This is an amusing book; as interesting as genuine books of sporting adventure seldom fail to be."—*Globe*.

THE NEW NOVELS.

The WILD FLOWER of RAVENS.

WORTH. By the AUTHOR of 'JOHN and I,' 'DR. JACOB,' &c. 3 vols.

FELICIA'S DOWRY. By Mrs. Fitz-MAURICE OKEDEN. 3 vols.

"This novel is capital, and deserves wide popularity. The characters are all well sketched."—*Sun*. "Felicia's Dowry" is the work of a highly-cultivated mind. The characters are well drawn, the language good, the interest fully sustained, and the moral excellent."—*Messenger*.

KING'S BAYNARD.

By the Hon. Mrs. GEORGE GIFFORD. 3 vols.

"Our hasty sketch of this story can give but little notion of the ability with which it is written. 'King's Baynard' will be read with avidity by those who admire a stirring history and well-managed development."—*Reader*. "Very pleasant and well-written volumes. 'King's Baynard' is a tale of absorbing interest."—*Morning Advertiser*.

SIR OWEN FAIRFAX.

By Lady EMILY PONSONBY, Author of 'The Discipline of Life,' &c.

"Lady Ponsonby writes like a lady, and like a lady who knows how to write."—*Athenæum*. "A very interesting and pleasant story."—*Sun*.

MIRK ABBEY.

By the Author of 'LOST SIR MASSINGBERD,' 'THE OLYMPIANS' &c. 3 vols.

"The author's best book."—*Post*. "A spirited and amusing story."—*Pall Mall Gazette*. "An admirable and most fascinating story."—*John Bull*.

A NOBLE LIFE.

By the Author of 'JOHN HALIFAX,' 'CHRISTIAN'S MISTAKE,' &c.

"A beautifully-written and touching tale."—*Post*.

BOUND to the WHEEL.

By John SAUNDERS, Author of 'Abel Drake's Wife,' &c. 3 vols.

"A very interesting story."—*Sun*. "A spirited and absorbing novel."—*Star*. "The idea of the hero is original, and very carefully worked out."—*Spectator*.

The WIFE'S ERROR.

By Lady BLAKE. 3 vols.

[Just ready.]

MR. AINSWORTH'S NEW WORK.

Now ready at every Library,

In 3 vols. post 8vo.

THE CONSTABLE DE BOURBON.

BY

WILLIAM HARRISON AINSWORTH.

"Mr. Ainsworth has taken an immense canvas, and has filled it up with a crowd of figures, including all the most renowned characters of one of the most romantic epochs in mediæval history. The central figure is, of course, the great rebel, the Constable de Bourbon, who gives its title to the book. Bourbon himself is a splendid subject for romance, and the war he sustained against France is one of the most interesting and eventful of the many wars of the eventful sixteenth century. Around Bourbon are grouped a score of figures well nigh as dramatic and noble as his own. Francis I. is the second in prominence; his great rival, the Emperor, is constantly seen in the background, and barely appears on the stage. Then comes a host of characters, at the head of which stands the august figure of the old Comte de Saint-Vallier, the father of Diane de Poitiers, mistress of the King. Triboulet follows, and is succeeded by the brave Bayard, the knights *sans peur et sans reproche*; the Constable Anne de Montmorency, the Admiral Bonivet, and others. These are the more important figures: those which are subordinate include the Prince of Orange, Francesco Sforza, and Giovanni dei Medici, at the head of their Italian mercenaries, and Cornelius Agrippa, the eminent astrologer. The events narrated are as important as the characters introduced. The opening scene reveals the first quarrel between Bourbon and the King, due in part to the pride of the former, but mainly to court cabals, which are traced at some length. The Second Book deals with the flight of Bourbon after he had contracted a secret alliance with the Emperor Charles the Fifth and with Henry the Eighth of England. In this the author has allowed the most range to his imagination, and it is at once the longest, the most adventurous, and the most interesting in the novel. The Third Book carries us to Milan, where Bourbon assumes the command of the Imperial armies. We have particulars of the retreat of the French from Novara, and we witness the death of the illustrious Bayard. The Fourth Book gives a long account of the great siege of Marcellus. A hard nut this city proved to Bourbon, and one he was unable to crack. The Fifth Book is occupied with the famous siege of Pavia, and the battle, disastrous to Francis, which followed. The fight of Pavia is described at some length. The promise of success which attended the earlier part of the combat, and the complete rout of the French in which the day resulted, are vividly described; and in the last chapter of the book we see the king, taken prisoner with almost all his nobles, Montmorency, St. Pol, and others, writing to his mother the well-remembered sentence, 'Madame, tout est perdu, fors l'honneur.' In the Sixth Book we see Francis prisoner at Madrid, are witnesses of his interview with his illustrious rival, Charles V., and contemplate the signature of the treaty of Madrid. In Book Seventh, which is also the last, Bourbon, again triumphant, leads his army to the sack of Rome. We witness the capture of the immortal city, have a glimpse of Benvenuto Cellini, and see Bourbon mortally wounded in the hour of his last great triumph. It must add to the interest with which the romance will be read that its principal historical incidents occur on the very ground where it is possible the most deadly combats of the war at present raging will take place."—*Sunday Times*.

"There is no more legitimate subject than this for such a writer as Mr. Ainsworth. It will add to the author's reputation, because it is written so naturally. If it has not been written easily there is the greater art, for it reads easily."—*Reader*.

"Fortunate as Mr. Ainsworth has hitherto proved in the choice of his scene and his hero, he has seldom proved more fortunate than in the present instance. The Constable de Bourbon is the chief character throughout, and very vividly and effectively are his career and character portrayed."—*Sun*.

"Mr. Ainsworth has added another tale to the already long list of his valuable historical novels, and in the 'Constable de Bourbon' has considerably increased his fame. At this moment when war is afoot, and the whole of Italy is likely to resound with the movement of troops, the progress of Bourbon's army will be traced with peculiar interest, as every town named may possibly be the scene of some event of importance in our times as it was when the illustrious rebel and his outraged master carried fire and sword throughout their course."—*Examiner*.

CHAPMAN & HALL, 193, Piccadilly.

LONDON, SATURDAY, JULY 7, 1906.

LITERATURE

The Billiard Book. By Capt. Crawley. With numerous Illustrative Diagrams. (Longmans & Co.)

THE popularity of Capt. Crawley's hand-book on 'Billiards, its Theory and Practice,' has induced the writer to put forth all his strength, and give us a larger and more satisfactory book upon the same subject. So far as the science and art of the game are concerned, the present work is excellent; and in other respects it is far superior to the manual. Mathematical assistance—rendered by scientific players—has enlightened the author on many points, and enabled him to give the particular information in which the earlier treatise was especially deficient. The volume, moreover, is abundantly and well illustrated; and were it not for certain lame attempts at pleasantry, which the Captain must withdraw from future editions, it might be commended for good taste. Still, as the book stands, with some shortcomings and a few errors, it is a very creditable production, and the author may enjoy the knowledge that our literature possesses no more handsome or complete book upon his favourite game.

About the history of the pastime Capt. Crawley has much to learn. Having in the manual asserted, without any sufficient reason, that the game was "probably invented by the Dutch, from whom the French, Germans and the Italians soon learned it," he now informs us that the "invention of the game is generally attributed to the French"; but as he appears to have no better authority for this statement than Strutt's 'Sports and Pastimes of the People of England,'—a work so consistently inaccurate that no writer on games should rely on it as an authority,—he might as well have been altogether silent about the origin of the amusement. Concerning the source and date of the particular game known to players of the present day as "billiards,"—in contradistinction to pool, pyramids, and other games played upon the billiard-table,—"fancy" has led him into a comical scrape. "I fancy," he says, "that Billiards began to be played in the modern fashion towards the close of the reign of our Second George, because by statute 30 Geo. 2. it was made an unlawful game, and was forbidden to be played in taverns under a penalty of 10*l*." Here is a droll bunch of blunders. The statute thus mentioned does not make billiards an unlawful game; it does not forbid it "to be played in taverns under a penalty of 10*l*."; and if it did so prohibit the game, how would the fact justify Capt. Crawley's "fancy" that the modern game had already come into vogue? A humorous illustration of the way in which English legislators in their most virtuous moods formerly used to make one law for the poor and another for the rich: the statute, 30 Geo. 2, "for preventing gaming in public houses by journeymen, labourers, servants and apprentices," abstained from interference with the pleasures of "the quality," but ordained "that, from and after the twenty-ninth day of September, one thousand seven hundred and fifty-seven, if any person or persons licensed to sell any sorts of liquors, or who shall sell or suffer the same to be sold in his, her or their house or houses, or in any outhouses, ground or apartments thereto belonging, shall knowingly suffer any gaming with cards, dice, draughts, shuffle-boards, Mississippi or billiard tables, skittles, nine-pins, or with any other implement of gaming in his, her or their houses, ground

or apartments thereto belonging, by any such journeymen, labourers, servants or apprentices, and shall be convicted of the said offence, . . . shall for every such offence forfeit and pay the sum of forty shillings." For an offence committed after a first conviction the offender was liable to a penalty of 10*l*! The Act also provided for the punishment of "any journeyman, labourer, apprentice, or servant" who should "game in any house, &c., wherein any liquors shall be sold"; but it did not declare the game unlawful, as pugilism and gambling are at the present time unlawful, for it left persons even of the lowest degree at liberty to play the games thus specified, so long as they played them beyond the boundaries of public taverns. The Act permitted the games in hotels of every grade; and, whilst it was in full force, the wealthier residents of our country districts—magistrates, clergy, squireens and well-to-do yeomanry—used to frequent ale-house clubs for social intercourse and the diversions of play. The statute merely aimed at restraining the lower sort of people from gambling. If it warrants the opinion that the modern fashion of billiards had come up shortly before, it may also be quoted as evidence that cards, dice, draughts and shuffle-boards were not known till the reign of George the Second. To this extreme even Capt. Crawley would not care to push his argument.

The French attribute the invention of billiards to Henricque Devigne, a French artist, who flourished in the reign of Charles the Ninth; and there is a general feeling amongst Englishmen of our own time that the game was imported into this country from France. But the general impression is sustained by no conclusive evidence, but depends chiefly, if not altogether, on the number of French words present in the vocabulary of the sport, and on the improvements which French players of the eighteenth century unquestionably made in the pastime. Amongst words of French origin still used by English players are "coup or coo," "bricole," "crow," "carambole or cannon." *Bricole*—the name of the stroke whereby the player plays upon the cushion so that, on its return, his ball makes a cannon or hazard—was formerly used by French tennis-players. Cotgrave (1650) gives the following varieties of the word: "*Bricole*, f., 'a brick wall; a side-stroke at Tennis (wherein the ball goes not right forward, but hits one of the walls of the court, and thence bounds to the adverse partie)'. *Bricoler*, 'to toss, or strike a ball sideways; to give it a brick-wall (at Tennis also, as *Bricoller*); also, to bank at bowles'. *Bricoller*, 'to toss, or strike a ball sideways; to give it a brick-wall at Tennis.' When a billiard-player misses a hazard or cannon for which he played, but through good fortune makes one on which he did not calculate, the accidental stroke or "fluke" is called a "crow." By some players this word is erroneously supposed to be an allusion to the smart saying, "He shot at the pigeon and hit the crow;" but the term is really derived from the French *raccrocher*, to recover or get again; the force of the word, as used at the billiard-table, expressing that the player has, by the subsequent fluke, recovered the ground lost by the miss. An equally interesting word is *Carambole*, which is found neither in Cotgrave (1650) nor in Boyer (1753), but appears in Chambaud (1805). This last-named writer gives in his Dictionary—"Carambole [*karambole*], s. f. (t. du jeu de Billard; troisième bille sur laquelle chaque joueur peut jouer, indépendamment de celle de son adversaire)—Carambol." He also gives the verb "*Caramboler* [*karambole*], v. n. (t. du jeu de Billard; toucher avec sa bille la carambole et la

bille de son adversaire). To *carambol*." Hence, on the introduction of the third ball—i. e. the red ball, as it is now-a-days usually termed—it was called "a carambole"; and the player who made upon it and his adversary's ball the stroke now known as "a cannon" was said "to carambole." In process of time the name was taken from the third ball and confined to the stroke. The "carambole" was certainly introduced into England as early as 1779, for it is mentioned in the edition of 'Hoyle's Games, Revised and Corrected by Charles Jones,' which was published in that year. Soon after its introduction into this country "carambole," always pronounced "caranbole," was shortened to "carrom," and then corrupted into "cannon." The author of 'The Game of Billiards' (1801)—a slightly altered reprint of Dew's 'Rules'—observes, "If the striker hits the red and his adversary's ball with his own ball he played with, he wins two points; which stroke is called *carambole*, or, for shortness, *carrom*." The rapidity with which "carambole" was changed into "cannon" is not without interest for the philologist.

But though the French greatly improved the game, there is no proof that they invented it. Instead of conceding the honour of the invention to France, Dr. Johnson inclined to the opinion that the French borrowed the game from England, and observed in his Dictionary,—"Billard, Fr., of which that language has no etymology; and therefore they probably derived from England both the play and the name, which is corrupted from *balyards*, yards or sticks with which a ball is driven along a table." One of Johnson's critical editors, however, observes, "His remark on the French etymology, in the first place, is erroneous; for *billard* is from *bille*, a ball, just as *campagnard* is from *campagne*, and as many more French words are formed. In this determination Mr. Malone agrees with me. *Balyard*, in the next place, is not the genuine reading of Spenser; it is *balliards*, as Burton and other old authors write the word, and therefore the application of yard is forced." It is probable that players of ball-games in different countries at very early dates devised rude kinds of plays analogous to billiards, and that the modern diversion is the product of these various sports—is, in fact, a child of many parents. Certain it is that in far distant times the English had a sort of ground-billiards, in which two players, armed with short maces, struck about two balls, driving them upon each other, and through an arch similar to the arches used in croquet, and round a pin or cone, fixed perpendicularly on the smooth grass. From this old ground-billiards proceeded the game played upon tables, which, after a long lapse of time, has amply repaid its debt to mother-earth by bringing forth croquet and lawn-billiards. Thus raised from the grass-plot to the table, billiards was known in Elizabethan England. Shakespeare, Ben Jonson, Spenser allude to it. The author of 'Antony and Cleopatra' makes Cleopatra say,—

Let it alone; let us to Billiards;
Come Charmian.

Spenser sings,—

With dice, with cards, with balliards, far unfit,
With shuttlecocks misemearing manly wit;

and catching a metaphor from the smoothness of the polished ivory, Ben Jonson wrote—

Even nose and cheek, withal,
Smooth as is the billiard ball.

More modern literature abounds with allusions to the sport. Boyle remarks, "Some are forced to bound and fly upwards, almost like ivory balls meeting on a billiard-table"; and Locke observes, "When the ball obeys the

stroke of a billiard-stick, it is not any action of the ball, but bare passion." When John Evelyn dined with the Portuguese Ambassador, at Cleveland House, he saw a new billiard-table that was greatly superior to the tables ordinarily seen in great houses. "There was a billiard-table," says the diarist, "with as many more hazards as ours commonly have. The game being only to prosecute the ball till hazarded, without passing the port, or touching the pin; if one miss hitting the ball every time the game is lost, or if hazarded. It is more difficult to hazard a ball, though so many, than in our table, by reason the bound is made so exactly even, and the edges not stuffed; the balls are also bigger, and they for the most part use the sharp and small end of the billiard-stick, which is shod with brass or silver." At this period, and for many years afterwards, the pockets of a billiard-table were called hazards—a term now only applied to certain strokes; and the ordinary billiard-table was furnished with three pockets, placed in the upper end of the oblong table, one at either corner of the upper end and the third between the two corner pockets. The table which attracted Evelyn's notice had six pockets. A picture of a table may be seen in the frontispiece of 'The School of Recreation; or a Guide to the most Ingenious Exercises of Hunting, &c.' By R. H. (1732). Strutt, whose assertions are often at variance with testimony, says that this little book was published in 1710; but our copy, which bears no sign of being one of a second or later edition, bears a date later by twenty-two years. The table of this picture is oblong—not square as Strutt represents; and it contains three pockets placed at the upper end. Upon the table, midway from the top and bottom, stand the ring or arch ("the port," as Evelyn terms it), and the king or cone ("the pin" of Evelyn's account). In the old game with the "pin" and "port," if they stood between the balls, the player was required to send his ball through the port or round the pin on the way to his adversary's ball. If his ball touched the pin, it fell instantly, and the player lost a point. Strutt says, "At certain periods of the game it was necessary for the balls to be driven through the one and round the other, without beating either of them down; and their fall might easily be effected, because they were not fastened to the table;" but with regard to the port this passage is erroneous, for though the arch was not fastened into the table, it was heavily weighted with lead so that it could withstand the force of a ball.

The port and pin continued to be features of the game until the introduction of the carambole led to their final suppression. It should also be remarked that formerly billiard-tables were made of various shapes. Our ancestors had round, octagonal, oval and square tables as well as oblong boards. Round and square tables were commonly used, even so late as the beginning of the present century. The A.D. 1808 edition of 'Hoyle's Games, revised and corrected by Charles Jones,' directs the Caroline or Carline game of billiards to be "played on a round or square table with five balls." Very rude pieces of furniture were these old boards in comparison with the slate-tables of our own time. By those who have never examined any of them an estimate may be formed of their want of nicety from the fact that "the spot" in the best tables used at the opening of the present century was "generally marked with two brass nails." The cushions wanted elasticity; the wooden plane was often very uneven; and the best billiard-table makers took but small pains to set their tables on perfect levels. Slate tables were not introduced into England till 1827.

The billiard-sticks of our ancestors also differed greatly from those used by living players. Like the sticks described by Evelyn, the maces and cues of the earlier part of the eighteenth century were often tipped with metal. The expert Frenchman usually played with the cue, but bluff John Bull preferred the mace—the weapon contemptuously alluded to by James Love in the lines,

Not puny billiards, where, with sluggish pace,
The dull ball trails before the feeble mace.

Writing in 1801, "Amateur" tells us—

"The game is played with sticks, called maces, or with cues; the first consist of a long straight stick, with a head at the end, and are the most powerful instruments of the two; the cue is a thick stick, diminishing gradually to a point of about half an inch diameter; this instrument is played over the left hand, and supported by the fore-finger and thumb. It is the only instrument in vogue abroad, and is played with amazing address by the Italians and some of the Dutch; but in England the mace is the prevailing instrument, which foreigners hold in contempt, as it requires not near so much address to play the game with as when the cue is made use of; but the mace is preferred for its peculiar advantage, which some professed players have artfully introduced, under the name of *trailing*, that is, following the ball with the mace to such a convenient distance from the other ball as to make it an easy hazard. The degrees of trailing are various, and undergo different denominations amongst the connoisseurs at this game; namely, the shove, the sweep, the long stroke, the trail, and the dead trail or turn-up, all which secure an advantage to a good player according to their various gradations; even the butt end of the cue becomes very powerful when it is made use of by a good trailer."

After reading this account of the game as it was played in 1801, Capt. Crawley will, perhaps, get the better of his "fancy" that billiards began to be played in the modern fashion towards the close of the reign of our Second George. In the picture already mentioned, that forms part of the frontispiece to 'The School of Recreation' (1732), the players use short, thick, curved sticks, the maces of the period; and each player holds his mace at the middle in his right hand, so that one end of the curved mace rests upon his shoulder, and the knuckles of the playing hand are turned upwards to the ceiling. That the sticks of the most delicate sort, used by the most expert and particular players of the eighteenth century, were clumsy wands is seen from an anecdote in 'The Whole Art and Mystery of Modern Gaming fully exposed and detected' (1726), which tells the reader how a band of sharpers tampered with the cue of a person of distinction, who was one of the best players about town. "After many debates," says the writer, "how these sharpers were to take in the whole company, the person that quitted the counter (whom I shall call E) was thought the properest person to put the design in execution. The first step he took was to possess himself of R's favourite stick, which he constantly played with, notwithstanding the lock and key, and took it away unknown to any but his companions; he had prepared an instrument, made for the purpose, to shave or pare away each end of the stick, and leave in the centre a rising undiscernible to the eye of the most curious, and then put the stick again in its place." The rogue succeeded in his purpose; for the player, whose eye could not detect how his cue had been doctored, lost a series of games to his adversary. So long as the mace remained in vogue, players were accustomed to settle before beginning to play, whether they should use maces or cues. Sometimes a mace player would pit himself against a cue player. The rest, or jigger, does not seem to have been introduced

till tables of the present "large size" had been in use for some time. Writing in the first year of the present century "Amateur" gives twelve feet by six as the proper proportions of a full-sized table, and states in Rule 40—"When the parties agree to play point and point of the cue, neither of them has a right to use a butt during the game or match, without permission, but they have a right to play with the point of a long cue over a mace." Hence the germ of the modern jigger appears to have been a mace, the butt end of which was, perhaps, shaped by the hand of some daring improver so as to accommodate the thin end of the cue.

But though their appliances for the game were imperfect, our ancestors of the last century took a lively interest in billiards, and produced men who, in spite of obstacles, made themselves able players. In the reign of George the Second and in the earlier years of George the Third, London had two notable establishments for billiards; one in Pall Mall, the other at the corner of the Piazza, Russell Street, Covent Garden." The Russell Street rooms were kept by the celebrated player, Abraham Carter, who was in the last century all that Kentfield was in Capt. Crawley's earlier days. Carter's chief competitor was the famous amateur Andrews, who in the times of deep drinking and gastronomic indulgence habitually breakfasted, dined and supped upon tea and buttered toast, in order that he might have the greatest possible supply of nervous energy for the beloved game, in which he won infinite honour, and for the diversions of dice and other pursuits of chance, on which he wasted a comfortable patrimony as well as large sums of money which he won at billiards. Many were the good stories told of this eccentric gentleman's skill with the cue, and his singular want of luck at less scientific pastimes. Having on a certain occasion won a thousand pounds at billiards during the course of a single night from Colonel W—e, Andrews accompanied the colonel in a hackney-coach on the following morning to the City, in order that the debtor might pay the amount lost by a transfer of stock. On their way to the Bank the friends tossed to see who should pay for the carriage; and, having lost the toss, Andrews insisted on continuing the perilous amusement; whereupon the colonel gratified the wish to such good purpose, that before they reached the Bank the debtor had won back the entire thousand pounds. Having reduced himself to a condition verging upon actual indigence, Mr. Andrews in his declining years retired to a village in Kent, where he closed his days in great contentment, purchasing with a small annuity the tea and toast, and few other comforts, necessary for the gratification of his simple tastes. "He lately," says his biographer, "lived in a retired manner in Kent, where he declared to an intimate old acquaintance that he never knew contentment while he was rolling in money; and since he was obliged to live upon a scanty pittance he thought himself one of the happiest of men in the universe. It is now generally believed that he is dead." Another famous billiard-player of the same period was Mr. Dew, the author of the Instructions for the Billiard-table, which may be found in Charles Jones's edition of 'Hoyle's Games,' and in Amateur's 'Game of Billiards.' In these admirable directions, Mr. Dew observes: "Immoderate bursts of passion, and even fretting at trifling disappointments in the game, are usually found very prejudicial to the player; his nerves being affected, it is impossible for him to make the stroke with that nicety and steadiness the game requires,"—counsel which

Capt. Crawley condenses into the brief precept, "*Keep your temper.*"

At the opening of the present century all the really important games now usually played, with the exception of pyramids, were known to patrons of the cue. They practised: 1, the white winning game; 2, the white losing game; 3, the red winning game; 4, the red losing game; 5, fortification billiards; 6, the red winning and losing game; 7, choice of balls; 8, bricole; 9, carambole; 10, Russian carambole; 11, bar-hole; 12, the four-game; 13, hazards (i.e. pool); 14, the Carline game; 15, the commanding game; 16, the doublet game; 17, the limited game; 18, the one-hole game. Modern practice has altogether discarded fortification billiards,—a vile game, which was played by two sets of players, divided into Frenchmen and Englishmen, who drove their balls through castles, forts, batteries, and other such doll's toys, ranged in order about the table. Each fort was provided with a bell, which sounded whenever a ball was driven through its arch. "The red winning and losing," or "winning and losing carambole,"—the game which has in our time won for itself the distinctive appellation of "billiards," was introduced from France about the close of the last century. On its first arrival in this country it was called "Carambole," a name soon afterwards transferred to the cannon game ordinarily played at this day on French tables. "Amateur" (1801) describes it under the appellation "Carambole," and speaks of it as "newly introduced from France." The inefficiency of the players of that date, and the imperfections of their appliances for the sport, are illustrated by the fact that the usual game was "sixteen up," a far smaller score than any mere novice is accustomed now-a-days to make off a single break.

To illustrate the dark side of billiards,—i.e. the billiards of public rooms,—Capt. Crawley gives us some personal reminiscences, of which the following passage may be taken as a sample:—

"Whenever you meet a smart-looking fellow in a public room, who offers wagers against your making certain strokes which he can accomplish, treat him with civility, but don't bet with him. Learn all you can from him, but avoid giving him a chance of winning your money. After awhile, when he finds that he cannot get half-a-crown out of you, he will, in very desperation, love of play, or vanity, show you a few good strokes. This is the almost invariable practice. Take any advice from him, but don't bet. A game or two with him, for 'love,' will, perhaps, not be bad practice. He may not be a 'sharp,' but if he make his living by billiards, he is not a man to know intimately. I wish I could give you the names of some of these smart active young gentlemen. They are very well known, and generally carry a piece of chalk in their waistcoat-pockets, have a favourite cue, and call the marker by his christian name. Just a word in your ear. These clever fellows are sometimes well dressed, and pass for gentlemen. Indeed, some of them have had university educations, and are even members of good clubs. But, beyond a half-crown game or wager, they are dangerous. I remember a remarkably good-looking, pleasant-spoken, handsomely-dressed *chevalier d'industrie*, who was for years reckoned simply as an excellent player. But it was observed that only youngsters and new men played with him for high stakes. He had the run of half-a-dozen clubs, and nobody had anything to say against him. At last, one night Lord Noso introduced him to the billiard-room of the Megatherium, where I happened to be playing pool. He took a ball and played indifferently well, dividing a pool now and then, and betting an occasional half-crown. When the pool was over, somebody challenged him for a game at billiards, and he played. I sat down and looked on, saying nothing. Before the match was over the chevalier

had won more pounds than I should like to name. He was certainly very lucky, and appeared always to improve in his play as the game went against him and the betting got higher. I was interested and watched intently, but could discover nothing unfair. I noticed, however, that he seldom or never played at the white ball, and that in each game he had the spot-ball. But I thought nothing of that, many players preferring to try a hazard or cannon off the red rather than pocket an opponent's ball. And so the match went on, till there were a good many members looking at the game, and betting. At last, the chevalier's opponent, wishing to leave the room for a little while, requested me to finish the game for him. I consented, and played the next stroke with the ball left on the table by my friend. I had hardly played half-a-dozen strokes, when the secret of the chevalier's extraordinary success was revealed to me. *He had changed the balls*, substituting for the true white ball one which was faulty in its roll. This gave him a certain advantage over his opponent; and, being a good player, he won as often as he liked. Many gentlemen will remember how we exposed the lucky chevalier that night. A few years afterwards I saw him playing in a room in a Palais Royal hall. But he levanted directly he caught my eye, and left his game unfinished. It is astonishing how many tricks and disreputable manoeuvres men who make a living by billiards will have recourse to. On another occasion I was present at a match in which a professor gave a good many points to a talented amateur. The betting was in favour of the amateur, but the professor won, principally by a series of gentle losing hazards in the middle pockets. Being a master of 'strengths,' he was able, every now and again, to place the red ball near a middle pocket, when he invariably made a good break. On playing afterwards on the same table, I fancied that the middle pockets 'drew' somewhat—that is, the balls appeared to roll too easily into them. I had the cushions removed, and the cloth lifted, when, as I suspected, I found that the slate had been slightly scraped away, and lowered from the centre of the table to each pocket. In this case the marker must have been a party to the swindle. Albert Smith refers to this incident in one of his pleasantly-written sketches."

After vainly declaiming against evils which belong to the public table rather than the game, society has at length wisely decided to fight the noxious influence by making billiards one of the universal amusements of prosperous homes. By thus bringing the game into the domestic circle, the present generation has removed from schoolboys and young men a temptation to associate with persons who are not fit companions for gentlemen, and to frequent houses to which no man of the world would like his son to be an habitual visitor. It is difficult to imagine a greater contrast than that which exists between public billiard-rooms and those rooms where gentlemen play pool in private society. Whereas the ordinary public room is a dingy, dirty, comfortless chamber, redolent of stale tobacco, and open to knaves of the meanest and most repulsive kind, the billiard-room of a well-ordered family is a bright, airy, luxurious apartment, where children enjoy to watch the game in which their mothers take part. Some of our public rooms are, no doubt, comparatively respectable places; but the best of them are haunts to be avoided rather than sought out. On the contrary, the billiard-room of a happy home is the best possible in-door play-place for the old and young of both sexes. Frequently it is one of the principal reception-rooms of the house; and when that is the case, it is found to be quite as attractive to gentlewomen as any other drawing-room. Capt. Crawley speaks impressively about the character of the exercise taken by players at billiards; and for the most part his remarks have our concurrence. But players must bear in mind that the exercise of the

billiard-room is very different from exercise taken in the open air. Men and women who daily fatigue themselves by stretching over green cushions are apt to forget this important truth.

The Life and Death of Jeanne d'Arc, called the Maid. By Harriet Parr. 2 vols. (Smith, Elder & Co.)

THE story of Joan of Arc, as we popularly call *Joanetta Darc*, will never vex the listener's ears when it is fittingly told; and although the author of these volumes is occasionally a little over-sentimental, on the whole the stirring tale has, perhaps, never been more creditably narrated than in this instance. It would, no doubt, seem hard to say that the writer is too much in love with her heroine, for it is scarcely possible to love Jeanne too well; but when we find that among the qualities and characteristics of the Maid, that of freedom from superstition is insisted on, we must remark in return that the facts are quite opposed to the theory. While every honour should be paid to that heroine, who in the first quarter of the fifteenth century began the patriotic work of expelling the foreigner from France, it would be well also to remember that Joan had more opponents of her work than those who were in the ranks of the enemies of her country. Hitherto, French educational books and historical books cast all the guilt upon the English as disbelievers in and destroyers of the young Maid of Orleans. When she declared her mission, however, her first opponents were those of her own home and district. Jeanne's father protested that he would rather drown her with his own hands than that she should go playing the soldier. When her uncle took her to the noble De Baudricourt for examination as to her mission, her "Voices" and her "Council," that warrior bade the uncle box her ears and send her back to her father. The King's confidant, De la Tremouille, hated her heartily. They who represented the Maid, who had vowed to keep in maidenhood for ever, as joking about the three sons she was to have after the war, sons who were to be respectively pope, emperor, and king, only injured her reputation by circulating the tale. The noblest men near the bewildered King set their faces against Jeanne being admitted to the royal presence. Royal councillors treated her as a liar and impostor, and commoner men joked coarsely in her ears at her personal and religious pretensions. Courtiers were sceptical and mocking. The Dominican, Guillaume Aymeri, scornfully proclaimed that "If God were willing to deliver the people of France out of their calamities, He could deliver them without the help of the Maid's men at arms." Captains scoffed at Jeanne as she rode by them, as "a pretty chevalier to recover the kingdom of France." When she announced that she would convey provisions, men and arms, into distressed Orleans through the Beauce, which was then occupied by the English, the military commanders not only disapproved the courageous audacity of this young girl, but deceived her, leading her successfully, with her reinforcements of food and men, by another way into the beleaguered city; and when, in the council of war held in Orleans, she proposed an immediate assault on the besiegers, her proposal was entertained in a cold and distrustful spirit. The Council kept their own plans to themselves, considering the heroine as a gossiping girl, who would tell them to the first comer. Even after her first brilliant successes, there were jealous and narrow-minded men who denied her superior genius, or were enraged that it carried her to conquests.

It was only when Jeanne had compelled the English and such Frenchmen of the Burgundian faction who were with them to raise the siege of Orleans, as she had promised to do, by the help of God, that her countrymen generally yielded her a more general homage, and had in her a more implicit faith. From the King downwards she had been hitherto accepted and employed simply because everything else had failed. Even hope had expired; but through Jeanne a *chance* presented itself of recovering what had been lost, which chance it was deemed not expedient to throw away.

It was quite otherwise with the English and Franco-Burgundians. They at once believed in Jeanne's supernatural powers, though they, of course, attributed them to the devil. The English soldiers called her "witch," and Jeanne called them "God dams!" But it was this very idea of her being one of Satan's agents that unnerved the courage and unstrung the pluck of the English. Her appearance, with her supposed accursed magic about her, paralyzed the besieging army. The hostile soldiers came to fear to look in her face when she was near their lines lest some evil should fall upon them, here and hereafter. "Dunois said that before Jeanne's coming two hundred English could beat a thousand French; but after it, four or five hundred French could defy all the English power." Such was the aspect in which Jeanne was contemplated by some of her countrymen, from the time she professed to have a mission down to the period when her successes were sufficient to show that her profession was no longer to be disbelieved.

After the victory at Orleans, the general veneration for the Maid no doubt increased; but she had no lack of French enemies. The Archbishop of Rheims disturbed the King's confidence in her. With De la Tremouille and De Gaucourt, the prelate fiercely opposed Jeanne's proposition, after driving the English and their French allies out of the cities held by them, to carry Charles to Rheims to be crowned, and thence to Paris, to be installed in his capital. There was a strange jealousy of her among all classes. If the poor honoured her as she deserved,—like a heroine whom God protected,—abbots rebuked her for accepting a homage that belonged only to saints. People asked, sneeringly, in what accent her "Voices" spoke to her; and Charles himself "entertained more doubts of her now than before she had done him any service." When the Council acceded to her requests, it was always "more or less reluctantly." Worse than all, her own brother informed her of the popular belief around her native Domremy that she held her power from the fairies,—which was only one degree better than holding it of the devil. She was herself conscious of "treason in the air," and dreaded the treachery of men in high station; but there was no treachery in the antagonism of the great French prelate Pierre Cauchon, the Bishop of Beauvais, for that cruel personage denounced her openly, she being the enemy of the English and Burgundian parties in France, who had his support. Nevertheless, the Maid crowned the King at Rheims. She suffered a check before Paris, through the misconduct of others; but then she had broken the sword which she received from heaven, by beating with the flat part of the blade a gorgeously-dressed hussy who flaunted about the camp. Jeanne had broken her divine sword, lost her temper and a battle, and many French people began to think that, after all, the Maid was, perhaps, no better than she should be!

Jeanne's little day had not yet sunk in night, but its glory had departed. Nobles doubted or thwarted her,—opposition met her in all

quarters. Women and shepherd-boys with miraculous missions were raised up by her French enemies to excel her in great deeds, but they only excelled her in promises. On the other hand, Charles, to sustain her prestige, conferred on her some very cheap honours. He exempted her native village from paying taxes for ever, and he ennobled her and her family, giving them, in place of the immortal family name of Darc, that of Des Lys. But her prestige was not sustained. Her very page abandoned her, and, what was worse, gallant and gay young French fellows dangled after her and spoke impertinent soft nothings to her. Enterprises were proposed in order that she might suffer by her failure; and when her last fatal battle came on, before Compiègne, and Jeanne, abandoned by her false French friends, fled towards the town, Guillaume de Flavey ordered the drawbridge to be raised, and, all retreat being thus cut off, the Maid, through the act of a French friend, fell into the power of the Burgundian faction of Frenchmen who had eagerly pursued her. Then, the royal or Armagnac faction of Frenchmen, their faithless king at their head, abandoned her but for whom they would not have enjoyed a day of peace, glory, or prosperity. Dignified Churchmen spoke slightly of her deeds and motives,—people were told that God had abandoned her because of her pride,—and Charles and his government, for whom Jeanne had recovered a France they were unable to keep, never stirred finger to rescue from shame and death the noble Maid when she was held in strait imprisonment by another body of Frenchmen, and by the English government of which those Frenchmen were the very humble servants!

We will not follow the story into the details of Jeanne's trial, sentence, and execution. The infamy of that irreparable crime does not rest, however, on one party alone. When the Maid was brought to trial, it was through the desertion of the King of France, the selling of her by her captors (the Duke of Burgundy and Jean de Luxembourg), and the surrender of her by her purchasers (the English Council) to the Church. But, as Miss Parr truly remarks, "One thing stands for true—princes of her own nation betrayed her to death, and priests of her own nation accomplished her death." When apologists affirmed that the latter had consented to the execrable catastrophe only out of fear, or for the favour of the English, they only aggravated the guilt of those whom they hoped to excuse. The University of Paris were, perhaps, the chiefest criminals in the acting of this great wickedness. Against the course taken on this occasion the truly national voice of both countries was heard at the trial, when an English Lord exclaimed that Jeanne was a good woman, and he only wished she were English,—and when the indignant Châtillon declared that the trial was a mockery! And, moreover, when she was on the very threshold of the most horrible of deaths, it was to an Englishman she owed the only solace she could enjoy at such an awful moment. "She asked for a cross, and an English soldier at the foot of the scaffold, observing that her request was not promptly granted, made one of a broken stick he had and gave it to her. She accepted it, thanked him, kissed it, and put it into her bosom." It was only after this that one of her own countrymen, Brother Isambard, hastened to hand to her the crucifix which she pressed to her lips and clasped to her bosom.

In reviewing the whole case impartially, it is impossible to avoid the conclusion that the greater measure of guilt rests on the heads of the French. Our own, indeed, is not small. Neither party can afford to cast a stone at the

other. Again, a heavier amount of guilt lies with our neighbours than on ourselves, for what they have unworthily said and written of the Maid since her death. With us in England there is no name on the bright roll of heroic women more honoured; there is no memory more tenderly cherished; there is no being who has ever lived for whom we feel such peculiar sympathy; her name comes ever before us in a light of holiness, and the figure of her who bore it is as the figure of an angel. Such, we cannot doubt, is also the case in France; but in France alone has the name of the heroine been outraged, the memory of her deeds defiled, and the story of her life employed, not to edify and refine, but to degrade and pollute the mind. Essays have been written by brilliant Frenchmen to show that Jeanne never suffered at all, but lived the married pensioner of France! Voltaire, as if more than one predecessor had not earned infamy enough by making the "Pucelle" the subject of licentious poems, went beyond them all in measure of baseness when, in his poem with that name, he exposed the heroine naked to the world, and lashed her with his sarcasms, in order to arouse in her native France a scornful laugh at her story. This base act was, doubtless, one of an individual; but Paris, at least, chose to share the overwhelming guilt, by receiving Voltaire on his return from exile to the capital, in 1778, with cries of "Vive l'autour de La Pucelle!" In that cry, virtue, patriotism, religion and gratitude were disgraced, and public decency outraged. But France continues to wrongfully accuse the English of being the sole destroyers of Jeanne's life, and they continue to read the unclean poem of the unprovoked murderer of her fame.

On the other hand, the statue of Jeanne d'Arc by the Princess Mary of Orleans, may be taken as the homage rendered to female heroism and virtue, on the part of the true womanhood of France. In that country none of Jean's race are known to exist, but there is a tradition that one of her brothers, John or Peter Des Lys, settled in Scotland, and there founded the family, members of which still live and flourish under the name, less noble in form, of "Lys."

The Naturalist in Vancouver's Island and British Columbia. By John Keast Lord. 2 vols. (Bentley.)

THE British North American Boundary Commission, to which Mr. Lord was attached as naturalist, was charged with the task of marking a line along the forty-ninth parallel of latitude, in North-Western America,—the limit settled by treaty,—to serve as a visible frontier between British Columbia and the States of the North American Union. The working staff consisted of from 120 to 150 men, and were employed during several years in clearing a lane through the primeval forests which clothe the precipitous heights and narrow valleys of the Cascade range and Rocky Mountains, surveying the swamps, lakes, and rivers, and planting a line of iron posts from the shores of the Gulf of Georgia to the terminal point of the delineation, on the watershed between the Atlantic and the Pacific. Whilst the other members of the Commission were thus occupied, our naturalist was pleasantly engaged in collecting specimens of the Fauna, studying the habits of animals, and investigating the fisheries of the neighbouring waters. About the doings of the Commission our author says very little, and does not even give the dates of the commencement and end of its duties. A considerable portion of his time

seems to have been spent in Vancouver's Island, and on one occasion he was sent to San Francisco to purchase mules, and convey them to head-quarters, over the wilds of Oregon. The materials for a book of the nature which he has now given to the public,—a mixture of narrative, descriptions of scenery and wild life, with selections of readable matter from a naturalist's journals,—were thus abundant and varied. Such books, as experience has shown, are sure of many readers, and are likely, if well written, to attain lasting popularity.

Books of this class, however, are liable to fail of their mark through faults of conception and arrangement: this, we fear, will be the case to some extent with the present work. The thread of the narrative, which should be preserved to give personal interest and unity to the contents, is too much broken, and the natural history is given in too large and too solid lumps. The popular character of the scientific portions is not well kept up. There is very properly an Appendix, to which are consigned the long lists of Greek and Latin names and descriptions of new species; but the technical matter is not wholly confined, as it ought to be if the book is intended for general readers, to this division of the work, but is incorporated, *en masse*, in some of the chapters, especially as regards the Crustacea in Chapter 13 of Vol. II., which is unreadable on this account. The absence of continuous dates is also a serious defect. Some of the narrative portions ill accord in style and substance with the rest of the work. For instance, the journey through Oregon with the mules, which, although written with great spirit and very amusing, contains scarcely any natural history, and smacks rather of the lively tourist than the philosopher. Another defect is the want of an index, which is especially needed in a work throughout which are scattered many valuable scientific facts.

In the execution of the details, Mr. Lord is more successful. His narratives of minor excursions, sketches of scenery and Indian life, and zoological anecdotes, are well and clearly written. He is never tedious when he keeps out of technical detail, and he often succeeds in conveying a picture to the mind of his reader by a few brief touches. Here, for instance, is an account of sturgeon-fishing by Indians:—

"The spearman stands in the bow, armed with a most formidable spear. The handle, from seventy to eighty feet long, is made of white pine-wood; fitted on the spear-shaft is a barbed point, in shape very much like a shuttlecock, supposing each feather represented by a piece of bone, thickly barbed, and very sharp at the end. This is so contrived that it can be easily detached from the long handle by a sharp, dextrous jerk. To this barbed contrivance a long line is made fast, which is carefully coiled away close to the spearman, like a barpoon-line in a whale-boat. The four canoes, alike equipped, are paddled into the centre of the stream, and side by side drift slowly down with the current, each spearman carefully feeling along the bottom with his spear, constant practice having taught the crafty savages to know a sturgeon's back when the spear comes in contact with it. The spear-head touches the drowsy fish; a sharp plunge, and the redskin sends the notched points through armour and cartilage, deep into the leather-like muscles. A skilful jerk frees the long handle from the barbed end, which remains inextricably fixed in the fish; the handle is thrown aside, the line seized, and the struggle begins. The first impulse is to resist this objectionable intrusion, so the angry sturgeon comes up to see what it all means. This curiosity is generally repaid by having a second spear sent crashing into him. He then takes a header, seeking safety in flight, and the real excitement commences. With might and main the

bowman plies the paddles, and the spearman pays out the line, the canoe flying through the water. The slightest tangle, the least hitch, and over it goes; it becomes, in fact, a sheer trial of paddle versus fin. Twist and turn as the sturgeon may, all the canoes are with him. He flings himself out of the water, dashes through it, under it, and skims along the surface; but all is in vain, the canoes and their dusky oarsmen follow all his efforts to escape, as a cat follows a mouse. Gradually the sturgeon grows sulky and tired, obstinately floating on the surface. The savage knows he is not vanquished, but only biding a chance for revenge; so he shortens up the line, and gathers quietly on him, to get another spear in. It is done,—and down viciously dives the sturgeon; but pain and weariness begin to tell, the struggles grow weaker and weaker as life ebbs slowly away, until the mighty armour-plated monarch of the river yields himself a captive to the dusky native in his frail canoe."

Fishing and the natural history of fishes occupy a large portion of Mr. Lord's book, one hundred and twelve consecutive pages of the first volume, besides other scattered notices, being devoted to this part of his subject. His description of the various kinds of salmon which ascend in incredible multitudes the rocky and ice-cold streams of British Columbia, will interest a numerous class of readers, besides securing the attention of ichthyologists, on account of the sound discrimination of the species and the intelligence with which the author writes on this class of subjects. Smoke-dried salmon forms the chief winter food of the Indians, and Mr. Lord gives several lively descriptions of the gathering together of the tribes at the falls of the rivers at the salmon "harvest time." A favourite locality is the "Kettle Falls" of the Columbia river, about seven hundred miles from the sea:—

"About three weeks preceding the arrival of the salmon Indians begin to assemble from all directions. Cavalcades may be seen, day after day, winding their way down the plain: and as the savage when he travels takes with him all his worldly wealth—wives, children, dogs, horses, lodges, weapons and skins—the turn-out is rather novel. The smaller children are packed with the baggage on the backs of horses, which are driven by the squaws, who always ride astride like the men..... While awaiting the coming salmon the scene is one great revel; horse racing, gambling, love-making, dancing, and diversions of all sorts, occupy the singular assembly; for at these annual gatherings when all jointly labour in catching and curing the winter supply of salmon, feuds and dislikes are for the time laid by, or, as they figuratively express it, 'The hatchet is buried.'"

Mr. Lord relates his fishing and hunting exploits with the zest of a true sportsman, and seems to limit his zoological studies to the naming of his species and the observation of habits. The philosophical problems which have occupied the minds of most naturalists during these later years appear to be subjects into which he has not deeply inquired. Even generalizations on the geographical relations of the Fauna which he has studied, occupy no place in his book. His philosophical reflections do not go beyond the old-fashioned sort:—

"Why exist those microscopic wonders (diatoms and infusoria) formed with shells of purest flint, and of the quaintest devices? Why these atomies, that tenant every roadside pool, which dance in the sunbeam, and float on the wings of the breeze? Why all the prodigal variety of strange forms crowding the sea, forms more wonderful than the poet's wildest dreams ever pictured? Who can tell?"

Next to the fishes the natural history of the mammals of the country, many species of which were discovered by Mr. Lord himself, occupy the principal portion of his work. Portions of six chapters are devoted to notices

of birds; the account of the three species of humming-birds, which make their appearance in British Columbia before the winter snows have totally disappeared from the lower slopes, being particularly interesting. One whole chapter is occupied with observations on the different varieties of native dogs, in which the white-haired race, formerly shorn for clothing by the natives of the coast, is stated as probably introduced by Japanese visitors. Before the close of the much-broken narrative there are chapters on the natives, on hints to travellers as regards camping, &c., and on the "Crabs of Vancouver Island."

The Appendix contains, besides a list of all the animals collected by the author (with the exception of the Crustacea), descriptions of new species from the pens of different gentlemen who are authorities on their respective groups. We notice many errors, not always typographical, in the terminology and nomenclature of the technical parts of the work.

Fasciculus. Ediderunt Ludovicus Gidley et Robinson Thornton. (Parker & Co.)

THIS is a collection of Latin verses, mostly translated, by four Oxford graduates. By far the larger part of the volume is the composition of the two editors, Mr. Gidley and Dr. Thornton. Of the other two contributors, Mr. Edward Walford and Mr. John Russell Baker, the former is the author of only four or five pieces, the latter of not more than six or seven.

What Horace says of poetry in general is especially applicable to poetry composed in a foreign language. It is not a necessity of life, but a luxury, and therefore ought not to be mediocre. We do not, of course, mean to say that no Latin verses ought to be written except by first-rate composers. The composition of Latin verse is one of the established means of educating the taste of schoolboys; and schoolmasters who have any time for composition will do well to write from time to time pieces of the same kind as those which they set to their pupils. To do so is the only way in which a teacher can keep up his own interest in the subject—the only way in which he can show a schoolboy that he sympathizes with schoolboy difficulties. The verses thus produced, though far from first-rate, will have accomplished their work if they have succeeded in encouraging the pupil to improve himself by showing him what may be done. But it is a mistake to conclude that because it is advisable that such verses should be written, it is advisable that they should be published. No Latin verses should be published but such as will interest persons who have no interest in the writers, such as will serve as models to other composers, and give real and high pleasure to readers who know what good Latin verses are.

These remarks of ours apply, perhaps, to Mr. Gidley more decidedly than to the other contributors to this volume. He has printed a great many Latin versions, often very fairly executed, of passages from English poetry; but as we turn over the pages of the book we can scarcely point to one which we consider quite good enough to publish. One reason why he has not succeeded better may be that he has frequently been indiscreet in his choice of originals from which to translate. Keats, Shelley, and Mr. Tennyson are great poets; but they are stamped with a peculiar modernism which must render their poems almost impracticable to translators, unless, it may be, to one or two of unusual powers, such as Mr. Merivale. What is there gained by turning such lines as

Then glut thy sorrow on a morning rose,
Or on the rainbow of the salt sand wave,

Or on the wealth of globed peonies;
Or if thy mistress some rich anger shows,
Imprison her soft hand, and let her rave,
And feed deep, deep upon her peerless eyes—
into such as

Tunc matutinis exple lamenta rosetis,
Aut fuerit spumantis Iri ubi orta sal,
Aut opulenta globo pateat pæonia rubro;
Succensere tibi femina si quid amet,
Haud mora, prende manum mollem, sine prodigat iras;
Illius ex oculis plenior haustus erit—?

Each line of the Latin is more or less ingenious; but what notion do the lines as a whole give of Keats's lines as a whole? Keats's thought is peculiar, individual, unclassical; but it impregnates every word and every syllable of the passage, colours the imagery, influences the rhythm. Mr. Gidley's lines would simply puzzle a Roman; at the same time, they are far from satisfying an Englishman. Where is the "rich anger" of the mistress in "Succensere tibi femina si quid amet"? What rhythymical correspondence is there between the passionate languor of "Imprison her soft hand, and let her rave," and the careless rapidity of "Haud mora, prende manum mollem, sine prodigat iras"? And what would "plenior haustus ex oculis" convey to an ordinary Roman apprehension but a shower of tears? This, however, is not the greatest mistake in judgment which Mr. Gidley has made. If Shelley, Keats and Mr. Tennyson are not classical in the technical sense, they are antiques of the purest water compared with Edgar Poe; yet Mr. Gidley has actually thought it worth his while to toil through the whole of 'The Raven,' which is represented in five-line stanzas of trochaic tetrameter, with a trochaic dimeter-hypercatalectic (we believe we are right in our terminology) for the "Never-more" burden. It is, perhaps, a merit in the translation that it does not represent the unmeaning modulation, the nonsense-verse phraseology of the original; but if this was not to be done, why was the thing tried at all? Where Mr. Gidley has chosen more obvious passages for translation he not unfrequently trespasses on ground already appropriated by other and more powerful claimants. Thus he has rendered more than eighty lines from the latter part of the First Book of the 'Paradise Lost' not badly, but not so as to improve in any way on Dobson's excellent version. Or, if it be thought that a work executed more than a hundred years back, and now difficult to obtain, need not prevent even a less gifted artist of the present day from making a similar experiment, why should he have trespassed on Mr. Holden's manor by publishing an inferior version of Walter Scott's lines on Time only a year after a better translation has appeared? We have only space for the last stanza of the poem, together with the rival versions; but the quotation of the whole would lead to the same result:—

Redeem mine hours—the space is brief—
While in my glass the sand-grains shiver,
And measureless thy joy or grief,
When Time and thou shall part for ever.

MR. HOLDEN.

Tu vero reparas, spatium breve creditur, horas,
Donec in hoc stillant grana minuta globos;
Tristitia sive feres seu læta, ea fine carebunt,
Non iterum visum cum tibi Tempus ero.

MR. GIDLEY.

Tu momenta mei prudens cole, dum tibi fas est,
Et stillans horas clepsydra signat adhuc;
Gaudia namque sibi cæli sine fine dabuntur,
Aut erit æternus, nec pereunte, dolor.

Perhaps the following, from Milton's Sonnet to Lawrence, are among Mr. Gidley's best lines ('What neat repast shall feed us,' &c.); subject to a doubt we entertain about the use of the subjunctive in a direct question:—

Quæ nos exillaret simplicitas dapibus,
Cui Bacchus comes est avidus, Aticca,
Post quam vel citharæ dulce sonans melos
Vel vocis numeros sit licitum aurbibus

Hauriri cupiditas Tuscaque carmina?
Quisquis quam bona sint talia perspicit,
Et parce frui, stultitia caret.

Dr. Thornton's verses are in general much the same as Mr. Gidley's,—fairly good, but not good enough. Now and then he is not unsuccessful, as where he renders Herrick's lines—

He knows not love that hath not this truth proved,
"Love is most loth to leave the thing beloved"

by

Hoc si quis verum nescit, vix novit amare,
Invitus linquit quidquid amavit amor."

There is a classical cast, too, about the short original Prologue which he has prefixed to the volume, as the following lines will show:—

Vix denegetur venia, si quid audacter
Styllis Latine forte lusimus nostris,
Vestemque Musas exulasse nostrates
Coegimus, novaque contegi palla,
Qualem beatis prodidere thesauris
Verona et Andes, Sarsina, Aufidus, Sulmo.

Dr. Thornton is, as a general rule, more judicious than Mr. Gidley in the selection of pieces for translation, preferring the earlier English poets to authors whose character is obtrusively modern; but he has once or twice been equally indiscreet in another way. Thus he has turned Colman's humorous poem 'Lodgings for Single Gentlemen' into a set of elegiacs of that hybrid type between Ovid and Martial, which no Roman could possibly have relished, though it has found favour with some modern composers—the translators of 'Gammer Gurton' poetry in the 'Arundines Cami,' and the composers of Westminster epilogues. Even this, however, is more venial than the rendering of Mrs. Leo Hunter's 'Expiring Frog' into eight long-drawn hexameters, not memorable in themselves, and in no way analogous to the absurdity of the original.

Mr. Baker's contributions are almost entirely original; even where he translates, it is as often as not from poems signed with his own initials—an odd fancy, which we should hardly scruple to condemn, if we did not remember that he may possibly shield himself by the example of Cowper. Mr. Walford, who has contributed least, is, we think, an abler composer than his colleagues, and is besides free from their faults of judgment,—though even he has not applied the "limæ labor" quite so freely as he might have done.

NEW NOVELS.

Clemency Franklin. By the Author of 'Janet's Home.' 2 vols. (Macmillan & Co.)

'Clemency Franklin' is a charming story, well written and well told. It is a book to be read for the pleasure it will give, and it is a book to be given to young girls for their own profit. The reading will be an innocent pleasure, without any of the dullness that too often marks innocent pleasures for its own. There is a zest in the story,—simple as it is,—a delicate discrimination of character, and a faculty for putting the various personages into action, which give life and reality to the work. The tale is slight, and the skill of the author has been bestowed upon the delineation of character rather than upon the elaboration of incident.

Two young girls, each with an uncomfortable home, are goddaughters to the Hon. Mrs. Edgecombe, the great lady of the neighbourhood. All the surroundings are well sketched in, and the two girls, Clemency Franklin and Sydney Serle, are well contrasted: Clemency, noble, fearless, frank, and with a fine natural intellect; Sydney, pretty, timid, playful, caressing, and of an abject cowardice, which, however, gave a peculiar charm to her great brown eyes, looking shyly up from the shadow of their long lashes. Mrs. Edgecombe has a son, the idol of her life, who had been driven, by the

stress of paternal tyranny, out to India, where he has acquired rank and distinction, leaving his mother to endure her lot as best she might. The father is dead when the tale begins, and Mrs. Edgecombe reigns over the stately glories of Combe Magna. She is a well-drawn character, with her bright, ardent, generous, though domineering nature. She has set her heart on the marriage of her son, when he comes home, with Clemency. The son is all that a son should be. He comes back; but he, like his mother, loves to have his own way. He resents her plans for him. He likes Clemency, and would have adored her if he had been left free, or if there had been any objection. There are objections to Sydney Serle; but she is, or at least he fancies she is, tender, loving, clinging, and passionately in love with him; whereas, in reality, she is only a little vain fool. The working up of the different qualities of each character in connexion with the others and with the incidents that occur, is clever and delicate; the result, what might have been expected. The story of Sydney Serle's wooing is amusing; her faithless breach of a prior engagement, and the perplexity it brings upon her, is true to life. Out of all the cross-purposes, disappointments, and mistakes, a better order of things arises than all the schemes and day-dreams which human self-will had purposed. The story is very satisfactory, and although it may be a reversal of the usual order to make the heroine change her mind about her hero, Clemency makes the right man happy at last, and the reader, if he be of our mind, will heartily sympathize with him. The moral interwoven with the story is to beware of too much scheming, and not to hold too fast to the desire of one's own imagination, but to do our duties as they are appointed for us, and have trust that the end will be peace.

Chronicles of Carlinsford. Miss Marjoribanks.

By the Author of 'Salem Chapel,' &c. 3 vols. (Blackwood & Sons.)

ALTHOUGH 'Miss Marjoribanks' is superior to the third and immediately preceding instalment of the Carlinsford series, so far as mere readability is concerned, Mrs. Oliphant has not shown a wise discretion in renewing her attempts to illustrate a kind of society which she certainly has not studied under conditions favourable to accurate observation. In the present tale, no less than in the earlier stories, the country-town quality are London gentlefolks transplanted to a small provincial borough; the rural neighbourhood is but a patch of Notting Hill; and the parts assigned to the leading characters betray the writer's ignorance of the sharply-marked gradations of rank, the apparently trivial but practically important varieties of sentiment, the conservative jealousies and the unyielding influences that are the characteristics of English country-town life. The exclusiveness of the author's Grange Lane "set" is the defiant, restless, scheming exclusiveness of the fashionable clique of a newly-established watering-place, and altogether lacks the imperturbable self-sufficiency of the upper ten of an old borough with a poll-list of some six hundred voters. In one place they fight for a recognition which such persons in such a society would be sure to receive without demand. At another time the proudest of them make to the lower members of their own order concessions such as the local magnates of a rural neighbourhood would make under no conceivable pressure. To any one who has observed how slowly social influence grows in country districts, and how tenacious the acknowledged leaders of country society are of their authority and title to respect, there is no need to enume-

rate the circumstances which would render it impossible for a girl—the only child of a successful medical practitioner—to reorganize the society of her district, and bring under her sway not only the married ladies of her town, but also the county ladies of its immediate vicinity. The principal doctor of a country town is necessarily an important power within the boundary of his professional circuit; and under favourable circumstances—that is to say, when his income is ample, his family small, and his personal qualities more than ordinarily attractive and conciliating—he is sometimes found a centre of the best society of his peculiar locality. But still country doctors, taken at the best, are only country doctors, and may not presume to give laws to the county magistrates and wealthier clergy, and other prosperous personages, from whom they draw much of their incomes. Any country doctor's daughter who, at the ripe age of nineteen years, should venture to play the part of social reformer, and to dictate on matters of taste and etiquette to married ladies of unquestionably superior status, would be promptly snubbed for her impertinence, and laughed into better manners. In this lies our chief objection to Miss Marjoribanks and her doings. That at nineteen years of age she possesses the mental and moral characteristics of a woman of five-and-thirty years; that at the outset of her career she possesses nerve, tact, and knowledge of the world, seldom found in women who are not the acknowledged leaders of fashionable coteries; that her acquirements are altogether inconsistent with her education at a country boarding-school and her very limited experiences,—are points on which much might be said to the author's discredit. But these inconsistencies are trifling in comparison with the grand impossibility which underlies the whole story. The task assigned to the country doctor's unmarried daughter is a task which no such person in real life could accomplish.

There is, however, considerable amusement to be found in watching the impossible performances of the young lady; and, until its importunate demands upon the reader's credulity vex him to impatience, the narrative of Miss Lucilla's marvellous exploits produces an interest similar to the excitement felt at the sight of a rope-dancer who keeps his beholders under a lively certainty that his next feat will give him a broken neck. Some of the scenes in which she figures are so intensely ludicrous that they belong to farce rather than comedy. Of these broadly farcical passages, not the least piquant is the description of Mr. Bury's discomfiture when he tries to foist a pious stranger on Lucilla Marjoribanks as chaperon and spiritual guardian. Mr. Bury, however, is a tame, commonplace member of society by the side of Archdeacon Beverley, whose impetuous nature causes him to violate those rules of decorum which clergymen are wont to observe even more punctiliously than any other class of men. One example of this overbearing priest's mode of dealing with his adversaries will show how little he resembles such wearers of the cloth as we are accustomed to meet at dinner-tables and assist in parochial undertakings. The interest of the story depends in a great degree on the movements of a certain Mr. Cavendish, who plays a conspicuous part amongst the Carlingford aristocracy, by whom he is respected as a gentleman of fine taste, unusual accomplishments and considerable wealth. It is whispered of this worthy, that he is "one of the Cavendishes"; and partly out of respect to the gentle lineage imputed to him by his admirers, he is pointed at as a future member of Parliament

for the borough on which he has bestowed the light of his countenance. Nor are the inhabitants of Carlingford greatly mistaken in their estimate of the wealthy resident. He is a man of intellect and unimpeachable integrity; but though he is incapable of crime or baseness, he has been induced by petty vanity to assume a name to which he has no title by birth, and to conceal the lowliness of his extraction under an affectation of gentle antecedents and associations. Years before he settled at Carlingford, Mr. Cavendish, *alias* Kavan, had formed a close intimacy with an aged gentleman, who, dying, bequeathed to him the bulk of a considerable property, to the disappointment of a young lady who, as the old man's niece, had formed a not unreasonable expectation that she would be the testator's principal legatee. On learning the contents of her uncle's will the niece, notwithstanding her disappointment, sees that the fortunate Mr. Kavan is morally as well as legally entitled to the estate bequeathed. Far from suspecting him of having fabricated the will, she does not even suspect him of having exercised undue influence on the senile testator. The case, however, is differently regarded by the young lady's lover and cousin, the Rev. Mr. Beverley, who in the course of time becomes Archdeacon Beverley. Without a particle of evidence in support of his extravagant statements, Mr. Beverley maintains that Kavan is a knave, cheat, conspirator; and with the violence of an angry man utterly ignorant of law, he insists that the disappointed niece shall indict Kavan for conspiracy, and prosecute him for exercising undue influence over the dead man. Clergymen, let it be observed, by-the-by, are usually very clear-headed men of business in all that concerns testamentary arrangements; and even those of them who know least about secular affairs have too much good sense to talk such arrant nonsense about conspiracy and legal indictments, when there are no facts to countenance their offensive language. Of course the niece takes no proceedings against the man, who, so far as her uncle and herself are concerned, has not even been guilty of sharp dealing. Pocketing his wealth, Mr. Kavan turns away from Mr. Beverley, and, after a course of fashionable life in London, settles at Carlingford, under the name of Cavendish. Years pass on; and when Mr. Beverley has risen to be an archdeacon, and so important a member of the clerical profession that he is spoken of as a likely man to obtain a bishopric, he visits Carlingford, and in the genteel clique of the borough stumbles upon his old antagonist, Mr. Kavan, *alias* Cavendish. Time having in no degree softened his prejudice against the honest gentleman, whom, in defiance of evidence, he persists in thinking an arrant rogue, Archdeacon Beverley accosts Mr. Cavendish in a crowded drawing-room, and to the profound astonishment of all hearers, calls him a criminal and a conspirator. "Do you not," exclaims the furious Archdeacon, "understand that compassion is impossible in such a case, and that it is my duty to expose you? You have told some plausible story here, I suppose, but nothing can stand against facts. It is my duty to inform Dr. Marjoribanks that it is a criminal who has stolen into his house and his confidence—that it is a conspirator who has ventured to approach his daughter." On being asked for his facts, the Archdeacon becomes confused; and on further pressure he is unable to mention a single circumstance that gives even a colour of truth to his stupendous calumny, or in any way palliates his ruffianly intemperance. In her third series of the 'Chronicles of Carlingford,' Mrs. Oliphant told the story of a perpetual curate's life, without hav-

ing learnt the meaning of that clerical title; and now she introduces us to an archdeacon who plays the part of an abusive bully, and shocks an assembly of ladies by pouring on one of their intimate friends a torrent of noisy slander. Are we wrong in declining to accept her pictures of clerical life as faithful delineations? Are we unjust when we express our opinion that her knowledge of English society is not complete?

Emily Foinder; or, the See-Saw of Life: a Novel. By F. Devonshire. 3 vols. (Newby.)

Emily Foinder is a young lady who goes through as many persecutions as would set up a saint and martyr in claims to the Calendar. She has a dreadful father; he, though not quite a madman, is a violent fool. He torments his wife, a meek little woman who has no sense; he torments his daughter, who is a dutiful doll; he has a wicked servant who abets him in all his schemes, but who torments him in his turn. Capt. Foinder takes a dislike to a young man who is in love with his daughter, and he insists upon her renouncing her lover and accepting a very vulgar and worthless young man who is her lover's false friend. On his daughter's refusal to comply with the paternal command, he declares she shall go to a lunatic asylum. The wicked servant gets forged certificates and a forged letter, by which Emily is entrapped into an elopement with her lover's friend; landed in an asylum, has her head shaved, and is reduced to be a No. 13, instead of a name.

Her lover, meanwhile, is thrown into prison on the evidence of his friend, who deliberately perjures himself; and his father disinherits him in favour of this wicked young man. Of course all comes right at last. Capt. Foinder is murdered out of hand by his servant in a railway-carriage; lost wills are found, and Emily Foinder and her lover become the lawful heirs of their respective parents, and become Lord and Lady Ermingdale. The wicked friend receives a handsome allowance from those he has injured, whilst Emily shows her angelic benevolence by removing a dangerous though interesting lunatic from safe keeping to place her in one of the park lodges. The novel of 'Emily Foinder' is utter nonsense as regards the incidents. It is extremely bad in style, full of slang, and altogether unprofitable reading for rational beings.

Letters and other Documents illustrating the Relations between England and Germany at the Commencement of the Thirty Years' War. From the Outbreak of the Revolution in Bohemia to the Election of the Emperor Ferdinand II. Edited by Samuel Rawson Gardiner. (Printed for the Camden Society.)

TIME repeats itself. The outbreak of a great war is always heralded by unsuccessful mediation on the part of England. What we have seen preceding the Italian and the Danish campaigns,—what has preceded the cloud of war which is even now bursting in Europe, preceded the Thirty Years' War. The weak appealed to England for help which it was not politic to give them; the strong asked England for advice which they did not mean to take. The friends of England counted on her assistance; the rivals of England called her to be umpire, that she might not take part in the battle; and France looked on till England should decide, ready to throw her sword into the scale of authority if England helped the rebels,—into the scale of religious freedom should England stand aloof and Austria triumph.

Admitting that "the second growth of Puritanism, and the anti-monarchical feeling which

reached its culminating point in the reign of Charles the First, may be distinctly traced to the dissatisfaction of the nation with the desertion by James of his Protestant allies," Mr. Gardiner devotes some space in his Introduction to a defence of James's policy. That policy, he says, was right in its conception, though it failed in its execution. We understand him to mean that James was wise in not countenancing the Bohemians in armed rebellion, wise in his endeavours to secure peace, to avert the horrors of a war of religion, and to reconcile the contending parties. But we must not judge a policy by the ends it proposed to itself, but by the ends it had any chance of attaining: otherwise every policy would be good except that which has succeeded. The fault of such a policy as that of James, the fault which has been repeated so often by his successors, was, and is, that it has aimed at ends too pure to be attainable, and made use of merely human means for superhuman achievements. Mr. Gardiner says that James's ignorance of men and things led him to underrate the difficulty of the work before him, and his vanity led him to overrate his own power of bringing men to his views by the enunciation of a few truisms. "He proposed to send an ambassador to mediate, without knowing what the merits of the dispute were, and without the most distant idea what were the feelings and passions of the men who were to be called upon to submit to the award of this unexpected umpire." That war is horrible, that treaties are binding, that rulers should be just, that nations should be content with what they have, are facts that need no demonstration. But till it can be ascertained exactly at what point those facts apply, and till all people can agree on a definition of right and justice, war will be resorted to, with all its horrors; and the only escape from the cogency of treaties will be that first shot which turns them into waste paper. The arbitrator must be fully aware that each party wants something, and that neither will be satisfied without at least a part of it. If the Bohemians wanted religious liberty, and the House of Austria absolute dominion, it was idle for James to propose that both should surrender their desires, or that one should give up everything without an equivalent. The natural result of a war is, that the strongest takes all it can get, and the weakest gives up everything. But war is seldom carried to that extent. Either the other powers interfere when the two contending powers are weakened and impose a compromise upon them, or the contending powers find themselves too equally matched and agree upon a compromise. All that can be done by arbitration before is to suggest the compromise which must come after; and if this is done with sufficient skill there is some chance of the war being averted. Take the case of the Italian war. France and Sardinia wanted Lombardy and Venice; Austria wanted to keep them. If arbitrators had suggested the present arrangement, it might, or might not, have been accepted; it would certainly have been considered. France would have remembered the Quadrilateral; Austria would have thought of her old defeats at the hands of the French. But when England proposed a Congress to discuss the question with an express stipulation that the Treaties of 1815 were not to be mentioned, war became a necessity; and the compromise which might have been carried peaceably was written in the blood of Magenta and Solferino.

Much the same was the case with the mediation proposed by James. We do not say that if he had sketched out the agreement subsequently effected by the Peace of Westphalia he would have been heard; but the remedies proposed in his instructions to Doncaster are singularly

futile at the beginning of a war that was to last thirty years and to devastate the whole of Germany. Doncaster argued very wisely that, "since the fortune of war is always aguish, and the event oftentimes not answerable to the best grounded hope, his Ma^{ty} (the King of Bohemia) should not be ill advised to fix the wheel while it stands in his favor, especially seeing a higher elevation of his victory would in the end turne but to his losse and repentance for having desolated and impoverished the kingdom wherof he is already invested, and by the same means weakened and endangered the Empire wherof he might, without vanity, be in expectation. But," he adds, "neither my reasons nor instance could move his Majesty one hayres breadth out of the circle wherein it seems both he and his Counsellor were charmed to keepe." We can quite understand it. The fate of an empire is not influenced by truisms, unless they are backed by something still more cogent and no less inexorable.

We see, both by the address of the Bohemians to James and by James's instructions to Doncaster, that the universal Jesuit was then, as now, in the ascendant. Appealing to James as the Defender of the Faith, the Bohemians talk in language which seems a presage of Mr. Whalley of the doings of "Sathan per Jesuitas, organa sua, locustas nimirum illas in Apocalypsi prædictas." James proposes, in order to settle the dispute between the Bohemians and Ferdinand the Second,—"First, that the Jesuits should be limited to their own functions, and that they should not meddle with matters of state; That King Ferdinand should remember the oath which he took at his coronation, which ought not to be broken; That the Protestants should quietly enjoy the patents, agreements, and ordinances granted in past times in their favour by the Emperors, Kings of Bohemia; and that liberty be given to the above-mentioned prisoners, with restitution of their estates and goods, as soon as may be conveniently possible; That every one of the officials of their party be replaced in their offices as they were before." He had previously stated that the Bohemians had "proceeded against two of the principal men of the contrary faction, namely, Slawata and Martinitz, whom as disturbers of the peace they had deprived of their offices." Certainly in this mild phrase Ferdinand would not be slow to detect a decided animus in favour of his opponents, if, indeed, he noticed at all that this mild phrase applied to the act by which Slawata and Martinitz were thrown out of a window eighty feet high. A mediation begun in this tone was most aptly commented on by Gondomar, who held that the vanity of the King of England was so great as to make him think it of much importance to have peace made by his means, and that it was possible and fitting to accept his mediation, "since it cannot do any harm or make things worse than they would be without it." James would hardly have embarked on his course of peace-making with so much satisfaction had he known of the light in which it was viewed by the Spanish statesman.

From the letters of Viscount Doncaster in this volume we do not learn much of the preparations for war or of the state of Germany. We have a good deal about courtly and ambassadorial etiquette, some details about princes and peoples, and a few items about those cruelties and affairs which were so soon to monopolize history. The sketch given to James of his daughter and her husband is, of course, more courtier-like than accurate. Of Maximilian of Bavaria—of whom Schiller says, that his firmness only failed after resisting twenty-eight years of the severest trials—we read 'that his High-

ness is exceedingly misunderstood to their shame that have reported him to his Ma^{ty} for a Jesuited Prince; from which imputation he is so innocent that, were it not for the reverence of his yet living father who brought that vermin into this country, they were it may be in some danger of being driven out by his Highness, who doth now only allow and not favour them. Next, that no subject or servant of our master's can make larger or stronger professions of honoring his Ma^{ty} then his Highness hath done to me, and yet if I have any skill his complexion is nothing complementall." The Archduke and Archduchess Albert received Doncaster near Brussels; and of the first he has something to tell, while of the second we hear from another ambassador that she "swells with the wrong she seems to have that of a Kyng's daughter and syster she cannot (because her husband wyll not) be made the wyfe of an Emperox." Doncaster complains very bitterly of his reception by the Archduke. The Archduke, who had only risen from his bed that very day, was "sitting in a chayre," but there were "no means provided for me to receive that honor, which I conceived due to his Ma^{ty} Ambassador." The reason given, after repeated complaints, was "that the Comte de Noyelles was used in the same fashion at his first audience in England, that at my next I should (as I did) finde other; wherewith I was fayne to rest satisfied, though not altogether pleased."

The relation of a tumult at Frankfort between the guard and the servants of the Archbishops of Mayence and Cologne is not unlike the accounts which even now find their way into the German newspapers, when the soldiers of various nations forget that they are a Federal garrison, and remember their unit more than their unity. But in the same page there is a sentence that might have been penned by any living diplomatist, asking "What hath passed at the Diet, or rather the reason why nothing hath yet passed?" If it is humiliating to find that England has not improved in arbitration since the outbreak of the Thirty Years' War, it is significant that the present German Diet should be a faithful copy of the Electoral Diet which sat in 1619, or of that Diet which, in 1790 and 1791, while the French Revolution was beginning to convulse Europe, occupied itself in discussing whether the dilapidated state of the buildings at Wetzlar was owing to the head-mason, and whether repairs should be undertaken at once or postponed a little longer.

The Bewick Collector: a Descriptive Catalogue of the Works of Thomas and John Bewick. Illustrated. By Thomas Hugo, M.A. (Reeve & Co.)

Mr. Hugo's labour in compiling this immense catalogue of the works of the great draughtsmen and poets, for such, indeed, the brothers Bewick were, has been purely one of love. Apart from the comparative smallness of the circle of readers who are interested in this kind of Art, the number of the body is still further diminished when those are eliminated who would not buy a catalogue, however admirably it may be illustrated and arranged, or however complete it may be. We wish Mr. Hugo all success and more than all the probable reward, he is likely to obtain as the producer of this testimony of affection. When we say that the book before us comprises not fewer than 560 pages of not very widely-printed matter, with 112 woodcuts from the artists' works, and that it surpasses all former collections in value and completeness, Bewick collectors will know what a treat has been spread for them. Mr. Hugo possesses what is probably the largest

collection of impressions from cuts by the Bewicks; of this gathering he has made full use.

The reprints of the cuts are only to be surpassed by the best impressions that are known to us. Many of them are of the highest beauty in Art, *æ. gr.* the mountain view on page 177, taken from the poems of Goldsmith and Parnell: a miracle of fine drawing, very different in feeling and style from the laborious but ignorant manner by means of which our recent engravers and draughtsmen have aimed, not to cultivate the peculiar facilities and felicities of their art and its material, but to imitate—when success is as little to be desired as it is possible—the effects and superdelicacy of steel and copper-plate engraving. In all the works of Bewick and the great artists on wood from the time of Dürer to his own, the amount of thought and knowledge that could be expressed was not supposed to be limited to the production of “fine-lining” and stippling, such as are unapt to the qualities of the block. Now, enormous sums are wasted on such books as the ‘Illustrated New Testament’ of two years since, wherein the artists appeared capable enough to split hairs on the box, but had neglected to acquire the gift of drawing with even tolerable accuracy, much less to attain sufficient power of dealing with the styles of the great old masters in treating form. The boldness of the Bewick manner, on the other hand, was not a mere result of audacity, still less of contempt for Nature, but of a sagacious power of seizing her characteristics, and impressing them broadly and at once,—the result of insight far deeper than the purblind way of our poor labourers will ever lend them.

We may find means to illustrate the difference between the two styles thus referred to, by pointing to the little cut of “Ruins,” done for a private book-plate, and reprinted here, p. 305 (Mr. Adamson's cut, No. 1929), which is two inches and three-quarters wide by two inches in extreme height: it represents a piece of wrecked Gothic architecture with foliage growing about it. Not only have we here the most happy effect of chiaroscuro, in which was no small part of the secret of Bewick's success, and with which he dealt as broadly as a Venetian painter would have done, but the most extraordinary minuteness of form, unlaboured however, and produced with such solid and firm lines that thousands of good impressions might be taken from a block which did not depend for its beauty upon the extreme tenuity of its workmanship. So wonderful an amount of incident and character has this little design, which, however, is only one among many thousands, that the foliage of the oaks, distinguishable as that of the ground-oak,—the chestnuts, which peer through the vista of the central arch,—the feathery ashes and the seldom-trodden herbage in the front—leaf and stalk, blade and flower, are all here. Here, also, is the perfect surface of the sandstone, in some places greatly weathered—see the pinnacles, where the wind has bitten deeply, in others less so—near the bases of the pillars of the crossing; the broken surface of the wall, which is partly built of rubble—see on the left, by the side of the pointed window; the forms of the mouldings; traceries and caps were not less happily and swiftly distinguished. Yet probably there is not a line in the whole cut which a decent apprentice of the modern craft could not split in three.

We may turn again to p. 271 of this book, where is a reprint of a small cut (No. 1619), an illustration to a trivial book, called ‘The Foolish Stag,’ done for the delight of children. Here is represented a stag about to drink from

a pool that is partly overhang by trees, and guarded on the distant side by a row of palings,—fence is perhaps the proper name,—that is itself cut off from an open field, wherein there is a stag galloping, no doubt before the hunters. One might write a column of the *Athenæum* about the drawing of the nearer stag, the spreading apart of his fore-feet as he stoops his antlered head towards the water, the form of the hoofs that press upon the sloping turf, the balance of the head itself, the contour of the neck, the handling of the beast's *scapulae*, the texture of his hide, and that supreme craft by which the artist, lover and knower of Nature, has contrived to tell us how the hair points upon different portions of that hide,—one way on the neck, where its fineness is clearly made out,—in another on the flank,—in a third on the haunches,—and how it is very hard and fine upon the slender and elegant fore-legs of the creature. We know, but need not tell, how old he was by the lines on his antlers; we can see by the shape of his nostril that he has not been hunted on that day.

We will let this pass, and keep our attention for the row of very prosaic palings that cuts off the side of the bank at some little distance from the water's edge, and is planted in sward, the nearer portion of which has been eaten away by the stream. There are four uprights to this row of palings, and these are crossed above by a horizontal bar. Now, not one of these pales is upright. We should say, before going further, that their average height is not more than three twenty-fourths of an inch. We say average height advisedly; for they are not all alike even in that respect, for which irregularity many things may be said to account: the carpenter had unequal materials probably, old ship timber, it may be,—one never knows how they will divide such stuff in the ship-breaker's yard; or they sank differently in the earth after first fixing, and had to be refixed, not vertically as before; they wore unequally in the weather, just as men do; and, although beyond a question their tops were once rectangular, it is clear that something—time, water, wind, mischievous boys, or nibbling beasts—has not left a right angle, or so much as a regular curve, for their tops, nor two curves which resemble each other, or (this is exactly what was to be expected) two sides of the same pale, which, at its top, are equally worn. The palings are old, but the line of verdure behind them is new; in fact, it is composed of young fir which the owner planted last fall by way of a screen and for timber, to be used one knows not how by-and-by. The pale which is most to our left has had a splinter taken off—doubtless by violence—the upper part of its length; this is above the horizontal bar, but it goes down to the ground at the full width below that bar. Something has happened to the extreme pale on our right; we are inclined to think that when it was rent a cantankerous knot sent the wedge or axe-edge askew, and made one of its borders a good deal thicker than the other; at any rate, the stroke of light left by Thomas Bewick on that side of this paling is wider, much wider, than we can account for by the analogy of the other palings: we have not, of course, impudence enough to disbelieve the said Thomas about that light. If any less faithful than ourselves exist, let them repent on seeing how the top of this identical pale—which, as nearly as our hair-dividers can measure it, is exactly three twenty-fourths of an inch in height and one forty-eighth of an inch in average width—is also thicker than those of its companions, and catches the light, having a dent in the middle which makes that light (one forty-eighth of an inch or thereabouts

though it be) *unequally* wide. How many strokes of Bewick's pencil told all this, does the reader ask? Well, three, or if we count them twice, once above and once below the bar, six, or, to be exact, five and a half, for two of the top ones are melted somehow together. On looking again, it is obvious that a large allowance must be made to one of these five strokes and a half on account of the fact that one of those of the lower three, by turning sharply towards our right, does duty, not only for the outline of the horizontal bar, but for the thickness of that member's lower edge, nay, also for the shadow it casts on the slightly sloping pale.

Apollonius of Tyana, the Pagan Christ of the Third Century: an Essay. By Albert Réville, Doctor in Theology, and Pastor of the Walloon Church in Rotterdam. Authorized Translation. (Hotten.)

THE author of this little essay is understood to be the early friend and fellow-student of M. Renan, and he seems to possess a good deal of the spirit of philosophical criticism which distinguishes the latter, though running in a somewhat different direction. He has drawn here an interesting sketch of a not uninteresting episode in the history of the Roman empire.

About the time of the birth of Christ there appears to have prevailed throughout Greece and Rome, among men who thought, a strong feeling of dissatisfaction with paganism as it then existed, with a belief, not that polytheism itself should be abolished, but that it was in need of reform. To these reformers Christianity was not acceptable, because it abolished the old creed altogether; but there were many who saw the much higher moral character of this new creed, and who wished to recast the old religion upon the new model,—in fact, while they rejected Christianity itself, to form a Christianized paganism. It was out of this spirit that numerous later philosophical sects arose, and it led to what M. Réville calls an attempt to introduce a pagan Christ, and this attempt received imperial encouragement in the reigns of Severus and his successors. This spirit in the imperial household appears to have come from the East, and to have arisen out of the mysticism of eastern sun-worship. Julia Domna, the wife of the Emperor Septimius Severus, was the daughter of a priest of the Sun, at Emesa, in Coelosyria, and, herself a woman of superior mind, she assembled round her some of the most learned and intelligent men of the day, including two well-known names in literature, Dio Cassius the historian, and Philostratus. Her sister, Julia Mesa, her intimate and faithful companion, shared in her sentiments; and it was to her influence that Rome owed the elevation of Elagabalus, a priest of the Sun, and a fanatical advocate of the eastern Sun-worship, to the imperial throne. Julia Mesa and her daughter, Sumis, the mother of Elagabalus, held the reins of government during his reign, and on their deaths, soon after, the same influence continued in the person of Julia Mamaea, the daughter of Mesa, and the mother of Alexander Severus.

It was under the influence of this extraordinary family of remarkable women, all coming from a Syrian temple of the Sun, that the vigorous attempt was made to establish Sun-worship as the orthodox religion of the Roman empire, the traces of which are still visible in so many remarkable monuments, not only in the centre of the empire, but through all its provinces, and even on the distant shores of Britain. To one of these women we owe also the equally unsuccessful attempt to establish a

pagan Christ, whom they sought to set up as a rival to the Christ of the Gospel. For this purpose she chose an individual who flourished some two centuries before, and whose name enjoyed a certain reputation for the strictness of his philosophical doctrines and life. This man's name was Apollonius, and he was born at Tyana, a Greek city of Cappadocia, it is believed at about the same time as Christ was born in Judæa. Perhaps the circumstances of his being a contemporary of Christ was one of his recommendations to the choice of the imperial religious reformer. To Philostratus, already mentioned as one of the literary circle of Julia Domna, was intrusted the task of writing in Greek the life of the philosopher Apollonius of Tyana and the result was a singular piece of credulous biography, which is still in existence. Apollonius had sought to restore in their primitive purity the doctrines and practices of the Pythagoreans, who were looked upon as the most divine of all the sects; and he had wandered over the world, and even visited the Brahmins in India, to perfect himself by their teaching and example. He appears to have been a wild religious enthusiast, who worked himself, or at least his followers, into the belief that through his perfection in virtue he had obtained in his person the character of a divinity, with the power of working miracles by the mere exertion of his will. Moreover, like the Christ, he sustained persecution for his reforming opinions. Philostratus relates with great zest the life and adventures of Apollonius, and especially his miracles.

Dr. Albert Réville, in the little volume before us, has investigated, with skill and judgment, the literary history of the work of Philostratus, and the religious and political circumstances of the time under which it was written and published. Though concise, he has produced a satisfactory essay, which gives a new interest to a subject which was almost forgotten. He has shown especially that the attempt which was made under imperial influence in the third century to set up Apollonius for a pagan Christ, as a set-off against the Christians, was a miserable failure.

OUR LIBRARY TABLE.

The Beautiful in Nature and Art. By Mrs. Ellis. (Hurst & Blackett.)

"But what is usefulness?" observes Mrs. Ellis to the young ladies whom she addresses in this pleasant and healthy volume. "Is it limited to that which enables us to eat well, sleep well, dress well, at the least possible expense? Or is usefulness that which adds to our happiness under any circumstances, whether prosperous or adverse? I would accept the meaning of the word under the latter definition; and, under this view, would speak of beauty as an element of usefulness, because all things are useful which tend to make us intelligently and innocently happy. If it be useful that some one should point out to us a way by which we can purchase our food and dress at a low price and yet of good quality, it must certainly be useful to point out some way of obtaining a perpetual feast of enjoyment, of which no change in our ordinary circumstances can deprive us. It must be useful to help us to see beauty in that which is always before us in the open book of Nature, and which is always accessible to us in the lesson-book of Art." In this strain a writer, who has had much experience as a teacher, lays before youthful minds certain elementary truths relating to Art, and the knowledge to which the study of Art proves a ready and agreeable means of access. The volume may be recommended as a book suitable for school girls.

The Making of the American Nation; or, the Rise and Decline of Oligarchy in the West. By J. Arthur Partridge. (Stanford.)

THE author of the 'Budget of Paradoxes' should

look at this wild, fantastic, rhapsodical eulogy of Transatlantic democracy by an enthusiast who has, on former occasions, told the world what he thinks on questions of American politics. "The main object of this work," the Preface informs us, "is, therefore, to trace the Historical Development of that Principle of Equality in Education, in religion, and in politics, intrusted by God to the care and final vindication of the American nation." Of the recent war of secession, he remarks: "The slave fight was a 'big job.' It was the fiery ordeal through which America had to pass from federation to nationality." Of the great republic, he observes: "Thirty Millions of Kings" (printed in capital letters) rule America. Each knows right well that his Sovereignty depends on the common respect for the law, and that the respect of the world for the power and the principles of Democracy, and the national institutions, depends upon the Union." Having quoted a passage from one of Mr. Sala's American letters to the *Daily Telegraph*, he adds, in a foot-note, that the "Special Correspondent from America in the Midst of War" is "neither Puritan by nature nor ascetic by habit." As Mr. Partridge announces himself a member of the Reform Club, of which society Mr. Sala is also a member, he perhaps speaks from personal observation. This is not the only instance of bad taste to be found in Mr. Partridge's pages.

Vignettes. Twelve Biographical Sketches. By Bessie Rayner Parkes. (Strahan.)

THE dozen of earnest women earnestly commemorated by Miss Bessie Parkes are these:—First, Madame Swetchine, a Russian lady, who falls into the group of Muscovite saints: a great, a good, and, in the main, a true woman, not without a spice of Jesuitism in her composition, even as had that more notorious and tawdry prophetess, Madame von Krüdener, who kept the Czar in thrall, and held prayer-parties in Paris, at which sceptics (Benjamin Constant among the number) knelt and yawned. Second, "La Sœur Rosalie," the Sister of Charity—possibly the best representative of that remarkable order that ever existed. Third, Madame Carpentier, directress of charitable institutions, and an author of some works that have attracted notice. Fourth, our countrywoman, Madame de Lamartine—here enthusiastically eulogized as the affectionate helpmate of a distinguished poet and man of letters. Fifth, Madame Luce, of Algiers, who has devoted herself to the difficult task of attempting to educate and ameliorate the condition of Moorish women, and this (wisely) without any attempt at proselytism. Sixth, Madame Winthrop, a name never to be forgotten when "the Pilgrim Fathers" are thought of. Seventh, the continuer of 'Rasselas,' Miss Cornelia Knight, who hardly seems to us to merit a place in a gallery of representative women. Eighth, Madame Goyon—a sketch combined from little-known materials, in part a memoir by M. Émile Souvestre, with taste and neatness: the best of the dozen. She was a patriotic Italian lady, who seems to have tempered her burning eagerness to see her fair country rise among the nations with a quiet, practical sense, too rare, alas! among the gifted liberals on the other side of the Alps. Ninth, Mrs. Delany, that good, dozy, discreet old lady, of whom, and of whose *herbarium* in tinted paper, we have heard enough, thanks to "little Burney" and to Lady Llanover's book. Tenth, Doctress Harriot Hunt, whose queer American autobiography passed through our hands some years ago: sound at the core, though with a huge amount of conceit on the surface. Eleventh, Mrs. Bosanquet, better known, perhaps, as the worthy wife of Fletcher of Madeley, the reverend Methodist author of 'Checks to Antinomianism': one whose virtue and beneficence as a working (not only a preaching) priest during times of great stress and sorrow must endear his memory to all who value deeds more than words. Twelfth, Mrs. Jameson.—The above list makes criticism in detail superfluous. It may be added, however, that these twelve "Vignettes" originally appeared in a periodical; and that Miss Parkes appears to us, so far as we know her writings, to have improved in her choice of language and balance of style—as every one

who takes up authorship with sincerity has a good chance of doing, provided he does not stiffen into conceit and mannerism.

Worcesteriana: a Collection of Literary Authorities affording Historical, Biographical, and other Notices relating to Edward Somerset, Sixth Earl and Second Marquis of Worcester, Inventor of the Steam-Engine, and his immediate Family Connexions. With Critical Notes. By Henry Dircks. (Quaritch.)

THE title-page of this work sufficiently explains its intent and object. If another word be required to further elucidate the latter, it is only to state that Mr. Dircks, having possessed more material than he could use in his biography of the second Marquis, has here published a sort of *catalogue raisonné* of authorities, with critical annotations, for the use especially of all future writers on the subject of "The Inventor of the Steam-Engine," touching whom and his princely connexions, Mr. Dircks considers that gross errors have been hitherto promulgated and repeated. It is worth remarking of this family, that since the year 1514, when Charles Somerset, the natural son of Beaufort, Duke of Somerset, was created Earl of Worcester, down to the year 1682, when the third Marquis was created Duke of Beaufort, the title descended regularly from father to son. With the exception of the succession, first, of a grandson, and then of two brothers, the ducal title has also been regular in its descent, the present duke being the lineal descendant of the first earl. Previous to the era of the Somersets, ill-luck seemed to attach itself to the title. The first earl turned monk, out of sheer poverty; the second was beheaded; the third slain abroad; and of the two Tiptofts who succeeded, one lost his head, and the other died a minor and unmarried. Perhaps the happiest man of them all was the first marquis, who always went to Court in a frieze coat, and now lies at Windsor in a woollen shroud.

Essays on the Irish Church. By Clergymen of the Established Church of Ireland. (London, Parker & Co.; Dublin, Hodges & Smith.)

FOUR rectors in the Church Establishment in Ireland have contributed to furnish the five Essays in this volume—viz., the Revs. James Byrne (who furnishes two Essays on the principles and the endowments of the Irish Church, and on its influences), Arthur Edwards, William Anderson, and Edward Lee, from whom we have an historical sketch of the Church, a summary of its difficulties, and an account of its property and statistics. Mr. Byrne, after defending his Church, acknowledges that "many changes might be made with advantage in the Irish Church," but holds that, if she be subverted, Ireland will be overwhelmed by the destructive power of Romanism or Atheism. Mr. Edwards, with the experiences of history before him, concludes that the enemies of the Irish Church are revolutionists, with further ends in view. Mr. Anderson alludes to the gradual extinction of the Irish language as facilitating the work of conversion among the native Romanists. We must, however, remind him that Mr. Leriham, in his 'History of Limerick,' asserts that more people in Ireland speak Irish than was the case centuries ago. And we would suggest to the author of this Essay that one of the difficulties in the way of the Established Church is really disappearing. The old, hearty, beloved, and clever Irish priest is altogether dying out. Italians or Italianized Irishmen, who have no sympathies whatever with Ireland or the Irish, and whose efforts are made exclusively for the profit and glory of Rome, are taking the places of the national priests. Cardinal Cullen is Italian to the very tips of his fingers. He and his Italianized priests are hated by the old country priests and the old country people, who have always been rather Irish Catholics than Roman Catholics. As for the old Catholic Church of Ireland, Mr. Lee recognizes her in the Established Church; and he is not wrong, perhaps, in maintaining that, because her clergy are working earnestly to strengthen her, that clergy are assailed by their and Ireland's enemies, the Italianized priests, who care less for Ireland than for Rome.

Examples in the Methods of Modern Geometry, especially Trilinear Co-ordinates. By R. H. Wright, M.A. (Longmans & Co.)
A good and useful collection.

A Collection of Two Hundred Chess Problems. By F. Healey. (Longmans & Co.)

THE usual plan of full diagrams. One of the good abbreviated methods would reduce the price to one-fifth, or even below. But if chess-players like to pay for hundreds of elaborate woodcuts, no one has a right to prevent them.

Useful Rules and Tables relating to Mensuration, Engineering, Structures, and Machines. By W. J. Macquorn Rankine. (Griffin & Co.)

Prof. Rankine is sure to gain credit, undertake what he may. But in the present matter he is not merely himself, but all of himself. To very wide knowledge, and familiarity with application, he adds a strong power of collection and digestion. It must delight him to put things together, and to contrive their order. The book before us—a necessity of the engineer, &c.—will be useful to any teacher of mathematics.

The Principles and Practice of Levelling. Fifth Edition. *With the Addition of Mr. Law's Practical Examples for setting out Railway Curves, and Mr. Trautwine's Field-Practice of laying out Circular Curves.* By F. W. Simms. (Lockwood & Co.)

THIS is now a standard work, and needs no recommendation. A work in its fifth edition has been carried to the superior court long ago. All we have to do is to note the reprint, and advertise the additions.

A Collection of Elementary Test-Questions in Pure and Mixed Mathematics. By J. R. Christie. (Macmillan & Co.)

THIS is the collection of an experienced teacher, and has much extent of subject, and corresponding necessity of selection. There is a collection of examination papers; and the whole has a very useful appearance.

The Young Geometrician; or, Practical Geometry without Compasses. By Oliver Byrne. (Chapman & Hall.)

TRIANGULAR rulers are substituted for the compasses. There is always something ingenious about Mr. Byrne's notions; but we do not think his triangular rulers will drive out Jacky Two-legs.

An Elementary Treatise on Solid Geometry. By W. S. Aldis, M.A. (Deighton & Co.)

THIS is a wrong title; and persons wanting a book on solid geometry may be deceived by it. It is an application of algebra to solid geometry, and also of the differential calculus. We object to nothing but the title. The work is of well-selected elementary character.

We have on our table *Peace through the Truth; or, Essays on Subjects connected with Dr. Pusey's Eirenicon*, by the Rev. T. Harper (Longmans);—*A Smaller Dictionary of the Bible*, for the use of Schools and Young Persons, by William Smith, LL.D. (Murray);—*The Epistles of St. Paul to the Ephesians, the Colossians, and Philemon*; with Introductions and Notes, and an Essay on the Traces of Foreign Elements in the Theology of these Epistles, by the Rev. J. Llewelyn Davies, M.A. (Macmillan);—*Ecclesia Dei: the Place and Functions of the Church in the Divine Order of the Universe, and its Relations with the World* (Strahan);—*Letters to the late Charles Butler on the Theological Parts of his Book on the Roman Catholic Church*, by Henry Philpotts, D.D. (Murray);—and *Sermons for the Sick and the Afflicted*, by the late Rev. Hugh Stowell, M.A. (Hamilton, Adams & Co.).

LAW BOOKS.

Bracton and his Relation to the Roman Law: a Contribution to the History of the Roman Law in the Middle Ages. By Carl Güterbock. Translated by Brinton Cox. (Philadelphia, Lippincott & Co.; London, Trübner & Co.)

THIS work, intended by its learned author to elucidate the history of the Roman Law, and valuable to all students of legal history in that view, has a

still higher interest to the English reader as bearing on the history of our own Common Law. Bracton is the greatest authority on the law of England in his day; and the inquiry into his relation to the Roman Law is, in fact, an inquiry how far that law had, in the middle of the thirteenth century, influenced the laws of this country. This question is one which has been frequently referred to by legal authors as being of great importance; but it has not been fully investigated, and it has recently been classed by an English writer of some eminence as amongst the most hopeless enigmas of jurisprudence. In the present work (which, we believe, has been published for some years, though now translated for the first time) Prof. Güterbock approaches this question in that patient spirit of inquiry which is so fatal to all "hopeless enigmas." Being a foreigner, he is free from that bias, almost rising to the warmth of party spirit, which would influence most Englishmen in dealing with this subject. Here an admirer of our Common Law would be inclined to underrate the influence of the Roman Law, and strive to show that the whole body of the law in force in Bracton's day was the indigenous growth of our own soil; while a learned Civilian might be tempted to claim for the Roman Law the credit of some of those excellent rules which we owe to that great and original system which belongs to this country. The frequent use which Bracton makes of the Roman Law is undeniable; and those who are most adverse to that law have been driven to the suggestion that it is only used by him as embellishment or illustration, and that it had then no legal authority. Bracton, however, was writing a practical law book for the use of the English Judges; and the sounder opinion would seem to be that at which our author, following the late Mr. Spence, has arrived, namely, that the Roman Law stated in Bracton was good and valid law, having been incorporated into the Common Law of England. The probability is, that the Roman Law was extensively adopted to supply the deficiencies of our Common Law; and that, while our forefathers were very jealous of any introduction of foreign law affecting matters on which our own legal system was complete in itself,—as on the subject of real property or immovables,—they readily adopted the Roman Law as regarded those matters of which our Common Law had taken but little note, as was the case with personal property or movables. The large extent to which Bracton was indebted to the *Summa* of Azo, to the Code and the Institutes, is proved by the extracts from the two works which are placed side by side in this book. We regard the present as a very valuable contribution to the history of our laws; but it by no means exhausts the question. We trust it may be the subject of further investigation, which cannot be better prosecuted than in the spirit of the present work.

Institutes of Jurisprudence. By William Austin Montrieu, Advocate of the High Court, Bengal. (Calcutta, D'Rorario & Co.; London, Macmillan & Co.)

IT is a little startling on opening a law book to come upon an extract from the works of Mr. Tupper; and the fact suggests an apprehension that the author's predilections may be in favour of a style of composition somewhat more verbose and less intelligible than is usually adopted in a legal work. We are bound to state that this apprehension is but too well founded. The author revels in synonyms; and instead of selecting from the little squads of words that present themselves before him the most serviceable one, he marches them all bodily into his book, and the effect is not a little wearisome to the "gentle reader," and even irritating to one who does not happen to be "gentle." The object of the writer is to bring within "convenient compass a categorical and didactic exposition of the elements and principles of jural science"; and the present work is a *résumé* (methodized and compressed) of oral lectures delivered to the law classes of our Presidency College at Calcutta. On referring back to this statement, which is contained in a dedication of this work to Lord Stanley, after an examination of the work itself, our first feeling was one of curiosity as to what the lectures must have been like before they were compressed,

since such liberality of words is still apparent. This feeling of curiosity, however, soon yielded to one of pity for the students (probably the deceased students, for few can have survived) who underwent those lectures in that hot climate. We are satisfied that the style of this work will prevent its being of any general service; and this is much to be regretted, as we think that the author is, in many respects, well qualified for the task he has assumed, and that the present book, if it were so composed as to be readable, would also be useful.

The Law relating to Boundaries and Fences. By Arthur Joseph Hunt, Barrister-at-Law. (Butterworths.)

As every Englishman's ambition is to have a freehold of his own, we must all be interested in the law of boundaries. If the estate is on the coast, new questions will arise between the owner and the Crown. If it is bounded by a small river or a road, the owner's title to the land "*ad medium flum*" will cast upon him rights and duties that he dreamt not of. If your property is bounded by a wall, your neighbour will use or abuse that wall on the other side, and you must ascertain your legal rights therein. So if a man grows his own vegetables—and what real happiness can there be without doing so!—your neighbour's cattle will eat them, and your right to satisfaction will turn on the law of boundaries, the question being who ought to have kept them in such a state as to keep out the intruders. The law of boundaries and fences is, in the work before us, treated with great ability; and as the language is clear and, as far as may be, free from technicalities, it will be found useful beyond the limits of the legal profession.

LIST OF NEW BOOKS.

Bell's Emphasized Liturgy, &c., 12mo. 3/6 cl.
Bourdillon's Bed-Side Readings, 2d series, 12mo. 2/ cl.
Catechism of Theology, 18mo. 1/6 cl.
Christian Verses for the Children, 12mo. 1/ cl. swd.

WESTPHALIAN SUMMER SONG.

(From the German of F. Freiligrath.)

In lightning and in summer's rain,
In noon-sun hot and glowing,
Full gaily, O Westphalia's grain,
Art shooting up and growing!
Old Hellweg's rye,† so lithe and strong,
Seven feet and more thy stems are long,
How gloriously dost ripen!

"I grow and ripen fast and strong,
The year with gifts is mellow,
To satisfy both old and young
I ripen rich and yellow.
But dost thou not, O wanderer, know
That he who joyfully did sow
Can never cut and reap me!"

"Forth thro' my swaying ears he went,
In rank and order starting,
With clenched fist and head low bent
From house and home departing;
Loud summoned by the drum and horn,
He goes to crush his brother's corn
In brother-war unhallowed.

"Who, then, for this year's harvest-home
Will fetch the girls to foot it?
Alas! who'll wave the harvest-wreath?
Upon the barn who'll put it?
The reaper's name is Death, I wot,
He mows this year with grape and shot;
Well know I who has hired him.

"A little bird sings on the Haar:‡
'Where Elbe and Maine are heing
There he who was a ploughboy here
All stiff and stark is lying.
His homestead's pride, forth did he go;
A brother's bullet laid him low!—
I rustle to the breezes."

KATE FREILIGRATH.

June, 1866.

† Hellweg, the fertile corn-plain of Westphalia.

‡ Haar, a range of hills in the same district.

THE SAMARITAN PHOTOGRAPHS BY THE PALESTINE EXPLORATION FUND.

Lonsdale Square, July 2, 1886.

IN your Journal of Saturday last, a brief account is given of the list of photographs of Samaritan objects taken under the auspices of the Palestine Exploration Fund, and submitted by that society to the inspection of Mr. Deutch of the British Museum, with his report thereon. As I take great interest in Palestine Archaeology, and especially in Samaritan matters, I trust I may be allowed to make a remark or two with regard to the photographic copies of the Samaritan Law, especially since the photograph made for His Royal Highness the Prince of Wales, on the occasion of his visit to the Holy Land, seems to be a blunder, if we are to judge from the copies of it published. And, firstly, it is a mistake to suppose that the Samaritans at Nablous have but one scroll. I have myself seen and examined three, which bear much similarity one to the other, and are kept in similar gilt cases. It is, therefore, of importance to know what assurance we have that the photographs in question were made from the famed ancient roll and not from one of the others. I have been a witness, on more than one occasion, when the priest imposed upon travellers, who were anxious to see the celebrated scroll, by showing them one of the other two rolls instead of the true one itself, and this need cause no surprise when it is remembered with what jealousy it is guarded, and how rarely it is exhibited to any one but themselves.

We are further told that in the opinion of modern investigators this ancient copy, together with the Samaritan Recension itself, was written some centuries after Christ. With regard to the antiquity of the Recension itself, this opinion is quite gratuitous, and it would be highly interesting to know from what data these investigators have arrived at the conclusion respecting the ancient copy.

In conclusion, let me add, it is equally a mistake to suppose that the quartos are regarded with any peculiar reverence. It is true they are carefully kept as valuable transcripts; but they are never used by the priest to read publicly from, as they are not esteemed sufficiently sacred: none but the rolls are used for that purpose, and the most ancient of these is only shown to the congregation once a year, namely, on the Day of Atonement.

JOHN MILLS.

DICTIONARY OF PAINTERS.

York Street, Covent Garden, July 3, 1886.

As my name has been imported into several of your recent papers, in reference to some of my contributions to Mr. Otley's 'Supplement to Bryan's Dictionary of Painters,' I crave the insertion of a few lines of explanation. And I think it right to begin with acknowledging that your reviews of June the 9th and 23rd are substantially correct, and though rather caustic, not more so than the occasion required, or than I should have written them myself had I not been the publisher. My printed notice, which follows, somewhat antagonistically, Mr. Otley's preface, states what gave rise to the contributions in question, and indicates, I think unmistakably, that I was fully aware of the shortcomings of the book. In that notice I promise to supply, in a further Supplement, whatever may be found deficient in the present, and this I hope I shall live to see properly accomplished.

Now as to what more immediately concerns myself. In commencing your first review you incidentally object to the combination of a critical with a biographical dictionary of living artists, upon which Mr. Otley takes occasion to reply that the word "critical" is only on the title-page, for which I am exclusively responsible, and that he should have objected to its introduction had an opportunity come before him. But Mr. Otley ignores that my contract with him was for a Supplement to what bears the title of a Biographical and Critical Dictionary, and that an agreement entirely in his own handwriting is "to write and complete a biographical-critical continuation of Stanley's edition of Bryan's 'Dictionary of Painters and Engravers.'" Indeed, the book itself confutes his

assertion, inasmuch as criticisms are introduced in a considerable number of instances; indeed, as it appears to me, whenever Mr. Otley could find them ready to his hand. Your next objection to a matter of mine, and one upon which Mr. Otley rejoices to hang a note, is my sketch of Seymour the caricaturist. This reveals a curious fact: Seymour, as well as Henry Shaw, had been entirely omitted, and could only be introduced after the pages were stereotyped by making them fill up exactly four columns; hence my notice of Seymour is somewhat longer than it would else have been; but I see no harm in its fullness. Your questioning the accuracy of my remark that Wm. Havell's landscapes are vigorously painted, and have all the brilliancy of Turner (a fact which I can prove by several examples), brings out Mr. Otley's self-congratulation that the article was written by me, and not by him, adding, in the same paragraph, that I have taken other liberties with his name by interpolating matters which do not bear my initials. Mr. Otley seems to forget that I was never requested to add my initials to anything I had written till the book was printed off, and his preface in hand; how, then, could I meet his requirement in any manner more distinct than I have done in my printed notice? I there point out with sufficient exactitude the notices (amounting, I see, to seventy) which had been written by me, at the same time observing that I was responsible for portions of others. And I will here take occasion to add, that had I not used a considerable degree of surveillance over the book during its progress through the press it would have been much more deficient than it is. When the manuscript was first put into my hands, as ready for press, it was so imperfect that I returned it, with a long list of important omissions, including such names as Catermole, Rosa Bonheur, Gallait, Birket Foster, Leys, Gérôme, Meissonnier, Koekkoek, Lance, Hardy, Hemslay, Linton, O'Connor, Fred. Tayler, &c. These, and others which I mentioned, were, after a long interval, added; but many, including several you have named, were not thought worthy of a place, and I had not then time to contribute more than I have acknowledged.

As already said, I am perfectly satisfied with your review, and should not have thought it necessary to reply to any part of it; but I could not reconcile myself to submit to Mr. Otley's attempt to fasten a slur upon my gratuitous labours for his benefit.

HENRY G. BOHN.

NATIONAL PORTRAIT EXHIBITION.

Few better opportunities present themselves for comparison between Vandyke and Lely in the first case, and between either of these artists with those who were employed in Elizabeth's and King Henry's time, than are offered by a short walk within the walls of this Gallery. It is strange how the times are reflected in the individuals. Whatever might be the faults and crimes of the earlier periods, the persons here depicted are evidently men, the women women, true to the stronger, if they were also the rougher, phases of human character: whether the earlier was not really more refined as well as stronger admits of grave doubt. The soldiers of the king, no less than his courtiers and physicians,—see *Dr. Butts* (No. 110), *Dr. Linacre* (if it be really he), No. 96; the women, see *Lady Butts's* dame-like, good English face (115), also almost any of the younger ladies,—are really more like modern English folks than those who intervened under the Stuarts. It is not thus merely on account of the painters,—who were not less foreigners at the later than the former date, and could not be expected to render the English character with greater truth at one time than at the other. Holbein was as much a German as Sir A. More and Vandyke were Flemings of their day: all were affected by outlandish schools. One thinks—so common is the distinction of character to which we allude—that the sitters must have differed prodigiously. The swinish vices of James's rule are written upon countless male and female faces here; the paltry Gallicism of Charles the Second's time, its utter folly, is not more distinct than the shallowness and coldness of those of his father, of whose

reign the portraits—as it is strikingly worthy of note—are curiously rich in suggestions of ceremonies and court observances. Between the later two the section of the Commonwealth is thrust as if the underlying primeval English broke through the luxurious crusts of a disintegrated race: so in mountain ranges primeval granite heaves sharp peaks or shoulders through the stratified sedimentary rocks.

Between Lely and Vandyke the gulf is vast and profound,—not so complete, however, as that which is apparent in the broader cases to which we have just referred; it is of family, the other of kind. The so-called "*La Belle Henriette*," *Duchess of Orleans*, (582) habited as Minerva,—for which impertinence the goddess could not be so much as contemptuous,—is by Lely; and, in its way, one of his preferable pictures—at any rate, fairly to be compared with Vandyke's *Lady Baltimore* (586). Both look amorous, the constant expression of what we have called their "family" in time; the one, however, is lively, spirited, not impure; the other, trivial, flutering, impertinent, without having something in her face which recalls the circumstances of her death,—what has been styled its "provocation." Notwithstanding her flattering style as "*La Belle*," we recollect Pepys's opinion of her beauty to be by no means exalted. Mrs. Pepys was no beauty, the diarist not apt to think his "poor wretch" a Venus; yet we cannot blame him for preferring his own as "much handsomer than she," when he saw the former, "with two or three black patches on," standing near the lady who so kindly imported to her brother's court that woman styling herself *Louise Renée de Kerhouel*, afterwards *Duchess of Portsmouth* (884). The Lely is in keeping with the character of the sitter; so is the Vandyke: the latter a warm, sweetly-balanced, yet essentially superficial picture as compared with the Holbeins, Mores and Zuecheros of the previous century. One sees in those the influence of the theatre, as in these, that of the church. It may be that in such diverse influences—which no one can deny or fail to observe who considers the respective masses of portraits here—is the secret of the characteristic divergence to which we refer. To our contrasted examples much must have been due on account of the ones as bred in the blood of Arundel or Wardour, the other in that of Mary of Guise, Mary of Scotland and France, Charles the First, and Henrietta Maria,—the last a daughter of Mary de' Medici. What a descent! Returning to the execution of the Vandyke, let us conclude by showing how charmingly the rich colour of the blue dress and its white accompaniment go with the fascinating, under-glowing warmth of the lady's dark skin and clear dark eyes.

Near *Lady Baltimore's* fervid charms hangs the unbeautiful face of *Lady Byron* (585), by Jansen, dressed in black and red: a picture that is worth comparing with the work of Old Stone, *Lady Frances Cecil* (553), and others here of questionably correct ascription to the same. A sound and fine portrait: a Dutch-looking woman, probably daughter of a Dutchwoman, her father having been Governor of Breda.—*The Earl of Portland* (598), sometimes called "*The Greedy*," by Vandyke, is a noble portrait of its order.—*The Marquis of Montrose* (588) is probably by Vandyke; at any rate, a good work in his school, by Dobson it may be.—*Grace, Lady Granville*, (569) ascribed to Vandyke, is certainly by Old Stone: compare it with No. 553: a fine portrait.—The likeness of *Selden* (616), by Mytens, is first-rate in character and execution.—In 634, *James Stuart, Duke of Richmond and Lennox*, we have a worthy cavalier, whose features are strangely like those of the portrait ascribed to *Robert Carr, Earl of Somerset*, (593) the property of the Duke of Devonshire. Another portrait of the Duke appears in No. 720, ascribed to Vandyke, holding an apple in his hand, in the character of Paris about to judge the goddesses. It is well never to forget that the Dukes of Richmond of this blood had nothing to do with *Louisa de Kerhouel*. Her son assumed the title after the death of the last male of this race. Charles the Second's son, *Charles Lennox*, created Duke of Richmond, is here (913); also *Frances Stuart*, granddaughter of Lord Blantyre (875), the so-called "*La Belle*

Stuart" of Charles's Court, who married, 1667, Charles Stuart, Sixth Duke of Richmond and Lennox, of the former race. Readers will remember the accounts of the lady in Grammont, Pepys, and other sources; above all, the extraordinary discussion about the merits of her legs, which she settled in so candid a fashion. After the death of her husband, in 1672, December 12th, whom she took to the great disgust of the King, that monarch—it may be with a whimsical sense of revenging himself—bestowed the title of Richmond and the name of Lennox upon his own son by Mdlle. de Kerboul, who had been born but a few months before, July 29, 1672.—The portrait of *Lady Orrery* (675) is in Lely's best manner, but has been varnished too much. An erroneous note of a number for our last article on this subject led to the ascription of the custom of fastening a ring by a black cord to the wrist of No. 507 (*The Countess of Bedford*), to that of No. 509 (*The Rev. R. Crakanthorpe*). This ring is jewelled with a red stone, and therefore is not a wedding ring, although it is on the third finger of the left hand; from the right wrist is another ring pendent from a black cord.

In No. 604 is *Pym's* pleasant, gentlemanly face; in 609 the same, much older and sorrow-worn, part of a memorable group; in 610 *Sir J. Eliot*, not at all like the man one would fancy, said to be by Van Somer, but surely not truly so; also *Hampden* (606), by R. Walker; the manly face of *Lord Falkland* (619), no work of Vandyke; then *Mr. Attorney-General Noy* (607), who drew the writ for "ship-money" against Hampden, near *Sir Jacob Astley* (635) who raised the regiment of life-guards, and was the last of Charles's commanders; he came to grief at Stow-on-the-Wold, 1646. Here is *Sir Ralph Verney* (612), who might be called the first parliamentary reporter, son of *Sir Edmund Verney* (632), who raised the standard at Nottingham, and died defending it at Edgehill; beneath the picture hangs his silver-headed walking-staff. In No. 376 we have his father, another *Sir Edmund Verney*; in 525 stalwart *Sir Francis Verney*, son of *Sir Ralph* the taker of notes, who is said to have turned privateer, doubtless after the Rupert fashion; also to have turned Mohammedan, and died, at last, a penitent, with "Our Lady of Pity." He is depicted, according to the Catalogue, by Velasquez: a fine portrait of the school, but none of the great Spaniard's making. Here is ruthless *Prince Maurice* (608), of whom we spoke before as unheard of since a great West Indian storm at sea. There is no difficulty about the Garter in this picture, as has been assumed; he was the 443rd knight in order of election. Vandyke painted him handsomely at this time, with a face less vicious, if less vigorous, than his brother *Rupert's* (603): a face that soon corrupted. He lived to be called a Nero, and died yet young. When King James's subjects and Elizabeth's old captains, Craven, Willoughby, and Vere, fought against the Germans for the "Twelfth-Cake King" and Elizabeth of Bohemia, they little thought these youths would visit upon English homes the slaughter and waste of the Palatinate. See the beautifully-modelled head of *Prince Rupert* (615), attributed to Jan Steen. Here is a picture of *Colonel Richard Lovelace* (630), exactly the face one would expect. We cannot help associating it with the so-called *Andrew Marvell* (804), by G. Smits, which is certainly a caricature, although it may be a likeness, and differs prodigiously from Hanneman's capital and eminently characteristic head (795); *Lovelace's* face is thoroughly vicious and weak. In 652, *Sir John Bramston*, of *Screens*, *Chief Justice*, we have the father of the autobiographer to whom we owe so much about the times in which he lived.

Among portraits of historical interest none surpasses that admirable one by Van Somer—the best of his works to our knowledge—of *Lord Chancellor Bacon* (468). The face looks a little fretful; the hand is on the top of his walking-staff, the great seal on the table: notice the splendid manner in which the master has dealt with the black, gold-embroidered robe in all its stiffness, and surrounded it with so large a mass of red that it is perfectly relieved in tone and colour. Not far from this is *old Sir Julius Caesar* (428), Master of the Rolls, in

whose arms the great Chancellor died,—an odd, kindly-looking man, wearing that quaint skull-cap, with the coronet of lace about its border, of which there are many examples here. *Sir Julius* looks very aged; he was said to be kept alive by the prayers of the poor his alms relieved.—Two curious whole-lengths in small of *Lords John and Bernard Stuart* (594) appear to have had a landscape background added at a comparatively recent period. A long white building stands in a meadow to the right; a pagan temple, by way of summer-house, on the left. Two old-fashioned looking young men, the expressions of whose faces go far to redeem the poverty of their features.

The portrait of *Rich, Earl of Holland*, (574) is remarkable for the splendour of its costume: so clothed, a man must have blazed like a firefly. The face, in its vicious effeminacy, falling curls, and supercilious expression, is intensely characteristic. Among the noteworthy pictures of children here is a Vandyke, *Henry, Duke of Gloucester*, (631) standing in a landscape. This is the youth on whose death, September 13, 1660, Pepys thought fit to go into mourning, and, on the 15th of that month, "called at my father's (the tailor's) and bespoke mourning for myself"—garments which the economical diarist had made from old ones; for, on the Sunday next but one, the 23rd of September, "came one from my father's with a black cloth coat, made of my short cloak, to walk up and down in." Walk in it he did, and went to Westminster Abbey with hope to hear *Mr. Saint's Rest Baxter*, then King's Chaplain, preach; was disappointed, but heard *Mr. Rowe* and "wished myself out," because some plaster fell from the roof. Here is *Baxter* himself (1008), lent by the faithful congregation at Kidderminster. In No. 950 we have *Pepys*, by Kneller; not the most interesting portrait we could have wished to see that is in the National Portrait Gallery. Between the days of ordering and receiving the new-old clothes, Pepys met another old friend of ours, one *Jerry White*, once chaplain to the Protector; here is he also (814), but not by Vandyke's hand. *Frances Cromwell* is not here, or her first husband, *Mr. Robert Rich*, near relative of the Earl of Holland above named,—who, however, had lost his dandified-looking head ere that love-making scene came about. He did so in front of Westminster Hall, together with "poor, versatile" *Duke of Hamilton* (899), and *Arthur, Lord Capell*, (794), who sits there with his wife and family,—so the painter shows them,—with the gardens at Hadham behind, as in forgotten summer-days. The three unlucky lords came out of the house of *Sir Robert Bruce Cotton* (471) near the Abbey, then held by his son. Here is *John Wallop*, by Riley (984), who defended *Baxter*, on account of the "Paraphraze of the New Testament." Thus these dead folks are linked. We have more yet about Lord Capell's family picture.

SUPPLEMENT TO THE BUDGET OF PARADOXES. (No. VI.)

(No. 16.) I omitted from its proper place a manuscript quadrature (3-1416 exactly) addressed to an eminent mathematician, dated in 1842 from the debtor's ward of a country jail. The unfortunate speculator says, "I have laboured many years to find the precise ratio." I have heard of several cases in which squaring the circle has produced an inability to square accounts. I remind those who feel a kind of inspiration to employ native genius upon difficulties, without gradual progression from elements, that the call is one which becomes stronger and stronger, and may lead, as it has led, to abandonment of the duties of life, and all the consequences.

(No. 17.) There are people who are very unfortunate in the expression of their meaning. *Mr. Holyoake*, in the name of the "London Society," &c., forwarded a pamphlet on the existence of God, and said that the Society trusted I "may be induced to give" the subject my "consideration." I quizzed the assumption that I had that subject yet to begin. How could I know the Society was one person, who supposed I had arrived at a conclusion, and wanted a "guiding word"? But so it seems it was: *Mr. Holyoake*, in the *English Leader* of October 15, 1864, and in a private letter to me, writes as follows:—

"The gentleman who was the author of the argument, and who asked me to send it to *Mr. De Morgan*, never assumed that that gentleman had 'that particular subject to begin'—on the contrary, he supposed that one whom we all knew to be eminent as a thinker had come to a conclusion upon it, and would perhaps vouchsafe a guiding word to one who was, as yet, seeking the solution of the Great Problem of Theology. I told my friend that 'Mr. De Morgan was doubtless pre-occupied, and that he must be content to wait. On some day of courtesy and leisure he might have the kindness to write.' Nor was I wrong—the answer appears in your pages at the lapse of seventeen years."

I suppose *Mr. Holyoake's* way of putting his request was the *stylus curius* of the Society. A worthy Quaker who was sued for debt in the King's Bench, was horrified to find himself charged in the declaration with detaining his creditor's money by force and arms, contrary to the peace of our Lord the King, &c. It's only the *stylus curius*, said a friend: I don't know *curius*, said the Quaker, but he shouldn't style us peace-breakers.

(No. 17.) The system laid down by *Mr. Frost*, though intended to be substantially that of *Lodowick Muggleton*, is not so vagarious. It is worthy of note how very different have been the fates of two contemporary paradoxers, *Muggleton* and *George Fox*. They were friends and associates, and commenced their careers about the same time, 1647-1650. The followers of *Fox* have made their sect an institution, and deserve to be called the pioneers of philanthropy. But though there must still be *Muggletonians*, since expensive books are published by men who take the name, no sect of that name is known to the world. Nevertheless, *Fox* and *Muggleton* are men of one type, developed by the same circumstances: it is for those who investigate such men to point out why their teachings have had fates so different. *Macaulay* says it was because *Fox* found followers of more sense than himself. True enough: but why did *Fox* find such followers and not *Muggleton*? The two were equally crazy, to all appearance: and the difference required must be sought in the doctrines themselves.

Fox was not a rational man: but the success of his sect and doctrines entitles him to a letter of alteration of the phrase which I am surprised has not become current. When *Conduitt*, the husband of *Newton's* half-niece, wrote a circular to *Newton's* friends, just after his death, inviting them to bear their parts in a proper biography, he said, "As *Sir I. Newton* was a national man, I think every one ought to contribute to a work intended to do him justice." Here is the very phrase which is often wanted to signify that celebrity which puts its mark, good or bad, on the national history, in a manner which cannot be asserted of many notorious or famous historical characters. Thus *George Fox* and *Newton* are both national men. *Dr. Roget's Thesaurus* gives more than fifty synonyms—*colleagues* would be the better word—of "celebrated," any one of which might be applied, either in prose or in poetry, to *Newton* or to his works, no one of which comes near to the meaning which *Conduitt's* adjective immediately suggests.

(No. 19.) The echoes of the moon-controversy reached *Benares* in 1857, in which year was there published a pamphlet 'Does the Moon Rotate?' in Sanscrit and English. The arguments are much the same as those of the discussion at home.

(No. 20.) I am informed that the legend of *St. Vitus* is given by *Ribadeneyra* in his lives of the Saints, and that *Baronius*, in his *Martyrologium Romanum*, refers to several authors who have written concerning him. There is an account in *Mrs. Jameson's* 'History of Sacred and Legendary Art' (ed. of 1863, p. 514). But it seems that *St. Vitus* is the patron saint of all dances; so that I was not so far wrong in making him the protector of the cyclometers. Why he is represented with a cock is a disputed point, which is now made clear: next after *gallus gallinaceus* himself, there is no crower like the circle-squarer.

(No. 20.) Among my anonymous communicants is one who states that I have done injustice to the *Rev. James Smith* in "referring to him as a spiritualist," and placing his 'Divine Drama' among paradoxes: "it is no paradox, nor do spiritualistic views mar or weaken the execution of the design." Quite true: for the design is to produce and enforce "spiritualistic views"; and leather does not mar

nor weaken a shoemaker's plan. I knew Mr. Smith well, and have often talked to him on the subject; but more testimony from me is unnecessary; his book will speak for itself. His peculiar style will justify a little more quotation than is just necessary to prove the point. Looking at the "battle of opinion" now in progress, we see that Mr. Smith was a prescient.—

(P. 588.) "From the general review of parties in England, it is evident that no country in the world is better prepared for the great Battle of Opinion. Where else can the battle be fought but where the armies are arrayed? And here they all are, Greek, Roman, Anglican, Scotch, Lutheran, Calvinist, Established and Territorial, with Baronical Bishops, and Non-established of every grade—churches with living prophets and apostles, and churches with dead prophets and apostles, and apostolical churches without apostles, and philosophies without either prophets or apostles, and only wanting one more, 'the Christian Church,' like Aaron's rod, to swallow up and digest them all, and then bud and flourish. As if to prepare our minds for this desirable and inevitable consummation, different parties have been favoured with a revival of that very spirit of revelation by which the Church itself was originally founded. There is a complete series of spiritual revelations in England and the United States, besides mesmeric phenomena that bear a resemblance to revelation, and thus gradually open the mind of the philosophical and the infidel classes, as well as the professed believers of that old revelation which they never witnessed in living action, to a better understanding of that Law of Nature, for it is a Law of Nature, in which all revelation originates and by which its spiritual communications are regulated."

Mr. Smith proceeds to say that there are only 35 incorporated churches in England, all formed from the New Testament except five, to each of which five he concedes a revelation of its own. The five are the Quakers, the Swedenborgians, the Southcottians, the Irvingites, and the Mormonites. Of Joanna Southcott he speaks as follows:—

(P. 592.) "Joanna Southcott is not very gallantly treated by the gentlemen of the Press, who, we believe, without knowing anything about her, merely pick up their idea of her character from the rabble. We once entertained the same rabble idea of her; but having read her works—for we really have read them—we now regard her with great respect. However, there is a great abundance of chaff and straw to her grain; but the grain is good, and as we do not eat either the chaff or straw if we can avoid it, nor even the raw grain, but thrash it and winnow it, and grind it and bake it, we find it, after undergoing this process, not only very palatable, but a special dainty of its kind. But the husk is an insurmountable obstacle to those learned and educated gentlemen who judge of books entirely by the style and the grammar, or those who eat grain as it grows, like the cattle. Such men would reject all prophetic revelation; for there never was and probably never will be a revelation by voice and vision communicated in classical manner. It would be an invasion of the rights and prerogatives of Humanity, and as contrary to the Divine and the Established order of mundane government, as a field of quatern loaves or hot French rolls."

Mr. Smith's book is spiritualism from beginning to end; and my anonymous gainsayer, honest of course, is either ignorant of the work he thinks he has read, or has a most remarkable development of the organ of imperception. A. DE MORGAN.

OUR WEEKLY GOSSIP.

THE needle-gun is king. Never, perhaps, since the invention of gunpowder, has science played so striking a part in the great drama of actual war as during the past week. Valour, discipline, experience, have gone for nothing in the presence of a delicate weapon, which Austrian and English boards have declared unfit for use in the field on account of its fineness and fragility in the hands of their common rank and file. If this opinion be well founded, what a confession it is of the superior intelligence of the Prussian soldier! We do not ourselves believe that the needle-gun is too delicate for our line to handle, though it probably is so for a Croat's hands. Still the needle-gun, terrible as it has shown its power to be, is not the most fatal gift of science to the soldier. The Spencer gun is said to be as much beyond the Prussian arm as that arm is beyond the old Brown Bess. Our own authorities at the War Office consider the new weapon with which it is arming our troops to be the best practical gun extant. But so the War Office always thinks. Ten days ago Marshal Benedek publicly ridiculed the needle-gun which has broken his magnificent array of battle.

Mr. James Wyld has been prompt as the Prussians themselves in pushing the war. The campaign ad scarcely opened before we have from Charing Cross, a large 'Map of Central Europe,' admirably

drawn for displaying the *ensemble* of the campaign, politically and diplomatically,—a 'Strategic Map of the Theatre of War in Central Europe and North Italy,'—a 'Map of the Theatre of War in Central Europe,'—and 'Theatre of the War in North Italy.' Mr. Bacon has also issued a 'Map of Central Europe,'—and Mr. Stanford has published a very good 'Map of the Theatre of the War.'

The Ordnance Committee of Woolwich have been engaged this week in considering a novel application of hydraulic power to gunnery. The experiments have been made upon two models constructed according to the plans of the inventor, Mr. William Murphy, of Cork; and the remarkable result of eliminating the recoil in the discharge of cannon has been established.

Messrs. Longmans have entered into an engagement with Mr. Maguire, M.P., to publish a work he proposes writing on the Irish in America.

In addition to what was said last week as to the arrangements of the Archaeological Institute Congress, it should be announced that Mr. G. T. Clark will describe the architectural features of the Tower on the occasion of the visit. Mr. Clark is the greatest living authority on the subject.

Messrs. Puttick & Simpson announce, in connexion with the Fenn MSS., the sale of the Addison Manuscript, noticed on several occasions in the *Athenæum* some time since (Nos. 1923, 1934, &c.).

As the Committee of the London Art-Union seem to fancy that come what may to their luckless brethren of provincial fame, they are safe under their charter of incorporation, it may be well to remind these gentlemen of the revoking power retained by the Government. These words are extracted from the Charter of the London Art-Union, 1st of December, 1846:—"And we do expressly declare that whenever it shall appear to any such Committee of our Privy Council that the said Society is perverted from the purposes of the said in part recited Act of Parliament to certify the fact to Us, and thereupon it shall be lawful for Us to revoke or annul this our Charter."

Gradually the contents of the iron museum at South Kensington, known as the "Boilers," are being removed, preparatory to its being taken down and re-erected for district museums in a more permanent form. The contents of the Education Division were cleared out this week. Whilst the space is free a concert is to be given in it by the Wandering Minstrels, for the benefit of the West London School of Art; it will take place on the 18th of July.

Lord Monson has lately intrusted Mr. G. A. Rogers with the restoration of the magnificent carvings executed by Gibbons for his Lordship's Gaton estate. Worms and beetles had attacked these beautiful works with such energy that their entire destruction was almost completed; the interior of the wood being reduced to powder and the surface perforated with countless holes. The carvings consist of birds, fruit, fish and flowers of every description. The restoration, which required great care and was of a time-taking character, was as follows: Mr. Rogers had them photographed; he then separated all the joints and loose pieces, and thoroughly destroyed all insect life by means of corrosive sublimate and other poisons. The next operation was to scrape all the powdered rotten portions away from the back and to fill the holes thus made with a soft hardening substance, so as to strengthen the entire work. Then the holes in the front surface had to be stopped with a poisoned cement, and the whole remounted by aid of the photographs. Lord Monson has kindly given to Mr. Rogers a specimen of the decayed carving, so as to show the state they were in to those interested in the art.

The rumour that Sir Hugh Cairns would be the next occupant of the Marble Chair—a seat, by the way, that has long ceased to exist save in the poetic imaginations of legal biographers—occasioned some public remark on the "comparative youth" of the Conservative Attorney-General, and some erroneous inferences concerning the average

age of Chancellors on first receiving the Seal. Born in 1819, Sir Hugh is still in his forty-eighth year; but had he verified report by becoming Lord Derby's Chancellor, he would not have been remarkable in history as a singularly youthful holder of the Great Seal. Lord Keeper Guildford, Lord Jeffreys, Lord Somers, Lord Cowper, Lord Hardwicke and Lord Thurlow (to say nothing of pre-Restoration Chancellors and Keepers), held the Seal before they had reached our present Attorney-General's age. Francis North wriggled into the Keeper's office on very bad terms, when he was only forty-five years of age; Lord Jeffreys received the Great Seal, as the reward of his services on the Western Circuit, whilst he was still in his thirty-eighth year; Lord Somers grasped the "pestiferous lump of metal" when barely forty-three years old; Lord Cowper—whose youthful appearance caused his Queen some annoyance and her courtiers much amusement on his first elevation to the woolsack—was Lord Keeper in his forty-second year; Lord Hardwicke was a year younger than Sir Hugh Cairns on receiving the Seal; Lord Thurlow also was only forty-six years of age when he became, for the first time, custodian of the *clavis regni*. Lord Keeper Wright—the most obscure person who has held the Great Seal in recent times—was only forty-six when he entered the office which he may be said to have illustrated by his dullness and conspicuous want of parts. Charles Yorke was barely forty-eight when he became Lord Chancellor—for three days. Of twenty-eight holders of the Seal who have flourished since Sir Orlando Bridgeman's reign, ten were under fifty years of age on entering office; and only nine had reached fifty-five years of age on being summoned to preside over Chancery. In these later years, whilst the number of competitors for the Great Seal has been rapidly increasing, financial reform has shorn the prize of so many golden charms that candidates are seldom willing to accept the desired office until they have gained from practice at the bar that requisite measure of wealth which can no longer be acquired from the emoluments of the Chancellor's place. Consequently, notwithstanding the number of our elevations to the woolsack since Lord Eldon's retirement, our eminent lawyers, on taking the last and highest step of professional advancement, are usually attended by age as well as honour. Lords Campbell and St. Leonards would never have been Chancellors had they not survived the appointed term of threescore years and ten. Lords Chelmsford, Truro, Cranworth and Westbury, had all of them seen sixty years or more when they mounted the woolsack; and it is not probable that England will again see a series of boy-chancellors—like Jeffreys, Somers and Cowper. Lord Chelmsford was born on April 15, 1794, and is, therefore, in his seventy-third year—a mere youngster in comparison with our vigorous Chief Baron.

Again the lightning wires are on their way across the Atlantic, with a confident staff in charge of them, guided by the experience of all former failures. We dare not count on success; but we can, at least, hope for it with all our heart. The "chain of intelligence" between the two worlds will be the best peace-maker, now and in the future.

Our liberties are preserved in brine, said Jerrold; and once in a dozen years, at least, we find reason to be grateful for the twenty miles of sea-sickness which separate us from our continental allies. As a matter of political sentiment, therefore, we are not inclined to rejoice over Mr. Hawkshaw's scheme for uniting Kent and the Pas de Calais by a railway tunnel; but science will take its own course, as it did in the Box Tunnel, the Thames Tunnel, and other projects, if it can only obtain the money from a confiding public. A plan with less of solid hope in it than a projected extension of the Chatham and Dover line into France—by way of the Channel bed—it would be difficult to find on this side of the Isthmus of Suez. Mr. Hawkshaw seems to have higher faith, and we learn that he is causing some preliminary shafts to be dug on either side of the Channel, in the hope of finding favourable geological conditions for his experiment. We should fear that the unfavourable conditions will

be mainly discovered on the Stock Exchange. Who wants a railway across the Straits of Dover?

Messrs. Longmans & Co. have published a very useful book of reference in 'The Municipal Corporations Directory, 1866.' It contains, among other matter, lists of county and borough authorities, a description of the City companies, and a table of bankers, newspapers (daily), markets, and fairs.

A Government inquiry into the statistics of insane persons throughout France yields the following results. Out of 84,321 persons suffering from insanity, in 358 cases it was due to overwrought brain; 2,549, to domestic troubles; 951, loss of fortune; 803, loss of a dear relative or friend; 620, disappointed ambition; 120, remorse; 223, anger; 31, joy; 836, love; 477, jealousy; 363, pride; 123, political events; 82, sudden change from an active to an inactive life; 115, solitude; 139, solitary confinement; 78, home sickness; 1,095, religion; and 1,628, miscellaneous unstated causes. Of the above number of insane, 53,000 were in private houses; the expense to the State of those in public establishments was a little over eight million francs.

We learn by a recent communication from India that the young native students who present themselves for examination at the Universities established in the three Presidencies show a very hopeful and commendable aptitude for science, perhaps more so than for literature. Is this to be taken as an indication that at no very distant day there will be in the East a number of ingenious recruits ready to take part in the great work of advancing science? If so, the question arises, will they all be able to find work in India? Will they come into competition with the young men who go out from England? And it may fairly be asked whether the basis of Indian institutions is sufficiently moral to ensure permanent activity?

Hippophagists will now have an opportunity of indulging in their favourite pabulum. The French government has officially authorized the sale of horseflesh in France, both by butchers and *restaurants*, subject, however, to severe regulations. And the Paris papers contain advertisements that horseflesh butchers' shops are about to be opened in that city; while, to celebrate this event, the Hippophagist Society announce that a horseflesh banquet, at 10 francs a head, will take place on Monday, July 9, at No. 100, Rue Richelieu.

It is a significant fact that the functionaries of the German Association of Naturalists and Physicians have sent out circulars announcing that the forty-first meeting, which was to be held in September next, will not take place. This will be a disappointment for those members of our scientific societies who had planned to take part in the very agreeable proceedings which have usually characterized the meetings of the Association.

Prof. Agassiz has recently received a large and important collection of the fishes inhabiting the Paraguay region, made by the Emperor of Brazil when he was carrying on war against that country. In an autograph note to the Professor, accompanying the present, the Emperor says: "I have given instructions that the fishes I collected shall be sent to you—for it was with this thought that I collected them. It is a slight homage that I pay to science, and I shall be most happy if by placing the fishes in your hands you will make better known the rich nature of my country."

The population of the eight principal cities in the kingdom of Italy at the beginning of this year is thus stated in a recent official document:—Naples, 447,065; Turin, 204,715; Milan, 196,109; Palermo, 194,463; Genoa, 137,986; Florence, 114,363; Bologna, 109,395; Messina, 103,324.

A proposition to establish a Department of Education, at Washington, which was supported by a large number of scientific and literary men, has been defeated in the House of Representatives by sixty-one to fifty-nine.

BRITISH INSTITUTION, Pall Mall.—The GALLERY, with a Collection of PICTURES by ANCIENT MASTERS and deceased BRITISH ARTISTS, is OPEN DAILY, from Ten to Six.—Admission, 1s.; Catalogue, 6d.

GEORGE NICOL, Secretary.

ROYAL ACADEMY OF ARTS.—The EXHIBITION of the ROYAL ACADEMY is OPEN in the Day from Eight till Seven. Admission, One Shilling; Catalogue, One Shilling.—In the Evening from Half-past Seven till Half-past Ten. Admission, Sixpence; Catalogue, Sixpence.

JOHN PRESCOTT KNIGHT, R.A., Secretary.

SOCIETY OF PAINTERS in WATER COLOURS.—The Sixty-second Annual EXHIBITION is NOW OPEN at their Gallery, 5, Pall Mall East (close to the National Gallery), from Nine till Seven.—Admission, 1s.; Catalogue, 6d.

WILLIAM CALLOW, Secretary.

Will shortly Close.

INSTITUTE OF PAINTERS in WATER COLOURS.—The Thirty-second Annual EXHIBITION is NOW OPEN, at their Gallery, 33, Pall Mall, near St. James's Palace, daily, from Nine till Dusk.—Admission, 1s.; Catalogue, 6d.

JAMES FAHEY, Secretary.

FRENCH GALLERY, 120, Pall Mall.—The THIRTEENTH ANNUAL EXHIBITION of PICTURES, the Contributions of Artists of the French and Flemish Schools, is NOW OPEN, admitting also to HOLMAN HUNT'S PICTURE, 'The Finding of the Saviour in the Temple.'—Admission, 1s.; Catalogue, 6d.

THE NATIONAL PORTRAIT EXHIBITION, Exhibition Road, South Kensington, is NOW OPEN to the Public. Admission, on Mondays, Wednesdays, Thursdays, Fridays, and Saturdays, 1s. each person; Tuesdays, 2s. 6d. Hours from Ten A.M. till Six P.M. Season Tickets, 12s. each. Catalogue, 1s. and 1s. 6d.

MR. MORBY'S COLLECTION of MODERN HIGH-CLASS PICTURES is ON VIEW at the Royal Exchange Fine Arts Gallery, 24, Cornhill. This Collection contains examples of Holman Hunt—J. Phillip, R.A.—T. Faed, R.A.—J. Lewis, R.A.—Egg, R.A.—Hook, R.A.—Frith, R.A.—Rosa Bonheur—Goodall, R.A.—Cooke, R.A.—Creswick, R.A.—Pickersgill, R.A.—Calderon, A.R.A.—Sant, A.R.A.—Le Jeune, A.R.A.—Ansdell, A.R.A.—Frost, A.R.A.—Nicol, A.R.A.—Pettie, A.R.A.—Yeames, A.R.A.—P. Nasmyth—Linnell, sen.—Dobson, A.R.A.—Cooper, A.R.A.—Gale—Marks—F. Hardy—John Faed—Henriette Browne—Frère—Rulphers—Billouin—Liddendale—Geo. Smith—Peter Graham, &c.—Admission on presentation of address card.

Mr. and Mrs. GERMAN REED, with Mr. JOHN PARRY, in a New Entertainment, entitled A YACHTING CRUISE, by F.C. Burnand, Esq., Scenery by Messrs. T. and W. Grieve; with THE WEDDING BREAKFAST at Mrs. ROSELEAF'S, by Mr. John PARRY. Every Evening (except Saturday, at Eight), Thursday and Saturday Mornings, at Three.—Royal Gallery of Illustration, 14, Regent Street.—Admission, 1s., 2s., 3s. and 5s.

SCIENCE

The Modern Peach Pruner, treating on the Long and Close Systems of Pruning the Peach, adapted for the Open Air, and for all Forms of Orchard-House Culture. With numerous Original Illustrations. By the Rev. T. Collings Bréhaut. To which is added, Notes on Variation from Seed, by Mr. Thomas Rivers. (Journal of Horticulture and Cottage Gardener Office.)

THE object of this little handy book is to teach how to train and prune the peach according to the lessons of the latest experience. The name of Mr. Thomas Rivers, of Sawbridgeworth, is a sufficient guarantee for the soundness of the practical advice which he sanctions; and every page written by Mr. Collings Bréhaut shows his thorough acquaintance with the most approved ideas respecting the management of soils, and the application of the principles of vegetable physiology to the cultivation of the peach. A professional trait of the reverend author, however, peeps out when he tells us that, according to the Chinese poets, and to Confucius, who was born 550 B.C., and was well acquainted with the Mosaic writings, "the tree of life and death," the forbidden fruit, was the peach. The Rev. T. Collings Bréhaut will not, it is to be hoped, incur the reprimand of any of the bishops for encouraging, by writing a book, the propagation of such a naughty tree. Forbidden fruit is, however, proverbially sweet, and a little episcopal reproof would give an uncommon zest to the flesh of this fruit, and a great fillip to the cultivation of it in orchard-houses.

The notes on the variations of nectarines and peaches from seed are exceedingly curious, and worthy of the consideration of botanical physiologists as well as of fruit-growers. Orchard-houses now enable peach-fanciers to grow a long succession of fruits from the early and late kinds, and by judiciously fertilizing new sorts they may raise varieties from seed for themselves. Mr. Rivers obtained seedlings, which, from having leaves with glands, were not liable to mildew. Plants having very marked characteristics ought to be selected for the expe-

riments. A short time will then suffice to test any new variety, and to obtain results which, prior to experience, can scarcely be believed. Mr. Rivers was himself sceptical of the story of the Pitmaston Orange Nectarine. In 1815 the late Mr. Williams, of Pitmaston, planted stones of the Elvage, which has white flesh and small flowers, and one of the stones produced a tree with large, beautiful flowers. This Pitmaston was the first full-sized orange nectarine known in England. One and forty years later, in 1856, Mr. Rivers planted stones of this sort, which in due time bore fruit nearly all identical with their parent. There was, however, one fruit which was large and ten days later. The flesh of this fruit was transparent, like the pine. The young trees, from the stones planted in 1862, gave but small hopes of deviations; but in 1865, amidst fruit all like their grandparent the Pitmaston, two very large beautiful fruits were observed hanging on one of the trees. "Here," says Mr. Rivers, "we have the fourth generation of the Elvage nectarine, and it proves to be a large and late peach." Mr. Rivers ascribes these extraordinary changes to cross-breeding, insect fertilization, and breeding in-and-in. By breeding in-and-in, he means selecting varieties generation after generation, and thus conveying the qualities of a race. Of this process the Lord Palmerston is an illustration. Among the seedlings of 1865, numbered in the fruit record of Sawbridgeworth, this peach appears as number 22:—

"A peach measuring twelve inches round,—pale straw, rosy cheek; firm yet juicy flesh, and rich aroma. Raised from Princess of Wales, and so third generation from Pavie de Pomponne. One fruit was ripe, and submitted to the Fruit Committee at South Kensington, received a first-class certificate. Named Lord Palmerston. Flowers large."

Mr. Rivers narrates the genealogy of the Lord Palmerston, or the process by which a peach large in size but unfit to eat becomes juicy in flesh and rich in aroma:—

"In making my collection of every kind of peach known in Europe and America, I some years since received that largest of all peaches, Pavie de Pomponne. Owing to its great size and to its beautiful rose-like flowers, I always felt much interest in it, but its fruit was seldom fit to eat. It was not till 1857 that I thought of raising seedlings from it, for I had slight hopes of raising a melting peach from a clingstone. I planted, however, some stones; one tree grew, and produced melting peaches, rather late, but of good quality. It was named the Princess of Wales. This variety has much of the robust habit of its parent, and gives the same grand flowers. The seedling raised from this departed widely from the parent stock, producing small flowers and melting fruit, but not large. In 1862 stones of the Princess of Wales peach were planted, one of which produced fruit in 1865. This seedling gives fruit firm like its ancestor, Pavie de Pomponne, though a melting peach. This is a case of adherence to race."

The physiological law is clearly the same in the animal and vegetable worlds: peculiarities accidentally acquired can be transmitted; but there is always a tendency to revert back to the original type. Size in fruits is seldom accompanied with flavour; it is, therefore, always a triumph of skill when a large fruit is made eatable, juicy and aromatic.

The scientific and practical interest of Mr. Rivers's observations must not, however, detain us longer; nor can we part with this solid and good little book without recommending it to all who are engaged in seeding, training and pruning the peach.

SOCIETIES.

NUMISMATIC.—June 21.—*Anniversary Meeting.*—W. S. W. Vaux, Esq., President, in the chair.—The following gentlemen were elected as officers and council for the ensuing session: *President*, W. S. W. Vaux, Esq.; *Vice-Presidents*, S. Birch, Esq. and the Earl of Enniskillen; *Treasurer*, W. Freudenthal, Esq.; *Secretaries*, J. Evans and F. W. Madden, Esqs.; *Foreign Secretary*, J. Y. Akerman, Esq.; *Librarian*, J. Williams, Esq.; *Members of the Council*, T. J. Arnold, Rev. C. Babington, J. B. Bagnall, J. Davidson, B. V. Head, J. F. Neck, Rev. A. Pownall, Samuel Sharp, G. H. Virtue and R. Whitbourn.

ZOOLOGICAL.—June 26.—Dr. E. Hamilton in the chair.—The Secretary called the attention of the meeting to a fine specimen of the Californian vulture (*Cathartes Californianus*, Shaw) lately received in the Society's Gardens.—A communication was read from Mr. G. Krefft, containing 'Descriptions of New Species of Australian Snakes, of the Genus *Hoplocephalus*.'—A communication was read from Dr. J. C. Cox, of Sydney, containing characters of six new Australian Land Shells.—Mr. T. J. Moore communicated some notes on the habits of *Chauna Derbiana*, which appeared to be the littoral of New Granada, and not Central America, as had been previously supposed.—A paper was read, by Mr. H. Adams, 'On the Shells collected by Mr. S. W. Baker during his recent Explorations in Central Africa.' Two species of *Unio* contained in Mr. Baker's collection were considered by Mr. Adams to be new to science, and described under the names *U. Bakeri* and *U. acuminatus*.—Mr. Fraser exhibited and made remarks on a pair of Horns of the Philippine Deer (*Cervus marianus*, Desm.).—Mr. H. E. Dresser read some notes on the nesting of the Booted Eagle (*Aquila pennata*), and exhibited specimens of the eggs of this bird recently obtained by himself in Central Spain.—Mr. Blyth exhibited some pairs of Horns of different varieties of the African Buffalo (*Bubalus Caffr*), and pointed out the distinctions between the Central African and Southern forms of this species.

ENTOMOLOGICAL.—July 2.—Sir J. Lubbock, Bart., President, in the chair.—The Hon. T. De Grey, M.P., and C. Ward, Esq., of Halifax, were elected Members.—Mr. Stainton exhibited a head of *Typha latifolia*, for the purpose of showing the mode of feeding of the larva of *Laverna phragmitella*; also, specimens of a *Gelechia*, very similar to *G. leucomelanella*, bred from galls formed on *Gypso-phila saxifraga*, and found at Mentone.—Mr. Bond exhibited a specimen of *Dianthæcia cæcia* and a *Phycia*, probably new, both captured in the Isle of Man by Mr. Hopley; also specimens of *Lesia philanthiformis*, bred from pupæ sent to him by Mr. Greening, from the Isle of Man.—Mr. Edwin Shepherd produced a specimen of *Dianthæcia cæcia* from Bentley's collection, supposed to have been captured many years ago in Yorkshire.—Mr. Edward Saunders exhibited a collection of Mexican butterflies, amongst which was a gynandromorphous *Pieris Euterpe*.—Mr. Pascoe called attention to an extract from Von Tschudi's 'Thierleben der Alpenwelt,' and to a paper, by Mr. Albert Müller, in the last number of *The Zoologist*, with reference to insects at considerable elevations in Alpine regions settling on and sinking into the snow through the radiation of heat from their bodies, confirming some observations of Mr. Pascoe communicated to a former meeting of the Society. A discussion ensued, in which Profs. Westwood and Brayley took part.—The President directed attention to an article in the *Comptes Rendus* for the 4th of June, 1866, by M. Balbiani, in which the author, as the result of observations of his own, advanced a theory that the Aphides are true hermaphrodites.—Mr. Stainton mentioned that much injury had been done to the rye in the neighbourhood of St. Étienne, which he believed was caused by the larva of *Oxsenheimeria taurilla*.—Mr. Stevens exhibited *Dicranoccephala Wallichii*, from Northern India, and *D. Bowringii*, from Southern China.—The Rev. Douglas Timins

communicated notes on the larvae of *Charaxes Jasius* and *Melitæa Provençialis*.

ROYAL INSTITUTION.—May 4.—Sir Henry Holland, President, in the chair.—'On Recent Progress in the History of proposed Substitutes for Gunpowder,' by Prof. F. A. Abel.

May 25.—Sir H. Holland, Bart., President, in the chair.—'On the Shooting-stars of the Years 1865-6, and on the Probability of the Cosmical Theory of their Origin,' by Mr. A. S. Herschel.

June 1.—Sir H. Holland, Bart., President, in the chair.—'On the Opalescence of the Atmosphere,' by Mr. H. E. Roscoe.

June 15.—'Experiments on the Vibrations of Strings,' by Prof. J. Tyndall.

July 2.—Sir H. Holland, Bart., President, in the chair.—The Duke of Edinburgh was elected an Honorary Member; R. Cockerton, Esq. was elected a Member.

SOCIETY OF ARTS.—June 27.—W. Hawes, Esq., Chairman of the Council, in the chair.—The Secretary read the Annual Report of the Council.—Silver medals have been awarded by the Council as follows:—To Mr. J. C. Morton, for his paper 'On London Milk'; to Mr. T. Gray, for his paper 'On Modern Legislation in regard to the Construction and Equipment of Steam-ships'; to Dr. J. L. W. Thudichum, for his paper 'On the Diseases of Meat as affecting the Health of the People'; and to the Hon. C. G. Duffy, for his paper 'On some Popular Errors concerning Australia.'—The following Members were elected officers for the ensuing year:—*President*, H. R. H. the Prince of Wales; *Vice-Presidents*, Edward Akroyd, Lord Berners, W. H. Bodkin, Sir J. P. Boileau, Bart., The Earl of Caithness, Harry Chester, H. Cole, Lord De l'Isle and Dudley, The Earl Granville, K.G., W. Hawes, C. W. Hoskyns, Lord H. G. Lennox, Lord Lytton, Right Hon. Sir J. S. Pakington, Bart., Sir T. Phillips, The Marquis of Salisbury, Sir F. Sandford, Sir J. Kay Shuttleworth, Bart., T. Twining, and Vice-Chancellor Sir W. Page Wood; *Council*, John Bell, Prof. Bentley, D. R. Blaine, J. B. Denton, J. Easton, P. Graham, H. Maudslay, J. S. Pakington, Col. Scott, R.E., B. Shaw, Alderman Waterlow, and G. F. Wilson; *Treasurers*, W. T. Mackrell and S. Teulon; *Auditors*, J. Murray and P. Wright; *Secretary*, P. Le Neve Foster; *Financial Officer*, S. T. Davenport.

MEETINGS FOR THE ENSUING WEEK.

TUES. Ethnological, 8.—'Tribes of the Nile Basin,' Mr. Baker; 'West Coast Indians, Vancouver's Island,' Mr. Sprout; 'Aborigines of Andaman Islands,' Mr. Nash.

SAT. Botanic, 34.

FINE ARTS

THE FRENCH ART-EXHIBITION OF 1866.

Paris, June, 1866.

THERE are few remarkable portraits in the Exhibition. Perhaps the finest for delicacy, refinement, and for purity of colouring, is M. C. Jaquand's 'Portrait of the Countess Mimerel.' It is the portrait of an elderly lady, full of dignity and sweetness. Age appears a grace, so well is it borne. M. A. Loudet's portrait of General Renault, senator, is a remarkable work. The head is well studied, and is, albeit highly finished, full of strength. It is an ideal head of a soldier. It is a pity that the eye is led from it by the bright red of the *grand cordon*, and the trousers, and the gold lace. These kill the face. M. A. Tissier's portrait picture, called 'The Completion of the Louvre,' is probably meant to be an historical work. M. Visconti, the architect, is presenting and explaining his plans to the Emperor and Empress, who are sitting at a little table, with their ladies and gentlemen-in-waiting around them. All the figures are wanting in dignity. The portrait of the Empress, with a yellow tint thrown across it, is a libel; and the figure and face of the Emperor are ungainly and commonplace. Now, whatever may be the personal defects of the Third Napoleon, no observer could truthfully say that his appearance was commonplace. We have only to contrast this rendering of him with that of M. Cabanel, in last year's Exposition, to see the difference between the wise obser-

vant artist, who can select and reject, and the mediocre artist who can only copy from Nature.

Before turning to the landscapes, a few words on the two gems exhibited by M. Blaise Desgoffe. They are studies of flowers, jewels, china and fruit. The rich colours, exquisitely blended, are delightful to the eye. The finish is wonderful, while every touch is free and sharp. The ivory cup in No. 559 is perfect for texture and beauty of colour. We can give these two delightful works no higher praise than that of saying they are fully equal to the pictures M. Desgoffe exhibited last year, and which were noticed in these columns. The qualities as a painter which M. Desgoffe possesses, he possesses in perfection.

First among the landscape-painters in the Exhibition, this year, stands Théodore Rousseau. He exhibits two studies in the forest of Fontainebleau. One is a sunset; and the glory of Orion setting in the west, laying "fiery fingers" through the depths of forest foliage, here leaving deep shades of olive green, and there burnishing the leaves into showers of gold; could not be more delightfully put upon canvas. The full blaze of the setting sun upon a thin row of trees to the left of the picture, where every leaf is a leaf of gold, is an exquisite bit of beauty.—François Bonheur's cattle-piece is a fair and skilful picture, much in the manner of his illustrious sister Rosa.—M. E. Fromentin's charming landscape, full of beautiful bits of light and shade, is enlivened and completed by the march of the wandering tribe of Arabs; some being borne across the stream, and others toiling up a steep, but all in picturesque confusion, and presenting charming accidents of colour.—A view of the Roman Campagna, by M. Lanoue, is a broad, airy landscape, flooded with Italian sunlight.—But what have we here? A horrible bit of patch-work of dabs of colour, without harmony, without beauty of any kind. It is called 'A Turkish Cemetery beyond the Adrianople Gate, Stamboul,' and is perpetrated by M. J. J. A. Laurens. Would they admit it to the Art-Gallery of the Pantheon in Oxford Street?—But here is something stranger still. A figure closely bound, as in a winding-sheet, in white drapery patched with gold. The young person is loaded with flowers, as dry as artificial flowers on a lodging-house chimney-piece; and with a face—well, fair enough for such flowers. The Catalogue informs us that this is 'Ophelia.' A spectator can only shrug his shoulders and pass on, and be merciful, bearing in mind that the mistake is by a lady.—In the whole Exhibition there is not a finer bit of colour, a sweeter landscape, than that marked 'Le Crépuscule,' by M. F. H. Nazon.—A view of Florence, in water-colours, by Clara Montalba, is a charming study; finished, yet with the strength and freshness of a sketch in it.

In a vast miscellaneous collection of paintings like this, which stretches along the broad galleries of the Palais, it is impossible to avoid doing a little injustice. Unknown genius may be lurking in a corner, and may be passed unregarded. But there is this comfort: Genius must prevail; unless, indeed, the patience be wanting, as in the case of the poor boy who, at the opening of the Exhibition, finding his work rejected, fetched it away heart-broken, and in the night, shot himself. There are many ambitious pictures in the galleries. There is much ambition that has overleaped itself. All the scriptural subjects, all the religious subjects, are poor and mean. Perhaps M. C. H. Michel's deserve exception from this general condemnation; and Mercadé's picture of the body of St. François d'Assise claims mention, not for any power of idealization, not for any dignity that is in it, but for some good drawing. The picture itself is muddy in tone. Ste. Claire, followed by her nuns, is kissing the hands of the corpse—a corpse that suggests the charnel-house and not the church. As we looked at this picture our thoughts wandered to that 'Death of Ste. Claire,' by Murillo, which was lately sold out of the Aguado collection. Between Murillo and Mercadé, of Barcelona, there is an incline indeed! 'The First Interview of Machiavel with Cesare Borgia,' by M. Faruffini, of the Academy of Pavia, is a striking picture; both the figures are well studied and conceived, and there is intellectual light in the two heads. Spanish art

is more strongly represented than usual, by Antonio Ghibert and Edoardo Zamacois, the latter being a pupil of Meissonnier. M. Ghibert's 'First Interview of François the First with his betrothed, Eleanor of Austria,' is, perhaps, on the whole, the best historical picture in the Exhibition. The colour is admirably balanced; the figures are all full of dignity, and the two principal subjects, the king and his betrothed embracing, are charming. The king appears a most kingly and, at the same time, tender suitor. M. Zamacois has painted the entry of the *torreros*, in their rich and gaudy attire. The fellows are broad-shouldered, with determined, bull-like faces; they are all dissimilar in feature, but akin in expression. M. Meissonnier has a worthy pupil. Appreos of Meissonnier, he should be congratulated on the promising appearance made by his son. Jean Charles Meissonnier has two cabinet-pictures in the Exhibition, of which it cannot be said only that they are full of promise: they are delightful pictures, and show the son to be worthy of the father. The picture called 'Taking Tea' is painted very much in the manner of the elder Meissonnier. The two figures, an elderly man and an elderly lady conversing across a little elegant tea-table, are both delightful, life-like, graceful studies. The texture of the lady's blue velvet jacket against the white satin skirt, and then, again, the white satin against the snowy linen of the cloth upon the table, prove how successfully the work has studied under the father. The rich transparent brown of the screen behind, the finished details, show a patient skill that promises the world a second Meissonnier equal to the first. Among the miscellaneous pictures is an excellent one by Charles Moreau, called 'Convalescence.' The old man's querulous expression is a true bit of Nature, and the entire picture is well painted. The two studies of Eastern women,—the 'Armenian' and the 'Femme Fellah,'—by Charles Landelle, are two beautiful examples of this artist's genius; the colour in both is rich and clear, and the heads are fine types of the highest eastern beauty. M. Marie's little Italian girl is a rare rich study, worthy of Decamps. M. Marchaux's 'Cleopatra,' at full length upon the earth, is finely conceived; there is a wild and savage glow in the dark eyes that burn out of the canvas. It is a passionate face, hoping, waiting, expecting. 'The Wife of Potiphar meditating her Revenge' is a picture that should not be passed over. The face of the woman, just risen from her couch, has an intense expression of passion. The entire figure is finely drawn and posed; it is by M. H. F. Chopin. —'The Confessional,' by J. Tissot,—a mysterious, graceful lady in black, who has evidently had much to confess,—draws a sympathetic crowd. Painted incidents in the life of Buonaparte or Josephine, whether well or ill executed, are never without eager spectators. In M. Viger Duvignau's 'Souvenir de Malmaison,' the Emperor is presenting a rose to Josephine, who is surrounded by her ladies. A more lifeless group of dolls, the Empress included, could hardly be painted. Yet it makes impressionable Parisian ladies cry, "Cette pauvre Joséphine!"

The leading nudity of the Exhibition is the 'Femme au Perroquet,' by Gustave Courbet. It is already photographed, and in every shop-window. It is a finely-drawn reclining figure of a woman toying with a parrot. The skill and power of the artist are undoubted. He is a master of drawing. But conceive such a subject in the English Royal Academy! There is neither dignity in it, nor classic warrant for it. But this year has been fruitful in subjects that would shock, not only Mrs. Grundy, but very many much less sensitive people.—M. Saint-Pierre's 'Sleep of the Nymph,' from one of André Chénier's Idylls, is perhaps the purest in tone and treatment of the wholly undraped school. But MM. E. Leroy, J. J. Lefebvre, A. E. F. Lecadre, V. H. Juglar, and Adolphe Jourdan are sinners with their brush, from whose canvas people hurry on apace.

We must not forget two exquisite bits of Breton life, by Eugène Leroux. The 'Breton Servant' is worthy of Wilkie. M. Fortin's 'Beggar-Boy' is an excellent study from life, that would please many English connoisseurs.

The sculpture, thrust this year into a long nar-

row place, which the *Bretonnement* calls a "cave" (the writer should have seen our old Sculpture Gallery at the Royal Academy!), includes many works of average merit. The dead Abel, of Fengeres des Forts, is the most prominent—we are not sure that it is not the best—of the three hundred large and small works massed in the sculpture corridor. M. Carpeaux's design for the Pavilion of Flora, at the Taileries, is full of original power. The subject is not a little pretentious. It is Imperial France carrying light through the world, and protecting Agriculture and Science. M. Carrier-Belleuze has some works remarkable for those special excellencies which have made him a favourite among the bronze-workers of Paris.

We had nearly forgotten a rich bit, among the drawings. It is *Epsom Races*, by a Belgian artist, M. Van Elven. The drawing is a very fair one. But, strange to say, there is not an English man or woman on Epsom Downs. The women in the front are French from head to foot; and an indecent episode in the corner, completes the foreign atmosphere which M. Van Elven has contrived to throw over our great national race. B. J.

FINE-ART GOSSIP.

We have received some photographs from statues by Mr. Mozier, of Rome,—a name most of our readers will recall as familiar to them at the International Exhibition. This very able sculptor affects the severe and earlier form of Greek design as his model in style, and reproduces it with a success which, for a modern, is remarkable. Undoubtedly, much might be expected from the adoption of this phase of sculptural style as a point for departure in modern carving; far more, indeed, than from the somewhat sensuous later manner which has found favour with the sculptors of this age. The severity of the earlier models suits admirably those abstract presentations which have always been declared most apt to Art in marble, and is less fortunately applicable to romantic themes. This is illustrated by the photographs now in question, one of which, *Il Penseroso*, represents with undeniable success the grave and impersonal theme. Another, *Rebekah at the Well*, though by the same hand, and a work of thought, fails exactly where we should expect, in being more personal and picturesque. *Il Penseroso* cannot be overpraised for the simplicity and gravity of its design. A veiled figure, one of the series, despite Mr. Mozier's ability, is unapt to the material as here treated in the usual modern manner. The design, of course, is original.

A well-known artist writes:—

"June 30, 1866.

"Allow me to tender you my sincere thanks for your article in the last number of the *Athenæum* on the treatment of the landscape-painters by the members of the Royal Academy. As the *Athenæum* is the only journal in which the artistic world place any confidence, I trust your remarks will cause the more liberal members of the Academy to exert themselves in our favour, and that, at least, we may have a share of the space at their disposal, and a few of our works placed in more prominent positions than has been the case for many years. As most of the landscape-painters have met with similar treatment to myself, I will mention my own case. I have been a contributor to the Academy Exhibitions for eighteen years, and during that time I have only had one picture hung on the line, and for that I am indebted to a personal friend being one of the hangers; with this one exception, most of my principal works have either been hung next the ceiling or returned (last year the former was the case, and this year my two principal pictures were returned). While the line space is filled up with what are called figure-pictures, many of which are in reality nothing more than pictures of studio furniture and costume, and very often four or five are by the same painter, others cannot get one small picture in to represent them. I would suggest that, until the Academy have more space at their disposal (which event does not seem probable for some years), no artist should have a second picture hung on the line until every contributor whose work had

been accepted had one placed where it could be seen properly (Members and Associates, of course, excepted). But I think they also might share some of the space they now occupy with six and eight pictures, and nearly thirty feet of the line, with their less fortunate brethren. If such a plan were advocated by your powerful journal, it would confer a great boon on many.

"A LANDSCAPE-PAINTER."

A picture, by M. Alma-Tadema, now at the French Gallery, Pall Mall, to which we draw passing attention some weeks since, is worthy of additional notice, because it illustrates a novel phase of design and the acquisition of a new field for study. This work is numbered 3, *The Return from Shopping*,—a Roman matron, attended by a strapping young male slave, who is heavily laden with purchases, accompanied by her daughter, a well-grown damsel, and her little, self-willed, much-indulged son. This party approaches the entrance to their residence, the valve of which is held back by an older servant, who has stepped into the street for the purpose, and now attends the entry with a profoundly obsequious mien. All the details of costume and architecture have been studied and reproduced from antique models with great care, to a most interesting result, by M. Alma-Tadema. The robes of the women, the garments of the boy, the diverse clothing of the slaves as proper to their offices, the painting of the house-walls, the fittings of the entrance, the contents and decorations of the atrium as revealed by the open door, the manner of paving the street, both as respects the roadway and footpath, show how much the painter has, for our benefit, profited by modern researches of this nature. M. Alma-Tadema reproduces in some respects the peculiar manner of M. Leys. This is true as regards that neglect of the surface of their pictures, which gives an unfinished appearance where it ought not really to be, to the injury of both artists' works. They resemble each other in the employment of strong and opaque colouring. M. Alma-Tadema is to be compared, by no means to his own advantage, in this point with M. Leys, whose facility with lucid and semi-transparent tints gives him an enormous superiority in colour, as well as in reproduction of the actual textures that present themselves to the artist, and may be happily or unhappily dealt with, according as his power admits. The design of this picture exhibits a good deal of humour. The doorkeeper is a wily, elderly Italian, with a high back to his skull, and long narrow jaws that slope to the front and downwards to a pointed chin. He has ashy-brown and scanty hair, stoops as he stands, holds his face forwards, and looks down, with a steady, glowering smile, or sinner, in the corners of his mouth. By many little crafty services he has got the comparatively easy janitor's berth, while his fellow-slave, apparently a Briton, with four times the strength, honesty and loyalty, holds the subordinate place of page, is led out to carry the umbrellas and long cloaks of the idle lady and her companions, taking the chances of rain or sunshine as they come, and brings the load home again, with the addition of a huge, prickly aloe-plant in a pot, which stabs him in the breast as he bears it under one arm; held in the other, a rhododendron alaps him in the face at every step.

One of the oddest things noticeable at the National Portrait Exhibition is that No. 355, *Robert Devereux, Second Earl of Essex*, dated 1594, then twenty-seven years of age, and No. 362, *Queen Elizabeth*, both belonging to the Earl of Verulam, and heirlooms we believe, are dressed in a black stuff which is obviously of the same nature and pattern. There would be, of course, nothing unusual in the fact of a ruler bestowing rich stuffs on a favourite subject. We remember how, so long ago as the eleventh century, William the Conqueror was provoked to swear by the "light of God" that Roger Fitzosbern, son of William, Lord of the Isle of Wight and Earl of Hereford, should remain in prison during the rest of his reign, because he treated contumeliously the splendid gift, "surcoat, silken tunic, and mantle of precious ermine brought from abroad," which the King sent to

the said Roger, then a prisoner for rebellion. Henry the First exasperated the very soul of Robert Courthouse, a prisoner, by inadvertently sending a new, but torn, robe.

The sale of the celebrated collection of drawings by the old masters, of the late Rev. Dr. Wellesey, has been continued during the past week at the rooms of Messrs. Sotheby, Wilkinson & Hodge. We quote some of the more interesting lots, with the prices they obtained: Cattle crossing a Brook, by Claude, 98*l.* (Colnaghi);—View of the Piazza St. Marco, in pen and sepia, by Canaletti, 38*l.* (Colnaghi); The Jesuit Church, by the same, 34*l.* 5*s.* (Colnaghi);—Hans Hemmelinck, by himself, 21*l.* (Whitehead);—Portrait of John Wilks, by Hogarth, 18*l.* (Whitehead);—A beautiful Portrait of Queen Jane Seymour, by Holbein, 57*l.* (Addington);—A Sea Piece, in Stormy Weather, in pen and sepia, by Claude, 50*l.* (Colnaghi); A Shepherd seated on the Stump of a Tree, by the same, 37*l.* (Whitehead);—Portrait of a Young Lady, by Sir Peter Lely, 18*l.* 18*s.* (Colnaghi); The Duchess of Cleveland, by the same, 80*l.* (Addington);—Profile of a Lady, 58*l.* (Colnaghi);—The Count de Ligny, by Lucas van Leyden, 22*l.* 10*s.* (Clement);—Portrait of Francis the Second of France, by Janet, 54*l.* (Colnaghi);—The Pope, seated with Four Cardinals, by Pinturicchio, 20*l.* (Whitehead);—View in Rome during the Carnival, in sepia, by Claude, 44*l.* (Colnaghi);—Two full-length Figures, in pen and sepia, by Perugino, 37*l.* (Addington); The Marriage of the Virgin, by the same, 38*l.* (Whitehead); Full-length of Men in Armour, by the same, 23*l.* (Addington); The Saviour on a Throne, by the same, 30*l.* (Clement);—The 'Adoration of the Shepherds' (being the first idea for the fresco at Perugia), 38*l.* (Whitehead);—Mercury and Argus, in pen and indian ink, by Claude, 68*l.* (Hayes); The Fishermen, by the same, 51*l.* (Whitehead); An Open Country, by the same, 8*l.* (The Earl of Warwick); Jacob and the Angel, by the same, 37*l.* 16*s.* (Hayes);—Portrait of Isabella Sforza, in red chalk, by Titian, 20*l.* (Addington); Study of an Old Oak, by the same, 42*l.* (Clement); A Landscape, by the same, 26*l.* (Whitehead);—Portrait of Adolph Hillhovius, by Lucas van Leyden, 18*l.* 1*s.* (Whitehead);—Embarkation of St. Ursula, by Claude—a study for the picture in the National Gallery, 70*l.* (Colnaghi); The Shepherd and his Flock, by Claude, 42*l.* (Addington); The Setting Sun, by Claude, 66*l.* (Colnaghi); Ruggiero and Angelica, by Titian (engraved by C. Cort), 30*l.* (Grundy).

MUSIC AND THE DRAMA

BY SPECIAL DESIRE.—MR. CHARLES HALLE'S BEETHOVEN RECITALS, St. James's Hall.—THE EIGHTH and LAST RECITAL will take place on WEDNESDAY NEXT, July 11, to commence at Three o'clock precisely. Programme: Sonata, in E major, Op. 109, Beethoven; Song, Miss Edith Wynne; Sonata, in A flat major, Op. 110, Beethoven; Song, Miss Edith Wynne; Sonata in C minor, Op. 111, Beethoven. Piano-forte, Mr. Charles Halle; Accompanist, Mr. Emilie Berger. Sofa Stalls, 10*s.* 6*d.*; Balcony, 7*s.*; Area, 2*s.*. Tickets at Chappell & Co.'s, 50, New Bond Street; and at the Hall, No. 28, Piccadilly. —N.B. On this occasion the entrance for all parts of the Hall will be by the Piccadilly door only.

MR. ARTHUR S. SULLIVAN has the pleasure to announce that Mdlle. MEHLIG has delayed her departure from England in order to PLAY at his Grand Orchestral Concert, WEDNESDAY EVENING, July 11.—Stalls, 10*s.* 6*d.*

MR. ARTHUR S. SULLIVAN'S GRAND ORCHESTRAL CONCERT, St. James's Hall, WEDNESDAY EVENING, July 11, Eight o'clock.—Madame Lind-Goldschmidt, Miss Edith Wynne, Mr. W. H. Cummings, and Mr. Santley. Piano-forte, Mdlle. Mehlig and Mr. Franklin Taylor. Principal Violin, Mr. Henry Blagrove. Conductor, Mr. Arthur Sullivan.—Stalls, 10*s.* 6*d.*; Unreserved Seats, 5*s.* and 3*s.*; Balcony, 1*s.* 6*d.* and 1*s.*; Area, 6*d.*. Tickets at Chappell & Co.'s, 50, New Bond Street; and at the Hall, No. 28, Piccadilly.

MADAME LIND-GOLDSCHMIDT will SING at St. James's Hall, on WEDNESDAY EVENING, July 11, at Arthur S. Sullivan's Orchestral Concert. Secure your Tickets at Lamborn Cook, Addison & Co.'s, 42 and 43, New Bond Street. Stalls, 10*s.* 6*d.*; Unreserved Seats, 5*s.* and 3*s.*

NEW PUBLICATIONS.

PIANOFORTE MUSIC.

A brief account may be commenced to-day of some of the music which has accumulated into a rather formidable heap during the past quarter of the year.

The eighteenth series of the superb edition of Beethoven's works, in course of issue by Herr Breitkopf & Härtel, Leipzig, claims precedence.

It is devoted to the Magician's slighter pieces; some of which are new to us,—as, for instance, the posthumous *Rondo* in G, numbered Op. 129. This may almost pair off with the other *Rondo* in G (Op. 51, No. 2), which is well worth the adoption of any delicate pianist, since a more exquisite *solo* does not exist. There is less variety in this Op. 129; but the real subject is developed with the hand of a genius. Then, how full of matter are the six Minuets (Op. 105), which are also unfamiliar! Remark especially the grace of No. 2. It might have been thought that the world had nothing to learn in respect to Beethoven's oriental prodigality of fancy. We never felt it so strongly as while turning over the leaves of this collection of what its author possibly considered "unconsidered trifles." The book contains thoughts of beauty sufficient to suggest a long life's labours to many a meaner musician; and these may be ranked with the sketches and drawings of Michael Angelo. The man who conceived 'Il Pensiero' at Florence, and the Sibyls on the roof of the Sistine Chapel, and who built the church among the ruins of the Baths of Diocletian,—who could throw off passing fantasies of a grace and delicacy as fascinating as his power in colossal creations was overpowering,—does not occupy a higher throne in Art than does the composer of the C minor Symphony, the Pianoforte Concerto in E flat, the 'Kyrie' of the Posthumous Mass, and lastly these pieces, most of which, nevertheless, a child may master technically.

Next a packet of music from a firm hand, that of Herr Pauer, is to be opened. The industry of this excellent Professor cannot be too strongly dwelt on as rare. Here, as his sixtieth work (Leipzig, Kistner), we have a set of *serious variations* on a theme from 'Samson,' "My faith and truth," which is about as good as any set of its kind that could be named. In a lighter strain is his "Andante Piacerevoli," built on an elegant theme. His "Falsche Melodieuse" bears, perhaps, too ambitious a title, the subject being less spontaneous than a melody should be. Two stages later, we come on yet one more "Tarantelle," which is of fair Tarantella quality,—on a pretty trifle, "Chanson du Savoyard,"—and further on a vigorous transcript of the spinning chorus from Haydn's 'Seasons'—on one more picturesque of Mendelssohn's setting of Moore's Venetian "When through the Piazzetta" (the above published by Ewer & Co.). This list may be thought to represent work enough, especially when it is added that every bar of such labour is honestly executed and carefully finished. But Herr Pauer, as his Historical Concerts gave the world to know, is no less indefatigable in research than he is diligent in composition. He offers rich fruits of his reading in his *Old Piano-forte Music*, six numbers (Leipzig, Senff; London, Ewer & Co.). More timely a publication could not be, since a large section of players and those played for, naturally enough satiated with the sickly trash of late deluging the public, are returning to the more wholesome fare provided by their ancestors. Herr Pauer has been musically happy in the selection of his specimens, which, "though ancient, are not old," as was well said regarding certain poetry by a thoroughly accomplished critic. They contain a variety of melody which will surprise those who have been used to conceive that "tune," as distinct from "science," is an invention of modern times. It would be impossible to name a more interesting collection than this.

M. Stephen Heller is in danger of becoming mannered. "Sham upon sham," said the Doctor in Miss Edgeworth's 'Mancuvring,' "is too much for any man." Reverie after reverie must deteriorate the force of thought and invention, because such habit of mind discourages that commerce with the outer world, which no one concerned in one of the two most representative among the arts (Drama, the first; Music the second) can afford to neglect. In these, *Deux Cahiers*, Op. 114, and his three *Ballades*, Op. 115 (Schott & Co.), it will be seen that "the light of other days is faded." M. Heller cannot write a bar which is vulgar, but he may force himself to write when ideas present themselves languidly, and this seems to be his present case.

Some small "Flying Leaves" (to translate, as in

this present article, German titles) by Oscar Weil, (Op. 6,) (Leipzig, Breitkopf & Härtel) shall close to-day's account. These are not without grace, nor without style. Herr Weil has not "heard the chimes at midnight" for nothing. If they are without originality, why almost every known composer has begun by being a copyist, and thus the absence of any marked feature should not be taken too severely to heart by those who sit in judgment. Herr Weil's case is "adjourned."

HER MAJESTY'S THEATRE.—Why Mozart's 'Die Entführung' has been less seldom heard than his three other popular operas, and may be said, like 'Idomeneo,' 'Così' and 'La Clemenza,' to have been comparatively shelved, is to be explained in two sentences. The story is silly; the voices required for the music are exceptional—a *soprano* of great compass upwards, a bass, with a great compass downwards. Yet neither 'Don Juan,' 'Le Nozze' or 'Il Flauto' is more "worthy" (as grammarians have it) than this delicious comic opera, which well merits an extended study. To-day only a few of its characteristic points can be noticed. First, an amount of local colour nowhere else attempted by Mozart. There is nothing of Spain in 'Don Juan,'—nothing in 'Le Nozze' (save the brief use of the well-known *Fandango* previously employed in a more developed form by Gluck in his ballet 'Dom Juan'); whereas, not even Weber's self in his 'Preciosa' and 'Oberon,' not even Signor Rossini, in the mountain-music of his 'Guillaume Tell,' have surpassed, in adaptation of known national forms and peculiarities, the Turkish music of 'Il Serraglio'; beginning with the bright overture which we rate even higher than the overture to 'Figaro.' Parenthetically, let the passage at the sixty-fourth bar be noted as the first example of that peculiar effect, which has been made such account of in the 'Tannhäuser' Overture, as though it were invented by Herr Wagner. Nothing, to return, can exceed in spirit, brilliancy and use of the "Janissary" effects the chorus which introduces *Constance* (from which Beethoven did not disdain to borrow a phrase for the final chorus to his 'King Stephen'), save it be the last chorus, closing the opera. The vivacity and variety given by these, as contrasted with the sentimental portions of the story, are admirable, and were exceeded by no other of Mozart's choral stage effects.† Then, the humour of *Omin's* part separates it from anything else from its master's hand, save it be the Birdcatcher's music in 'Il Flauto.' What can exceed the sulky stupidity of his interrupted romance in the apple tree! the burly rage of his two grand airs (the second of which is curiously paired by the Pedlar's song in Mendelssohn's 'Son and Stranger')! his stealthy, solid tipsiness in the drinking duet with *Pedrillo*! Among further strokes of humour may be noted the outburst of *Blondine's* shrewish jealousy in the quartett which ends the second act, which is as eminent a masterpiece in point of its natural combination, within limits of form, of opposite humours, as the Quartett, "Non ti fidar," in 'Don Juan.' Among other delightful fancies, *Pedrillo's* guitar romance (thoroughly original), and the happy couplets, going round from voice to voice, with which the drama closes. The above are far more dramatically precious than the airs of sentiment and parade, which, as he himself confessed some years after they were written, are too long drawn. It is on the comic and characteristic portions of 'Il Serraglio' that its strength rests.

We could go in this strain, exemplifying and comparing, much further, but forbear; and shall now speak of the performance at Her Majesty's Theatre. Mdlle. Tietjens gives her utmost to the part of *Constance*; but we cannot agree with her wholesale admirers in commending her execution of the florid music, which, however carefully executed, is heavy and incomplete. It would have required labour to give an organ so powerful as hers unerring flexibility: had this been given, she might

† That we may not be thought to force a case at random, the reader may be reminded that the forcible choral effect closing the ball-room scene in 'Don Giovanni' is not Mozart's. In the score there is no indication of anything of the kind—the act being ended, as is a similar act in 'Le Nozze,' by the principal characters alone.

have taken rank as a second Catalani. The point of her career is passed in which this could be done, were she or her public aware of the difference between "almost" and "altogether." We cannot accept Dr. Gunz as *Belmonte*. He gets through his music with German integrity, it is true, and his voice is sufficient, but it is ill delivered; and he might be singing in Hottentot, not Italian, text. *Osmín* shows Herr Rokitsansky to great advantage. He has a real, deep bass voice, and has exercised it well. The passage music, as mercilessly thrown into his part as if Meyerbeer had done it, is neatly executed; and he has what even our lazy tenors disdain to provide themselves with—a real shake. Moreover, he looks the character well, and behaves as *Osmín* should, though not so subtle and grotesque in his humour as the last *Osmín* we saw, M. Bataille, at the Théâtre Lyrique. Mdlle. Sinico (always acceptable) is an arch *Blondine*. Signor Stagno has "the makings" of a light and, what is rarer, a comic tenor, and was lively and personable as *Pedrito*; but he was at fault in his recitatives—a fault not to be overlooked. The orchestra and chorus did their work well, and with a certain air of enjoyment. The scenery and dresses were sufficient without superfluous luxury. On the whole, this revival is most welcome.

ROYAL ITALIAN OPERA.—The value of a thoroughly prepared artist made itself felt the other evening at the Royal Italian Opera, when Mdlle. Artôt at once and most skilfully took the part of *Rosina* to replace Mdlle. Patti. A word concerning the last-named excellent artist. Some among our contemporaries are disposed to take exceptions to her stature as unbefitting the part of a *Czarina* in 'L'Etoile.' Such being the case, it may not be amiss to offer a reminiscence in regard to 'L'Etoile.' Meyerbeer, as every one who approached him must have known, was fastidious to the utmost limits of caution in the selection of his artists,—the assertion being attested in the letter from him which prefaces the Library Edition of 'L'Africaine.' He said, in our hearing, that he had an express reason for entrusting the part of *Catterina* to Madame Vandenhoevel-Duprez because of the fragility of her appearance and voice, which made her moral ascendancy over that muscular Muscovite, Peter Baas, the shipbuilder's workman at Saardam, doubly striking by contrast. While we are talking about 'L'Etoile,' let us correct another error, one into which the *Gazette Musicale* has fallen when adverting to its late revival at Covent Garden. It is mistaken in stating that the part has been only sung there by Madame Bosio and its present representative; overlooking the excellent performance in it of Madame Miolan-Carvalho, and its last year's presentation by the original *Catterina*, Madame Vandenhoevel-Duprez. Every one is unanimous as to the value of Madame Lemmens-Sherrington as *Prasovia*. We understand that 'Le Nozze' is in rehearsal. Why so late? is a question every one may ask. Every one is well nigh satiated with music at the time present. Our managers might purposely avoid the "run" of the season for their most important productions. To make matters odder, Ricci's ridiculous 'Crispino e Comaro' (why produced at all is a mystery), is, according to the advertisements, to pass first; so that let no one wonder if 'Le Nozze' be postponed, as is the case with 'Don Sebastian,' promised for Mdlle. Artôt, till another year, or *sine die*.—The *Orchestra* states that Mr. Alfred Mellon's Concerts, which will begin in August, will this year be continued till December, when the theatre will be given over to Pantomime.

PRINCESS'S.—This theatre re-opened on Monday with a new drama by Mr. Watts Phillips. It is entitled 'The Huguenot Captain,' and consists of a few striking incidents, which are made the vehicle of much picturesque action. It is in three acts, and of these the first is most effective. Here we are introduced to the tavern of the White Cross, which is visited by the Duke Hector, son of the widowed Duchess d'Armenonville, who with his gallants take the liberty of interfering with some Bohemians

who are amusing themselves, after the manner of stage-gipsies, innocently enough. One of the mad-cap train is the sergeant *Annibal Locust* (Mr. George Honey), from whose rough attentions the gipsy, *Juanita* (Miss Augusta Thompson), seeks protection. The Huguenot captain, *René de Paradillan*, rises in her defence, and in so doing provokes the wrath of Hector, who challenges him to a duel on the spot. They fight with two swords each, and Hector falls, apparently dead. The captain has to make his escape, and is followed by the infuriated soldiery. He has to pass the bridge of St. Michel, which is guarded by *Annibal Locust* and two officers. The former occupies the centre, and gets drunk, so that when René appears he is able to get his clothes, and, thus disguised, to avoid his followers. Part of this scene is acted in song, and a drunken refrain, in which the words are misplaced, excited much merriment. At length the fugitive captain reaches the Hôtel d'Armenonville, and has an interview with the Duchess, who swears to protect him. He hides behind the curtains of her magnificent bed, and subsequently she discovers that he is the slayer of her son; nevertheless, for her oath's sake, she maintains his secret, resolving on vengeance hereafter. The scenes are all gorgeously placed on the stage, and are exceedingly well acted. The second act has a small amount of dialogue and incident. The materials are meagre in the extreme; but they are supplemented with an elaborate ballet, and some mechanical effects relative to the escape of the incautious captain from a prison. The ballet alluded to is a grand affair, which is much assisted by the introduction of the grotesque French artistes, MM. Flageolet, Clodoche, Comète, and Normande, from the Théâtre Impérial du Châtelet, among a Bohemian troupe. Here the ballet is very cleverly managed, so as to fall in with the general action of the scene, and form part of the dramatic plot. In the next scene, René, disguised as a monk, seeks an interview with his lady-love, *Gabrielle de Savigny*, niece to the Duchess (Miss Neilson), but is discovered by the drunken sergeant, and lodged in the old Châtelet prison, from which he is assisted by the gipsies, *Juanita*, and her brother, *Imael* (Mr. C. Seyton), in escaping. In the third act, the Captain seeks *Gabrielle* in the chateau, and has to encounter the Duchess, who is determined on surrendering him. A violent love-scene takes place, and some stilted dialogue passes between the three interlocutors; for here the author has endeavoured to write up the dialogue, but it is with difficulty that the interest of the audience is secured,—certainly their sympathies are not excited. Finely acted, and magnificently mounted, with some musical accessories which are highly creditable to Mr. J. L. Hatton and Mr. Charles Hall, this drama, we fear, will nevertheless fail to take a lasting hold on the public mind, and indeed is chiefly valuable for its spectacular illustration, not for its dramatic excellence. Much applause, however, followed the fall of the curtain, and the principal artistes were recalled.

ADELPHI.—A version, by Mr. Burnand, of Offenbach's 'Helen; or, taken from the Greek,' was produced on Saturday with success. The rendering was free and easy, far too much so, we think, and certainly erred in vulgarizing the pleasing wit of the original by broadly exaggerating it into burlesque. The music, of course, was beyond the general capabilities of the company, yet was better delivered than might have been expected. Miss Mellon and Mr. Toole, as *Paris* and *Mene-laüs*, were both good; and Miss Furtado, as *Helen*, did excellent service. The scenery, by Mr. Herbert, was appropriate, though the subject allows but small scope for the exhibition of his talents.

MUSICAL AND DRAMATIC GOSSIP.

THE concerts are not yet over "and gone." *Mdlle. Angèle* and *Peachel* have received their friends in company. Some, however, are drawing to a close. The last of the *Popular Concerts* was on Monday, at which Mr. Halle and Madame Arabella Goddard appeared as pianists.—Mr. Ella wound up with his "grand matinée" on Tuesday. At

this the pianists were Herr Lubeck and Herr Jaell. Of the former, we have hardly spoken sufficiently. He is, no doubt, a forcible and brilliant player, as his handling of Mendelssohn's second *trio* showed; but he is not adverse to "playing down" his comrades (in the *scherzo* the three were not neatly together), and his *cantabile* and *legato* passages want smoothness. The theme of the *andante* was over-expressed. Herr Auer is not yet the player Mr. Ella fondly believes him to be. He wants decision and breadth of style (as was to be felt in Beethoven's *Septet*), and, as we have observed before, plays his own part in, rather than leads chamber-music. Seeing that this journal was the first to mention this young violinist as promising very good things, it is justified in offering counsel rather than the flatteries by which the most promising of artists may be impeded, not helped forward. Mr. Ella is incorrigibly given to sheltering under the wide wing of his self-praise all those who appear at his concerts.

"It is rumoured," says the *Orchestra*, "that the Royal Academy of Music will take up its temporary abode at the South Kensington School of Arts. Prof. Sterndale Bennett, we hear, has been offered its direction, as successor to Mr. Lucas, who has retired."—It was to be foreseen, from the hour when the Society of Arts took the matter in hand, that an attempt to make a move in the direction of Cromwell Road was sure to follow. With regard to the expediency of this there may be many opinions. We are in expectation of the complete published evidence. Our hope of a Government grant does not, at the time present, keep pace with our expectation of the promised Blue Book.

Mr. Cummings, whose value as a tenor singer rises month by month, the other day carried off the first, or thirty guineas, prize given annually by the Catch Club for a five-part glee. The second prize was won by a titled amateur, Lord Beauchamp, for a four-part glee.

M. Gounod's *Cecilian Mass* was advertised at the Roman Catholic Cathedral in Southwark for Sunday last.

On the authority of a contemporary, we stated, some time ago, that certain church music, by Dr. Stainer, of Oxford, was remarkable for certain uncommon qualities. This was meant for praise. Certain extracts from his 'Gideon,' given in last week's *Orchestra*, are remarkable indeed! We cannot call to mind anything so nonsensical, random and bad, written by a musician, or even an amateur, of any pretension; and are almost tempted to ask whether they are not a hoax!

The engagements for our provincial autumn musical festivals are now all but filled up. Among others of importance and promise is that of Miss Edith Wynne, who is retained for Norwich—the singer of singers for the part of *Adah* in Mr. Costa's 'Naaman.'

On the havoc which the present strife in Germany will make in every art, and especially Music, it is superfluous to dwell. Meanwhile, one consequence will evidently be, the flight hitherward of many valuable artists at the very time of year when every foreigner not engaged in provincial "touring" has been used to run across the Channel homewards. Prof. Moscheles has arrived from Leipzig. How, his flight makes us ask, will the present state of affairs affect the Conservatory there? Sad it would be were that College of Art, in many of its important respects and results so admirable and enviable, to "go down" in the thick of the battle.—The opera-houses at Dresden and Hanover are shut.

The "music of the Future" in Munich seems to be following the fate of the Countess of Lansfeldt, Lola with the horsewhip, and to be worried and hurried out of the capital, in defiance of kingly protection. We perceive that Herr von Bulow, the pianist, one of its most strenuous advocates, has been compelled (his friends assert, by persecution) to throw up the court appointment for the sake of which he had quitted an advantageous post at Berlin.

'Jean la Poste,' adapted from M. Boucicault's

'Arrah na Pogue,' has been produced at the Galté, and, it appears, with success.

A new opera, 'Jose Maria,' by M. Cohen, is in rehearsal at the Opéra Comique, with M. Montaubry for hero. M. Mermet's 'Roland' is to be revived at the Grand Opéra during the flat season. It is said that M. Carvalho is courageous enough to meditate bringing forward a version of 'Lohengrin,' at the Théâtre Lyrique, during the coming winter.

Signor Sangiorgi's new opera, 'Guiseberg da Spoleto,' has been given at the Argentina Theatre, Rome.—A new opera, 'Le Fate,' by Signor Valenza, was given in the course of last month, at the Teatro della Fenice in Naples.—To the list of Italian composers who are strange to us, we may add the names of Signori Vicini, Ticci, Lovati-Cazzulani, Albini, Ruzzi, and Cisotti. It would be wasted space to transcribe the titles of their works, which appear one and all to have perished. According to *Il Trovatore*, Signor Pacini is at work on yet another opera.—Madame Vera-Lorini is to sing in 'L'Africaine' at Rome.

Madame Ristori has been playing for a few nights at the Théâtre Lyrique.—We read, in *Il Trovatore*, of some new Italian plays: 'Ada,' by Signor Dominici, and 'Aspasia,' by Signor Pallano, at Genoa; at Florence, 'Don Cipriano,' by Signor Castelvécchio, some of whose comedies were noticed here a few years ago, and 'Padrone Vecchio,' a small comedy, by a writer dismissed, not very respectfully, as "un certo Calenzuoli."

On Saturday the Lyceum Theatre closed for the season with the tragedy of 'Hamlet,' Mr. Fechter supporting the pensive Dane with his usual discrimination. Their Royal Highnesses the Prince and Princess of Wales were present on the occasion. A diamond ring of the value of 150 guineas was also presented in the green-room by the company to Mr. Fechter, who received it with visible emotion.

On Wednesday week the performance of Dr. Westland Marston's comedy of 'The Favourite of Fortune' was suspended, and Mr. Sothern appeared instead in the character of *David Garrick*. We know not whether Mr. Herman Vezin's success in another version of the same drama had anything to do with the change, but it is probable. Due notice will be given of the next performance of Dr. Marston's comedy, which still continues attractive.

MISCELLANEA

Silk-producing Spiders.—In a recent number of the *Times* I observe a notice of a species of silk-spider, stated to have been discovered on Folly Island, in the harbour of Charleston, South Carolina, by Dr. Wilder, of the United States army. As the subject appears to have attracted attention, perhaps I may be permitted to offer a few remarks bearing additional testimony to a fact which is worthy of record in an economical as well as scientific point of view. When I paid my first visit to the Bermudas, in the summer of 1854, I became acquainted with the habits of a very remarkable species of spider, which on my return to England was identified by Mr. Adam White as *Epeira clavipes*. A short account of its habits and silk-yielding capabilities I gave in my 'Naturalist in Bermuda' (1859). Since that time, however, repeated visits to the islands have afforded me opportunities of observing the insect, and collecting specimens, both old and young, with cocoons, &c. From such observations I am inclined to believe that this species, which belongs to the same genus as Dr. Wilder's insect, is equally capable of producing silk of a quality by no means inferior to that of the Folly Island spider. My attention was first drawn to the strength of the silk by coming in contact with the webs as I forced my way through the cedar groves, when I found the power of resistance to be something extraordinary, and I readily imagined that the information given me as to the capture of the smaller birds in its silky meshes was perfectly correct. Having been told by

a 'Mudian lady that good housewives sometimes made use of the silk for domestic purposes, I thought I would endeavour to procure a sample fresh from the insect. Seizing the first specimen that came to hand, I allowed it to fall about half way to the ground, hanging suspended by its thread. Taking a piece of twisted paper, I transferred the end of the thread to it before the spider reached the ground, and commenced winding rapidly while the insect descended, and I wound away for some time, until at last my specimen seemed disinclined to continue the supply, when, severing the thread, the insect was allowed to escape. Now, this thread of silk, which by-the-by was of the most beautiful colour and texture, during the whole process was never broken, and even when I gave it an extra stretch, it only proved the more its strength and elasticity. The cocoons are composed of the richest silk, far surpassing, I think, that afforded by those of the Bombyces; while from the abundance of these insects in the Bermudas, I have not a doubt, if collected together, and kept within proper inclosures, they would prove a source of much profit to the owners, and a benefit to manufacturers of silk material; for the spider, unlike the caterpillar's process, emits several threads at once, which, united, form a strand of considerable strength.

J. M. JONES.

Bent, Bending-time.—Now that your correspondents are discussing the former, will you allow me to put a query about the latter? There is a popular saying,

When the pigeon goes a bending
Then the farmer lies lamenting.

In Suffolk, however, the suffering is transferred to the bird. In that dialect it is,

The dow (dove) she du no sorer know
Till she du a bentin' go.

Johnson's Dictionary gives "Benting-time (from bent), the time when pigeons feed on bents, before peas are ripe," with a quotation from Dryden,

Bare benting times, and moultin months may come,
When lagging late they cannot reach their home.

May I ask for the context from Dryden, and an explanation of benting-time, as Johnson's does not seem satisfactory.

E. G.

The National Portrait Exhibition.—One of the chief advantages likely to result from an exhibition of portraits like that now open at South Kensington is the prolonged scrutiny which they undergo; and it seems a great pity that this most interesting collection should be dispersed without some permanent record being made of the probable authenticity or doubtfulness of each picture. Within a few days we have had a curious instance of the speedy way in which oral tradition fails on this point. There is at this moment, at the British Institution, a portrait, said to be that of Kitty Fisher, by Sir Joshua Reynolds. It is described and engraved as such in Leslie and Taylor's Life of Reynolds; and yet a letter, printed the other day in the *Times*, affords proof that the portrait is that of a virtuous lady named Woods, and not of the unvirtuous Kitty. Stranger still, it was not painted by Reynolds, but by Cosway! Would it not be practicable to mark every picture now exhibiting, or henceforward to be exhibited, at South Kensington, with a number corresponding to a similar number in a register, wherein a competent committee might record the fact that, in their opinion, such and such a picture was, or was not, authentic? The number might be painted, on some unimportant portion of the picture, in very small red letters—so small as not to be noticed by a casual observer. They should not be placed on the back of the picture, as they would be liable to be obliterated when the picture was lined or repaired. In the register would be pasted down the present printed description, with the additional remark that the committee considered the picture to be an authentic, or a doubtful, or a palpably spurious representation. This register would be kept at the Museum, as an occasional book of reference, so that the feelings of contributors would not be hurt by the non-authenticity of some long-cherished picture being published to the world. When one of the portraits changed hands, its registered number would enhance its value to the

purchaser, as affording the best guarantee of the portrait being genuine. If the principle of the plan I have suggested were accepted, the details might be left to the able connoisseurs to whom we owe the present complete and excellent Catalogue. The gentlemen to whose exertions we are indebted for bringing together the present unrivalled collection have, no doubt, had, in some cases, a difficult and delicate task. They have had to accept pictures which, at the first glance, they must have seen to be spurious, either as to the person represented or the painter. As an instance of the first kind, I would adduce the head of Wallace. Imagine the rough warrior in Scotland, more than five hundred years ago, sitting for this portrait, decked with a tartan scarf, and a brooch inscribed "Libertas"! On the other hand, some of the so-called Holbeins were painted after the year in which we now know Hans Holbein to have died.

D.
June 22, 1866.

Pose.—At Eton, the persons appointed to examine and select the pupils who are to be placed on the foundation at King's College, Cambridge, are called *posers*, i. e. as we suppose, *placers*, determiners of the places of the pupils examined. Certainly one would suppose that *to pose* is to place. Hence a difficult question would naturally be called a *poser*, i. e. such a question as would be asked in the highest and final examination. In the 'World of Words' we find "*Pose*, see *Catarre*," which is itself a *poser*, for *Catarre* is not found, and *Catarrah*, as one would suppose, does not satisfy the reference.

Statistics of Victoria.—The official Blue Book for Victoria gives some very interesting statistics respecting that colony for the past year. Of the entire population, 605,501, as many as 244,963 form what is known as the gold-fields population: this number includes 1,908 aboriginals. The national territory unalienated is stated at 49,734,251 acres, of which quantity 30,463,999 acres are returned as rented for pastoral pursuits, on which are 1,177 squatters. The agricultural statistics show the total extent of land occupied to be 6,125,204 acres, of which about five millions are freehold and the remainder rented. The extent of land under tillage is 479,463 acres; 125,040 acres were planted with wheat, yielding 1,889,378 bushels: in 1863 there were 162,009 acres under wheat, yielding 3,008,437 bushels. The acreage under oats continues to increase, and reached 144,308 acres in 1864, yielding 2,694,415 bushels. One of the most prominent features of the book is the great increase in the cultivation of the vine, no less than 3,595 acres being planted last year with 8,750,408 vines, yielding 10,042 gallons of wine, and 225 of brandy. There is no doubt that, when the process of manufacturing wine is better understood, Victoria will yield a very large quantity of excellent wine. Indeed, there is no apparent limit to the produce of this colony. The cattle in the colony are thus classed:—660,060 cows, 8,406,000 sheep, 117,182 horses, and 113,530 pigs. Seventy-four breweries were at work, employing 495 persons, and producing 6,179,712 gallons of beer, which were supplemented by an importation of above 800,000 gallons. There were 338 manufactories of various kinds at work in the colony. The machinery in the gold-fields is estimated at 1,500,000*l*. The rates of labour are returned at 1*s*. to 2*s*. a week, with rations, for agricultural labourers; 1*s*. a day, without rations, to artisans; domestic servants, 3*s*. to 5*s*. a year, with board and lodging. Bread averaged 11*d*. the 4*lb*. loaf; meat, 4*d*. to 6*d*. a pound; tea, 3*s*. to 4*s*.; garden produce, a little higher than in England. A lodging, suitable for a mechanic and his family, costs about 12*l*. a year, and the expense of erecting a building suitable for an agricultural labourer and his family is about 30*l*.

TO CORRESPONDENTS.—Baltimore—Old Subscriber—J. E. C.—J. W. D.—D. A. R.—J. H.—H. G.—W. A. D.—Received

*. The Title-page and Index for our half-yearly volume are given with the present number, on a separate sheet, as a Supplement, gratis.

MESSRS. CHURCHILL'S PUBLICATIONS.**The QUARTERLY JOURNAL of SCIENCE.**

No. XI. (JULY, 1896). 5s.

Contents.

1. The MORTALITY of LIVERPOOL and its NATIONAL DANGER. With a Typhus Map of the Borough.
2. The NEW IRON FIELDS of ENGLAND. By EDWARD HULL, B.A. F.G.S. With Woodcuts.
3. The HABITS and CONDITION of the TWO EARLIEST KNOWN RACES of MEN. By W. BODD DAWKINS, M.A. Oxon., F.G.S. Plate and Woodcuts.
4. SCIENCE and CRIME. The "Mountain Ash" Murder.
5. BRITISH VOLCANIC ROCKS: Hints to Home Tourists. By ARCHIBALD GEMIE, F.R.S.
6. DE LA RUE and CELESTIAL PHOTOGRAPHY. With Portrait.
7. GEOLOGICAL MAPS: their Relation to Agriculture and the Coal Supply.
8. On a TEMPORARY OUTBURST of LIGHT in a STAR in CORONA BOREALIS. By WILLIAM HUGGINS, F.R.S. With Woodcut.

CHRONICLES of SCIENCE; The International Horticultural Exhibition and Congress.

JOURNAL of MICROSCOPICAL SCIENCE,

including the Transactions of the Microscopical Society of London. No. XXIII. Edited by E. LANKESTER, M.D. F.R.S., and G. BUSK, F.R.S. With Plates and Woodcuts. New Series, 4s.

WHEREFORE, WHETHER, and WHITHER?

or, the Bible and its would-be Re-translators. By HENRY F. A. PRATT, M.D. 8vo. 1s.

A MANUAL of MEDICAL JURISPRUDENCE.

By A. SWAINE TAYLOR, M.D. F.R.S. Eighth Edition, fcap. 8vo. with Engravings on Wood, cloth, 12s. 6d.

On INFLAMMATION and other DISEASES

of the UTERUS. By J. HENRY BENNET, M.D. Fourth Edition, with numerous Additions, 8vo. cloth, 16s.

A GUIDE to the PRACTICAL STUDY of

DISEASES of the EYE. By JAMES DIXON, Surgeon to the Royal London Ophthalmic Hospital. Third Edition, carefully revised, post 8vo. cloth, 9s.

On DISEASES of the HEART and GREAT

VESSELS. By HENRY WM. FULLER, M.D. Cantab., F.R.C.P., Physician to St. George's Hospital. 8vo. cloth, 7s. 6d.

On DROPSY, and its Connexion with Diseases

of the Kidneys, Heart, Lungs, and Liver, as well as on some other Diseases of those Organs without Dropsy. By W. R. BANHAM, M.D., Physician to, and Lecturer on the Principles and Practice of Medicine at, the Westminster Hospital. Third Edition, enlarged and revised, with 16 Plates, 8vo. cloth, 12s. 6d.

On DISEASES of the VEINS, HÆMOR-

RHOIDAL TUMOURS, and other AFFECTIONS of the RECTUM. By HENRY LEE, F.R.C.S., Surgeon to St. George's Hospital. Second Edit., entirely re-written, 8vo. cloth, 5s.

CURVATURES of the SPINE: their Causes,

Symptoms, Pathology, and Treatment. By BERNARD E. BRODTHURST, F.R.C.S., of St. George's Hospital, and the Royal Orthopedic Hospital. Second Edition, revised and enlarged, with Engravings, cloth, 7s. 6d.

On SOME of the MORE OBSCURE FORMS

of NERVOUS AFFECTIONS. By HARRY W. LOBB, M.R.C.S. Re-issue, with the Chapter on Galvanism entirely rewritten. 8vo. cloth, 8s.

IMPERFECT DIGESTION: its Causes and

Treatment. By ARTHUR LEARED, M.D., Physician to the Great Northern Hospital. Fourth Edition, fcap. 8vo. cloth, 4s.

The MODERN TREATMENT of SYPHILITIC

DISEASES: comprising the Treatment of Confirmed and Constitutional Syphilis by a safe and successful method. By LANGSTON PARKER, Honorary Surgeon to the Queen's Hospital, Birmingham. Fourth Edition, 8vo. cloth, 10s.

The IMMEDIATE TREATMENT of

STRICTURE of the URETHRA. By BARNARD HOLT, F.R.C.S., Senior Surgeon to the Westminster Hospital. Second Edition, 8vo. cloth, 3s.

The SURGERY of the RECTUM: with Cases

illustrating the Treatment of Hemorrhoids and Prolapsus by the Improved Clamp. Lettoman Lectures. By HENRY SMITH, F.R.C.S., Assistant-Surgeon to King's College Hospital. Fcap. 8vo. 2s. 6d.

A MANUAL of BOTANY.

By Robert BENTLEY, F.L.S., Professor of Botany, King's College, and to the Pharmaceutical Society. Fcap. 8vo. with nearly 1,200 Engravings on Wood, cloth, 12s. 6d.

A MANUAL of ANIMAL PHYSIOLOGY.

With an Appendix of Examination Questions. By JOHN SHEA, M.D. B.A. Fcap. 8vo. with Engravings, cloth, 5s. 6d.

A MANUAL of PRACTICAL HYGIENE, in-

tended especially for the Medical Officers of the Army. By E. A. PARKES, M.D. F.R.S., Professor of Military Hygiene in the Army Medical School. Second Edition, enlarged, 8vo. with numerous Plates and Woodcuts, cloth, 16s.

DEFECTS of SIGHT and HEARING: their

Nature, Causes, Prevention, and General Management. By T. WHARTON JONES, F.R.S., Professor of Ophthalmic Medicine and Surgery in University College. Second Edition, fcap. 8vo. with Plate and Wood Engravings, 2s. 6d.

CHOLERA in its HOME. With a Sketch of

the Pathology and Treatment of the Disease. By JOHN MACPHERSON, M.D., late Deputy Inspector-General of Hospitals, H.M. Bengal Army, and formerly of the European General Hospital, Calcutta. Crown 8vo. cloth, 5s.

NOTES on HEALTH in CALCUTTA and

BRITISH EMIGRANT SHIPS, including Ventilation, Diet, and Disease. By W. H. PEARSE, M.D. Edin., Government Emigration Service. Fcap. 8vo. 2s.

ON the DISEASES of the RECTUM.

By T. B. CURLING, F.R.S., Surgeon to the London Hospital. Third Edition, much enlarged, 8vo. cloth, 7s. 6d.

The USE of the SPHYGMOGRAPH in the

INVESTIGATION of DISEASE. By BALTHAZAR FOSTER, M.D., Physician to the Queen's Hospital, Birmingham. 8vo. fully illustrated, cloth, 2s. 6d.

GOUT and RHEUMATISM in RELATION to

DISEASE of the HEART. By A. W. BARCLAY, M.D. F.R.C.P., Physician to St. George's Hospital. Post 8vo. cloth, 6s.

A HANDBOOK of UTERINE THERAPEU-

TICS, and of Modern Pathology of Diseases of Women. By E. J. TILT, M.D. M.R.C.P. Second Edition, revised and enlarged, post 8vo. cloth, 6s.

LATERAL and other FORMS of CURVA-

TURE of the SPINE, their Pathology and Treatment. By WM. ADAMS, F.R.C.S., Surgeon to the Royal Orthopedic and Great Northern Hospitals. With Plates, 8vo. cloth, 10s. 6d.

The TRUE and the FALSE SCIENCES: a

Lecturer on Homoeopathy. 8vo. 2s.

SORE THROAT: its Nature, Varieties, and

Treatment: including the Use of the Laryngoscope as an Aid to Diagnosis. By M. PROSSER JAMES, M.D., Senior Physician to the City Dispensary. Second Edition, post 8vo. illustrated, cloth, 5s.

The DRUGGIST'S GENERAL RECEIPT-

BOOK: comprising a copious Veterinary Formulary and Table of Veterinary Materia Medica; Patent Medicines, Druggists' Nostrums, &c. Trade Chemicals, Miscellaneous Preparations and Compounds used in the Arts, &c. By HENRY BEAUMLEY. Sixth Edition, carefully revised, 18mo. cloth, 6s.

BRIEF REMARKS on CHOLERA: an

attempt to Advance a Theory of that Disease which shall lead to a more consistent Method of Treatment. To which is added, a short Table of Practical Rules for General Use during an Epidemic. By ROBERT J. SPITTA, M.D. Lond. 8vo. 1s.

DR. LEE ON BATHS.

The PRINCIPAL BATHS of FRANCE. Fourth Edition, 2s. 6d. (Just published.)

BATHS of SWITZERLAND and SAVOY, with Remarks on the Action of Mountain Air. 3s. 6d.

BATHS of GERMANY. Fourth Edition, 7s.

BATHS of NASSAU. Fourth Edition, 2s. 6d.

HOMBURG and NAUHEIM. Third Edition, 1s.

WATERING PLACES of ENGLAND. Fourth Edition, 7s. 6d.

SAMPSON LOW & CO'S LIST OF NEW BOOKS.

The PRISON LIFE of JEFFERSON

DAVIS; embracing Details and Incidents in his Captivity, with Conversations on Topics of great Public Interest. By JOHN J. CRAVEN, M.D., Physician to the Prisoner during his Confinement. 1 vol. post 8vo. (On Tuesday next.)

The PROFITS of PANICS: the Narrative of a City Man. In popular form, price 1s. (On Wednesday next.)

A HISTORY of SAVINGS' BANKS; with an Account of the Origin and Progress of Mr. Gladstone's Financial Measures for Post-office Banks, Government Annuities, and Government Life Insurance. By WILLIAM LEWINS, Author of 'Her Majesty's Maids.' Dedicated, by permission, to the Chancellor of the Exchequer. 8vo. 16s.

The LIFE and CORRESPONDENCE of BENJAMIN SILLIMAN, M.D. LL.D., late Professor of Chemistry, Mineralogy, and Geology in Yale College, U.S.A. Chiefly from his own MSS. and Diary. By GEORGE FISHER. With Portrait. 2 vols. post 8vo. price 24s. (On Monday.)

A MEMOIR of the late Dr. MOUNTAIN, Bishop of Quebec. By HIS SON. 8vo. cloth, price 10s. 6d. (On Monday.)

SOUTH AUSTRALIA: its Progress and Prospects. By A. POSTER, Esq., late Member of the Legislative Council of Adelaide. Demy 8vo. with Map, cloth, price 15s.

TRAVELLING in SPAIN in the PRESENT DAY; being an Account of the Journey of a Party of Ladies and Gentlemen who lately Visited its Principal Cities. By HENRY BLACKBURN. With numerous Illustrations from Photographs and Drawings from Life, by John Phillip, R.A., E. Lundgren, Walter Severn, and the Author. Also, an Appendix of Routes, Fares, &c., the Expenses of the Journey, and a New Map of Spain. 12s.

A THOUSAND MILES in the ROYAL CANOE on the DANUBE, MOSELLE, RHINE, REUSE, AAR, MAINE, SAAR, SAAR, SAAR, &c. By J. MACGREGOR, Trin. Coll., Cambridge, Barrister-at-Law. With Illustrations. Small post 8vo. with a Map, price 5s. (Sixth Thousand now ready.)

LETTERS on ENGLAND. By Louis BLANC. Translated under the Author's Revision. 3 vols. post 8vo. 16s.

THIRTY YEARS of ARMY LIFE on the BORDER. Comprising Descriptions of the Indian Nomads of the Plains; Explorations of New Territory; A Trip across the Rocky Mountains in the Winter; Descriptions of the Habits of different Animals found in the West, and the Methods of Hunting them; with Incidents in the Life of different Frontier Men, &c. By Colonel R. B. MARCY, U.S.A., Author of 'The Prairie Traveller.' With numerous Illustrations. (Shortly.)

JAMAICA and the COLONIAL OFFICE: Who caused the Crisis? By GEORGE PRICE, Esq., late Member of the Executive Committee of Governors Sir Henry Barkley, Sir Charles II. Darling, and Edward J. Eyre, Esq., in the Legislative Council of that Island. 8vo. cloth, with a Plan, 5s.

NEW NOVELS. Now ready.

TOILERS of the SEA. By Victor Hugo.

Third Edition. 3 vols. post 8vo. 24s.
"A free, spirited translation of a noble book. It is difficult to dissent from those who fancy they discover in the author's three volumes a romance, an epic poem, and a drama of real life. There is also in the volumes a charming idyl, full of grace, sweetness, and simplicity. If there be any one who can rise from the perusal of the book without feeling not only deeply moved, but also enlightened, chastened, and, for at least the moment, improved, let no such man be trusted."—*Illustrated London News*.

"A fisherman encounters all the fury, and caprice, and treachery of outer nature in order to win a woman whom, on his return, he finds to have unconsciously, but irrevocably, lost her heart to another. But this plainest of stories is worked into genuine tragedy by an exercise of poetic power which, at least in some portions of its display, has very rarely been surpassed in literature."—*Saturday Review*.

"As an idyl of homely love and simple heroism, we know nothing save parts of 'Enoch Arden' that can compare with the touching sweetness of the closing scenes of the book."—*Athenæum*.

"It is impossible for us not to feel chained to the book by the spell and sway of a master hand. The fight of man with sea and storm is rendered as it never has been rendered before, and probably will never be rendered again, by human pen."—*Spectator*.

The STORY of KENNETT. By Bayard Taylor. 2 vols. 10s.

A CASUAL ACQUAINTANCE. By Mrs. Duffus Hardy. 2 vols.

MARY TONSON'S. By Cathbert Bede. 2 vols.

By Henry Hall. 3 vols. 24s.

LOW, SON & MARSTON, 15, Ludgate-hill.

CHAPMAN & HALL'S NEW BOOKS.

Nearly ready, 1 vol. royal 8vo.

THE PROPORTIONS OF THE HUMAN FIGURE,

According to a New Canon, for Practical Use. Illustrated by Plates. By W. W. STORY.

A Book for Home Travellers. EASTERN ENGLAND. By WALTER WHITE.

1 vol. post 8vo. with Maps, 18s.

CRADOCK NOWELL:

A TALE OF THE NEW FOREST.

By R. D. BLACKMORE, Author of 'Clara Vaughan.' 3 vols. post 8vo. [Nearly ready.]

New Novels at all Libraries.

The CONSTABLE DE BOURBON: a New Novel. By WILLIAM HARRISON AINSWORTH. 3 vols. post 8vo. [This day.]

AT THE BAR: a New Novel. By CHARLES COLLINS. 3 vols. post 8vo. [This day.]

CHANDOS. By Ouida. Second Edition. 3 vols. post 8vo.

ROSEWARN. By C. Sylvester. 3 vols. post 8vo.

FARNORTH. By Theo. Kennedy. 3 vols. post 8vo.

193, PICCADILLY.

THE NEW SKETCH-BOOK. Price 2s. 6d. — WILSON & NEWTON, 22, Rathbone-place, London; and all Artists' Colourmen, &c.

Now ready, price 5s.

AN INDEX to the PEDIGREES contained in the Printed Heraldic Visitations. By GEORGE W. MARSHALL, LL.M.

"Compiled with evident care."—*Herald and Genealogist*.

"A work which genealogists will be glad to possess."—*Notes and Queries*.

"This valuable boon for consultation."—*Field*. London: Robert Hardwicke, 192, Piccadilly.

Now ready, royal 8vo. half calf, with numerous Illustrations, price 5s.

THE FOURTEENTH VOLUME of TRANSACTIONS of the NORTH of ENGLAND INSTITUTE of MINING ENGINEERS. By Eminent MINING ENGINEERS.

Vols. 1 to 14 (excepting 3, 4 and 5, out of print) can now be had of the Publisher, A. Reid, Newcastle-on-Tyne.

Vols. 1 and 2 are reprinted.

Now ready, Second Edition, greatly enlarged and revised, royal 8vo. cloth gilt, price 5s.

THE INDUSTRIAL RESOURCES of the THREE NORTHERN RIVERS—the TYNE, WEAR, and TEES, beautifully and copiously illustrated with Maps, Sections, and Woodcuts. Edited by Sir W. ARMSTRONG, C.B. F.R.S., L. L. BELL, Esq., JOHN TAYLOR, Esq., and Dr. RICHARDSON.

London: Longmans & Co. Newcastle: A. Reid.

In the press, and shortly will be published, demy 4to. size, 2s. 6d., with some 300 beautiful Illustrations.

THE THIRD EDITION of

THE ROMAN WALL. By J. COLLINGWOOD BRUCE, LL.D. Subscribers' Names received by the Publisher, A. Reid, Newcastle-on-Tyne.

N.B.—The price of this Work will be raised on the day of publication.

Price 3s. 6d. 18mo. cloth, lettered, DR. CHARNOCK'S GUIDE to the TYROL, STIRIA, CARINTHIA, and SALZKAMMERGUT. London: W. J. Adams, 59, Fleet-street.

PROFESSOR RANKINE'S NEW WORK. Ready this day, post 8vo. cloth, price 9s.

USEFUL RULES and TABLES for Architects, Builders, Carpenters, Coach-builders, Engravers, Engineers, Founders, Mechanics, Ship-builders, Surveyors, Type-founders, Wheelwrights, &c. By WILLIAM JOHN MACQUORN-RANKINE, C.E. LL.D. &c., Author of 'Civil Engineering,' 'The Steam Engine,' &c. London: Charles Griffin & Co., Stationers' Hall-court.

BURNET ON PAINTING.

In 4to. 42. 10s.

A TREATISE on PAINTING. In Four Parts. Illustrated by 150 Etchings, from Celebrated Pictures. By JOHN BURNET, F.R.S.

The Parts may be had separately,—

1. ON THE EDUCATION OF THE EYE. Second Edition. 2s.
 2. ON COMPOSITION. Seventh Edition. 15s.
 3. ON LIGHT AND SHADE. Sixth Edition. 15s.
 4. ON COLOUR. Fifth Edition. 51s. 6d.
- In royal 4to. with Proof Impressions on India Paper, and Portrait of the Author. Price 8l. 8s. half morocco, gilt top.
- "Mr. Burnet writes as an artist on the practice of his art: his illustrations are admirable: an essay in themselves."—*Athenæum*. J. & J. Leighton, 40, Brewer-street, Golden-square, W.

BAEDEKER'S GUIDES.—ENGLISH.

GEORGE ROUTLEDGE & SONS, The Broadway, Ludgate-hill.

MR. DIXON'S NEW WORK.

"A REMARKABLE AND VERY ORIGINAL BOOK."—*Saturday Review*."BRILLIANT, LIFE-LIKE PICTURES."—*British Quarterly Review*.

Now ready, a SECOND EDITION of

THE HOLY LAND.

By WILLIAM HEPWORTH DIXON.

With Illustrations from Original Drawings and Photographs on Steel and Wood.

2 vols. demy 8vo. 24s.

"Mr. Dixon has written a singularly able book. His genius is essentially conservative. He contrives while sipping his coffee or smoking his cigarette to throw off sketches, with the careless boldness of a hand sure of its own accuracy, which challenge the closest criticism, and whilst professing only to give rough-and-ready pictures of places and scenes as they were in the day when Christ stood amidst them, the centre figure of the whole, he is really bringing the most subtle analysis to bear on the thought which after four thousand years of various development was found in a concrete form, stripped of its vitality and crystallised into the creeds of Pharisees and Sadducees. The sharp points of contact and antagonism, the manners, habits, and scenes of the strange race among whom Christ walked, are all graphically described in the work before us, and we think few would rise from a careful perusal of its pages without a deeper insight into the sacred story, possibly a wider understanding of the words of One who taught as having authority, and not as the scribes."—*Spectator*.

CHAPMAN & HALL, 193, Piccadilly.

NEW WORK

BY ROBERT BUCHANAN.

Next week will be published,

Small 8vo. price 5s.

SALOM'S NEW OPERA and FIELD GLASS,

and THE RECONNOITERER GLASS, price 10s. 10d., sent free.—This "Tourist's Favourite," through extraordinary division of labour, distinctly shows small windows 10 miles off, landscape at 30 miles, Jupiter's moons, &c.—The MASTER OF CAMMARTHER: "The Reconnoiterer is very good."—EARL OF BRADSLAW: "I find it all you say, and wonderfully powerful for so very small a glass."—EARL OF CAITHNESS: "It is a beautiful glass."—Rev. LOAN SCARPAK: "approves of it."—LOAN GIFFORD: "Most useful."—LOAN GAVVON: "Remarkably good."—SIR DION GAVLEY: "It gives me complete satisfaction, and is wonderfully good."—CAPT. SEXTON, Royal Small Arms Factory, Enfield: "I have found it effective at the 1,000-yards range."—F. H. HAWKES, of Farnley, Esq.: "I never before met an article that so completely answered the recommendation of its maker, nor, although I have tried many a Glass combining so much power for its size with so much clearness."—*The Field*: "We have carefully tried it at an 800-yard rifle range against all the Glasses possessed by members of the Corps, and found it fully equal to any of those present, although they had cost more than four times its price."—*Notes and Queries*: "What intending tourist will now start without such an indispensable companion to a pleasure trip?" The celebrated "HYTHE" GLASS shows bullet-marks at 1,300 yards, and men at 3½ miles, price 31s. 6d. All the above Glasses, respectively bearing the registered trade-marks, "Salom," "Reconnoiterer," and "Hythe," are only to be had direct from SALOM & CO. 54, Princess-street, EDINBURGH, and 137, Regent-street, LONDON.

Small 8vo. cloth, 7s. 6d.; gilt, 9s.

THE STORY OF A LIFE; Or, SEVEN YEARS' WRITING FOR SEVEN DAYS' READING.

By WILLIAM ALFRED GIBBS.

Opinions of the Press.

"Mr. Gibbs takes a high view of life and its duties, and has a real regard for nature."—*Westminster Review*.
 "The poem which gives the title to the book has the spirit of Tennyson in a remarkable degree. It is like a picture of Turner's placed beside a Claude, showing high appreciation, with nothing resembling servile imitation. . . . Among the lighter pieces we may name 'Kling-Klang and Klong, or Everything Wrong,' which, with several others, has much of the terseness along with the hearty homeliness of Cowper's poems of the same kind."—*Inquirer*.
 "The author looks on human nature with the eye of a poet. We should call him a truthful analyst of the heart, who has studied carefully and deeply, and who can record his views and conclusions in choice language. . . . The volume is miscellaneous, and has lays grave and gay, all of which are thoughtful and pleasant reading."—*Public Opinion*.
 "This book shows marks of unusual power."—*Manchester Examiner*.
 "The illustrations are forcible and imaginative. . . . The poems display considerable versatility of thought and style."—*Birmingham Journal*.

London: ALFRED W. BENNETT, 5, Bishopsgate Without.

NEW WORK by the AUTHOR of 'The MOOR and the LOCH,' &c.

Now ready, price 5s.

BAKER, and a Chromo-lithograph Frontispiece of the GREAT LAKE from which the NILE FLOWS, and Portraits of MR. and MRS. BAKER, beautifully engraved on Steel by JENKS after Photographs.

THE

ALBERT N'YANZA, GREAT BASIN OF THE NILE, AND EXPLORATIONS OF THE NILE SOURCES.

By SAMUEL WHITE BAKER, M.A. F.R.G.S.,
Gold Medalist of the Royal Geographical Society.

"A model of what a book of travel should be."—*Saturday Review*."A narrative of personal courage, endurance, and perseverance, which fills the mind not only with wonder, but with pride."—*Scotman*.

"Mr. Baker has completed the solution of the greatest geographical mystery of the last two thousand years; his name and that of his heroic wife, will be imperishably associated with the Sources of the Nile; and his book will in future ages be read, as we now read Herodotus,—a classic in literature, a romance in adventure, and a high authority in geographical history."—*British Quarterly Review*.

BREAKFAST.—EPPS'S COCOA
(more commonly called Epps's Homeopathic Cocoa, as being
prepared and introduced by James Epps, the Homeopathic Che-
mist first established in England). The very agreeable character
of this preparation has rendered it a general favourite. For
breakfast no other beverage is equally invigorating and sustain-
ing. This Cocoa is used by thousands who never used Cocoa
before. "Cocoa stands far higher than tea or coffee," Dr. Hassall
says.—Sold in 1 lb., 1 lb., and 1 lb. packets.

THE CULTIVATION of TEA in the East
Indies is an important feature, and the EAST INDIA TEA
COMPANY have, on account of its great strength and exquisite
flavour, promoted its sale by every means. The Company are now
selling Assam, Cachar, Darjeeling, &c., at the reduced duty, viz.,
from 3s. 6d. to 3s. 8d. per lb., and China Tea as usual at 1s. 4d.
per lb. and upwards. Warehouses, No. 9, GREAT ST. HELEN'S
CHURCHYARD, Bishopgate.

PHILLIPS & COMPANY'S TEAS ARE

BRITISH ASSOCIATION for the ADVANCEMENT OF SCIENCE.

The next ANNUAL MEETING of the Association will be held at NOTTINGHAM, on WEDNESDAY, AUGUST 22, and the following days, under the Presidency of W. R. GROVE, Esq., Q.C. F.R.S., &c.

Information concerning the Local Arrangements may be obtained from the Local Secretaries, at Nottingham, Dr. Robertson, E. J. Lowe, Esq., F.R.S., Rev. J. F. McCallan.

General Secretary—Francis Galton, Esq., F.R.S., 43, Rutland-gate, London.

Assistant-General Secretary—George Griffith, Esq., 5, Park-villas, Oxford.

General Treasurer—W. Spottiswoode, Esq., F.R.S., 50, Grosvenor-place, London.

UNIVERSITY COLLEGE, LONDON.—

The Offices of SURGEON to University College Hospital and of HOLME (Special) PROFESSOR OF CLINICAL SURGERY are vacant by the Resignation of R. Quain, Esq., F.R.S. Applications for these Appointments will be received at the Office of the College on or before TUESDAY, July 24th.

Further information may be obtained on application to the Office of the College.

CHAS. C. ATKINSON, Secretary to the Council.
July 9th, 1866.

QUEEN'S COLLEGES, IRELAND.—The

PROFESSORSHIP OF ENGLISH HISTORY and LITERATURE in the QUEEN'S COLLEGE, BELFAST, being now VACANT, Candidates for that Office are requested to forward their Testimonials to the Under-Secretary, Dublin Castle, on or before the 18th AUGUST NEXT, in order that the same may be submitted to His Excellency the Lord Lieutenant.

The Candidate who may be selected for the above Professorship will have to enter upon his duties on the 1st September next.
Dublin Castle, 7th July, 1866.

QUEEN'S COLLEGE, CORK.—

SESSION 1866-67.

Matriculation and Scholarship Examinations.

On TUESDAY, the 16th of October next, will be held, in the College, an EXAMINATION for Matriculation; and for Scholarships, on THURSDAY, the 18th.

Eight Senior Scholarships of the value of 40*l.* each; and forty-six Junior Scholarships, varying in value from 20*l.* to 25*l.* each; to fifteen of which first-year Students are eligible.

For Prospectuses and further information, apply to the Registrar of the College.

Signed by order of the President,
ROBERT J. KENNY, Registrar.

HIGH SCHOOL OF GLASGOW.

In consequence of the retirement of one of the Classical Masters and the death of another, and the re-arrangement of the Classical Department, there will be VACANCIES in October for a HEAD MASTER, a SECOND MASTER, and an ASSISTANT MASTER, all in the Classical Department.

The Head Master and the Second Master hold their appointments for life, the Assistant Master during the pleasure of the Town Council. The Head Master will have an endowment of 100*l.* per annum, in addition to his share of Fees; and the Emoluments are expected to be not less than 400*l.* for the Head Master, 250*l.* for the Second Master, and 150*l.* for the Assistant, with the prospect of considerable increase.

Particulars may be obtained of Mr. MORRO, Town Clerk, City Chambers, Glasgow; and applications, with copies of testimonials, may be lodged with him on or before 31st July.

City Chambers, Glasgow,
27th June, 1866.

KEBLE MEMORIAL.—Proposed College at

OXFORD in memory of 'The Author of the Christian Year.' Sum already subscribed, 23,000*l.* Subscriptions may be spread over five years.

Honorary Secretary, HENRY E. FELLEW, Esq.

Office: No. 2, Waterloo-place, S.W., London.
Bankers—Messrs. Herries, Farquhar & Co.,
16, St. James's-street, S.W.

OWENS COLLEGE, MANCHESTER.—

THE NEXT SESSION commences on MONDAY, the 1st of October, 1866.

The following Exhibitions and Scholarship are open for Competition in October, 1866:—

DAITON MATHEMATICAL ENTRANCE EXHIBITIONS. Two of 15*l.* each, tenable for one year, to be competed for by persons not previously Students of the College, and not more than eighteen years of age.

SHAKESPEARE SCHOLARSHIP (English Language and Literature), annual value about 40*l.*, tenable for two years, open to all Candidates whose age shall not have exceeded twenty-one years on the 1st of January, 1866.

Prospectuses of the Courses of Instruction, of the several Scholarships, Exhibitions, and Prizes offered for Competition, and of the Examinations held in Owens College by the University of London, may be had from the Registrar, Mr. J. H. NICHOLSON, at the College.

The 'OWENS COLLEGE CALENDAR,' containing full information on all matters relating to the College, will be published early in August. Price 2*s.* 6*d.*; by post, 3*s.* 6*d.*

J. G. GREENWOOD, Principal.
JOHN P. ASTON, Secretary to the Trustees.

CLAPHAM PARK SCHOOL.—Mr. LONG'S

Pupils have uniformly, during several years, gained Honours in the Public Examinations of the College of Preceptors, and in the Oxford and Cambridge Local Examinations, Senior and Junior. Others have matriculated at the London University in the First Division,—one recently taking also the Entrance Examination, and two passed at the last Examination for the East India Civil Service.—Full particulars will be given on inquiry, with references. Terms, inclusive, according to age, from Forty to Seventy Guinea.

N.B. Several professional bodies accept the College of Preceptors' First-class Certificate in lieu of Matriculation.

PALESTINE EXPLORATION FUND.—

Patron, Her Majesty the Queen.—A Paper, by Cyril C. Graham, Esq., 'On Researches into the Topography of Palestine,' the Report of Captain Wilson on the First Expedition of this Fund, and other Papers, will be read before the HISTORICAL SECTION of the ARCHEOLOGICAL INSTITUTE, at the Royal Institution, Albemarle-street, on MONDAY, July 23rd, in the Morning Sitting. The Dean of Westminster will preside, and the Meeting will be addressed by various eminent persons. The Photographs, 100 in number, taken by the Expedition (most of them for the first time, with the Detailed Maps of the Lake of Galilee and other portions of the Holy Land, Plans of Buildings, Sites, &c.), will be exhibited.

By order,
5, New Burlington-street, G. GROVE, Hon. Secretary.
July 12, 1866.

LONDON UNIVERSITY.—TUITION for

the various Arts and Science Examinations, by Cambridge Graduates (Wrangler, First-class Classic and Natural Sciences Honour-man). Classes throughout the year. Demonstrations, &c. in a Laboratory. Classes now meeting for Matriculation, Jan. 1867.—CANTAB., 4, Verulam-buildings, Gray's Inn.

TUTOR.—A B.A. of Cambridge, First-Class,

June, 1866, wishes to meet with an ENGAGEMENT in a Gentleman's Family to teach one or Two Sons. Good Testimonials.—Apply to R. A., Post-office, Oundle.

INSTITUTRICE FRANÇAISE.—A Con-

scientious and Lady-like Parisienne seeks the post of Resident or Visiting GOVERNESS, where French only will be required. Would accept a Holiday Engagement.—Address, stating Salary, Lutterick, 34, Ladbroke-Gardens, W.

PARIS.—One or Two LADIES, or Young

Ladies, RECEIVED by Mme. AUGUSTE. Terms (with French Instruction, and use of Piano), &c.—For Particulars address M. A. ALVET, LL.B. (late Professor at Midland Institute), 27, Rue de l'Assomption, Paris.

A YOUNG LADY requires a RE-ENGAGEMENT

as RESIDENT GOVERNESS. Acquirements, English, French, Music, and Drawing. References will be given.—Address E. A. SKEKTON, Sowerby Grange, near Northallerton.

A WIDOW LADY, who has been for upwards

of ten years accustomed to Tuition (including Latin and the rudiments of Greek), would be glad to place Two Girls in a good School, as a Governess's Family where there is a well-qualified Governess in exchange for Two Boys. The Advertiser resides at the seaside, in a healthy locality, and would not object to take delicate children. Satisfactory references would be given and required.—Address ALPRA, care of Messrs. Philip, Son & Nephew, the Educational Depot, South Castle-street, Liverpool.

A WRANGLER and Classical Scholar, Gradu-

ate of Cambridge University, experienced in Tuition, devotes his Evenings to PREPARING CANDIDATES for University and other Public Examinations.—Address E. R., 9, Regent's Park-terrace, Gloucester-gate, N.W.

GENTLEMEN PREPARED for the UNI-

VERSITY, Civil Service, and Royal College of Surgeons EXAMINATIONS by a GENTLEMAN (Bachelor of Arts and holder of a Certificate of Merit from the Committee of Council on Education).—Address E. 12, Camomille-street, City.

RESIDENT GOVERNESS.—A Lady of high

attainments, who advances her Pupils well and steadily, will be free to accept a RE-ENGAGEMENT at the end of August. Excellent references can be given.—Address, by letter only, to Z. Hatchard's Library, 187, Piccadilly.

A CHRISTIAN LADY, of ability and expe-

rience, requires a SITUATION as Superintendent of Domestic Affairs in a Household, or Companion to a Lady, at Home or Abroad. A liberal salary expected.—Address E. D. S., care of Miss Rice, High-street, Weston-super-Mare.

A CLERGYMAN would be glad to find a

TRAVELLING COMPANION for a Six or Seven Weeks' Tour of the Continent. Could start after July 22. Or would be glad to take charge of one or two Sons of Gentlemen.—Address LL.B., Chapeltown, Leeds.

TO PRINCIPALS of SCHOOLS.—A middle-

aged LADY desires a RE-ENGAGEMENT as Housekeeper in a first-class School for Young Gentlemen. She has had many years' experience in similar situations, and possesses unexceptionable testimonials and references.—Address E. A., Grove House School, Tottenham, N.

HURST COURT, ORE, HASTINGS.—

Dr. MARTIN REED prepares the SONS of GENTLEMEN, between the ages of six and eighteen, for the Public Schools and Universities, or for Mercantile Pursuits. The situation is one of the finest and healthiest possible. The arrangements are those of a first-class Private School.

The CLASSES RE-ASSEMBLE on WEDNESDAY, August 1.

COLLEGES, LADIES' SCHOOLS, &c.—

Prof. MELVILLE BELL can undertake a few Engagements for ELOCUTION LESSONS during next Session. FAVOUR Instructions in Reading and Delivery, to Clerical and other Visitors, at 18, Harrington-square, (near Regent's Park), N.W.

MENTAL AFFECTIONS.—A Physician,

residing within an easy distance of London by rail, has at the present time VACANCIES in his house for TWO LADIES and ONE GENTLEMAN. This House has been established over 60 years for the reception of ten high-class Patients only.—Address M. D., care of Messrs. Whicker & Blaise, 67, St. James's-st., S.W.

PRACTICAL CHEMISTRY.—The LABORA-

TORY, 30, GREAT MARLBOROUGH-STREET, is open for Day and Evening Instruction, under the direction of Mr. VACHER.—Analyses undertaken.

A GENTLEMAN, who, for more than Seven-

teen Years, has worked on the Staff of two of the leading London Journals, is OPEN to an ENGAGEMENT as EDITOR, SUB-EDITOR, or CORRESPONDENT. He can speak and write French, Italian, and German, and understands Spanish and Portuguese. Is perfectly acquainted with the routine work and management of a large newspaper. The highest references can be given. The Advertiser would accept a Secretaryship or any other post of confidence.—Answers to L. E. O., Boddington's Library, Churton-street, S.W.

THE PRESS.—WANTED, for a Provincial

Daily Newspaper of sound Liberal Politics, an EDITOR of experience on the Daily Press. He would have to write a Leader and Summary daily, and to give a general superintendence to the Paper under his charge.—Address PARRA, care of Mr. C. H. May, 13, St. Benet's-place, Gracechurch-street, E.C., giving particulars of past Engagements, Salary required, Age, &c.

THE PRESS.—A Young Man, respectfully

connected, well educated, and properly qualified, offers his Services as PUBLISHER, or ASSISTANT-PUBLISHER, or READER. First-class references, and security if desired.—ALPHA, Post-office, King-street, Covent-garden, W.C.

THE PRESS.—PARTNERSHIP.—The Pro-

prietor of a very long-established Weekly Newspaper, in a first-class Provincial Town, is desirous of meeting with a party to join him as full PARTNER. To any young Gentleman with Literary tastes this would be found a good and safe opportunity, as a certain income could be guaranteed from the commencement.—For further particulars apply, in the first place by letter, to A. Z., 25, Lisle-street, Leicester-square, London.

Applications for particulars to be made at the Office of the Company, No. 7, East India Avenue, Leadenhall-street, London, E.C. By order, R. A. CAMERON, Secretary.

The following Circular has been issued by

THE CREDIT FONCIER and MOBILIER of ENGLAND (Limited).

To the Shareholders of the Credit Foncier and Mobilier of England (Limited).

Referring to the Circular Letter of the 3rd instant, the Directors of the Credit Foncier and Mobilier of England (Limited), have much pleasure in reporting that the PROPOSAL for the RECONSTRUCTION of the COMPANY, with a view to the reduction of the liability of the Shareholders, has been most favourably received, as will be apparent when it is mentioned that out of a total of 4,546 Shareholders, only 15 Shareholders have dissented from the proposals put forward, and even of these some have only expressed a qualified dissent.

I am further instructed to inform you that the Directors, at a meeting of the Court held this day, have unanimously passed the following Resolutions, to which your attention is requested:—

1. That in accordance with the powers granted by Clause 83. of the Articles of Association, interest be paid to the Shareholders at the rate of 5s. 6d. per Share (free of Income Tax), equal to 10 per cent. per annum, being interest from 1st April to 30th June, 1866, on the Company's Investments; and that Interest Warrants for the same be sent to all Shareholders registered on the Books of the Company on Monday, 19th July, 1866.

2. That in accordance with the powers granted by the Articles of Association in Clause 2 of Article 25, the sum of 400,000, or 2s. per share, be, and is hereby, transferred to the capital account of the Company, in reduction of the amount of unpaid capital on the shares of the Company, and that each share do henceforth stand in the Books of the Company at 12s. per share.

3. That in accordance with the powers granted by the Articles of Association, Article 6, a call of 12s. per share be, and is hereby, made: the same to be payable at Messrs. Smith, Payne & Smith's, Bankers, No. 1, Lombard-street, E.C., on Saturday, July 21, 1866.

4. That an Extraordinary General Meeting be held on Monday, the 30th July, 1866, for the purpose of submitting to the Shareholders certain resolutions, having reference to the circular addressed to them, under date 3rd July, 1866: formal notice, naming place and hour of such meeting, to be duly sent to each Shareholder.

The Directors have further the satisfaction of reporting that, owing to the desire expressed by many of the Shareholders to pay up their Shares in full as soon as the reconstruction of the Company shall be carried out, the Directors are able to announce their confident belief that the call of 12s. per share, announced as payable on 1st January, 1867, will not be required.

By order of the Court of Directors,
 ALFRED LOWE, Secretary.

17 and 18, Cornhill, 9th July, 1866.
 P.S.—The Interest Warrants and Call Papers are in course of preparation, and will be issued on Thursday next, the 12th inst.

* Copies of the Circular dated the 3rd of July, and the above, can be obtained on application at the Office of the Company.

Sales by Auction

Autographs, Deeds and Charters, from the Famous Collection of Sir JOHN FENN.

MESSRS. PUTTICK & SIMPSON will SELL by AUCTION, at their House, 47, Leicester-square, W.C. (west side), on MONDAY, July 16, and two following days, the very interesting and important COLLECTION of MSS. and AUTOGRAPH LETTERS, formed many years since by Sir JOHN FENN, Knt. (Editor of 'The Paston Letters'); comprising Deeds and Charters, Royal, Noble, and Conventual, from a period slightly subsequent to the Conquest to the fifteenth Century, one of which is signed (in full) by King Stephen Matilda, his Queen, and Eustachius, his Son (A.D. 1137)—fine Armorial and other Seals—very numerous and highly important Rolls and other Records, consisting of Domestic Accounts, Inventories, Terriers, Rentals, Court Rolls, &c., from an early date, and particularly illustrative of the Counties of Suffolk and Norfolk. The Autograph Letters and Historical Documents comprise numerous important Papers from Henry the Eighth to the last Century, and present Examples of the Autographs of Royal, Noble and Illustrious Persons—Eighteen highly important Proclamations, Diplomatic Instructions, Letters, and other Documents, all bearing the Sign-Manual of Queen Elizabeth, &c.

 This is the largest and best Map of Central Europe published.
 Maps of the Seat of War of all sizes.

James Wyld, Geographer to the Queen, 487, Strand, W.C.; 11
 and 13, Charing Cross, S.W.; and 2, Royal Exchange, E.C.

SCHOOL ATLASES,

By ALEX. KEITH JOHNSTON,
 LL.D. F.R.S.E. F.R.G.S. F.G.S. &c.
 Author of the Royal and the Physical Atlases, &c.

This day is published, price 12s. 6d.

A NEW AND ENLARGED EDITION OF

THE SCHOOL ATLAS OF CLASSICAL GEO-
 GRAPHY, comprising, in 22 Plates, Maps and Plans of all
 the important Countries and Localities referred to by Classical
 Authors. Half bound, 12s. 6d.

"The additions are so extensive and important as to render
 this substantially a new Work—the most complete of its kind in
 general use. These comprise, besides very large additions to the
 former Plates, A New Map of the World as known to the Ancients,
 a New and Enlarged Map of the Peloponnese, Aïden, &c., A Map
 of the Outer Geography of the Odyssey. For the last of these, as
 well as for the matter printed in red on Plates XIII. and XV.,
 the Author is indebted to the Right Hon. W. E. Gladstone, who
 not only placed at his disposal the illustrations to his most inter-
 esting work, 'Homer and the Homeric Age,' but enhanced the
 favour of revising the proof sheets of the plates and text, as
 adapted for this Atlas. The new names inserted in the former
 Maps have been engraved in a smaller letter, leaving the more
 important places prominent for the advantage of junior classes.
 A complete Index to the whole is given, with the geographical
 position of every place where possible, its modern equivalent
 wherever ascertained, and the accentuation of the name carefully
 marked."

FORTY-FOURTH THOUSAND.

ATLAS OF GENERAL AND DESCRIPTIVE
 GEOGRAPHY, exhibiting the Actual and Comparative
 Extent of all the Countries in the World; with their present
 Political Divisions. A New and Enlarged Edition, corrected
 to the present time. 26 Maps, with a complete Index, 12s. 6d.

ATLAS OF PHYSICAL GEOGRAPHY, illus-
 trating, in a Series of Original Designs, the Elementary Facts
 of GEOLOGY, HYDROLOGY, CLIMATE, and NATURAL HIS-
 TORY. 30 Maps, including Coloured Geological Maps of Europe
 and of the British Isles. Half bound, 12s. 6d.

ATLAS OF ASTRONOMY. Edited by J. R.
 HIND, Esq. F.R.A.S., &c. With Notes and Descriptive Letter-
 press, embodying all recent Discoveries in Astronomy. 18
 Maps, printed in colours by a new process, half bound, 12s. 6d.

ELEMENTARY ATLAS of GENERAL and
 DESCRIPTIVE GEOGRAPHY, for the Use of Junior
 Classes; including a Map of CANAAN and PALESTINE, and a
 GENERAL INDEX. Half bound, 6s.
 William Blackwood & Sons, Edinburgh and London.

THE WAR ON THE CONTINENT.

The present Geographical and Political features of the
 Countries where War is expected to occur will be found
 distinctly and accurately represented in the Maps of

KEITH JOHNSTON'S ROYAL ATLAS,
 all of which may be had separately, price 3s. in sheets; or
 in cloth cover, with Index of Places, price 4s. 6d.

William Blackwood & Sons, Edinburgh and London.
 Sold by all Booksellers.

MAP OF EUROPE ON FOUR SHEETS.

By ALEX. KEITH JOHNSTON,
 Author of 'The Royal Atlas,' &c.

William Blackwood & Sons, Edinburgh and London.

NOW READY AT ALL THE LIBRARIES,

MR. BAKER'S GREAT NILE BOOK.

2 vols. 8vo. cloth, price 22s. with Maps, numerous Illustrations,
 engraved on Wood by J. Cooper, from Sketches by Mr. Baker,
 and a Chromo-lithograph Frontispiece of the Great Lake from
 which the Nile flows, and Portraits of Mr. and Mrs. Baker, beau-
 tifully engraved on Steel by Jeens, after Photographs.

THE ALBERT N'YANZA, GREAT BASIN of the NILE,

AND

EXPLORATIONS OF THE NILE SOURCES.

By SAMUEL WHITE BAKER, M.A. F.R.G.S.,
 Gold Medallist of the Royal Geographical Society.

"A model of what a book of travel should be." *Saturday Review*.
 "A narrative of personal courage, endurance, and perseverance
 which fills the mind, not only with wonder, but with pride." *Scotsman*.

"Mr. Baker has completed the solution of the greatest geogra-
 phical mystery of the last two thousand years; his name, and that
 of his heroic wife, will be imperishably associated with the sources
 of the Nile; and his book will in future ages be read, as we now
 read Herodotus—a classic in literature, a romance in adventure,
 and a high authority in geographical history." *British Quarterly Journal*.

"A book which everybody must read."—*North British Review*.

MACMILLAN & CO. London.

THIS DAY IS PUBLISHED, THE TENTH THOUSAND,
 WITH A NEW PREFACE, OF

ECCE HOMO:

A SURVEY OF THE LIFE AND WORK
 OF JESUS CHRIST.

8vo. cloth, 10s. 6d.

MACMILLAN & CO. London.

Extra fcap. 8vo. cloth, price 5s.

DRAMATIC STUDIES.

By AUGUSTA WEBSTER.

Opinions of the Press.

"Mrs. Webster shows not only originality, but what is nearly as
 rare, trained intellect and self-command. She possesses, too, what
 is the first requisite of a poet—earnestness. This quality is stamped
 upon all that she writes. The opening lines to the poem of 'A
 Painter' prove that she thoroughly realises what Art means, and
 at once give an earnest of the power which the conclusion fulfils." *Westminster Review*.

"There is one of them, 'Sister Annunciate,' which ought at
 once to place its authoress on a high level among our contemporary
 poetesses."—*Literary Churchman*.

"With the Dead' is the monologue of an early persecutor of the
 Christians in the Catacombs of Rome, mythically condemned to
 grope for ever in their darkness, unreleased by death. This is,
 perhaps, the poem which most impresses the reader with the imagi-
 native vigour and dramatic force displayed."—*Nonconformist*.

"Our favourite, however, is the 'Snow Waste,' a noble and
 imaginative poem of which any living poet might be proud." *Reader*.

Also by the same Author,

THE PROMETHEUS BOUND OF ÆSCHYLUS.

LITERALLY TRANSLATED INTO ENGLISH VERSE.

By AUGUSTA WEBSTER.

Edited by THOMAS WEBSTER, M.A.,

FRENCH CLASS-BOOKS by CHARLES
 HENRI SCHNEIDER, F.E.L.S. M.C.P., French Master
 in the High School, Edinburgh, &c.

EDINBURGH HIGH SCHOOL FRENCH
 CONVERSATION-GRAMMAR, arranged on an entirely
 new Plan, with Questions and Answers in French. Fifteenth
 Edition. 3s. 6d. THE KEY. 2s. 6d.

The new feature in this Grammar is the questionnaire, which,
 along with the answers, will enable the master to converse with
 his pupils in French on the rules which they have already learned
 in English, and in this way to imprint these rules indelibly on
 the minds of his pupils. The Exercises are also arranged on the
 conversational system: in each lesson there are three: the first
 to be translated from French into English in the class; the
 second, from English into French; and third to be written at
 home.

EDINBURGH HIGH SCHOOL NEW
 PRACTICAL FRENCH READER, with Questions in
 French on the Subjects read. Fifteenth Edition. 3s. 6d.

The plan is entirely new, and will be found thoroughly prac-
 tical.

EDINBURGH HIGH SCHOOL FRENCH
 MANUAL of CONVERSATION and COMMERCIAL
 CORRESPONDENCE. Sixth Edition. 2s. 6d.

 Wood, &c.

FROST and FIRE: Natural Engines,
 Tool-Marks, and Chips; with Sketches taken at Home and
 Abroad. By A TRAVELLER.

"I must now direct your attention to a work entitled 'Frost and Fire,' by Mr. J. F. Campbell, which will be read with satisfaction by all who are interested in the physical causes which have led to the structure of the earth's surface. Although the style of the work is somewhat quaint, and the arguments occasionally slightly obscure, we cannot but admire the energy and perseverance with which the author pursued his researches after causes, whether heat or cold, frost or fire, which have been at work as the tools and forces which have shaped the earth's crust, either by denudation, deposition, or upheaval. The many illustrations contained in this volume, and the quaint sources from which the author has sometimes drawn them, render his work one of great interest, and which it is impossible to peruse without deep thoughts and suggestions being forced on the reader's mind."—*Anniversary Address of the President of the Geological Society, Feb. 16, 1866.*

"A very original work, and what is uncommon in such subjects, a very lively and attractive one, has just appeared under the striking title of 'Frost and Fire.' As many general readers will doubtless be gratified in perusing the telling anecdotes related by the author—whether derived from scenes in his own native Highlands, or from Lapland, Norway, the Alps, the Mediterranean, or North America—so I also believe that geologists and physical geographers will find in the work a fund of original thought, which must act as a stimulus to the production of many most important results."—*Sir Roderick Murchison's Anniversary Address at the Royal Geographical Society, May 27.*

"A very Turner among books, in the originality and delicious freshness of its style, and the truth and delicacy of the descriptive portions. For some four-and-twenty years he has traversed half our northern hemisphere by the least frequented paths; and everywhere, with artistic and philosophic eye, has found something to describe—here in tiny trout-stream or fleecy cloud, there in lava-flow or ocean-current, or in the works of nature's giant sculptor—loe."—*Reader, May 27.*

3 vols. demy 8vo. profusely illustrated, 32s.

The EARLY RACES of SCOTLAND
 and THEIR MONUMENTS. By Lieutenant-Col. FORBES-LESLIE.

"This learned and elaborate book presents the closest and most satisfactory investigation of the character of the primitive races who inhabited the British Islands yet given to the public. Whether the readers agree with Colonel Leslie or not, they must of necessity allow that he has produced the most complete book on this subject that has ever been published."—*Daily News, June 8.*

"A meritorious attempt to throw light upon the early inhabitants of Scotland, by a careful examination and analysis of their monumental remains, and the comparison of these with similar analogous erections found in other parts of the world."

London Review.
 "We have never previously met with a single antiquary who has offered such rational opinions as Colonel Forbes-Leslie has brought forward."—*Bell's Messenger.*

"The work is one of importance, and gives us an opportunity of describing the present state of a very curious question. It is true the detail of these facts occupies but a few pages of a large work, but the works are few which contain pages of so much value."

"The work now before us is a most valuable addition to our knowledge of these rude and mysterious monuments of hoar antiquity that meet us in so many places in the British Islands. Colonel Forbes puts forth his suggestions relating to these early monuments with great modesty, considering the vast amount of industry and research he has brought to bear upon the subject, which might fairly be held to entitle him to speak with a larger share of confidence."—*Edinburgh Evening Courant.*

1 vol. crown 8vo. 7s. 6d.

DAINTY DISHES: Receipts collected
 by LADY HARRIETT ST. CLAIR.

"It is often very difficult to prevail upon cooks to follow the directions of a receipt; they think they know as well, or better; and if they condescend to employ the ingredients, pay no attention to the instructions for their proportion or admixture, or the time they take in cooking, in order to bring them to the right point—as the French say, 'cuit au point.' The result is probably a nasty mess, in no way resembling what was originally intended. For this it is difficult to find a remedy; but there is one when practicable—i.e., make it yourself."—*Proverbe.*

"True to its title, it shows that 'dishes' may be 'dainty' without being costly or elaborate, with nothing but wholesome ingredients to begin with, and delicate management in the cooking."—*Examiner.*

Edinburgh: EDMONSTON & DOUGLAS.
 London: HAMILTON, ADAMS & Co.

**MR. AINSWORTH'S NEW
 WORK.**

Now ready at every Library, in 3 vols. post 8vo.

THE
CONSTABLE DE BOURBON.

BY
 WILLIAM HARRISON AINSWORTH.

"The principal facts brought out in Mr. Ainsworth's new romance are the determination of Bourbon to be revenged upon Francis the First, his negotiation with England and Spain, ratified by a treaty, under which he was to raise the standard of rebellion in France, and to participate in the destruction of the country; the betrayal of this secret to the King, and Bourbon's flight into Italy, after refusing the offer of Francis to reinstate him in his power and possessions, and to sanction his marriage with the Duchess d'Angoulême; his command of the army opposed to the King of France, and his subjugation of that monarch in Italy, whereby he revenged himself to the utmost of his desires; his subsequent expedition to Rome at the head of a riotous, ill-disciplined army, and his death upon first entering the walls of the Holy City. The third volume is chiefly devoted to the sanguinary encounters between the armies in the field; and the mode of warfare in the 16th century is admirably described. We are told that at the battle of Pavia above 8,000 of the King's troops were slain, while only 700 of the victorious army lost their lives. If this fact is consistent with history, it equals the slaughter caused in recent battles with all the appliances of needle-guns and rifled cannon, and this must have occurred in the space of a few hours only. If the Constable de Bourbon had been able to take advantage of his splendid victory the fate of France would have been considerably altered. At the siege of Marseilles we learn that the regiment of Amasons performed wonderful feats of endurance and valour. It was by them that the ditch intended to counteract the sunken mine of the besiegers was so promptly dug; but most of them lost their lives from the explosion of the powder. The book is full of interest, and the story is told so well that it commands the attention of the reader. Harrison Ainsworth has added another laurel to his fame by the production of the 'Constable de Bourbon.'"—*Observer.*

HURST & BLACKETT'S NEW WORKS.

FIELD-MARSHAL VISCOUNT

COMBERMER'S MEMOIRS AND CORRESPONDENCE. From his Family Papers. By the RIGHT HON. MARY VISCOUNTESSE COMBERMER and Capt. W. W. KNOLLYS. 3 vols. 8vo. with Portraits, &c. 30s. bound.

"To the last this noble soldier and most perfect gentleman took cheerful part in the duties and pleasures of life, leaving to an only son the inheritance of a great name, and to a sorrowing widow the task of recording how the bearer of the name won for it all his greatness. This has been done evidently as a labour of love by Lady Combermer, and she has been efficiently assisted in the military details by Capt. Knollys. Apart from the biographical and professional details, the volumes, moreover, are full of sketches of persons of importance or interest who came into connection with Lord Combermer."—*Athenæum*.

"A welcome and gracefully-written memorial of one of the greatest of England's soldiers and worthiest of her sons. It is a most interesting work."—*Morning Post*.

The SPORTSMAN and NATURAL-

IST IN CANADA; or, Notes on the Natural History of the Game, Game-Birds, and Fish of that Country. By MAJOR W. BOSS KING, F.R.G.S. F.S.A.S. Royal 8vo. Illustrated with beautiful Coloured Plates and Woodcuts. 30s. bound.

"A goodly volume, splendidly illustrated. It is an important contribution to natural history, and a work the intending traveller will consult once and again. The book will take its position in the foremost rank of works of its class. Of recent British travellers few can vie with its author in close observation of nature, and in those graces of style and scholarship which make the information contained in his volume as pleasant to obtain as it is valuable to preserve. In fact, since the works of Elliot Warburton and Kinglake, no book of travels with which we are acquainted has been written in a style more clear, forcible, and picturesque."—*Sunday Times*.

PRISON CHARACTERS DRAWN

from LIFE. By a PRISON MATRON, Author of 'Female Life in Prison.' 2 vols. 21s.

"These volumes are interesting and suggestive."—*Athenæum*. "A woman lodged among imprisoned women, with a kindly sympathy, a quick eye, and a mind and to record clearly its well-directed observations, has something to tell that thousands will be glad to learn. Her quick-witted transcripts of living character are studies that nothing can make obsolete or deprive of interest for living men."—*Examiner*.

THE BEAUTIFUL in NATURE and

ART. By Mrs. ELLIS, Author of 'The Women of England,' &c. 1 vol. with Portrait, 10s. 6d. bound.

"A pleasant, healthy volume."—*Athenæum*. "A very charming volume is this new work by Mrs. Ellis. It will interest many fair readers."—*Sun*.

"The author has written a book which deserves to be highly commended. It is intended for the young of her own sex, and it will be strange if they do not find it attractive as well as useful and instructive. It is the work of a keen-sighted, thoughtful, sensible and experienced writer."—*Illustrated News*.

SPORT and SPORTSMEN. By

CHARLES STRETTON, Esq. 8vo. with illustrations, 15s. "This is an amusing book; as interesting as genuine books of sporting adventure seldom fail to be."—*Globe*.

THE NEW NOVELS.

THE WILD FLOWER of RAVENS-

WORTH. By the AUTHOR of 'JOHN and I,' 'DR. JACOB,' &c. 3 vols.

"The Wild Flower of Ravensworth' is a beautiful tale, written with deep feeling, and full of tender, impassioned romance. It charms by its elegance and moves by its pathos. The interest of the situations is marred by no infringement of probability, and the varied characters are sketched with truthfulness and manœuvred with tact."—*Illustrated News*.

FELICIA'S DOWRY. By Mrs. FITZ-

MAURICE OKEDEN. 3 vols.

"This novel is capital, and deserves wide popularity. The characters are all well sketched."—*Star*. "Felicia's Dowry' is the work of a highly-cultivated mind. The characters are well drawn, the language good, the interest fully sustained, and the moral excellent."—*Messenger*.

KING'S BAYNARD. By the Hon.

Mrs. GEORGE GIFFORD. 3 vols.

"Our hasty sketch of this story can give but little notion of the ability with which it is written. 'King's Baynard' will be read with avidity by those who admire a stirring history and well-managed development."—*Reader*. "A very admirable and stirring story."—*John Bull*.

SIR OWEN FAIRFAX. By Lady

EMILY PONSOMBY, Author of 'The Discipline of Life.' 3 v.

"Lady Ponsomby writes like a lady, and like a lady who knows how to write."—*Athenæum*.

"A very interesting and pleasant story."—*Sun*.

MIRK ABBEY. By the Author of

'LOSIR MASSINGBERD,' 'THE CLYFFARDS of

OLYFFE,' &c. 3 vols.

"The author's best book."—*Post*.

"A spirited and amusing story."—*Pall Mall Gazette*.

A NOBLE LIFE. By the Author of

'JOHN HALIFAX,' 'CHRISTIAN'S MISTAKE,' &c.

"A beautifully-written and touching tale."—*Post*.

BOUND to the WHEEL. By John

SAUNDERS, Author of 'Abel Drake's Wife,' &c. 3 vols.

"A spirited and absorbing novel."—*Star*.

The WIFE'S ERROR. By Lady

BLAKE. 3 vols. [July 20.]

EXTRACT FROM WILLIAMS & NORGATE'S SCHOOL CATALOGUE.

THE GERMAN LANGUAGE.

APEL'S SHORT and PRACTICAL GERMAN GRAMMAR for Beginners, with copious Examples and Exercises. 12mo. cloth, 2s. 6d.

WEISSE'S (T. H.) GERMAN GRAMMAR. A Grammar of the German Language, based on its natural relation to the English. 2nd Edition. 12mo. cloth, 3s.

LITERATURE

The Church and the World: Essays on Questions of the Day. By Various Writers. Edited by the Rev. Orby Shipley, M.A. (Longmans & Co.)

It is six years since the thundering charge of the Essayists and Reviewers awoke orthodoxy from its disturbed slumbers: and we now have, in the same collective form, a mild imitation on the part of the—what shall we call them?—Puseyites, Tractarians, Anglo-Catholics, Ritualists, Laudians, or—just to make up the half dozen—Irrationalists. But they are eighteen instead of seven, and, allowing for smaller type, we find that they put forth twice the quantity of matter of 'Essays and Reviews.' Sixteen give their names; two are anonymous: one, because he writes what he—or she, as we gather from a single sentence—calls an autobiography; and one because the editor thinks that on the question of "Revelation and Science" the battle should be gained by argument, independently of the influence of names. It being thus clear that sixteen name-influences are held to be at work, we think it right, in the briefest way, to enumerate. The Essays are as follows:—

University Extension, J. E. Rogers, Oxford Professor; Missionary Aspect of Ritualism, Rev. R. F. Littledale; Infanticide, H. Humble, Canon, Perth; Cathedral Reform, W. E. C. Walcott, Prebendary; Revival of Confraternities, S. Baring-Gould, Mission-Priest; Hospital and Workhouse Nursing, A. Medows, M.D.; Clerical Celibacy, J. E. Vaux, Curate; Reunion of the Church, E. L. Blenkinsopp, Rector; The Last Thirty Years, Anonymous Autobiography; Positivism, Gregory Smith, Oxford Fellow and Rector; Revelation and Science, Anonymous; Conscience Clause, G. Trevor, Canon; Eucharistic Sacrifice, P. G. Medd, Oxford Fellow and Curate; Vows, T. J. Carter, Rector; Gothic Architecture, G. E. Street, F.S.A.; Science and Prayer, M. MacColl, Curate; Limits of Ritualism, T. W. Perry, Curate; Liturgies of 1549 and 1662, O. Shipley, Editor.

These names are, no doubt, of influence within the section, though most are not quite so well known as were the heterodox seven when they first appeared. Their arguments are so evidently intended for their own section that they will perhaps look upon a review in an exoteric journal much as the Chinese would look on a barbarian irruption; or as in the following story, which is literally true. The Chinese occupy a part of Calcutta by themselves; and they were somewhat in the habit of killing each other with pikes. The Government, after much allowance for this peculiarity, and repeated warning, tried, convicted, and sentenced a homicide. The whole quarter was in grief and astonishment; a petition was got up in the best English that could be obtained, and it began thus—If Chinaman poke Chinaman, what that to English Government? Heaven forbid we should insinuate that the squadron before us consists of holy pokers; but we can imagine their saying among themselves—If Puseyite nudge Puseyite, what is that to a literary journal? The whole is a quiet dose of semi-Romanism; a pot of mild half-and-half. We have heard of a person who was accused of pouring water into the milk; he met the charge by proving that he poured the milk into water. The old Tractarians wanted to empty us into Rome: their successors want to empty Rome into us. We recommend this book to all our readers who would be satisfied of the real tendency of the Ritualistic School: the dilution of the old spirit only renders the flavour more perceptible. To the tone there is nothing to object: the address is made to those who are

already convinced of the substantial truth of the main doctrines, with a hope of reflex action upon those without; and there is no question of anything to which vehement opposition is applicable. The contemplated antagonist is the member of the Establishment who does not go the length of the writers. The consequence is a calm which enables us to see deeper into the stream than we could have done if the mud had been disturbed.

That the whole of this system propounded by clergymen is avowedly a something more than the English Church teaches is distinctly professed. Doctrines which are "partially obscured" in the "Reformed service-book" are "re-stated." At the beginning of the article on the "Eucharistic Sacrifice" we find that "it may be well therefore, at this time, to re-state that great doctrine which is the true groundwork of the whole theory and practice of Church worship—the doctrine of the Eucharistic Sacrifice. The partial obscuration of this doctrine in our reformed Service-book (by way of reaction from certain popular superstitious perversions of it current in the later Mediæval period) has doubtless been the principal cause of the inadequate notions on the subject of church worship which have been, until comparatively lately, current among us."

This paragraph admits all that has been charged against the Tractarian school. The reformed Service-book does not tell the whole truth; and the writers before us undertake to make up the difference: where they go for materials will sufficiently appear to their readers, in spite of a little something which appears like dissembling and clogging. They pride themselves upon Romanism gaining more converts in Kensington and Islington, where there is "spiritual starvation," than in parishes which are protected by their "ritualism." The fact may be as stated; and, if so, the reason is easily given: the ritualists undertake to ruin the regular smuggler by selling smuggled goods in their own churches!

Leaving it as clear enough that this party is professedly Augmentative, and—though not professedly—depending on Rome for its supply of additions, we shall take a glance at their notion of what they call *Ritualism*. It appears that teaching by pictures and symbols is meant. We read the following with a little surprise, looking at the notions on the subject given by others of the writers; but perhaps this is the milk for babes.—

"Any one who chooses to bring the whole Ritual question to a simple test may do so effectually thus:—Take two street-Arabs, perfectly ignorant of Christianity. Read to one of them the Gospel narrative of the Passion, and comment on it as plainly as may be. Show the other a crucifix, and tell him simply what it means. Question each a week afterwards, and see which has the clearer notions about the history of Calvary. And in the matters of dealing with children, and with the ignorant, who are children in mind, the whole matter may be fitly summed up in the words of a popular writer who is no friend to Tractarians. In *Yeast* we read:—It is by pictures and music, by art and song, and symbolic representations, that all nations have been educated in their adolescence; and as the youth of the individual is exactly analogous to the youth of the collective race, we should employ the same means of instruction with our children which succeeded in the early ages with the whole world."

We need hardly stop to criticize the plan of the two street-Arabs; the proposal is too vague for comment. We admit the force of pictures and symbols; but only when the teacher and pupil have perfect means of understanding one another. A symbol certainly conveys; but what it conveys is the question. Rational men among the Roman priests are perfectly aware of the

danger of their pictures and statues; and they know well that the danger is greatest among those ignorant persons for whom our Essayist thinks them so useful. An old story shows the extremes of what may happen when communication by outward and visible signs is attempted: it is so old that it may bear revival. When, during the war of the early part of the century, an English force was in Italy, a soldier strayed some miles from his quarters, and found his way into a village church. The people, half-frightened at the heretic, crowded round their priest, and asked if the stranger were a Christian. "I am not sure," said the good man, "and I know not a word of their language; but I think I can find out." He accordingly turned to the soldier, and held up one finger; the soldier held up two: the priest then held up three; and the soldier clenched his fist. "The saints be praised!" said the clergyman; "heretics as they are, these men are still Christians! Did you not see that I held up one finger, as a symbol of the Father? The stranger held up two, as if to say that there was also the Son; I then held up three, to introduce the Holy Spirit; and the stranger doubled his fist, to signify that these Three are One!"—When the soldier got back, he said to his comrades, "These Popish priests are an impudent set! I saw one to-day in his church, and he held up a finger at me, to mock me for having only one eye! I held up two, to say that my one was as good as his two. Then he held up three, which meant that we had but three eyes between us: so I clenched my fist, to give him a hint to hold his sauce; and the fellow left off."

Through these Essays, so far as we have looked into them, there runs a defect which we notice in many quarters; and one of much meaning. When we read Sydney Smith's arguments in favour of a well-to-do clergy, setting forth that the soap-boilers at Edmonton would never respect a mediocre parson, with a dusty and deliquescent wife, and children full of bread-and-butter and Catechism, there came into our heads the doctrine of a certain Spirit which is to uphold true religion, and which will do it: and we thought within our wicked selves that it was very significant that we might read hundreds of pages of Sydney Smith, all about the advancement of the Church, without either a passing allusion to reliance on that Spirit, or any disposition to yield a single worldly point, such as might be a natural consequence of that reliance. We read these Essays with the same feeling. Now and then, in a *goody-goody* kind of way, there is an introduction of that great distinction between the religion of the two Testaments and that of all other systems; but done in a manner which looks more like the interpolated verse of the *Te Deum* than the constant fusion of the doctrine which is seen in the Psalms. We do not lay stress on the absence of professed adherence: for we see that there may be no temptation to bring forward what is fully acknowledged by all for whom the work is written. But we accept, as a fruit by which we are to know the tree, the absence of those consequences which would naturally result from living assurance of the Divine guidance. The use made of ritualism is worldly. Sydney Smith vaunts the worldly effect upon worldly men of a comfortable parson: the ritualist appeals to the effect on worldly minds of crosses, chalices, and chanting. St. John Chrysostom, seeing that the Arians beat the Orthodox by processions and hymns, beat them in turn by a grander ceremonial. St. Martin, having collected converts about him by austerities, miracles, and eloquence, made a "consolidation"

of the "stately ceremonial of the Catholic Church." St. Augustine knew that "much of his future prospect of success depended on the first impression made on the Kentish monarch": accordingly, first came a silver cross, then a painting of the Redeemer glowing with gold and colour, then a chanting of the Litany. Then the way in which the Muscovite envoys were "astounded" into Christianity by "vestments, singing, lights, incense, and processions." On this we propose what the mathematicians call a converse problem:—If it be God who chose the weak things of the world to confound the mighty, who was it who chose the mighty things of the world to confound the weak?

But this is not all. We could make allowance for High Churchmen, dazed with the old glories of a grand superstition, and uplifted with the notion of apostolic succession, for making a proud appeal to Chrysostom and Augustine, or even to Otto of Bamberg. But our Tractarian friends have another example:—

"A gin-palace, whose entrance is up a couple of steps from the footway, or whose doors do not swing open readily at a touch, is at a commercial disadvantage when compared with others on the street level and with patent hinges. Nay, more, internal decoration, abundant polished metal and vivid colour, with plenty of bright light, is found to pay, and to induce people to stay on drinking, just because everything is so pretty and cheerful to the eye, and so unlike the squalid discomfort of their own sordid homes. Many landlords have found even all this insufficient, without the additional attraction of music; and the low singing hall is sure to indicate the most thriving drinking shops in the worst quarter of the metropolis. If then painting, light, and music are found necessary adjuncts in a trade which has already enlisted on its side one of the strongest of human passions, it is the merest besotted folly to reject their assistance, when endeavouring to persuade men to accept and voluntarily seek an article for which they have never learnt to care, even if they are not actively hostile to it—to wit, Religion."

We never read anything more simple and innocent than this. In our own minds, we had always considered the high ritualists' churches as spiritual gin-shops; we never thought we should have gained such a right to declare our opinion as is given by the above. There is a very obvious begging of the whole question. If we were to say, You have forgotten a very important adjunct of the gin-shops and music-halls: why do you leave out fallen women? the answer would be that such assistance would be decidedly against religion. That's just it, we reply; and your whole system of ritualism must be proved to be favourable to religion—not merely productive of audiences—before your arguments are worth a straw. We know that you could fill your churches by building stages outside them, and manning them with a drum and pipes, and Mr. Merryman. But would religion be any the better for the people you would thus collect, or the people any the better for the religion they would thus get? This is the question; with some it is yet *sub judice*: but we believe that most rational persons are of one mind on the subject. For ourselves, we suspect that if Chrysostom and Augustine had drawn any hints of ceremonial, or arguments for ceremonial, from the *lupanaria*, they would have had the wit to keep their own counsel. But we may be wrong; and if so, the ritualists may correct us.

We have much respect for the mild spirit of these Essays. We forgive the assumption that the writers are Catholics, and that they know, far more than Protestants, what it is to meet God in prayer; and because of its accuracy, though not in their sense. Catholicism all Christians have a right to claim: and those of

whom we speak certainly do not protest against the errors of the Church of Rome. What, then, are they? The simple name of Ritualists will distinguish them well enough. They are but a sect of the Tractarians: or at least they have laid by Church-thunder, and profess to rest upon reason. We now leave them to our readers, with recommendation. We have seen nothing better calculated to give a just idea of their system: and they will catch a few, and give the rest rational amusement.

Mission Life in the Islands of the Pacific. Being a Narrative of the Life and Labours of the Rev. A. Buzacott, Missionary of Rarotonga, for some time Co-Worker with the Rev. John Williams, Martyr of Erromanga. Edited by the Rev. J. P. Sunderland and the Rev. A. Buzacott, B.A. With Preface by the Rev. H. Allon. (Snow & Co.)

THE matter of this volume is better than its manner. Mr. Buzacott was a zealous, intelligent, versatile man, who laboured with heart, soul and strength to fulfil the duties he undertook; and his success in missionary labour, by universal testimony, appears largely to have overpassed that won among the heathen by a large portion of the missionary confraternity. But the materials of the book are inexpertly combined. The remarks, especially the prefatory ones, are commonplace and prosy; and some of the deductions, however habitual to a certain class of sectarians, cannot pass without protest. We shall never cease to feel that the doctrine of miraculous interposition, "judgments," and the like, is a presumptuous attempt to enter into the secret counsels of Omnipotence and Omniscience, tending to foster the growth of spiritual pride. The timing of pestilence, tempest and famine, as sent forth on the earth with a view of punishing the sinner, or bringing him to a sense of the error of his ways, is no task for the finite powers of humanity. The wisdom and the import of the magnificent passages which crown and close the Book of Job have not been sufficiently taken to heart by the zealous, who do not perceive that, when forgetting them, they are virtually replacing one superstition by another.

We do not purpose to follow step by step the story of Mr. Buzacott's labours at Rarotonga. The natives appear to have been ready and teachable for so signally wild a race. One or two grotesque anecdotes will give an idea of the quality of the soil which Mr. Buzacott devoted himself to till:—

"Under the belief that the alphabet and the primary syllables were, as already intimated, a series of cabalistic sounds and signs peculiar to Christianity, 'many of the natives were wont to congregate together in the cool of the day and chant over the lessons they had learnt at school, just as they had been wont to chant their heathen songs. Some even imagined them to be *forms of prayer*, to be repeated in times of danger.' In illustration, an amusing story is told of an aged couple who resided near the mission-house, and who were greatly alarmed by the evening visit of a cat belonging to the native teacher. The cat's peculiar mew drew their attention to the door of their dwelling, and, being pitch dark, they saw what they described as two balls of fire. The wife began to remonstrate with her husband for having anything to do with the new religion; for, without her consent, and contrary to her wishes, he had attended the daily instructions. 'See,' said she, 'what your conduct has brought upon us! Here is this monster come from the teacher to visit us. Alas! we shall be destroyed.' Poor puss, hearing the sound of muffled conversation, became frightened, too, and began to send forth some of her most terrific cries. 'Oh, Tiaki,' exclaimed the wife, 'say the prayers you have learned.' Both

immediately dropped on their knees, and Tiaki began most earnestly to cry, 'B a, ba; b e, be; b i, bi; b o, bo.' The cat flew home in terror at such unwonted supplications, leaving the aged couple very grateful for their deliverance, and profoundly impressed with the efficacy of the new cabalistic sounds. * * The following will illustrate the original ideas of the Rarotongans on astronomy. Their account of the origin of the sun and moon, and their explanation of solar eclipses, will amuse the reader. 'One of the goddesses brought forth a son. Two gods claimed the paternity of the child, and so equally balanced were their claims that the child was adjudged to be cut in two, and half given to each. The god who received the head and shoulders for his portion threw it into the sky, and it became the sun; the other god, not knowing what to do with his part, threw it away into the bush. He was soon after visited by the sun-maker, who inquired what he had done with his portion; he said that he had thrown it away. 'Give it to me,' said the sun-maker; and, on receiving it, he threw it also into the heavens, and it became the moon. In the horned stage of the moon, the children were told by their parents that the horns were the legs of the lad, and when full, the dark places were pointed out as the marks of decomposition, which had taken place while it lay in the bush.' Eclipses excited their terror and dismay. Tangaroa, their principal god, was angry for not being properly fed, and the sun fell a prey to his voracious jaws. On the first occasion of a total eclipse subsequent to the arrival of missionaries, many of the natives came running in great excitement to the mission-house. They did not expect to see any more of Tangaroa's work now that idolatry was done away with; but to their dismay, here was Tangaroa at his old tricks, in the very act of devouring the sun. Mr. Buzacott was called out to witness the destruction. The eclipse had just commenced. A small part of the sun's disc appeared gone. 'Look,' said they, 'that is the first bite; and he will not be content till he has swallowed the whole.' The question was put, 'If the sun had been eaten before by Tangaroa, how did they manage to get it back again?' They replied, 'By giving him so much food as to make him sick, and cause him to vomit back the sun.' Perceiving that Mr. Buzacott was much amused by this account, they earnestly inquired if he could solve the mystery. They were surprised to hear that it was caused by the moon. A simple illustration was given them, by placing the heads of three of them of equal height in a row, to represent the earth, moon, and sun. On moving the middle one, representing the moon, to and fro, their fears ended in a good hearty laugh at their ignorance. One of the old priests was so wonder-struck at the superior knowledge of the missionary, that he gravely asked if he had ever been up above in the moon, and there seen and watched her during the operation! Mr. Buzacott constructed an electrical machine, for medical purposes. 'I had no materials but medicine bottles; and for the coating of my Leyden phials I used the lead lining of tea-chests. Three of these formed my battery, and fed by a cylinder driven by a multiplying wheel, I could produce a powerful shock. This rough machine surprised and terrified the natives very much at first. One evening, at the close of conversation on a variety of subjects, I resolved to introduce my battery to my adult scholars. Having charged it, I brought my wires from my study into the dining-room, and formed the natives into a circle, by holding hands. Of course they all received at one moment a smart shock, producing such intense alarm that I might have set up at once for a miracle-worker, and obtained the fear, if not the worship, of all. Their fears, however, were speedily allayed by the examination of the machine, together with an explanation of its character and uses. At their request I made several amusing experiments, which delighted and instructed them. They designated my battery the "Spirit Twister."

By turning his hands to every civilizing art, no less than by his theological instruction, the intelligent acceptance of which in all such cases

must be more or less problematical, the condition of the Rarotongans was, doubtless, much improved by the long residence among them of their Christian pastor. This is attested by the fact that his influence was obviously not a transitory one. Not merely did every passer-by bear witness to the superior condition of the island during the time of his residence there, but we are assured that he is still cordially remembered. Failing health compelled him to leave Rarotonga some years before his death. The following passages (translated) are from a letter addressed, in February last, by Makea, the present chief, to the missionary's widow:—

"Blessings on you in your deep affliction on account of the death of your good husband. This is from Makea, who, with my wife and family, deeply sympathize with you. Great indeed is our grief and lamentations on your account. Great was the grief of our hearts when we read your letter; we read it through our tears as we thought of our father Barakoti, who instructed us in the word of God. Dear friend, we shall never forget Barakoti. * * Dear friend, the whole of the population have gone into mourning for Barakoti; we are still wearing it; it is universal. All the chapels are in mourning. The pulpit at Avarua is covered with black, and the galleries with white tapa, on which is printed our lamentations for Barakoti."

The above have the ring of true metal.

Full justice has been here done to the admirable energy, devotion, and common sense of him to whom this book is devoted. Some of the feats chronicled to his credit are, nevertheless, a trifle apocryphal,—as, for instance, when it is asserted that, being in want of a musical instrument with which to lead Rarotongan psalmody, this excellent man (who, by the way, taught Queen Pomare new tunes) went into the bush, cut down a tree, and made a bass-viol of it!

A Rebel War Clerk's Diary at the Confederate States Capital. By J. B. Jones, Clerk in the War Department of the Confederate States Government. 2 vols. (Philadelphia, Lippincott & Co.; London, Trübner & Co.)

AFTER the shoals of worthless books about the American war that have appeared during the last five years, it is a pleasure to open a thoroughly entertaining and, in some respects, very instructive work on a subject that has occasioned so much poor and profitless writing. This *Diary* is no work of fancy, but a genuine record of four years' labour and sad experience, by a man who, from April, 1861, until the fall of Richmond in April, 1865, lived in the highest grade of the official world of the Confederate States—working at the same desk with such men as Major Tyler and Mr. Benjamin; holding constant intercourse with Mr. Jefferson Davis and the members of his cabinet; watching with critical eye the struggles of parties and the sufferings of the multitude; and recording, with a view to future publication, the gossip of cliques, the rumours of offices, and the trials of a capital—in which famine was doing insidious work at a date when the Confederate sympathizers in London were under the impression that their friends in Richmond were abundantly provided with the necessities of life. Nor was Mr. Jones less fitted by ability than by position to become the diarist of life at the seat of the Confederate Government. A journalist and writer of books, who had steadily advocated the policy of the slave-owners, the fugitive editor of the *Southern Monitor* (Philadelphia) possessed the literary qualifications for the task which he undertook as soon as the temporary rupture of the Union had been effected.

Having remained at Philadelphia until his safety required instant flight, he quitted the

office of the *Monitor* not many days before it was visited by a mob, the leader of which had provided himself with a hempen cravat for the proprietor of the unpopular journal. Making his first entry in the published *Diary* on the eve of his departure from his home, wife and children, he wrote, "But I must leave my papers, the accumulation of twenty-five years, comprising thousands of letters from predestined rebels. My wife opposes my suggestion that they be burned. Among them are some of the veto messages of President Tyler, and many letters from him, Governor Wise, &c. With the latter I had a correspondence in 1856, showing that this blow would probably have been struck then, if Fremont had been elected." A week later he was staying at the Exchange Hotel, where he learned that his place of business at Philadelphia had been sacked by a furious multitude, and that the North was already bestirring itself to preserve the Constitution. To his mind every movement in the loyal states indicated a determination to fight vigorously and without delay; but, strange to say, the Confederate leaders, with whom he was in confidential communication, would not take his view of the crisis. "The greatest statesmen of the South," he entered in his *Diary* under date April 22, "have no conception of the real purposes of the men now in power in the United States. They cannot be made to believe that the Government at Washington are going to wage war immediately. But when I placed the President's proclamation in his (i. e. Gov. Wise's) hand, he read it with deep emotion, and uttered a fierce 'Hah!' Nevertheless, when I told him that these 70,000 were designed to be merely the videttes and outposts of an army of 700,000, he was quite incredulous." Misunderstanding the North, the Southern chiefs were in their turn equally misunderstood by the Lincoln cabinet, who naturally inferred that the cotton-planters would not resist the vigorous coercion for which they were making no adequate preparation. Whilst the seceders thought that secession would involve only a trifling conflict, it was natural in Mr. Seward to think that ninety days would see the end of their rebellion. It was not long before each party saw its enemy in another light.

To the diarist it appeared that at the outset of the struggle even Mr. Davis was not prepared for a long war. "I told him," records the ex-editor, at his first interview with the Confederate President, on the 17th of May, "I wanted employment with my pen, perhaps only temporary employment. I thought the correspondence of the Secretary of War would increase in volume, and another assistant besides Major Tyler would be required in his office. He smiled and shook his head, saying that such work would be only temporary indeed; which I construed to mean that even he did not then suppose the war was to assume colossal proportions." But though the President did not foresee how much labour would devolve upon his War Office, he appointed Mr. Jones to the department with the modest salary of 1,200 dollars. Three days later, having made the acquaintance of Mr. Benjamin, who has recently sought refuge in Lincoln's Inn, the diarist observes, "Mr. Benjamin is, of course, a Jew, of French lineage, born, I believe, in Louisiana, a lawyer and politician. His age may be sixty, and yet one might suppose him to be less than forty. . . . Upon his lip there seems to bask an eternal smile; but if it be studied, it is not a smile—yet it bears no unpleasing aspect." Soon the war clerk learned to distrust this smiling Hebrew; and none of his sentences are more pungent with personal animosity than some

of those which relate to the War Secretary. Towards the close of his chronicles he observes, under date March 9th, 1865, "I saw Mr. Benjamin to-day without his usual smile. He is not at ease. The country demands a change of men in the cabinet, and he is the most obnoxious of all;" and after the lapse of another week he records, "One reason alleged for the refusal of Congress to suspend the writ of *habeas corpus*, is the continuance of Mr. Benjamin in the cabinet." But at this period of Mr. Benjamin's extreme unpopularity the Southern chivalry had grown thoroughly sick of the rebellion, and cordially hostile to its original promoters. For many months the popular detestation of Mr. Davis had been so virulent that his assassination would have occasioned neither surprise nor regret to some of his subordinates. Nearly two years earlier his death was wished for by some of his officers, who are thus alluded to: "April 22nd, 1863.—The President is reported to be very ill to-day—dangerously ill—with inflammation of the throat, &c. While this is a source of grief to nearly all, it is the subject of secret joy to others. I am sure I have seen some officers of rank to-day, not fighting officers, who sincerely hope the President will not recover. He has his faults, but upon the whole is, no doubt, well qualified for the position he occupies. I trust he will recover." As the desperate game approached its end, this hatred of their chief became more general and intense amongst all classes of Secession, and the ladies assembled in Richmond found a characteristic reason for disliking his wife. On the 19th of March, 1865, the diarist remarks, "Mrs. Davis has become unpopular with the ladies belonging to the old families. Her father, Mr. Howell, it is said, was of low origin, and this is quite enough to disgust others of 'high birth,' but yet occupying less exalted positions."

The variations of Southern feeling towards England are carefully recorded by the war clerk; and one of his passages respecting this country will not tend to diminish our satisfaction with the policy which we maintained in spite of transient irritations and the inflammatory agitation of Confederate partisans. "It is," writes Mr. Jones, on the 23rd of December, 1861, "with much apprehension that I see something like a general relaxation of preparation to hurl back the invader. It seems as if the Government were waiting for England to do it; and after all, the capture of Slidell and Mason may be the very worst thing that could have happened. Mr. Benjamin, I learn, feels very confident that a rupture between the United States and Great Britain is inevitable. War with England is not to be thought of by Mr. Seward at this juncture, and he will not have it. And we should not rely upon the happening of any such contingency. Some of our officials go so far as to hint that in the event of a war between the United States and Great Britain, and our recognition by the former, it might be good policy for us to stand neutral. The war would certainly be waged on our account, and it would not be consistent with Southern honour and chivalry to retire from the field and leave the friend who interfered in our behalf to fight it out alone." Had a rupture between England and the States taken place, we should have concurred with Mr. Jones on this delicate question of national honour; but since the South was fortunately never called upon to decide as to this matter between the promptings of the basest selfishness and the dictates of honour, we will waste no words upon the chivalrous officials who hinted that in case England was foolish enough to help the Confederacy, she should be to fight it out

alone with President Lincoln. Mr. Seward's concession to the legitimate demands of Great Britain occasioned deep chagrin in the Richmond War Office; and, despairing of assistance from our Government, official chivalry began to speak and write saucily about the perfidy and cowardice of the old country:—"A Mr. Bunch, British Consul," writes the war clerk, "has written an impudent letter to the department, alleging that an Irishman, unnaturalized, is forcibly detained in one of our camps. He says his letters have not been answered, which was great discourtesy, and he means to inform Lord John Russell of it. This letter was replied to in rather scathing terms, as the Irishman had enlisted and then deserted. Besides, we are out of humour with England now, and court a French alliance." For the disappointment caused by the English Government, the Confederates found an inadequate solace in the overtures of London tradesmen. On the Christmas Eve of '62 the diarist recorded:—"A Mr. Hart, agent for S. Isaac Campbell & Co., London, proposes to clothe and equip 100,000 men for us, and to receive certificates for specific amounts of cotton. This same house has, on this, it is said, advanced as much as 2,000,000 dollars on our account. This looks cheering. We have credit abroad. But they are Jews." Succeeding no better in her attempts to wheedle France than she had succeeded in her endeavours to draw England into the quarrel, the Confederacy began to rage furiously, and even to long for reconstruction of the Union, in order that the combined armies of North and South might forthwith humiliate the two European powers which had courteously declined to take any part in the War of Slavery. "Files of papers from Europe," observed the war clerk on July 15, '63, "show that Mr. Roebuck and other members of parliament, as well as the papers, are again agitating the question of recognition. We shall soon ascertain the real intention of France and England. If they truly desire our success, and apprehend danger from the United States in the event of a reconstruction of the Union, they will manifest their purposes when the news of our recent calamities shall be transported across the ocean. And if such a thing as reconstruction were possible, and were accomplished (in such a manner and on such terms as would not appear degrading to the Southern people), then, indeed, well might both France and England tremble; the United States would have millions of soldiers, and the Southern people would not owe either of them a debt of gratitude." Brave words these from a combination of unrecognized States, on the point of losing everything for which they had combined!

The war had not lasted many months before the Southern chiefs exhibited in their countenances the trouble that gnawed their hearts; and it was whispered that, under the pressure of adversity, President Davis had learnt his need of divine assistance, and meant to turn religious, in the hope of winning recognition from a higher power than France or England. "The President is thin and haggard," says the Diary, April 18, 1862; "and it has been whispered in the street that he will immediately be baptized and confirmed. I hope so, because it may place a great gulf between him and the descendant of those who crucified the Saviour. (This touch for the smiling Mr. Benjamin!) Nevertheless, some of his enemies allege that professions of Christianity have sometimes been the premeditated accompaniments of usurpations. It was so with Cromwell and with Richard the Third. Who does not remember the scene in Shakspeare, where Richard appears on the balcony, with Prayer-

book in hand, and a priest on either side!" But neither baptism nor confirmation could replenish the empty exchequer of the South. The military successes which dazzled and captivated many thoughtless spectators on this side the Atlantic did not conceal from the Southerners the desperate state of their affairs; and at Richmond, where every blow to their cause was known immediately and felt acutely, public opinion was made up of suspicion, despondency, and gloomy wrath. As the hopelessness of the struggle became more and more manifest, Southern chivalry became less and less willing to fight. On the 12th of September, 1864, the diarist records, "Over 100,000 landed proprietors, and most of the slave-owners, are now out of the ranks, and soon, I fear, we shall have an army that will not fight, having nothing to fight for. And this is the result of the pernicious policy of partiality and exclusiveness, disintegrating society in such a crisis, and recognizing distinction of ranks,—the *higher* class staying at home and making money, the *lower* class thrust into the trenches." At the opening of '65 the difficulty of finding recruits caused the President to turn his attention to the proposal for black soldiers. "The proposition," runs the Diary, January 1, 1865, "to organize an army of negroes gains friends, because the owners of the slaves are no longer willing to fight themselves; at least, they are not as 'eager for the fray' as they were in 1861; and the armies must be replenished, or else the slaves will certainly be lost." For months before the date of this last entry the mean whites had imitated the superior classes in shirking their military obligations; and, in some cases, recruits were actually brought *in chains* to General Lee. On the 10th of April, 1864, the writer says, "To-day, I saw two conscripts from Western Virginia conducted to the cars (going to Lee's army) *in chains*. It made a chill shoot through my breast."

Whilst soldiers were thus dragged in fetters to the battle-field, the physical sufferings endured by the inhabitants of Richmond were intense; and long before Grant's terrible combination of armies bore down upon the doomed capital, the necessities of life were sold in the markets at famine-prices. Even so early as the 3rd of February, 1863, the quotations of the markets gave the following prices of provisions:—"Butter, 3 dols. per pound; beef, 1 dol.; bacon, 1-25 dol.; sausage-meat, 1 dol., and even liver is selling at 50 cents per pound." To pay such prices for the necessities of life the war clerk had to raise money by the sale of trinkets and portable possessions, and by application to money-lenders; for his narrow official salary—paid in Confederate paper-money—was insufficient for the requirements of himself and family. It is under such circumstances that a man learns how to be grateful for small benefits; and, certainly, the terms in which Mr. Jones expresses thankfulness for the loan of a few Confederate notes—equivalent, perhaps, to 10l. in gold—are likely to appear extravagant to readers who have never felt the fear of actual starvation. Having obtained a loan of 300 dols. in Confederate paper, he writes in his journal, "This is the work of a beneficent Providence, thus manifested on three different occasions, and to doubt it would be to deserve damnation." Three weeks later he writes, "My tomatoes are now maturing, and my butter-beans are filling rapidly, and have already given us a dinner. What we shall do for clothing the Lord knows—but we trust in Him." Elsewhere, with a fervour that is not without a touch of the ludicrous, he writes, "Yet it seems to me that, like the Israelites that passed through the

Red Sea, and Shadrach and his brethren who escaped unscathed from the fiery furnace, my family have been miraculously sustained. We have purchased no clothing for nearly three years, and had no superabundance to begin with, but still we have decent clothes, as if time made no appreciable change in them." By degrees the war clerk reduced the allowance of meat consumed in his family to one ounce a day to each person. Soon meat ceased to form any part of their ordinary diet; and they lived as they best could on bread, fruit, vegetables and water, with such choice luxuries as a cup of coffee or a pint of shin-bone broth on holidays and high festivals. Whilst government officials endured these straits, the lower classes—comprising a large number of women and children, whose husbands and fathers were doing duty as "mean whites" in the Southern armies—were actually dying under the famine which had first swept away the cats and tamed the rats of the Confederate capital. The diarist writes, under date October 22nd, 1863, "A poor woman yesterday applied to a merchant in Carey Street to purchase a barrel of flour. The price he demanded was 70 dollars. 'My God!' exclaimed she, 'how can I pay such prices? I have seven children; what shall I do?'—'I don't know, madam,' said he, coolly, 'unless you eat your children.' Such is the power of cupidity; it transforms men into demons." Sometimes the gaunt women and pallid, dull-eyed children gathered together in crowds, and plundered the stores of provision-dealers; but they never begged. At periods when famine was prevalent amongst the very poor, the war clerk was surprised that the less indigent were never importuned by street mendicants. What occasion for surprise? The wretched creatures knew the uselessness of asking alms from men who could tell mothers to eat their own children. In the January of 1865 beef was sold at 8 dols. per pound; two months later the price of bacon was 20 dols. per pound, the price of meal 140 dols. per bushel; and while the Confederate troops were evacuating Richmond the war clerk thought himself lucky to buy a bushel of potatoes for 75 dols. Of course these prices were paid in Confederate notes,—of the depreciation of which currency we heard so little from the noisy gentlemen who were incessantly laughing in our clubs and hotels about honest Abe's greenbacks. On January the 27th, 1865, "gold sold at 47 dols. for one at auction"; on March the 5th, the diarist observes, "the government gives 1 dol. of gold for 60 of its own paper; but were it to cease selling gold, it would command 100 dols. for 1 dol." But the time was fast coming when Confederate notes were worth no more than any other kind of waste paper. After Mr. Jefferson Davis had fled from the seat of his falling government, and Abraham Lincoln's black troops had taken possession of the burning city, the war clerk wrote in his note-book, "Confederate money is valueless, and we have no Federal money. To such extremity are some of the best and wealthiest families reduced, that the ladies are daily engaged making pies and cakes for the Yankee soldiers of all colours, that they may obtain enough 'greenbacks' to purchase such articles as are daily required in their housekeeping." Can any greater humiliation for mortal pride be imagined than this dramatic degradation of the aristocratic daughters of the South, who thus became the hired cook-maids of negro soldiers?

Here and there the grim pages of this Diary are enlivened by laughable stories. For instance, under date January 18, 1863, the writer says—

"Our military men apprehend no serious consequences from the army of negroes in process of organization by the Abolitionists at Washington. Gen. Rains says the negro cannot fight, and will always run away. He told me an anecdote yesterday which happened under his own observation. An officer, when going into battle, charged his servant to stay at his tent and take care of his property. In the fluctuations of the battle, some of the enemy's shot fell in the vicinity of the tent, and the negro, with great white eyes, fled away with all his might. After the fight, and when the officer returned to his tent, he was vexed to learn that his slave had run away, but the boy soon returned, confronting his indignant master, who threatened to chastise him for disobedience of orders. Caesar said: 'Massa, you told me to take care of your property, and dis property' (placing his hand on his breast) 'is worf fifteen hundred dollars.' He escaped punishment."

This also is good—

"Custis (my son) received a letter to-day from Miss G., Newbern, *via* underground railroad, inclosing another for her sweetheart in the army. She says they are getting on tolerably well in the hands of the enemy, though the slaves have been emancipated. She says a Yankee preacher (whom she calls a whitewashed negro) made a *speculation*. He read the Lincoln Proclamation to the negroes: and then announced that none of them had been legally married, and might be liable to prosecution. To obviate this, he proposed to marry them over, charging *only* a dollar for each couple. He realized several thousand dollars, and then returned to the North. This was a legitimate Yankee speculation; and no doubt the preacher will continue to be an enthusiastic advocate of a war of subjugation. As long as the Yankees can make money by it, and escape killing, the war will continue."

In conclusion let us notice a typographical defect which should be amended in future editions of this entertaining work. Each page of a printed diary should bear upon its margin the date of the year to which the entries refer. Through neglect of this convenient rule the reader of 'A Rebel War Clerk's Diary' is put to much needless trouble.

NEW NOVELS.

King's Baynard. By the Hon. Mrs. George Gifford. 3 vols. (Hurst & Blackett.)

Mrs. Gifford is entitled to rank herself in the very front row of admirable mediocrity. She writes like a sensible woman, and like a lady; and the consequence is that she produces a novel quite good enough to prove her perfect right to indulge herself in producing novels if she chooses. For ease of style, vigour of description, and fidelity to real life so far as the sayings and doings of her *dramatis personæ* are concerned,—indeed, for all those qualities that guide the pen of a ready as well as an intelligent writer, the reader can neither wish nor expect much better outside the select circle of positive brilliancy. There is that soothing charm about 'King's Baynard,' from first to last, which can only be expressed by saying that one feels "at home" wherever it would have us station ourselves. In the Vavasour drawing-room and behind the Deredfordshire hounds,—in company with the "fine old English gentleman" and with the cunning provincial attorney who limps and wears spectacles,—in the county town on a fierce election day, and by the side of the grand old "muscular" parson's death-bed,—Mrs. Gifford equally makes us forget for the time that her little world is only a very little stage after all, and the men and women of her fancy only self-confessed players. And even after the pleasant conceit is dismissed, and the book along with it, back to Mudie's, the sensation stops behind, and we are conscious of having spent an enjoyable time in very entertaining company, headed by a hostess who, to an

exceptional degree, is a versatile and accomplished "woman of the world." Most of us appreciate that enjoyment; and by reading such a book as this we get the best possible imitation of it.

What is it, then, that is amiss with 'King's Baynard,' and consigns it to the company of the short-lived moths called literary mediocrities? Simply this we venture to affirm of it: that the whole story of its plot is not, like the characters who work it out, stamped with the hall-mark of reality. The mere imagination of such wickedness on the one hand, and such simplicity on the other, as that on which its interest hinges, is a painful and unnatural anachronism. The world and the people that are in it are not so black as these three volumes paint them, and as we are required to accept them for our vantage-ground. The Sir Marmadukes and Carlottas of 'King's Baynard' were an extinct species long before the date at which its story opens. Lawyers and marriage acts and modern society and printing presses have killed them all off ages ago. Nobody in England knows or believes now-a-days in an old family estate over whose hall "a curse" really and visibly hangs; nor a "first family in the county" whose mutual relations and proceedings are so shrouded in mystery that the very name is alluded to with 'bated breath. Skeletons in cupboards there are, we all know, and genealogical complications, and doubtful marriages, and disputed inheritances, and *causes célèbres* arising out of them; but these disagreeable rarities are not unravelled in occasional private interviews between one or two of the parties concerned, and, above all, are not in the habit of being set right by means of extraordinary coincidences, death-bed revelations just in the very nick of time, and discoveries of living skeletons of injured wives shut up for twenty years in out-of-the-way rooms.

It is because our author deals in mere idealities like these that we have classed her novel among praiseworthy mediocrities. The real artist—the landscape-gardener of fiction—is one who, with Mrs. Gifford's powers of execution (and he wants no more of these than she possesses), unites the faculty of devising what is both graceful and inartificial. If 'King's Baynard' had this latter charm, few recent novels would rank higher. As it is, we simply commend it to our readers as one well worth the trouble of reading.

Trodden Down. By Mrs. J. C. Newby. 3 vols. (Newby.)

POSSESSING in a high degree the special faculty by which the story-teller can entertain with trifles, Mrs. Newby has written several tales of considerable merit; but nothing has come from her pen better than this narrative of a woman's trial, error, penitence and atonement. Here and there she is open to a charge of inconsistency; and places could be mentioned where the story, instead of being tightly riveted like a piece of clever machinery, lacks the coherence requisite for proper truthfulness of effect, and may be described as a bundle of pieces loosely stitched together rather than a work of uniform design and definite intention. But such defects will not materially affect the popularity of the book, for novels are not critically studied by more than one out of every fifty devourers of prose fiction. The reader who looks to general interest, rather than those finer qualities which command the highest sort of critical admiration, will peruse 'Trodden Down' with pleasure; and if he may here and there pass an adverse judgment, his censure will on no occasion be aroused by the aim of the writer.

The heroine's temptation and trial are not

now set forth for the first time. A beautiful girl, the daughter of an impoverished and ambitious country squire, Marion Lowleigh is placed between a wealthy suitor whom her parents command her to accept, and a comparatively ineligible admirer whom she loves hotly and thoroughly. The struggle between duty to her parents and personal inclination terminates in flight from her father's roof, and a clandestine marriage with Vance D'Arcy, *alias* Edgar Fordyce; and scarcely have the young people completed their honeymoon when the bridegroom, to his utter consternation, is informed that a woman whom he had married some years before, and believed to be dead at the time of his second marriage, is alive. At the same time, Marion is led to believe that she is not a married woman, but the victim of unintended bigamy. Even in the first knowledge of her ignominious position she cannot reproach Edgar Fordyce, who designed her no ill, and whose attachment to her is alike sincere and honourable. Indeed, her unselfish nature is stirred more deeply by his sorrow than by her own shame. Accepting her misfortune as just punishment of her filial disobedience in flying from her home with a prohibited suitor, she firmly resists Edgar's entreaties that she should continue to live with him; and, flying from the tempter, she returns to her father, whom, in the language of the penitent prodigal, she implores to receive her as a hired servant, since she is no longer worthy to be called his child. Her supplication elicits a response which gives the reader an unpleasant shock, and is the grand blemish of the story. Instead of receiving her with gladness, and rejoicing over her re-appearance, Mr. Lowleigh adopts the line of action which the speaker of the parable regarded as impossible to human nature. Shelter is granted her according to the terms of her petition. Becoming her mother's needlewoman, housemaid and personal attendant, Marion does the work of three servants; and, in return for her meekness and industry, she receives gibes from her father, taunts from her mother, and disdainful ridicule from her younger sister, who is careful to enforce every letter of the compact by which Marion agreed to become a servant. All this is unpleasant, and quite at variance with the possibilities of life. Even if human nature produces parents capable, so far as affection is concerned, of the brutality exhibited by Mr. and Mrs. Lowleigh to their child, fear of the world's opinion and respect for the usages of society would restrain them from such outrageous expressions of unnatural animosity. The position is made up of mistakes and difficulties; but Mrs. Newby contrives to extricate herself from them by a bold onward movement to the really good purpose of her story. Humiliated and "trodden down" by her family, Marion perseveres in her docility and goodness,—as a servant contributing so largely to the happiness of her relations that they are compelled to recognize her again as one of their own blood. Having laboured as the devoted nurse of her father throughout his mortal illness,—an illness, by the way, that is cleverly and dramatically described,—and having roused in the hearts of her kindred a strong spirit of mutual love as the best antidote to the moral poison that has banefully influenced the fortunes of their house for several generations, Marion is restored at the close of the book to the arms of her husband, Edgar Fordyce, who has become a rich man, and is in a position to prove to her that their marriage was a lawful union; the story about his first wife's survival having been the baseless fabrication of the conspirators against his peace of mind. The heroine

is rewarded at the time when readers are wishing that Mrs. Newby had made her book a little longer.

Against the Stream. By Joseph Hatton. 3 vols. (Skeet.)

Mr. Joseph Hatton has exercised sound discretion in selecting a title for his volumes. They were certainly written "against the stream"; and the reader who conscientiously endeavours to gather together the facts of the story does not feel himself to be running with wind or tide. So far as the author can be credited with a purpose, he seems to teach, that when fearless and independent journalism cannot be sustained in a provincial borough without the pecuniary aid of a wealthy patron, the member who represents the borough in Parliament is bound by honour to subsidize from his own pocket the fearless and independent press of his special locality. To enforce this doctrine concerning the obligations of elected legislators, the novel holds up to contempt the meanness of Mr. Bonsall, M.P. for Middleton-on-the-Water, who actually refused to lend a thousand pounds to Mr. Martyn, the proprietor of the journal which supported the member's interest at the aforesaid Middleton-on-the-Water! Of course, much may be said on Mr. Hatton's side of the question raised in 'Against the Stream'; but quite as much, and something more, may be urged in reply. As we are anxious not to misrepresent the author on a point which he may think important, let it be observed that Mr. Martyn, on starting his free and independent newspaper, was under an impression that Mr. Bonsall had given a verbal promise to contribute as much as two thousand pounds towards its fearlessness and independence; but as this promise was not committed to paper,—as business men are not accustomed to establish newspapers on the strength of rich men's spoken encouragements,—and as in the length of time which elapsed between the date of the imputed promise and the demand for its fulfilment Mr. Bonsall, even if he really made it, might have forgotten it,—we cannot think badly of the late member for Middleton-on-the-Water so far as his treatment of Mr. Martyn is concerned. On failing to draw a sufficient subsidy from Mr. Bonsall, the proprietor of the *Middleton Star* passes through the humiliations of bankruptcy and the anguish of despair to a premature grave; and bailiffs, acting upon the instructions of merciless creditors, and under the personal superintendence of an attorney named Gripps, take possession of the printing-office. But, before they can accomplish their purpose, the emissaries of injustice are roughly handled by the compositors, in a struggle that discolours more than one eye and influences the course of more than one life. "Blood was flowing freely," says the historian of this decisive battle, "cases of type were toppled over, and in a few moments several persons were placed *hors de combat*. At length the printers gave way, and the fighting gradually became less furious, and then *mutually* ceased. . . . Several persons were seriously hurt. One man's leg was badly lacerated by the bite of a dog. Black eyes had sought the infirmary after the first attack. The compositor from an adjacent town, who had been under the pump an hour or two previously, was carried, insensible, to Dr. Smythe's. Three deputy-bailiffs were much bruised, and black eyes and bleeding noses were too numerous to enumerate." The other particulars and consequences of the fight are no less appalling.

Mr. Hatton's English is not without defects. When he draws attention to a woman of eccentric appearance, who calls a party of children

from their games by an inquiry, he writes about "an eccentric-looking female who stopped the *child-sports* to inquire where Mr. Alfred Martyn lived." Children are termed "juveniles," and a footman who appears amongst the supernumeraries of the drama is called "an apoplectic flunkey." The little boy who nearly burst into a fit of laughter is said to have "almost exploded in the apparently desperate efforts to keep down a strong exercise of his risible faculties." With equal grace and correctness, Mr. Hatton observes, "And once a woman has pledged herself to a man, and done so in the firm belief of his goodness, she does not quail at stilted and restricted notions of propriety." Of the young lady whose devotion to her lover under a reverse of fortune is warmly extolled we are informed, "She longed to prove herself worthy of his love and confidence; and I am prepared to venture the assertion, that had Cupid, in the first instance, directed commonplace shafts against poor Susan's heart, instead of mounting them with gold, he would have been much more successful in penetrating and conquering that vital organ, which is supposed to be the seat of love as well as of life." Elsewhere the author describes the interior of a lady's house thus:—"You may be sure this establishment was beautifully furnished; that the carpets were soft and velvety to the tread; that the curtains draped the windows in ample folds; that the mirrors were set in noble frames; and that the statuettes and other ornamental as well as useful articles in or-molu, and satinwood, and gold and silver, curiously wrought with Japanese and Chinese figures, or adorned with miniature pictures, or made to look severe with mosaic work, which enriched 'my lady's chamber,' were of the highest character." Here and there 'Against the Stream' contains some startling assertions respecting men of letters. For instance, Mr. Hatton reminds us confidentially that "Addison was only good company amongst his intimate friends; Ben Jonson was quiet and reserved; Goldsmith, *you know*, wrote like an angel and talked like *Poor Pill*." It is very complimentary on the author's part to assume that we know so much, but we are bound in honesty to say that he does us more than justice. From his title-page, and also from a sheet on which are printed many flattering judgments delivered by provincial critics on his 'Provincial Papers,' we learn that this is not Mr. Hatton's first appearance in literature.

Limerick; its History and Antiquities, Ecclesiastical, Civil, and Military, from the Earliest Ages. With Copious Historical, Archaeological, Topographical, and Genealogical Notes and Illustrations; Maps, Plates, and Appendices, and an Alphabetical Index, &c. Compiled from the Ancient Annals, the most authentic MS. and printed Records, recent Researches, &c. By Maurice Lenihan. (Dublin, Hodges, Smith & Co.)

SOME very mistaken person called history "the tombstone of the past." If this were true, historians would have nothing more to say of nations than that they were born at one time and died at another. They never tell facts except alleged facts, connected with character, which are seldom trustworthy; and they are altogether silent with regard to that which is the staple of history—action. There was, indeed, once an attempt to set up "*talkative tombstones*"; but Lycurgus suppressed this bold essay of the Spartans to flatter the dead.

Notwithstanding the sneer of Sir Robert Walpole, who amused himself by reading history because it was *not* true, history is truth itself

or it is not history. Mr. Lenihan must have been of this opinion when, under the name of "Limerick," he addressed himself to the task of writing a great part of the history of Ireland. His industry is worthy of all praise, but he sends his readers much further than they desired to go. The public will here find itself like the dwarf who asked Jupiter to "give him a leg up" to get into the saddle; the god gave it with such a will that he sent the dwarf over the saddle into a ditch beyond. "Oh, Jupiter," cried the pigmy, "you have helped me too much!"

Mr. Lenihan asks us to accompany him through 800 pages, many of which are solid, with notes in small type occupying seven-eighths of the page. We have nearly done this, to the best of our ability; and despite the author's obtrusive Romanism, ultra-patriotism and hatred of the Saxon, we find him instructive and amusing whenever he keeps to his subject,—that of Limerick,—a better than which no local historian could desire.

There are some things in this huge volume which lay the author open to a charge of partiality; but when we think of the very impartial way in which he, perhaps unconsciously, illustrates the Irish character, we readily pardon his partiality in other respects. It is one of the curiosities of Irish literature that it offers ready testimony against Irish character to those who are looking for such evidence. English comedy-writers make Irishmen rakes, fools, or buffoons; it is only Irish historians that depict them as knaves and traitors. The Irish writers ought to know best; but we fancy that they are either mistaken, or that in the very worst vices, manifesting themselves exceptionally in the national character, they see little to censure. They certainly appear to see no cause why they should not register them—without censure. This is assuredly not the case when they have to deal with the vices of their neighbours, who, being human, are also liable to err.

Thus, with the earliest history, we are at once in the midst of traitors; and the ladies are not a jot better than their lords. It is the wife of Brian Boru and mother of the King of Dublin who aids the Danish pirates against her own people. It is an Irish monk who persuades the Pope to make over Ireland to the Normans (who, our Irish friends require to be told, were neither Britons nor Saxons). It was a Dermot MacMurrough who helped those Normans to their triumph. There were not greater traitors to their own country than the O'Brians, and Mr. Lenihan expresses his mortification at having to record such a fact. Sons rebelled against their royal fathers. When contending chiefs, worn out with shedding blood and betraying one another, met together to elect one man who should rule them in peace, "each came to the convention determined that himself alone should be the chosen leader and king in Erin." The O'Kehanes of Kilrush and the O'Connors of Foyné skinned the Limerick merchants more cruelly than any foreigner ever did. Gerald, Earl Desmond, "the poet," made a bloody war on the Butlers, only because one of the latter had called him Gerald the *rhymist*! The marriages of the daughters of the chief of Thomond (Conor na Srona) with an O'Donnell, a De Burgh, and an O'Ruarc, was a family alliance that set the whole of them by the ears, and continually devastated Thomond. Those Irish cousins loved one another as snakes in a sack do. Galway did its very utmost, not to divide commercial prosperity with Limerick, but to ruin the latter, and have all good fortune for herself. "The tribes of the one were jealous of the sturdy Anglo-Irish of the other," and accordingly Mr. Lenihan reluctantly admits the

triumph of Limerick as arising from "political causes." We find oaths disregarded even when sworn "on the relics of Munster." These outrages did not illustrate the ancient times only. In the savage affair of 1641 the Irish Lord Inchiquin obtained the nickname of "Murrough of the Burnings," for his barbarous acts of incendiarism. "Execrations cling to his memory." The Irish have always been ready in applying nicknames. Lord Strafford was known as "Black Tom," and "to this our own day, his (Wentworth's) name is used by nurses in Leinster to frighten wayward children." When Ireton besieged Limerick, he was helped by the false traitors who were within the city. The narration of such things has its effect upon the author himself; and when he notices the death of Cromwell, he says that Oliver was "hurried to his woe!"—which is, at least, more than Mr. Lenihan can know. Later again, when one of the many assaults was made on Limerick, the city would have been lost but for the fact, "now proclaimed trumpet-tongued to the entire world," that the women repulsed the "savage invaders,"—who were too much for the men, we suppose. No wonder that William had "dreams that disturbed his soul," as Mr. Lenihan happens to know; though he may have been disturbed in body if, as the author certifies, the King, before retiring, "drenched himself thoroughly with those strong drinks he loved so dearly."

Lutterel heads the names of Irish traitors. He received his wages, and "Baldrery O'Donnell," the last and noblest then of the race of Irish patriots, "is said to have received a pension." According to the narrative before us, Limerick would have secured the victory but for this ever-present native treachery. There was, however, heroic fighting by true heroes on either side; though Mr. Lenihan has the most ingenious way of making defeat look like victory. For instance, the gallant English grenadiers thoroughly well thrashed and scattered an equally gallant but less lucky force of Irish. The author thus prettily tells it, in his Limerick way: "The Irish being now pressed upon by the grenadiers, quitted their first posts, and were then reinforced by other detachments; but the grenadiers pushed onwards." This spirit pervades the Irish war stories of the earliest times. Mr. Lenihan says that the Danes at Clontarf were "decisively crushed," stamped out; but although that was the fact, they continued to possess considerable wealth and influence, especially in sea-port towns, where they were as much distinguished by commercial aptitude and prosperity, as they were elsewhere for fighting. This was a pleasant way of being "decisively crushed"; and the story has a moral which Mr. Lenihan does not perceive. When the Danes were not acting as soldiers, they were industrious and thriving as trading citizens. They were, no doubt, severely mauled at Clontarf; but the survivors of the fight, and those for whom they fought, turned to trade, labour, and growing rich. Brian Boru was a lucky man in not so decisively crushing all the Danes in Ireland, and he was a wise man, if he was, as Mr. Lenihan asserts, "willing that they should remain."

As a beaten race, if they really were so, the old Danes, by changing the camp for the counting-house, showed that they had more wisdom and less pride than the later Irish, who took refuge in France after their last brave but unsuccessful struggle at Limerick. That struggle was for a king, in whom, being a Romanist, Mr. Lenihan can scarcely detect a fault. Even of his infamous issue of money made out of gun-metal, with a fictitious value attached to each coin, the author says: "At the first appearance of this money, the Protestants in Dublin

objected to take it, but were soon compelled to do so." As for the number of men who volunteered to follow James's fortune, not a quarter of them really did so, and of those who did, Mr. Lenihan and others show that the heroic element, saving bravery, was wanting in them. O'Neale, the author of the 'Groans of Ireland,' says of Wauchop, and even of Sarsfield, that "they projected only to build their own fortune on the ruin of the Irish." Mr. Lenihan, after telling us that of the wives and daughters of the expatriated who attempted to embark with the self-exiled, many were drowned, and others had their hands and arms chopped off as they clung to the sides of the vessels. In the next page, however, we meet with these ladies, safe and sound, with their relatives, in France, who, if we may trust Mr. Lenihan, formed the very worst company into which the poor creatures could have fallen. We meet with officers of all ranks living in such misery on the small pittance allowed by the French Government, that they "turn off their wives" in order to have the pittance to themselves. Other chivalrous Irishmen in France looked at their 4d. a day, and then at their children, whom they then abandoned to the wide world, and to the misery, starvation, or infamy which must have followed, but of which these soldiers knew nothing, as they lost sight and all knowledge of those whom they should have protected. Mr. Lenihan might have said even more than he does, for the road between St. Germain and Paris was not safe, through the violence of these men, who abandoned their wives and children, and some of whom, like Frank O'Neil, were broken alive on the wheel, for robbery and murder. Others seem to have been employed as spies, serving both governments. Mr. Lenihan even omits to notice the good example set by one, and, let us hope, followed by many. In the brigade of O'Brien, Viscount Clare, was a poor captain named O'Brien, who earned a very honourable and satisfactory livelihood as a fencing-master. His grandson, William O'Brien, was the clever actor of the last century who created the part of Lord Trinket, in 'The Jealous Wife,' married Lord Ilchester's daughter (Lady Susan Strangways), and was straightway provided for by her cousin, Charley Fox, out of the public purse. If his grandfather had not earned his bread by creditable means, instead of living on what he could buy with his 4d. a day, William O'Brien would never have married an Earl's daughter, nor have died, as he did, in the comfortable condition of an English squire.

It is to be regretted that Irish writers do not take history as the captain in St. Clare's brigade took the world,—by making the best of it. Both parties acted so ill, in past days, that their descendants might well let bygones be bygones, and leave all exasperating exaggerations for a simple narrative of facts; not taking as heroism on their own side what they rightly call brutality in an enemy. If the bigots belonging to all parties in Ireland would only rest for awhile, and leave honest and industrious Irishmen of every class to make the best, instead of, as hitherto has been done, the worst of their country, Erin (for whom there is a cordial feeling here in England) would soon know how to improve the happy chance which has been hitherto denied her.

Papers read at the Institute of British Architects. (Published by the Institute.)

ALTHOUGH the present annual volume of architectural lectures is less bulky than its predecessors, it is superior to most of them in the practical value and importance of its contents.

In this respect no item exceeds the very curious and novel paper, by Mr. E. L'Anson, 'On Office-Buildings in the City of London,' which, if it should turn up before the expected New Zealander, when he sits upon the heaped brick-earth which, some day, must represent this metropolis, will make him open his eyes, under the influence of feelings that cannot be wholly delightful. We trust Mr. L'Anson has sent copies of his discourse to all the antipodean cities, in order that the shock of surprise may be broken to the coming men. The New Zealander may thus learn that, under the influence of commercial exigencies and manias, enormous sums of money have been given for space here,—thus, 30,000*l.* for 1,000 superficial feet; that some of the most ingenious plans were adopted to economize the use of space; that in one case a light and air shaft, not exceeding seven feet in width, was used to penetrate a building four stories high; that so precious is the light as to render it advisable for an architect, not only to line these shafts with white glazed tiles—a capital plan—but to avoid the use of even a coloured ornamental border to the space so covered, because by this means it becomes a less powerful reflector. Mr. L'Anson's eminently practical text illustrates devices of the most unfortunate and prejudicial character with regard to health, which have, strange to say, not only been the result, but also, in no small degree, the means, of the prodigious overcrowding of edifices of the mercantile sort, as well as of the extravagant rents of the City. We have a strange illustration of British ways in the anecdote about a building next St. Helen's Church. When the old structures were removed, it was found that a window of the church had been bricked up since the Reformation, and the parish demanded as a right that, notwithstanding the lapse of time, the church should re-obtain its ancient light, asserting that no time was a bar to the rights of the Church. Chancery proceedings were begun on this nice point; but a compromise was effected, so that the church regained its window, after it had been closed three hundred years.

Mr. Warrington Taylor read a practical lecture 'On the Construction of Theatres.' This is not only useful, but amusing. We do not agree with the author that such edifices call forth none but the unpoetical or merely practical faculties of an architect's mind. We are struck with the value of Mr. Taylor's well-drawn distinction between the nature of the audiences—and therefore the diversity of their requirements—of Continental and English theatres. The manners of the people require much consideration in this country. The seemingly trivial habit of giving change for coin to visitors has to be considered, and influences the interior of a theatre where standing-room must be provided, and an unbroken, unloitering stream of persons entering cannot be expected. With regard to the situation of our theatres, in the midst of knots of houses, too often jammed in narrow and tortuous streets, or in moderately wide but immoderately frequented thoroughfares, it is obvious that nothing can be worse, either in respect to convenience of access and use, safety in case of fire, or architectural effect. The latter quality is found to "pay" by those who have crammed the City with gigantic offices, excluded ordinary traders, and enhanced rents in the way above referred to: it is strange that the same quality is not more sought for in its highest degree by proprietors of playhouses. It is true that half the City offices, on which such enormous sums have been spent to secure architectural pretensions, are really of little greater value in Art than so many flaring gin-palaces, and that, at the best, they are but showy and

permanent advertisements; nevertheless, if such pretences are serviceable in their proper cases, how much more so would be good and noble architecture for theatres!

Mr. Taylor is amusingly candid on the general ignorance of his professional brethren on the science of acoustics, and the arrangements of theatres accordingly. The best "house" for sound is Her Majesty's, which was built without science. The author is certainly right in saying that nothing is so beautiful as the smooth run of the boxes straight up to the proscenium frame (this is with regard to pillars intervening), and nothing is so excellent for sound. Prof. Hayter Lewis stated that, having to build a church, he consulted a most eminent Scotch *savant* on the plan; the reply was, that the principle proposed would probably answer, but, although he (the philosopher) had studied acoustics as much as any man, he had concluded that in applying theory to practice he knew nothing about them, and nobody knew more! Mr. Taylor pointed out defects in nearly all the modern theatres in Europe, some of which appear to us to have been exaggerated in the statement, but all are worthy of attention. Decoration for theatres is best of the simplest and broadest order, to be directed in execution by a fine colourist, not, as is commonly the case, by an empiric or half-trained artisan: so are most of the modern operators, in fact, whatever their social and trade positions may be. This will be safe policy, likely to result in good Art. On the current eager seeking after mere novelty, the following deserves to be quoted:—"Novelty, for its own sake, that is, when sought for to make effect, every one knows has been the ruin of Art in all ages, whether Classic, Gothic or Renaissance; the constant strain after novelty destroyed Gothic, and brought Renaissance into *rococo*."

Mr. Darbishire, in the course of a lucid and valuable discourse on the use of Coloured Bricks in decoration, introduced a quaint and striking example of the importance of colour in architecture: "How few persons would believe that the building on the west side of Trafalgar Square, for example, is really a uniform and regular composition? That portion which is occupied by the College of Physicians is so black, and the remaining two-thirds, belonging to the Union Club, is so white, that none but a critical, professional observer would detect any similarity in the two divisions. To all appearance they are separate buildings, and if either of them were burnt down, or removed a hundred miles away, the other would remain unaffected by the loss." This remark is perfectly just; the effect in question shows the vast importance of colour in architecture. In one or the other portion of the building which is referred to, a good deal of skill must have been thrown away. It is hard to say which is the least acceptable to the artistic eye, the doleful black of the college, or the smart, unbroken and glaring white of the clubhouse; probably the former is to be preferred, because there is something of richness in the unbroken hues of the begrimed building. On the other hand, nothing can be more unfortunate than the piebald appearance of some of our most famous public edifices. Thus, St. Paul's is simply ruined as a piece of architecture by the streaks of white that appear with the dominating sooty hue; in fact, Wren's work would look less ill than it does if it were painted black all over. The apparently unaccountable and freakish appearance of these streaks of white has puzzled many, and we believe their causes have never been thoroughly understood; they appear in full force only

on buildings of Portland stone,—in a minor manner on the sandstones used in London. This difference is certainly not due only to the darker colour of the latter lessening the startling force of contrast between the unsooty and the sooty surfaces. Buildings in sandstone take the soot more equally; in their comparatively unbroken dinginess, and consequently less impaired architectural effect, they prove what we wrote above, that St. Paul's would look better if it were painted entirely black. We remember seeing St. George's Hospital when it was temporarily painted of a bright red, and heartily wished it had remained so. Why, with all the resources of the pigments at hand, we should confine ourselves to a dull or glaring whitish buff, passes the conceptions of artists; surely at least the mouldings of stuccoed buildings might well be relieved with colour. Nothing is more vulgar than a new whitewashed street in Pimlico, where the houses are stuccoed, balustraded at the tops, "porticoed" at the doors, and all alike. The effect would be acceptable if judicious tinting were applied to these porticoes and window-mouldings; it is impossible to injure their forms. Two enemies appear with regard to the employment of polychromy in buildings: one of these is the ignorance, the other the timidity, of constructors. The first is audacious, and trusts to violent contrasts and "sensational" colouring for effect, and is not content with apt results from combinations of simple character, in which the primary hues are the dominant, if not the entire, elements; the second, on the other hand, hesitates to employ anything more potent than feeble washes. Between the two the public has no reason to rejoice in what has been done in polychromatic decoration.

Probably the most valuable of the series of disquisitions now in hand is that by Mr. Street, 'On English Woodwork of the Thirteenth and Fourteenth Centuries.' After showing that the attention of architects had been, for the most part, called to the carpentry of the centuries which followed those named until the Italian manner of building came into fashion here, the lecturer said, that there is one feature which, above others, distinguishes the early architects of this country: it is, that they were skilled beyond their Continental brethren in the science and practice of carpentry. The buildings the former erected surpassed, in the beauty and variety of their wooden roofs, those of any other race of architects in the world; their works are still enduring in such numbers as to astonish us when we think of the perishable nature of their materials and the neglect which has befallen them during the last three hundred years. These roofs have more irregularities in their plans, variety in their designs, and invention in their parts, than others that were elsewhere erected in stone. Mr. Street briefly traced the characteristics and sketched the history of Art of this kind in England, and enlarged affectionately upon the superior durability of the proper Gothic roofs, some of which have stood uninjured for six centuries, while recent attempts at copying these in a cheap manner and with insufficient skill are certain, he thinks, to perish long before their much older neighbours. Numerous examples attest the qualities of old works, not only as regards their beauty but their scientific construction. "Some of the ancient roofs are manifestly badly constructed, and very many of them only in compliance with the fashion of the day or of the district. And the extent to which this was the case affords a curious refutation of the common belief of the existence in the middle ages of bodies

of freemasons, or workmen who moved about from one building to another, carrying their ideas and customs from one end of the country to the other. For nothing can be more clear than that the constructors and designers of these old roofs were to a very great extent local men. Their work, indeed, is much more obviously characteristic of particular districts than that of any of the other workmen of the times; for, though it requires a trained eye and careful study to detect some of the local peculiarities of the masons or sculptors of the middle ages, they are obvious, in the case of carpenters, to the most hasty and cursory examiner." The minor constructions and turrets of wood next engaged the lecturer. Doorways, porches, floors, and ceilings were learnedly considered, together with scaffoldings, interior furniture, and machinery in wood. This paper is illustrated by diagrams of mouldings and views of the ancient hall at Mayfield.

Other subjects treated in this book comprise 'Fire-proof Materials and Construction,' by Prof. Hayter Lewis; a valuable paper by Mr. Ruskin, 'On the Conditions affecting the Study of Architecture in our Schools'; 'The Manchester Assize Courts,' by Mr. Waterhouse; and 'The Guildhall, London,' by Mr. H. Jones.

NEW POETRY.

Shadows of the Past. In Verse. By Viscount Stratford de Redcliffe. (Macmillan & Co.)

THERE is an interest, independent of their merits, in the poems of a man who has played so conspicuous a part in European politics as Lord Stratford de Redcliffe. We like to discover—or to fancy that we discover—what was the private bent of a mind long concentrated on public affairs,—what were the intellectual features of the man when the smooth mask of diplomacy was laid aside. The pages before us afford proofs of taste and culture, even of delicate fancy; and, although we doubt whether their writer, even had he devoted his life to poetry, would have attained in it the same prominence that he has gained in a political career, it is pleasing to find that his verse reflects what is most generous in his public aspirations (as in the effusions referring to Poland and Denmark), and proves that, amidst the conflicts of public life and the temptations of ambition, he has retained such steady faith in man's spiritual future as breathes from the following:—

THE MORAL OF MIGRATION.

There's nought in May's reviving bloom, when hearts to rapture yield,
There's nought in Summer's boundless glow, when plenty crowns the field,
Like that soft hour whose dying tints enrich the faded grove,
And raise to calmer, holier thought the dreams of mirth and love.

'Tis not the pensive maid alone that feels the chaf'ning power
Or musing bard who hears a moan in each deserted bower
The wild inhabitants of air give witness of the spell,
Nor beats the mind that notes untouch'd their ling'ring, last farewell.

Aloft in many a ring they wheel, and test th' inspiring force,
That points afar to climes unknown their long uncharted course:
A guide within each flutt'ring breast sustains the feeble wing,
And soon th' autumnal gale for them o'ertakes the flight of spring.

Then tell me, thou! whose eye can read the world's mysterious plan,
When Nature beckons o'er the grave, why shrinks the soul of Man?
Why clings he to an earthly shore, when all its charms are flown,
Why turns he from a brighter land, which faith can make his own?

The lament of the Danish maid over her slain lover is, again, a burst of sympathy with the cause of national freedom, which it is especially

pleasing to have from a man like Lord Stratford de Redcliffe:—

She mourn'd as only those can mourn,
When love with bleeding roots is torn
Deep-seated from the heart:
But true to race, of generous birth,
She play'd in right of kindred worth
A Danish maiden's part.

"To lose thee in the bloom of life,
When plighted thine, and all but wife,
Is hard and bitter doom;
But woman's faith may vanquish ill,
And I must bend a selfish will,
Nor grudge thee to the tomb.

"They say thy flashing sword was raised
Where fierce and high the battle blazed;
They say that, led by thee,
O'er mangled heaps, on countless foes
The Danish columns rain'd their blows
Till few were left to thee.

"Enough: the tear-drop let me dry
Ere yet it leaves this dark'nd eye:
What patriot ever dies?
He bleeds, but lives; in danger's hour
His memory speaks; his name is pow'r—
And here our bravest lies."

Afar the ringing tones were heard,
E'en to their last triumphant word;
Then sank the lovely head,
And pillow'd on the heart it press'd,
There found a cold but welcome rest,
Nor wish'd a goodlier bed.

We quote the above as an illustration of the poet-politician's spirit rather than for its style, which has the conventional and sentimental ring of a former period. The writer does more justice to his powers of description in such a poem as 'Traditions of Sutton,' which displays no small force of pictorial representation. The more ambitious poems, 'Fortunes of Genius' and 'Spirit of the Age,' though revealing an enlightened mind, are not equal to those before named in point of fancy and description, but belong to the province of Rhetoric rather than to that of Song. And it must be owned, without disparagement to strains which undoubtedly possess elegance and finish, that they are interesting less for the laurels which they may obtain for their writer than for those which in a distinct sphere of action he has already won.

Annie Weir; and other Poems. By David Wingate. (Blackwood & Sons.)

THIS second volume of poems is an advance upon the strains, full of freshness and of feeling for natural beauty, which won attention for the Scottish miner two or three years since. The author's skill in literal description is now more freely combined with the glow of fancy, and his power of expression generally has gained in ease and force. The opening poem, 'Annie Weir,' relates a touching incident with much simplicity and pathos. Annie Weir and Reuben Shaw, her lover, are at work in a mine, when water breaks in and seemingly cuts off the possibility of escape. No common power of realizing a scene is evinced in a stanza like this:—

We didna tear our hair,
But it surely was despair,
That made us tither's hauns sae wildly tak';
For our heavy hearts aye sunk,
As wi' hollow, dismal, clunk,
The water slowly rose and drove us back.

And in the following verses, which set forth the crisis of the situation:—

Let your fancy, if it can,
Paint us sitting worn and wan,
Watching owre our last bit candle as it flared its dying
flame;
Fled our guardian Angel seemed,
And till then we had not dream'd,
That ony darker shade could fa' on our despair.
Like parents owre a child,
That its hindmost smile hath smil'd,
Owre the glowing lowless wick low we leaned wi' fondling
care,
And gently blowing strave
The lowe alive to save,
And chase away the gloom for ae brief moment mair.
But we gently blew in vain,
So we raised our een again
At ance, I kenna why nor what we wished to see;

But I saw—and see it noo—
Beaming memory's mazes through.
The old sweet look o' love and trust in Annie's ee.

But the wick a faint dull red
In its ain white aye half hid,
Lang glow'd and seem'd a soul that the Fates were loath
to sever;
Then it dwindled to a spark,
That a star seem'd in the dark—
A star that sudden set to rise no more for ever.

This is not only vivid description, but seen by the expiring light, is a touch of true pathos and imagination. 'Robin o' Raploch,' again, is a capital ballad, told with great force of characterization and feeling. There is a good deal of true Scottish shrewdness and humour in the lighter pieces, and the transcripts from Nature have been painted with an eye made observant by a keen appreciation of beauty.

Pre-historic Remains of Caithness. By Samuel Laing, Esq., M.P.; with Notes on the Human Remains, by Thomas H. Huxley, Esq. (Williams & Norgate.)

THIS volume has lain upon our table for some time, and we have hesitated in what point of view to take it. It consists, as will be seen by the title, of two distinct parts. In the first Mr. Laing describes a number of monuments of pre-historic antiquity, or, at least, which he looked upon as pre-historic, scattered over the coast of Caithness, which he has made the scene of his explorations. The county of Caithness, as Mr. Laing says, is exceedingly rich in the early remains which it is fashionable now to call pre-historic,—such as sepulchral mounds and cairns, hut-circles, shell-mounds, and the like. Mr. Laing chose for his operations five mounds, or groups of mounds, lying within a range of about two miles, in the neighbourhood of Keiss Castle, namely, two large mounds known popularly as the Birkle Hills; a long mound which he calls the Burial Mound; a large green mound, to the north of Keiss Harbour, which he designates as the Harbour Mound; two low mounds, close to the present churchyard, which he calls the Churchyard Mound; and a green spot in the midst of the heather, about three miles inward from Keiss, containing the remains of ancient dwellings, which Mr. Laing calls the Moorland Mound. The first of these, situated at the point where the sand of the sea-shore changes into rock, presented the appearance of a long, low, irregular mound of sand, overgrown with green turf, extending about 300 yards parallel to the beach. Its form was so little defined that none but a practised eye would take it for a mound at all, and it appears to be composed chiefly of drift sand. In the central line of this mound were found, about fifteen feet apart, a series of kists, consisting of walls of unhewn flagstones from the beach, with no floor, but paved with large flagstones. Each of these kists contained a skeleton; but no objects of human workmanship were found, except near the centre, where there was a kist of larger dimensions, inclosed by a low circular wall of rough stones. It contained the skeleton of a tall man, considerably larger than those buried in the other kists, and on one side of him a parcel of what Mr. Laing calls stone implements, one of which, he says, "may have been" a battle-axe, two "may have been" spear-heads, with one arrow-head, seven knives or cutting instruments, &c. Mr. Laing does well to use the phrase "may have been," for we confess that, to judge by the engravings, we can see nothing in them but so many rudely-broken stones, and a few which appear to have been rounded by motion in water—just such as, we doubt not, may any day be picked up on the beach.

The Churchyard Mound proved to be an old

shell-mound, or rather a refuse heap from eating, similar to what the Danish antiquaries call *kjokkenmøddings*. It consisted chiefly of periwinkle shells, with some limpet shells, and a certain number of animal bones, the latter broken to pieces in order to extract the marrow. Mr. Laing states that the relics found here consisted of chipped flints, and very rude bone and stone implements, and pottery. The bone implements are classed as arrow-heads, and pins or skewers; but they seem to us, with hardly an exception, to be nothing more than the fragments which would naturally result from the fracture of the bones in order to extract the marrow. Under the Harbour Mound was found a mass of stone building, consisting chiefly of two concentric circular walls, with a flagged floor, which Mr. Laing considers to have been the lower part of a burg or circular tower. For a detailed account of all that was found in it, we must refer the reader to the book itself. The masonry, as far as we can judge by the cuts, hardly impresses us with the idea of a very remote antiquity. It was accompanied with kitchen-middens, which contained bones of animals, generally broken to extract the marrow, large deers' horns, some bearing the marks of sawing or cutting, great masses of limpet shells, mixed with periwinkles, implements in stone, bone, bronze and iron, and the jaw of a child, which has been splintered or gnawed, as if to obtain the marrow, whence it is conjectured that the inhabitants of this spot were cannibals. The Birkle Hills, which stand among the hillocks of blown sand, about 200 yards from the sea-shore, contained a few stone implements, similar in all respects to those in the Burial Mound, and one or two little implements of bone which are certainly artificial. The Moorland Mound contained a square building, the walls of which were made of large flags set on edge; the floor was paved with flat stones, but there were no traces of a roof. The floor was covered to a depth of from a few inches to a foot with shells, bones and ashes. The mound had, of course, been formed by an accumulation of moving earth. There were found here fragments of pottery, which, as one piece had a coarse blue glaze, could not be very ancient,—rude stones supposed to be implements, and two small stone whorls.

It will be seen at once that the objects found in these various excavations were not of a character to lead to any very satisfactory result; that they were things, in fact, that might belong to any period; that there was nothing in the structures found within the mounds which bespoke necessarily a remote pre-historic period. The supposed implements in stone and bone were so extremely indefinite in their character, that Mr. Laing himself calls them "the *ne plus ultra* of rudeness" in stone or bone. It is evident, too, that Mr. Laing, though a very zealous explorer, does not possess a very large amount of archaeological knowledge; for he mistakes (p. 28) a pair of bronze scissors, of a form which is found among Roman antiquities, and is not uncommon in our Anglo-Saxon graves, for "tongs or tweezers." In fact, taking his own account of these objects, when we come to hear his speculations upon them, we cannot but feel that he is building great theories upon very weak foundations.

OUR LIBRARY TABLE.

On Democracy. By Arthur Partridge (Trübner & Co.)

Mr. Partridge informs us that "this work arose out of some considerations suggested by another work, published concurrently herewith, and entitled 'The Making of the American Nation; or,

the Rise and Decline of Oligarchy in the West,"—of which treatise on the growth of American democracy it was not in our power to speak in complimentary terms. Here is a favourable specimen of the book before us: "The term 'Radical,' used as a party epithet, means a man who cannot adjust the ideal to the actual. His theories are too fine for facts. The term 'Tory' means a man who cannot adjust the actual to the ideal. He first believes in the catholic and the absolute (comprehends, as some would put it, the 'subjective' only), but knows not the People; the last knows only and certainly what the People are not. The first may be light, but he is not base. He believes in the angel, though his theories will not fit the ape. The last imputes his own nature to the People, and naturally refuses to believe in them. The People! capable of all, realizing what? The People, demoniac and angelic,—their Ignorance and Light, Brutality and Intellect, their nature, condition, rights, wrongs, wants, wishes, demands, and preparedness,—the Statesman must know all this, their present, and believe in all that, their future,—must rise to all their Heights, and measure all their Depths,—must at once believe and disbelieve in the People." The closely-printed volume ends with this assurance: "Whilst, therefore, towards Federation is the tendency of Governments, universal manhood suffrage and equality is not only the right of the People, but the only Factor of Unity, and the Necessity, and the Conservatism, and the Balance of States. Democracy begins with the Individual. It ends only with the world." Ought we to blush whilst making confession that we have not read all the arguments by which Mr. Partridge brings his disciples to this not very intelligible conclusion?

On Railway and other Injuries of the Nervous System. By John Eric Erichsen (Walton & Maberly.)

Mr. Erichsen's fourteen cases of injury to the nervous system from concussion should be considered by the members of his profession, and also by persons interested in the many obscure questions concerning the possible consequences of railway collision to passengers who, having escaped from an accident without any visible lesion, do not exhibit signs of important mischief until several days, weeks, or even months have elapsed since their concussion. But though the author's cases deserve respectful acceptance, they cannot be regarded as more than a modest contribution to the numerous collection of facts from which we may hope, ere long, to acquire some satisfactory acquaintance with matters concerning which we are greatly in need of further information. Mr. Erichsen's observations were, in the first instance, delivered to the students of University College Hospital; and he would have done well had he removed from the addresses their entire supply of "lecturer's padding" before sending them to press. Men of science do not care to be lectured interrogatively after this fashion: "Is the Law exempt from Conflicts of Opinion, independently of those that are of daily occurrence in its courts? Are there no such Institutions as Courts of Appeal? Are decisions never reversed? Are the fifteen Judges always of one mind upon every point that is submitted to them? Do we never see Conflict of Opinion spring up in the Lords and Commons, amongst the magnates of the legal profession, on questions that involve points of professional doctrine and practice? Is the Church herself free from differences of the widest kind on questions that we are taught are of the most vital importance? Have we not for years past heard questions of doctrine, of practice, of ritualism, discussed with an amount of vehemence and zeal to which we can find no parallel in our own profession? Are not angry passions roused in quarters where they are little to be expected, and may we not at times be tempted to exclaim, 'Tantene animis cœlestibus iræ?'" Clearly Latin has its uses, since it enables a speaker to suggest thus happily that a Bishop of the Established Church is a heavenly being!

The County of Sussex; its History, Antiquities, and Topography, with an Itinerary. (Cassell, Petter & Galpin.)

THIS is a new guide-book for the tourist, apparently

one of a series. Its distinctive characteristic is furnished by eight woodcuts, representing noteworthy buildings and views in the county. These illustrations are not worth much; but, as mere memoranda to a popular book, they are acceptable. A common and cheap series of railway-guides for England and the Continent derives great interest from including numerous little notes of this sort, not more than an inch square, but sufficient to their pretensions. Why our tourists' guide-books are not more profusely illustrated in this manner than is customary we cannot say; it would certainly be advantageous so to improve them. The book before us differs in some respects from that which it is obviously intended to rival, that is, Mr. Murray's 'Kent and Sussex.' Properly speaking, it is less a guide-book and companion to the knapsack than a book of reference; nevertheless, it answers very well for all purposes. In the interest of our readers we have examined it as a collection of archeological facts, in comparison with Mr. Murray's publication. We find that, although containing a considerable quantity of matter not in its foregoer, it is not equal in any respect to that publication; it is less full and wealthy in details of particular places. To the best of our knowledge it refers to fewer subjects—a very considerable defect in such a work. We have not compared it with "Black's Guide" to the same district; but, from recollections of the edition of that compilation which was employed by ourselves in 1861, it is superior to it in the quality of its literary features, its editor's intelligence and education, and much more complete as a guide-book. Mr. Murray's "Handbook" above referred to is dated 1863,—the last edition, we believe, yet by no means free from slips and blunders. It ought to be worth while to produce a nearly perfect work of this class. The fact of Messrs. Cassell's publication being in a mere paper cover will render it objectionable to most tourists.

Systematic Memory; or, How to Make a Bad Memory Good, and a Good Memory Better. By T. Maclaren. (Pitman.)

WE do not see any use or pleasure here. As to numbers, we prefer Grey, and use neither. And to remember a list of unconnected words by spoiling poetry is to wrap brickdust in gilt-edged letter-paper. The example given is—

ink-bottle, clock, tea,...

To remember this, you are to take—

The shades of night were falling fast
As through an Alpine village past
A youth, &c.

Then, by help of an ink-bottle as black as the shades, an illuminated clock at night, and a party drinking tea on the Alpine Matterhorn, &c., you get it all. And this is really in print! Neither use, nor play, nor fun: hard to do, and nothing when done.

Imaginary Printers and Supposititious Publishers —[Imprimeurs Imaginaires et Libraires Supposés, par Gustave Brunet]. (Paris, Tross.)

THE name of Gustave Brunet, of Bordeaux, is not so celebrated as that of the Brunet, of Paris—his namesake, though not his kinsman; but it is one well known in the bibliographical world. His 'Dictionnaire de Bibliologie Catholique' is as valuable in its way as the 'Manuel du Libraire' of the other. Though it made its appearance, strangely enough, as a portion of the enormous 'Encyclopédie Théologique' of the Abbé Migne, it is "catholic" only in the sense of "universal"; and very commendably catholic will it be found in its information on libraries and catalogues and a host of other subjects which interest the lovers of books. The present work, we are sorry to say, is far from deserving the same praise. The subject is a most unhappily chosen one. Printers and publishers who disguise their names and whereabouts may have more than one good reason for doing so: they may publish what is considered heterodox and seditious, and may seek to escape the severity of the Church or the Government; or they may publish what is simply indecent, and seek to elude the vigilance of the police. Too many of M. Brunet's clients are of the latter character. His list of "Imaginary Printers" bears the same relation to his 'Dictionary of Bibliology'

that the Newgate Calendar does to a general Biographical Dictionary. At page 107 he says, with justice, of one of his authors, that he was a despicable fellow, of whom too much notice has already been taken; and the very titles of some of the books he catalogues are such that he apologizes for reprinting them. But why re-chronicle those who ought to have been long ago forgotten, and reprint what ought never to have been printed? In short, though the volume on 'Imaginary Printers' contains, here and there, a few pages of interesting anecdote, it is, in the main, a dry catalogue of worthless books, and will add nothing to the author's reputation.

Westfield: a View of Home Life during the American War. (Edmonston & Douglas.)

THE amiable writer of this well-meant but not amusing novel endeavours, with much right feeling but small success, to illustrate the patriotic fervour and forgetfulness of self with which the Northerners of the superior classes sustained Mr. Lincoln's government during the war, and faced the dangers of battle no less bravely and cheerfully than they met its prodigious and necessary expenses. The characters of the story lack distinctiveness, and its incidents are by no means well chosen. The subject is one to which no inferior writer could render justice; and it seems to us that the anonymous author has not qualified himself for the achievement of his task by any critical study of the principles of romantic art.

No Union with Rome: an Anti-Eirenicon; being an Answer to the Reunion Scheme of Dr. Pusey. By Alessandro Gavazzi, Minister of the Gospel in the Italian Church. (Printed for the Author.)

MR. Gavazzi's book concerns questions to which we are not pledged to pay critical attention, and even if his arguments fell within the limits of our province we should not think it worth while to give them any public consideration. But though we decline to pass judgment on his opinions and logic, we must, in the interest of literature, express our disapprobation of his discourtesy and insolence to Archbishop Manning and Dr. Pusey, who, as scholars and gentlemen, should at least experience from literary opponents the respect that is due to honesty and high culture. Once in a while the angry controversialist speaks of the author of the 'Eirenicon' as Dr. Pusey; but in ninety-nine places out of every hundred where he is mentioned in this Anti-Eirenicon the Oxford Professor is named without either his academic or ecclesiastical title,—thus, "This is all that Pusey knows of those who do not tractarianize after the black Harlot of Oxford." Similar disrespect is shown to the Catholic Archbishop. Surely the rancours and spites evoked by religious controversy cannot make any considerable number of Englishmen delight in wanton exhibitions of ill-breeding.

We have on our table the following Pamphlets:—*Preface to the Fifth Edition of "Ecce Homo" (Macmillan).*—*"Ecce Homo" and its Detractors: a Review,* by George Warrington (Skeffington).—*A Vindication of the Past Course and Present Position of the Irish Clergy in reference to the National System of Education for Ireland, in a Speech delivered at the Annual Meeting of the Church Education Society, held in Dublin, April 11, 1866,* by James Thomas O'Brien, D.D. (Macmillan).—*Joint-Stock Banks: Proposal to secure Deposits placed at Interest,* by William Ray Smee (Mann).—*Land Tenure in Ireland: a Plea for the Celtic Race,* by Isaac Butt (Dublin, Fowler).—*The War, the Balance of Trade, and the Bank Acts, in a Series of Letters addressed to the Editor of the "Newcastle Chronicle," with a Preface and Appendix,* by Thomas Doubleday (Effingham Wilson).—*Thoughts upon Subjects connected with Parliamentary Reform,* by James Manning (Tribner).—*And The Negro and Jamaica,* by Commander Bedford Pim, R.N., a Paper read before the Anthropological Society of London, February 1, 1866 (Tribner).

GAMES.

Jerks in from Short-leg. By Quid. Illustrated. (Harrison.)

MANY readers may be saved trouble in an attempt to make out the meaning of this title if we say at

once, and hastily, that the book is about the game of cricket. Having read about half his work, we believe the jocularity—we use that term in a severe and Johnsonian sense—of the author, no less than his whole manner of treatment, nay, the very subject itself as here dealt with, that is, the game at cricket, its laws, the manners and customs of its professors and followers, combine to make what painters call a "vehicle," for the infusion of good, sound moral advice into the minds of young men. Few observers have stood in front of theatrical booths at a fair without distinguishing on the faces of the performers then strutting their little hour a profound seriousness of mood and dreadful internal gravity. Having long ago known these thoughts, with ample sympathy for the poor fellows who belied their hearts for daily bread, we fell more readily into the secret of "Quid" than might have been the case had we entered on his text without that pathetic preparation. His book is like one of those quaint, subtly expressive heads one meets with in Gothic sculpture, which, as it is gazed on, grows wonderfully in purport, and changes from a jeer to a sardonic, woful, heart-racked look, as if some sickening secret had lain in the carver's mind and would come out to the stone, file smooth and soften the lineaments as cunningly as he would. Sometimes it is but in one peculiar light the secret of such a face may be revealed, so that for a short time only in the sun's daily course is there any trace of it; otherwhiles the jeer, or superficial smile, is all you see. "Quid" is, of course, innocent of such profundity of craft as the carvers showed in their stone faces; nevertheless, ere ten of his pages are read one sees that he is more wise than witty, indeed that he is not witty at all, or even funny. We know that the absence of wit does not imply the presence of wisdom, but, as a rule, that the contrary is true; yet there is so much sound good sense, practicable advice, such wealth of Christian admonitions in this book, that we twice turned to its title-page and made sure,—unless Mr. Harrison is a myth, a relative of Mrs. Gamp's friend,—that we were not reading one of those excellent works which the Religious Tract Society produces under names that startle and occasionally attract. Such are our conclusions with regard to the half of the book we have read. Our readers will forgive our non-success in an attempt to get through the other half. As to the illustrations, some are capital, others bad; of the first let us name the series of heads on page 8, a collection of second-class cricketers; of the second kind are those on pages 118 and 119. The commendable predominate. We are convinced that the artist has not been admitted to knowledge of the author's secret; on the contrary, he does his best to cheer his text. The work would probably reach a wider circle of reformable persons if it were made less "slangy"; we recommend a change in this matter in a second edition. At present it is by no means impossible for a hasty reader to believe the work to be devoid of serious meaning.

Routledge's Handbook of Cricket. By Edmund Routledge. (Routledge & Sons.)

Mr. Edmund Routledge's manual of Cricket may be commended to the attention of young players. Our recent review of Capt. Crawley's handbook upon the same sport has, no doubt, already opened Mr. Routledge's eyes to the defects and blemishes of his treatise, which he can easily amend before the appearance of a second edition. "The origin of cricket," he observes, "has often been made the subject of dispute, and still remains undecided. Some authorities think it is as modern as 1770; others, again, point to 1700 as the true date; while the Rev. J. Pycroft, whose opinion is entitled to the greatest respect, *boldly* asserts that it is as old as the thirteenth century, when it was played under the name of 'club-ball.'" Reference to certain familiar books will satisfy Mr. Routledge that Mr. Pycroft's opinion is not altogether original, and did not need the support of bold assertion.

Chambers's Useful Handbooks.—Cricket; to which is added Troco, or Lawn Billiards. By Capt. Crawley. With *The Field* Committee's Rules. (Chambers.)

THE indefatigable Capt. Crawley, having told us all

he knows about Cricket and Billiards, now lays at the feet of croquet-players a little book which will be read with approval by connoisseurs of two pastimes which have become widely popular during the last few years. The captain is right in tracing Troco to the ancient game from which we derive our modern billiards; but he does not seem to be aware that pall-mall and croquet—the modern reproduction of the sport, which is commemorated by the name of one of our principal West-End thoroughfares—sprung from the same source. "And now," says the entertaining writer, towards the close of his manual, "a word or two with regard to costume. Ladies will do well to avoid long, hanging sleeves and sweeping trains. They should wear well-fitting boots, not too tight, and not too thin,—for the grass gets damp towards evening, and a cold is too high a price to pay for an afternoon's amusement. With a pretty boot, and a handsome dress properly looped up, so as to be out of the way of the balls, a neat hat, with the hair nicely arranged, belles look irresistible in a croquet-ground. And just a word for their ear. I am not a marrying man—having accomplished my destiny in that respect years ago—but I may tell them that I have known some very happy engagements for life that have been made during a match at croquet." With regard to masculine players, the author observes—"For gentlemen there is no more appropriate dress than the knickerbocker trousers and loose jacket now so fashionable, with a jaunty cap rather than a chimney-pot hat. And as the game is played in the field or on the lawn, I venture to say that not many ladies will object to the sight and perfume of a cigar." Clearly Capt. Crawley has a perfect sense of the fitness of things. May he never want a partner at croquet, or a cigar to console him!

LIST OF NEW BOOKS.

Aakew (Miss Anne), *Passages in Life*, post 8vo. 10/6 cl.
Beeton's *Management of Children in Health*, &c., 12mo. 1/6 swd.

NATIONAL PORTRAIT EXHIBITION.

THE frequent occurrence of black jewels in the portraits here has led to many conjectures as to the originals of those strange ornaments,—conjectures, in their strangeness, far outdoing the peculiarity of the things. To account for the frequency of these gems and the almost utter absence of the king of jewels, the diamond, in pictorial representations of persons living when that stone was not less in repute than ever, some learned writers have averred the black gems were intended for diamonds, and that the artists, hopeless of depicting the splendour of the latter, committed a sort of pictorial suicide, and made the blazing stones black, in default of their white intensity. To a painter this explanation is absurd on its face. There is no greater difficulty in introducing the colourless diamond to a picture than the sanguine ruby or the gorgeous carbuncle. It would not be the artist's object, neither would it be in his power, to represent fully the gleaming of any precious stone; such effect would be destructive to the quality of his picture, could he reproduce it. Moreover, diamonds are rarely big enough to make much show in pictures, where their peculiar qualities could be freely enough displayed to distinguish them from other white stones. Again, until the method of facetting the diamond was discovered by Louis de Berghem, and practised for Charles the Bold on the great Sancy diamond, there was not enough difference between the appearance of the purest

stones and that of many crystals to admit of pictorial distinction. The painter having to deal with a diamond large enough to make a show in even a life-sized portrait would not forget to depict its prismatic quality with colour enough to lead any but a very careful observer to believe he looked on the representation of a highly-tinted instead of what was really a colourless but potentially refracting stone. Marbodius of Anjou, in his 'Lapidarium,' as translated by Mr. King, distinctly refers to the original chromatic character of this stone:

Yet though it flashes with the brilliant rays,
A steady tint the crystal still displays.
Hardness invincible that naught can tame,
Untouched by steel, unconquered by the flame;
But steeped in blood of goats it yields at length,
Yet tries the anvil's and the smelter's strength.

Many of the black stones here depicted are much too large to be intended for diamonds: see that picture of the *First Earl of Manchester*, *Sir Henry Montagu*, (515) the property of the Duke of Manchester, which has been "restored" with prodigious severity, like many other pictures in his Grace's possession here,—e.g., No. 527, *Sir William Roper*, to which we recently referred, as showing the practice of attaching rings to the wrists by black cords: this portrait has a large black stone set in gold for a ring, probably a piece of jet or obsidian. The large white stones we sometimes see in portraits are doubtless crystals which were worn by sleepers to drive away evil dreams and baffle witchcraft. It is true the old custom of setting diamonds was to place black foils behind them, intentionally to enhance their lustre, the effect of which would be to give them, in some lights, the aspect of black stones; this was, however, also done with crystals. The size of examples in pictures is generally conclusive against the diamond being so represented. We wish somebody would discover a portrait of that wonderful Liparean stone that conferred, or was supposed to confer, power to understand the language of birds and beasts,—a discovery of doubtful benefit, notwithstanding its attractiveness. What personal remarks might we not hear by means of such a stone! There is a curious illustration of the verses of Marbodius, above quoted, in No. 313, *Richard Carew*, where a diamond of about the size of a die is laid on an anvil, and a hand out of a cloud holds a hammer to strike it, inscribed, "*Chi verace durera.*"

The large black stones may sometimes be meant for obsidian, which since the Roman time has been used for rings, and had magical properties ascribed to it. Of this material we have hitherto believed the famous "Show-stone" of Dr. Dee (340) to have been formed. The Catalogue here speaks of it as "polished cannel coal." (!) It was probably one of those crystals that are not unfrequently found in tombs. Dee himself, of course, believed it to be crystal; his "Diary" contains several references to it, and that he saw "*in crystallo*"—what he saw he does not say. Queen Elizabeth often pleased him by notice of this treasure. Would the reader like to see a small picture of two or three personages who appear here, as they lived in 1550? Wrote Dr. Dee, Sept. 17, "The Quene's Majestie cam from Rychemond in her coach, the higher way, by Mortlak felde. (Dee lived near the church there, on the west, by the water-side.) And when she cam right against the church, she turned down toward my howse; and when she cam against my garden in the felde, she stode there a good while, and then cam into the street at the great gate of the felde, where she espyed me at my doore making obeysains to Her Majesty; she beckoned her hand for me; I cam to her coach-side; she very speedily pulled off her glove, and gave me her hand to kiss; and to be short, asked me to resort to her court, and to give her to wete when I cam ther; hor. 6½ a meridia." Dee was evidently in good spirits at this time; only a few days before he had gained at least a prospect of wealth, for had not "Sir Humfry Gilbert granted me my request to him, made by letter, for the royalties of discovery all to the north above the parallel of the 50 degree of latitude?" Stout Sir Humphrey Gilbert was then meditating a voyage, partly accomplished in 1583. There is no portrait of Gilbert indeed the

Gallery is singularly unfortunate in respect to its pictures of discoverers. A Correspondent wonders at the number of portraits of Queen Elizabeth which have been preserved; he does not seem to have met with a reference to the common belief that Her Majesty's effigies were specially protected. Evelyn, when viewing the ravages of the Great Fire in London, noticed that "when those of all the kings" in the Exchange were broken in pieces, the effigies of Elizabeth received but little hurt, although the "vast iron chains of the City streets, hinges, bars, and gates of prisons were melted and reduced to cinders by the vehement heat."

In No. 642 we have a likeness of the Lord Keeper Coventry, attributed, we believe truly, to Jansen, which recalls an entry in Pepys's 'Diary,' about a visit paid, within a day or two of two centuries since (June 27th, 1666), to the son of the original: "To Sir W. Coventry's chamber, where I saw his father my Lord Coventry's picture hung up, done by Stone, who then brought it home. It is a good picture, drawn in his judge's (Lord Keeper's) robes, and the great seal by him." And while it was hanging up, "This," said Sir W. Coventry, "is the use we make of our fathers." Lord Braybrooke notes that the portrait was probably a copy by John Stone from an older work, because the Lord Keeper had been dead since 1639, and Old Stone, elder brother of John, since 1657. As the artist would naturally superintend the hanging of his work, whether an original or a copy, we take the meaning of Pepys to be literally that he saw Stone on this occasion. Now Jansen's name was so frequently translated into its English equivalent, "Johnson," which is nearly the same as "John Stone," that we can guess the diarist had no difficulty in confounding the name of the original artist with that of the copyist, and believing he saw an original work. John Stone was a frequent copyist. Here is the original of the picture Pepys saw. As it belongs to the Earl of Clarendon, it is probably one of those which Evelyn admired when he dined with "My Lord Cornbury, at Clarendon House," September 20, 1669, in the collecting of which, two years before, he took interest, and wrote a letter to the Chancellor with counsel on the selecting of portraits of worthies, enumerating many. Some among the many contributions of the present Earl of Clarendon are doubtless those acquired in pursuance of advice from the most competent gentleman of his day to the great Chancellor, to whom all paid their court by presenting portraits. — Another ancestor of Lord Clarendon, Henry, the second Earl, — the same as the above-mentioned Lord Cornbury, with whom Evelyn went to dinner in his father's house, one hundred and ninety-seven years ago, — wrote a curious letter to Pepys, May 27, 1701, which is to be read in the Pepys Correspondence, wherein he gave an account of a startling instance of second sight that happened in his presence, "towards the middle of February, 1662," and concerned his wife, then living, which, if we are to believe the writer, was fulfilled to the letter. — In No. 900 sits *My Lord Cornbury* and the *Lady Theodosia*, his wife, whose painful death was thus predicted. She may be seen, an infant, in No. 794, *Lord Capell and his Family*, in the garden at Hadham. — In 893 is *Lord Clarendon the Chancellor* himself. Of his earthly house "at the upper end of St. James's Street" no more mournful account appears than the jeremiade of Evelyn, 'Diary,' August 18, 1683. Two pillars in the gateway of the Three Kings Inn, Piccadilly, are all the remains of this vast palace, the gardens of which Evelyn laid out; the name of an hotel is its sole record. His grave is so utterly forgotten that few people are aware that its place is actually unknown, "on the north side of Henry the Seventh's chapel," says Anthony Wood, where is neither effigy, stone nor mark of any kind to commemorate one of the ablest men of his century.

A very interesting and curious picture (No. 439) represents *James the First at his Father's Tomb*, or rather praying at the altar of God, the all-merciful, for vengeance on the murderers of Darnley, whose monument is near the altar. This picture, which is a very interesting historical memorial, has

been wofully ill-treated, so much so that it is almost lost in coats of varnish and the absurd stain that some years since was so recklessly bestowed on all the royal pictures, of which this is one. The surface is covered with inscriptions, now nearly illegible. The composition is exactly like that of the engraved mural brasses of the date, where whole families are shown kneeling, as here, at their faldstools. In the corner appears a painting of the principal events that followed Darnley's death. — The portraits of *Darnley and his Brother*, (322), by L. de Heere, miniatures, are credible as likenesses; not so the picture belonging to the Earl of Home, said to represent *Darnley as a Boy* (326): there is no likeness here. Better, in that respect, is Mr. Mackenzie's picture, probably a compiled portrait, not from the life (323). The portraits of *Sir Thomas Gresham* (273, 279) are capital works; the former, beyond a doubt, to be ascribed to Sir A. More: a noble picture. We must go further back in order here to say that *Lord Guildford Dudley* (191) is but a modern copy of an old picture, and that *Earl Spencer's Lady Jane Grey* (183) is not *Lady Jane Grey* at all, but a copy, probably not an old one, from a picture by Lucas de Heere. To return: let us add, that one of the "the queen's old courtiers" appears at his best in the capital portrait, by Jansen, of *Sir Horace Vere* (487), whose span of life led him to the Low Country wars of Elizabeth, with his brother, Sir Francis (why is there no portrait of this valiant man in the Gallery?), to Cadiz, to be the adversary of Spinola himself, and afterwards to defend the Palatinate for the "Twelfth-Cake King," and the "Queen of Hearts," Elizabeth of Bohemia. He died while at dinner with Sir H. Vane. This face shows the man as he was, sober, manly, and thoughtful, that of "the soldier's friend." Compare it, however, with that of No. 523, named after him and Jansen, which, if really the picture given by Charles the First to Sir H. Mildmay, ancestor of the present owner, is doubtfully the work of Jansen, — we may say, not so at all, although it may be a portrait of Sir H. Vere. Notice Jansen's portrait of himself (502), an admirable picture, though cold and hard. The striking portrait, evidently of Spanish origin, of the school of Zurbaran, of *Count Gondomar* (531), has abundance of character in its greyish, wolf-like, yet craftily-laughing expression. The grim ambassador was a noteworthy joker. This picture, like the so-called portrait of *Sir J. Finett* (541), which is really a fine Tintoretto, needs the sustenance of oil or varnish, applied by competent hands. Both are treasures.

Thomas Wentworth, Earl of Cleveland, (542) is but a tolerable copy from Vandyke. It would be hard to admire too much the fine "sketches" for portraits by Vandyke: 1, The small whole-length of *Charles the First* (557), on horseback, a jewel in colour, charmingly painted, and remarkably rich; 2, *Philip Herbert, fourth Earl of Pembroke* (589), son of *Mary Sydney* (284), husband of *Anne Clifford, Countess of Dorset* (512). This is a nearly perfect study; like the last, worthy of great attention. The capital portrait of *Sir John Minnes* (683) looks very like a Vandyke, but still more like a picture by Dobson. It is worthy of note that this work and the so-called portrait of *Henry Ireton* (782) are undoubtedly representations of the same person, that is, of Sir John Minnes. No. 782 is very unlike Ireton, — see Walker's portrait of him, No. 789, — but it is here attributed to Dobson, and has probably so much of truth in it that it represents the brave sailor whom Pepys found to be "a fine gentleman and a very good scholar," but heard very different opinions from others. This copy seems to us to retain the name of the artist of its original, while the latter has been promoted to be a Vandyke. — Lord Bradford's "Vandyke," *Lady D. Sydney* (Sacharissa), No. 662, before referred to, is in all probability a very fine Lely; this is more than we should like to say for No. 684, another Sacharissa; this is one of Lely's bad portraits. — No. 591, *Family of Charles the First*, is only inferior to its opposite, No. 556; but it is inferior in beauty. The large dog, which forms so important an element in this picture, shows what a noble dog-painter Vandyke was. His style

is larger, and his colouring in dealing with them is nobler, than that of any painter, Snyder's net excluded. — The fine and grave portrait of *Lord Falkland* (619), the property of Lord Arundell of Wardour, one of the best works here, has not a touch of Vandyke's hand. The rage for ascribing pictures to him may be said to surpass that which refers to Holbein almost every portrait of a previous age. It is curiously illustrated by comparing *Sir John Minnes* (683) with the last-named, and both with the *Earl of Straford* (579), the *Earl of Carlisle* (538), or any other good picture by this master. No. 619 may be a portrait of *Falkland*. It represents a handsome youth, of about twenty-two years of age. Its style suggests the work of Frank Hals, and may be by him, painted while Falkland was in the Netherlands at that period of his life. *Venetia, Lady Digby*, (570) is certainly no work of Vandyke. No. 763, *General Massey*, is falsely ascribed to this master, and is probably a Dobson. *The Marquis of Hertford* (746), belonging to the Duke of Beaufort, is but an indifferent copy from Vandyke. The *Earl of Clarendon's Viscount Grandison* (749) cannot be doubted as being but a copy from the same, if referable to him at all.

PEEPING ADRIEN.

Paris, June, 1866.

M. Adrien Marx has outstripped his fellow *chroniqueurs*. There is no place he fears to tread in search of "copy." Your readers may remember him in M. Rothschild's kitchen, for which appearance, it seems, the Baron (who must be behind his time) has not forgiven him. He is unfortunate when he approaches cooks. Dr. Véron's Sophie is not pleased with him. He rejoices in her displeasure; he makes lines out of the Baron's anger. He laughs when Albéric Second tells him that he has caricatured Sophie, "who is an historical personage." "Go," M. Second writes to Peeping Adrien, — "Go, one of these mornings, and beg pardon, and study your judge with all the attention she deserves; you will make the *amende honorable*, and confess your errors."

Peeping Adrien is ready to confess his slips, to ask pardon, and to turn an angry epicure to account; but he is not ready to close his "Parisian indiscretions." Has he not made his way into the school-room of the Prince Imperial, and served up the little fellow's chairs and tables and linen duly, to the readers of the *Evenement*, accompanied by a childish sketch perpetrated by His Imperial Highness! If the private apartments of the Tuileries be not closed to Peeping Adrien, what hope is there for people who have no sentinels at their gates?

Poor Mdlle. Ross Bonheur had left the neighbourhood of the Luxembourg, and gone to the Château de By, near Fontainebleau, in the fond, vain, hope of escaping from the prying and importunities of travellers and indigenous intruders. She calculated without Peeping Adrien. Her porter may say to people who ring at her gates that Mademoiselle has gone out, and it is uncertain when she will return. This answer may turn away modest people; but Adrien only laughs at it. He has his column in his paper before him, and he has not travelled all the way from Paris to Fontainebleau for nothing. He was convinced by the firm denials of the old woman at Mdlle. Bonheur's gates that the lady was at home. He accordingly brought his "reserve battery" — a letter of introduction — into the field, and said, "I am distressed that Mdlle. Bonheur is not at By. I have been sent to her on urgent business by one of her friends, who has given me this letter for her; give it to her, with my regrets." The gates were closed. Peeping Adrien was left at By, "where cutlets with anchovy sauce are myths, and where civilization penetrates once daily in the shape of *Le Petit Journal*." Adrien indulged in the following reflections: "I will take a little walk. During this time Mdlle. Bonheur will read my letter, and, finding it signed by an old friend, will scold her servant for having turned me away. On my return to the château, I shall be told that Mdlle. Bonheur has just come in, and awaits me with impatience."

But Peeping Adrien was wrong. He was refused

admission on his second application. The old servant remarked, "Mademoiselle has not returned. Sometimes she dines at Fontainebleau. Sometimes she goes off for a fortnight, without saying a word to me. You know how eccentric artists are." Now a very young and simple *chroniqueur*, Peeping Adrien tells us, would have given up the pursuit at this point. But Adrien was an old hand. He argued, If Mademoiselle has received the note, she has broken it open. He asked for its return. This was impossible. So Mademoiselle cried out, "You must let in the intruder, who will disturb my solitude." In walked the triumphant Adrien, and he was at once taking notes. He saw before him a little, frowning fellow, shielded from the sun by an enormous straw hat. Stooping, he observed a beardless, bronzed face, lit up by "two brown eyes of ordinary size." The nose was fine; the mouth large, showing "in its hiatus" two superb rows of teeth. Long hair hung wildly upon the shoulders. The masculine figure said petulantly; "Who are you! whence do you come, and what do you want?" The petulant one lifted his blouse and thrust his hands into the pockets of his grey velvet breeches. The hands were little, and so were the feet, albeit covered with rough, hob-nailed boots, made of unvarnished calfskin. M. Adrien Marx observed that he was a journalist from Paris, who wished to see Mlle. Bonheur. "Look at her then," said the strange figure, lifting the enormous straw hat. M. Adrien at once observed that Mlle. Bonheur's hair was white, and that her coarse linen shirt was held together at the throat by two diamond studs. The lady now melted, and said, "My dear Sir, excuse me. You must understand the measures I am compelled to take to keep off the profane. I know English people who have travelled 500 leagues to see me, and who, after having stared at me at their leisure, have gone off without saying so much as 'Thank you.' If talent make an artist a rare animal, it is not worth while trying to be one. You must understand, moreover, the loss of time. If you were writing an important romance, would you be pleased if an intruder came upon you in the heat of your subject, and loaded you with old compliments?" Here M. Adrien felt bound to make a feint of retiring; but Mademoiselle would not hear of it, because he was of "*la grande famille*." "Besides, to-day," the lady added, "you'll not disturb me, for I am sheep-shearing!" Invited to witness this unsavoury part of farm labour, Peeping Adrien was told that if he did not like it the worse for him. "I have got one half sheared," said Mademoiselle, "and if I leave him so he will freeze on one side and broil on the other, and that will hurt him." Under the *chroniqueur's* eyes Mademoiselle sheared seven of her flock!

He then accompanied the lady to see her dogs, and goats, and horses—speaking freely of their breeding qualities by the way. "Do you shoot?" asked Peeping Adrien. "Yes, of course; but I am very clumsy. The only thing I do understand is rearing cattle. I was born to be a farmer; but fatality made me a painter. I am out of my true vocation." Hereupon M. Adrien rallied the lady, agreeing with her that painting was not her *forte*, and that he would look out for a place for her as ploughboy. Then they laughed heartily: item in Peeping Adrien's note-book.

The thousand and one pretty and curious things at Mlle. Bonheur's house are not passed over. The Gothic chairs, the brass chandeliers, the family portraits, are set forth. The easels are described as covered with studies of stags and horses, preparations for a great picture—a commission from abroad. "Oh, these foreigners!" the patriotic Peeping Adrien exclaims. Mlle. Bonheur studies each individual of her great pictures apart, and then groups the whole. "In this way she draws 4,000*l.* out of the coffers of wealthy Albion." Sometimes the lady is vitilful, and will not sell at any price. A bit she holds to be superlatively good she keeps, and will not be tempted by gold. M. Adrien saw a sheep-fold, with the name of M. de Rothschild chalked in the corner. The artist explained that she intended it for the millionaire; but that now she had made up her mind to keep it for herself. "Perhaps," Peeping Adrien maliciously adds, "I am the first to give this bad news to the Baron. I am sorry,

because we have quarrelled since the '*affaire des cuisines*,' and I am afraid this will not mend matters." Mlle. Bonheur's favourites are Troyon and Corot, and her rooms are full of these masters. At "dewy eve" Mlle. Bonheur conducted her intruder graciously to her gates, telling him, by the way, that she painted, as a rule, eight hours daily.

Taking advantage of the appearance of H. Dumas the younger's new novel, '*L'Affaire Clémenceau*,' Albert Wolff steps lightly in the wake of Peeping Adrien. But Wolff is as timid as a girl at her first ball, when compared with the *rusé* Adrien. M. Wolff tells us that he accompanied M. de Ville-messant when this gentleman went to M. Dumas's charming nest in the Avenue de Neuilly, in order to tempt the author of the '*Dame aux Camélias*' to sell his new work for publication in the *Erènement*. The conversation between the editor and the novelist is given; and the latter is shown declining the most tempting offers, on the ground that it would spoil his work to cut it into pieces for piecemeal publication in a daily paper. He would not sacrifice his art to bank-notes. He had copied '*L'Affaire Clémenceau*' five or six times "with his own hand," on the ground that he found he went most carefully over it in this way; and if he has now given it to the world, it is because he believes he has completed it in every part to the best of his ability. This will appear to bluff Englishmen very like a "puff preliminary," not at all distasteful to the chief bird in "the charming nest in the Avenue de Neuilly." But then we are such a prosaic people, and do not know how to turn our "charming nests," when we have them, to account. We waste our domestic sweetness when we might turn it into solid ducats!

B. J.

LIFE IN SPAIN.

Valencia del Cid. HUCKSTERS, their cries, their wares, and their doings, are being rapidly improved from the face of European civilized life. London has long since "moved on" these peripatetic merchants, who made morning, noon and night hideous with their cries. The descendants of the fashionable orange-dealers of King Charles's days still ply their precarious trade amongst us, the guardian of the public peace keeping his eye upon the fair specimen of Irishry who dodges from foot to road-way. Valencia del Cid has not yet improved from the face of her earth these wandering "merchant adventurers." They cry their wares at all hours, and certainly find customers, the venders being numerous and persuasive.

The roasted-pumpkin merchant, a lady, wanders up and down, tempting young Valencia and indigestion, at a farthing a slice: her stock-in-trade a small board, a sharp knife, and the roasted pumpkin. She is seated upon an easily removable rush-bottomed chair, and never fails to collect an audience, the buyers of course the less numerous body; the hungry eyes of the lookers-on follow with melancholy significance the fortunate purchaser of a slice, who marches off in triumph with his treasure, which step by step disappears. Some of the more adventurous of the Valencian youth, young descendants of old wandering Arabs, price the commodity, but having no means wherewith to purchase, criticize with severity both the quality of the article and its money value. Some, more mischievous, will venture upon a ridiculously low bid for the stock remaining unsold.

Noisy, bustling and pushing is the vender of hot coffee; his stock-in-trade are a coffee-urn with a tap in it, and a small stand for glasses. He marches up and down the thoroughfares at a pace somewhat less rapid than an Irishman's trot, shouting at the top of his voice, "Coffee hot! coffee hot, hot, hot!" He runs up and down, in and out, with the acumen of a dog—always in a crowd if he can find one. He never spills his coffee nor runs over any one. Early and late, in wet and chilly weather, he is looking for his customers—in shops, at street corners, the barber's shop, the tartana stands, under doorways. In this temperate town he supplies, with much credit to all concerned, the place of the gin-shop. Young Valencia stimulates its animal heat with exhilarating hot coffee rather than pernicious

but seductive fire-water. Of late years the trade in oranges from this port has been enormously extended, and in the season boxes of this fruit cover the quay at the "Grao." On the spot, and ripe, it is delicious; the rind is somewhat thick and unsightly; but the flavour quite compensates for any shortcomings in the way of exterior appearance.

The "Tartanero," or tartana-driver, is Valencia's "cabby." There are three species, the country Tartanero, the seaside ditto, and the more aristocratic ditto of Valencia proper. To begin with the latter. He knows every place, everything, everybody; as to saints, he knows the Calendar by heart, and can tell you where the best performance of the day can be seen and heard. His vehicle is a tilted cart, à la Barkis, his seat upon the shaft. Pepe and Juanita hire his vehicle for a "*paseo*"; he plays third party with wonderful discretion, and, singing to himself, drowns the echo which usually follows a too close proximity of lips. He drives Members of Parliament, old dowagers, military and naval men, town councillors, merchants, and all sorts of saints and sinners, up and down the Prado, overhearing all their secrets, and reporting none. The country Tartanero is the pet of the village, and is overwhelmed on market-day with all sorts and descriptions of little commissions, and is, doubtless, paid in kind by ruby lips. The Tartanero of the Grao is younger, more light-headed and light-hearted than his brethren; he is always pressing you to ride, assuring you that one more will fill his vehicle, and that he has a great desire to see you fill the vacancy. Once caught, you must await his complement of passengers; he is sometimes surly and impudent, as the trains now compete with him for the traffic; and as he is an adept at Valencia's billingsgate, he will favour you with a sample on very small provocation. Like a London cabman, he is very fond of "leaving it to you," when the fare has to be arranged.

You can get books in Valencia, and there are some fine collections here. Book-worming takes time, however, and red-hot tourists will see all the sights in a couple of days be the sun ever so furious.

You may always find a minstrel in a Spanish town. If at a loss, ask the barber; he can usually operate upon a guitar as skillfully as upon your chin; at any rate, he will direct you. Passing a *café*, frequented by Tartaneros and other workers for daily bread, I heard one of the sweetest tenor voices you can imagine. I looked in and saw that the room was only partially filled. I entered, seated myself, called for coffee, and commissioned the tenor to do his best; for nearly two hours he discoursed sweet melody. One song he sang with peculiar archness and effect. I found, later, that Ronda was his native "*pueblo*." Here is the song, or as much of it as I can remember:—

Where "Guadálvin" dashes o'er the cliffs
By Ronda's breezy bowers,
And sunbeams dance, and zephyrs kiss
The bubbles tossed in fairy showers.

Oh! peachy cheeks, oh! laughing eyes,
Oh! Ronda's witching daughters,
You've need of "orison" and "we";
Those black eyes flash such awful slaughters.

And when they sing their witching songs,
And when they dance their witching dances,
As thick as hail "Love's" arrows fly,
And dig as deep as ten-foot lances.

Your heart's as sound as deep-toned bell
When first you find yourself in Ronda:
Wait! if 'tis of flesh 'twill bleed,
And loving hopeless, die the fonder.

Her sons are brave, her daughters fair;
To France they never bowed the knee:
For homes and wives they fought and bled;
Their cry was "Spain and Liberty."

Gil Perez is their barber, "sangrador";
He shaves, he cups, sells leeches, too.
Ah! did he cure broken hearts,
Good gracious, what a trade he'd do!

Farewell to Ronda and its tumbling stream,
Clouds dashing upwards of its silver spray:
Farewell, "Pepeita!" Where's the heart
I've lost, and you have stolen away?

The Dulzainero is peculiar to Valencia. His stock-in-trade consists of an instrument resembling a flageolet. The concert is not complete without the drummer. These melodious Siamese twins whistle and drum wherever the chance of remuneration offers.

neration suggests itself. I cannot say that the article they discourse is very delightful; but a German band is much worse, for they keep worse time and make much more noise.—

I'm at Shingleton-super-Mare, casting pebbles into the sea:

A German band 'The Cure' plays; the sailors think it melody:

I think it is a painful wail, a war of brass and drum,
The natives stare with open mouths, and shout "The music's come."

The Dulzainero and the drummer are fair average street musicians. I noticed their collections of coin were lamentably small. No wonder Dulzainero looks pale and thin, piping all day upon low diet. The travelling tinker, the charcoal-dealer, the pine-nut seller, waylaying young Valencia on its way home from school, complete the list.

"El sindaco del tribunal de las aguas," or the syndicate of the water-tribunal, is a great character. These members of the irrigatory parliament are by no means an insignificant body in this rich, teeming, but thirsty province. The old Moorish works remain to this day, and have been utilized by each succeeding generation. The apportionment of the waters of the Turia and its trickling tributaries is a very serious matter. Here is a portrait: a man with large features; a head too small to match, upon which rests very insecurely a conical hat, brilliantly glossy during the session. A jacket rather small, ample trousers and a long stick, complete the picture. The first of these parliaments dates back to A.D. 911; they have to settle all disputes touching irrigation, and their award is final. F. W. C.

SUPPLEMENT TO THE BUDGET OF PARADOXES. (No. VII.)

(No. 21.) The high authority named at the end is Pascal, an early cultivator of mathematical probability, and obviously too much enamoured of his new pursuit. But he conceives himself bound to wager on one side or the other. To the argument (*Pensées*, ch. 7) that "le juste est de ne point parier," he answers, "Oui: mais il faut parier; vous êtes embarqué; et ne parier point que Dieu est, c'est parier qu'il n'est pas." Leaving Pascal's argument to make its way with a person who, being a sceptic, is yet positive that the issue is salvation or perdition, if a God there be,—for the case as put by Pascal requires this,—I shall merely observe that a person who elects to believe in God, as the best chance of gain, is not one who, according to Pascal's creed, or any other worth naming, will really secure that gain. I wonder whether Pascal's curious imagination ever presented to him in sleep his convert, in the future state, shaken out of a red-hot dice-box upon a red-hot hazard-table, as perhaps he might have been, if Dante had been the later of the two. The original idea is due to the elder Arnobius, who, as cited by Bayle, speaks thus:—

"Sed et ipse [Christus] quæ pollicetur, non probat. Ita est. Nulla enim, ut dixi, futurorum potest existere comprobatio. Cum ergo hæc sit conditio futurorum, ut teneri et comprehendi nullus possint anticipacionis actus: nonne prior ratio est, ex dubiis incertis, et in ambigua expectatione pendebitis, id potius credere, quod aliquas spes ferat, quam omnino quod nullas? In illo enim periculum nihil est, si quid dicitur imminere, casuum flat et vacuum: in hoc damnum est maximum, id est salutis amissio, si cum tempus advenit aperiat non fulsere mendacium."

Really Arnobius seems to have got as much out of the notion, in the third century, as if he had been fourteen centuries later, with the arithmetic of chances to help him.

(No. 21.) The infinite character of the offence against an infinite being is laid down in Dryden's *Religio Laici*, and is, no doubt, an old argument:—

For, granting we have sinned, and that th' offence
Of man is made against Omnipotence,
Some price that bears proportion must be paid,
And infinite with infinite be weighed.
See then the Deist lost; remorse for vice
Not paid; or, paid, inadequate in price.

Dryden, in the words "bears proportion" is in verse more accurate than most of the recent repeaters in prose. And this is not the only case of the kind in his argumentative poetry.

(No. 21.) The following is an extract from the English Cyclopædia, Art. TABLES:—

"1853. William Shanks, 'Contributions to Mathema-

tics, comprising chiefly the Rectification of the Circle to 607 Places of Tables,' London, 1853. [QUADRATURE OF THE CIRCLE.] Here is a table, because it tabulates the results of the subordinate steps of this enormous calculation as far as 527 decimals: the remainder being added as results only during the printing. For instance, one step is the calculation of the reciprocal of 601,5601; and the result is given. The number of pages required to describe these results is 87. Mr. Shanks has also thrown off, as chips or splinters, the values of the base of Napier's logarithms, and of its logarithms of 2, 3, 5, 10, to 137 decimals; and the value of the modulus 4342... to 136 decimals; with the 13th, 25th, 37th, ... up to the 721st powers of 2. These tremendous stretches of calculation—at least we so call them in our day—are useful in several respects; they prove more than the capacity of this or that computer for labour and accuracy; they show that there is in the community an increase of skill and courage. We say in the community: we fully believe that the unequalled turnip which every now and then appears in the newspapers is a sufficient presumption that the average turnip is growing bigger, and the whole crop heavier. All who know the history of the quadrature are aware that the several increases of numbers of decimals to which π has been carried have been indications of a general increase in the power to calculate, and in courage to face the labour. Here is a comparison of two different times. In the day of Cocker, the pupil was directed to perform a common subtraction with a voice-accompaniment of this kind: '7 from 4 I cannot, but add 10, 7 from 14 remains 7, set down 7 and carry 1; 8 and 1 which I carry is 9, 9 from 2 I cannot, &c.' We have before us the announcement of the following table, undated, as open to inspection at the Crystal Palace, Sydenham, in two diagrams of 7 ft. 2 in. by 6 ft. 6 in.:—"The figure 9 involved into the 912th power, and antecedent powers or involutions, containing upwards of 73,000 figures. Also, the proofs of the above, containing upwards of 146,000 figures. By Samuel Fancourt, of Mincing Lane, London, and completed by him in the year 1837, at the age of sixteen. N.B. The whole operation performed by simple arithmetic. The young operator calculated by successive squaring the 2nd, 4th, 8th, &c., powers up to the 512th, with proof by division. But 511 multiplications by 9, in the short (or 10-1) way, would have been much easier. The 2nd, 32nd, 64th, 128th, 256th, and 512th powers are given at the back of the announcement. The powers of 2 have been calculated for many purposes. In vol. II. of his 'Magia Universalis Nature et Artis,' Heribipoli, 1658, 4to., the Jesuit Gaspar Schott having discovered, on some grounds of theological magic, that the degrees of grace of the Virgin Mary were in number the 256th power of 2, calculated that number. Whether or no his number correctly represented the result he announced, he certainly calculated it rightly, as we find by comparison with Mr. Shanks."

These paradoxes of calculation sometimes appear as illustrations of the value of a new method. In 1863, Mr. G. Suffield, M.A. and Mr. J. R. Lunn, M.A., of Clare College and of St. John's College, Cambridge, published the whole quotient of 10000... divided by 7699, throughout the whole of one of the recurring periods, having 7698 digits. This was done in illustration of Mr. Suffield's method of *Synthetic division*.

Another instance of computation carried paradoxical length, in order to illustrate a method, is the solution of $x^3 - 2x = 5$, the example given of Newton's method, on which all improvements have been tested. In 1831, Fourier's posthumous work on equations showed 33 figures of solution, got with enormous labour. Thinking this a good opportunity to illustrate the superiority of the method of W. G. Horner, not then known in France, and not much known in England, I proposed to one of my classes, in 1841, to beat Fourier on this point, as a Christmas exercise. I received several answers, agreeing with each other, to 50 places of decimals. In 1848, I repeated the proposal, requesting that 50 places might be exceeded: I obtained answers of 75, 65, 63, 58, 57, and 52 places. But one answer, by Mr. W. Harris Johnston, of Dundalk, and of the Excise Office, went to 101 decimal places. To test the accuracy of this, I requested Mr. Johnston to undertake another equation, connected with the former one in a way which I did not explain. His solution verified the former one, but he was unable to see the connexion, even when his result was obtained. My reader may be as much at a loss: the two solutions are—
2.0945514815423265.....
9.0544851845767340.....

The results are published in the *Mathematician*, vol. iii. p. 290. In 1851, another pupil of mine, Mr. J. Power Hicks, carried the result to 152 decimal places, without knowing what Mr. Johnston had done. The result is in the English Cyclopædia, article INVOLUTION AND EVOLUTION.

I remark that when I write the initial of a Christian name, the most usual name of that initial is understood. I never saw the name of W. G. Horner written at length, until I applied to a re-

lative of his, who told me that he was, as I supposed, Wm. George, but that he was named after a relative of that surname.

(No. 24.) The Zetetic system still lives in lectures and books; as it ought to do, for there is no way of teaching a truth comparable to opposition. The last I heard of it was in lectures at Plymouth in October, 1864. Since this time a prospectus has been issued of a work entitled 'The Earth not a Globe'; but whether it has been published I do not know. The contents are as follows:—

"The Earth a Plane—How circumnavigated.—How time is lost or gained.—Why a ship's hull disappears 'when outward bound before the mast-head.—Why the Polar Star sets when we proceed Southward, &c.—Why a pendulum vibrates with less velocity at the Equator than at the Pole.—The allowance for rotundity supposed to be made by surveyors, not made in practice.—Measurement of Arcs of the Meridian unsatisfactory.—Degrees of Longitude North and South of the Equator considered.—Eclipses and Earth's form considered.—The Earth no motion on axis or in orbit.—How the Sun moves above the Earth's surface concentric with the North Pole.—Cause of Day and Night, Winter and Summer; the long alternation of light and darkness at the Pole.—Cause of the Sun rising and setting.—Distance of the Sun from London, 4,023 miles.—How measured.—Challenge to Mathematicians.—Cause of Tides.—Moon self-luminous, NOT a reflector.—Cause of Solar and Lunar eclipses.—Stars not worlds; their distance.—Earth, the only material world; its true position in the universe; its condition and ultimate destruction by fire. 2 Peter iii., &c."

I wish there were geoplutological lectures in every town in England (*geoplutological*, in composition, need not mean *babbling*). The late Mr. Henry Archer would, if alive, be very much obliged to me for recording his vehement denial of the roundness of the earth: he was excited if he heard any one call it a globe. I cannot produce his proof from the Pyramids, and from some caves in Arabia. He had other curious notions, of course: I should no more believe that a flat earth was a man's only paradox, than I should that Dutens, the editor of Leibnitz, was eccentric only in supplying a tooth which he had lost by one which he found in an Italian tomb, and fully believed that it had once belonged to Scipio Africanus, whose family vault was discovered, it is supposed, in 1780. Mr. Archer is of note as the suggester of the perforated border of the postage-stamps, and, I think, of the way of doing it: for this he got 4,000*l.* reward. He was a civil engineer.

(August 28, 1865.) The 'Zetetic Astronomy' has come into my hands. When, in 1851, I went to see the Great Exhibition, I heard an organ played by a performer who seemed very desirous to exhibit one particular stop. "What do you think of that stop?" I was asked.—"That depends on the name of it," said I.—"Oh! what can the name have to do with the sound? 'that which we call a rose,' &c."—"The name has everything to do with it: if it be a flute-stop, I think it very harsh; but if it be a railway-whistle-stop, I think it very sweet." So as to this book: if it be childish, it is clever; but if it be mannish, it is unusually foolish. The flat earth, floating tremulously on the sea; the sun moving always over the flat, giving day when near enough, and night when too far off; the self-luminous moon, with a semi-transparent invisible moon, created to give her an eclipse now and then; the new law of perspective, by which the vanishing of the hull before the masts, usually thought to prove the earth globular, really proves it flat;—all these and other things are well fitted to form exercises for a person who is learning the elements of astronomy. The manner in which the sun dips into the sea, especially in tropical climates, upsets the whole. Mungo Park, I think, gives an African hypothesis which explains phenomena better than this. The sun dips into the western ocean, and the people there cut him in pieces, fry him in a pan, and then join him together again, take him round the under-way, and set him up in the east. I hope this book will be read, and that many will be puzzled by it: for there are many whose notions of astronomy deserve no better fate. There is no subject on which there is so little accurate conception as that of the motions of the heavenly bodies. The author, though confident in the extreme, neither impeaches the honesty of those whose opinions he assails, nor allots them any future inconvenience: in these points he is worthy to live on a globe, and to revolve in twenty-four hours. A. DE MORGAN.

OUR WEEKLY GOSSIP.

Messrs. Moxon will shortly publish 'Lyra Elefantium: a Collection of some of the best Specimens of Vers de Société and Vers d'Occasion in the English Language, by deceased Authors,' edited by Frederick Locker.

The Council of University College, at their meeting on Saturday last, appointed Mr. A. Melville Bell—known as an author on Elocution and Public Reading, and more recently for his invention of Visible Speech—to be Evening Lecturer on Elocution to the College, during next session.

Sir Thomas Phillips has been elected Chairman of the Council of the Society of Arts.

Mr. Murray has issued in a lucky moment a little book called 'Memorials of the Tower of London,' by Lieut.-Gen. Lord De Ros. The book is well illustrated. The account given by Lord De Ros of the recent alterations, as well as the description of the present state of the Tower, are also well done. In the historical part, there are a few slips of the pen, which ought to be corrected in a second edition.

We are glad to hear that Mr. E. B. Eastwick, one of our first Eastern scholars, and author of 'The Handbook of India,' has been appointed Private Secretary to Lord Cranborne, the new minister for India.

The Committee of the Palestine Exploration Fund are preparing for publication both the account of the exploring party and the series of photographs taken by them in the Holy Land. These will be accompanied by the Report, drawn up by Mr. Deutch, at the instance of the Committee, on the paleographical and historical value belonging to some of the specimens submitted to him for examination. The conciseness of the extract from this Report, contained in a recent number of the *Athenæum*, seems to have given rise to one or two questions which can only be solved by the perusal of these documents in their complete form. A paper on Semitic (Phœnician, Samaritan, Hebrew) Paleography, with special reference to these and other recent finds, will also, we believe, be read by Mr. Deutch at the forthcoming Archaeological Congress, section of Antiquities.

The prize system has at length attained its zenith. Under the pretence of doing a public service,—and, we have no doubt, a sincere, though mistaken, belief that he is doing such service,—Mr. Henry W. Peek proposes to buy the copyright of four books, on the great and difficult topic of the Preservation of Commons, for 225*l*. Two of these books are to be legal and learned, and can only be written even decently by men high at the bar. The other two are to be popular and picturesque, and would tax the very highest literary powers. But even this small pittance is not to be given to the competent men. It is to be raffled for, drawn for, scrambled for, by a mob. The clever fellows are only allowed to take their chance. Mr. Peek must have an odd conception of the present state of the legal and literary markets if he dreams of getting his four books written by competent men. "Very great uncertainty prevails," he says in his proposals, "as to the legal rights of Commoners and Lords of the Manor, and it is believed that the latter have been considerably exaggerated. The competitors should trace the origin of these rights from an early period, explaining their original significance and the duties which devolved on Lords of Manors, the nature of their courts, and their relations with their tenants in early times, stating what, in the opinion of the writer, is the true relation of the Lord of the Manor to his tenants and the public, and his duty with reference to the rights held by him over the waste lands of his manor, having regard to the altered circumstances of modern times; the writer should consider generally the question how far the public now possess, or ever had, or ought to have conferred on it, rights to the enjoyment of land for purposes of recreation. The writer should state the principles which have guided the Legislature in the past, and which, in his opinion, ought to guide them in the future, with reference to the inclosure of Commons, distinguishing those in agricultural districts from those near large towns, advertising

especially to the Statute of Merton, and stating its present legal effect, having regard to the provisions of the general Inclosure Acts of recent times. The writer should also explain the causes of the decay of Commoners' rights in waste lands situate near large towns, and whether legislation can justly be applied, and, if so, in what manner, to prevent the Lord of the Manor taking the private advantage to himself of the lapse of the Commoners' rights owing to increased population. The writer should sum up the leading features of the questions involved in the subjects indicated, and state what changes in the law would be desirable and, in his opinion, justifiable, in the interest of the public, with a view to the preservation of Commons, especially those near large towns, without doing violence to the rights of private property." We undertake to say that there are not ten lawyers at the bar who could write a satisfactory book on this wide topic. The time of these men is worth twenty guineas a day; and Mr. Peek wants them to work for sixpence a day, with a good chance of not getting the sixpence when it is earned.

We have received a rather long letter from Mr. Ottley, in reply to Mr. Bohn; but the points debated relate to personal matters of agreement and disagreement, in which the public would take little interest. We cannot lend our columns to the discussion of private arrangements between author and publisher.

The Annual General Meeting of the Surrey Archaeological Society, to receive the Report of the Council, and to elect the officers for the ensuing year, will be held on Wednesday, the 18th inst. The Archaeological excursion of the members and their friends to Stoke d'Abernon, Cobham, and Fox Warren, will take place early in August.

The Early English Text Society this week issues to its subscribers the first instalment of its Texts for the present year, seven in number, namely, 'Seinte Marherete, the Meiden ant Martyr,' three Texts of ab. A.D. 1200, 1310, 1330, first edited in 1862, by the Rev. Oswald Cockayne, M.A., and now re-issued,—'The Romance of Kyng Horn; Floris and Blanchefleur; and the Assumption of the Blessed Virgin,' edited from the MS. in the Library of the University of Cambridge, by the Rev. J. Rawson Lumby,—'Political, Religious, and Love Poems from the Lambeth MS., No. 306, and other MSS.,' edited by F. J. Furnivall, Esq.,—'A Tretice in English breuely drawe out of the book of Quintis essencijs in Latyn, that Hermys the prophete and king of Egypt, after the flood of Noe, fader of Philosophis, hadde by reuelacioun of an aungil of God to him sente,' edited from the Sloane MS. 73, by F. J. Furnivall, Esq.,—'Parallel Extracts from 29 MSS. of Piers Plowman, with comments, and a Proposal for the Society's Three-text edition of the Poem,' by the Rev. W. W. Skeat, M.A., 1*l*.—'Hali Meidenhad,' about 1200 A.D., edited for the first time from the MS. (with a translation), by the Rev. Oswald Cockayne,—'Sir David Lyndesay's Monarchie, Part II., the Complaynt of the King's Papingo, and other Minor Poems,' edited from the first editions, by Fitzedward Hall, Esq. Four more Texts are in the press for this year's subscription of a guinea, namely, 'Some Treatises, by Richard Rolle de Hampole,' to be edited from Robert of Thornton's unique MS. by the Rev. G. Perry, M.A.,—'Merlin, Part II.,' edited by Henry B. Wheatley, Esq.,—'Dan Michel's Ayenbite of Inwyrt, or Remorse of Conscience,' in the Kentish dialect, 1340 A.D., to be edited from the unique MS. in the British Museum by Richard Morris, Esq.,—'Levin's Manipulus Vocabulorum,' 1570, the first of the Dictionary Series, to be edited by Henry B. Wheatley, Esq. And one of the Committee has sent out an appeal for fresh subscriptions to enable his fellow-managers to issue six more Texts this year, which the Society's editors can produce before Christmas.

By a slip of the pen we last week (page 13) gave the name of Mr. Newby (instead of Mr. Tinsley) as the publisher of a novel called 'Emily Foinder.'

We give the following from "An Attentive Reader":—"Your Correspondent 'D,' of last week, enlarges upon a suggestion which I have already observed in the *Athenæum*, in urging that some

'permanent record should be made of the probable authenticity or doubtfulness of each picture' now placed at the National Portrait Exhibition. Something of this kind ought to be done. Who is to do it? 'D' is unfortunate in his illustration 'of the speedy way in which oral tradition fails' with regard to portraits, when he cites certain letters to the *Times* newspaper, impugning the authenticity of one of the portraits of Kitty Fisher, by Reynolds, No. 107, now at the British Institution, the property of Lord Crewe. 'D' has overlooked the remarks made by yourself on this subject in reviewing the current Exhibition (*Athen.* No. 2016, p. 308, col. 1). Had 'D' followed the indication there given he would have found that Reynolds's ledger, as published by Mr. Cotton, effectually disposes of the idea that this work represents 'a virtuous lady named Wools.' The P.R.A. wrote, under April, 1774, 'Mr. Crewe, for Kitty Fisher's picture, 52*l*. 10*s*.' As Mr. Crewe is not likely to have had two such pictures, as the work in question has long been reputed to be Kitty's portrait, and is sent to the British Institution by the present Lord Crewe, with her name attached, we cannot doubt that here is the portrait designated in the ledger of Reynolds. Moreover, the Munro Collection contained another 'Kitty Fisher,' undoubtedly by Reynolds, almost identical with this, which is well known by the engraving. As to its having been painted by Cosway, its style puts that entirely out of the question. Cosway might have produced such a design, and Reynolds, consciously or unconsciously, have copied the same; but the former certainly did not paint this picture. There is nothing strange in the act of borrowing a design for a portrait. 'D' will find a startling instance of it in Mrs. Beale's portrait, at the National Portrait Exhibition, of the infamous Countess of Shrewsbury (598), which is a direct repetition of Lely's *Theodosia, Lady Cornbury* (900). If your Correspondent examines the well-known note-books in which Mr. Beale records the manner of his 'dear heart's' studies, he will be assisted to understand how the repetition came about, and what was the relationship between the Beales and Lely. F. G. S."

One of the signs of the times may be observed in an advertisement of a cheap morning paper, where a certain tradesman states as follows: "Dress-coats lent at Mr. —'s, No. 0, — Street, Covent Garden. The finest clothes may be had for the opera, balls, and marriages." This is to us a new idea, that may be beneficial to the extent of reducing the frequency of the custom which dictates wearing the absurd garments in question. We have heard of two men sharing one "dress-coat," but never that a man might hire such a thing.

Maps of the war district pour upon us. Mr. Stanford has put forth a clear and compact 'Shilling Map of Northern Italy,' as it was before the recent cession of Venetia to France.—Mr. Bacon has published a 'Map of Central Europe,' with the lines strongly marked, as they should be in a map intended for the million.

The following notes are from a Correspondent:—

"July 7, 1866.

"This note from Mr. Bazalgette will explain the cause of my addressing you: 'Having just seen a letter written by you in favour of the late M. Le Page, I hasten to tell you that on Thursday last (the 26th of June), on his return from teaching my children, he was knocked down by an express train at Wimbledon Station, and killed. As he has no relations in this country, I have undertaken to bury him at Morden; and if you like to attend his funeral, I shall be happy to see you at my house on Sunday afternoon, at three o'clock. I have known M. Le Page for three years only, but entertained great respect for him, and am anxious to learn something of his history, &c. (Signed) J. W. BAZALGETTE.'—This letter appears to afford the best testimony in favour of the excellent man, whom it was my good fortune to be well acquainted with for I think more than thirty-five years. His zeal as a teacher of French went far beyond the ordinary scope of giving lessons, and to that end he wrote a number of useful works, of which the 'Écho de Paris,' the 'French Speaker,' and the

'French Prompter' are now before me. The first of these had so large and constant a sale, that it ought to have secured the author a good income. Unfortunately, the publisher failed, through the destruction of the Royal Exchange by fire, and the copyright being sold in bankruptcy, M. Le Page's share in it somehow or other lapsed by the transaction. He was, in fact, too single-minded a man to cope with the world, and sure to get the worst in matters of business; but, nevertheless, he managed to be independent, and never became a burthen to his friends. Your space is too precious to allow of my dwelling at greater length on a character only distinguished by pureness, intelligence and modesty, which latter quality often stood in the way of his advancement. M. Le Page was born at Orleans, in France, where his father was a physician, and where a brother holds, or held to a late period, some judicial office. He always expressed dissatisfaction at the result of the original Revolution, and this feeling, and a love of freedom, brought him to England, where he kept the even tenor of his way, without concerning himself about politics or other public matters, and he must have been near seventy-five years of age when he met with his melancholy fate. F. S."

The Report of Owens College, Manchester, has been issued, and states the continued advance of the institution, although affected by recent events of a public nature. Considerable changes have occurred in the staff of Professors, due to death, removal, and resignation, and resulting in the appointment of Mr. Jack as Professor of Natural Philosophy, Mr. A. Ward as Professor of the English Language, Literature, and Ancient and Modern History (a tolerably comprehensive chair, one might say), and Mr. W. S. Jevons as Professor of Logic and Mental and Moral Philosophy, and of Political Economy. The creation of the new degree of Doctor of Literature, by the University of London, is referred to in this Report, with the conditions to its attainment. The following statement is interesting: "It is a characteristic of the London University, more open to question than its zeal in behalf of experimental science, that it has ceased of late years to exact of candidates for degrees in Arts and Science that they should be members of one of its affiliated Colleges. Whatever judgment may be formed of the expediency of this innovation, it is a mistake to infer from it that the University intended to disparage the value of academic training. The Senate has published recently a most instructive analysis of the results of the examination for B.A. in October last. This analysis sets in a strong light the comparative efficiency of collegiate and non-collegiate training, even as preparation for degree examinations—not to speak of other points of contrast which examinations do not test. At that examination there were 104 candidates in all, of whom 50 came from one or other of the affiliated Colleges, 11 from other Colleges or Schools, and 43 were registered as private students. Of the 104 candidates, 50 passed, and 54 were rejected; but the rejections were very unequally distributed. Of the candidates from the Colleges of the University, 34 per cent. failed to pass; whereas of those from other Colleges and Schools, 54.5 per cent., and of the private students as many as 70.5 per cent., were rejected. These figures need cause no surprise, and assuredly they afford no ground for any self-congratulation on the part of the Colleges. I quote them only to show that the practice of the University implies no doubt on the part of its authorities of the value, generally, of systematic training; and that its experience is in harmony with all reasonable anticipations."

Letters recently received from Australia announce the arrival at Melbourne of 100,000 salmon, sea, and brown trout ova, 40 per cent. of which were hatching in the breeding ponds of the river Plenty, in Tasmania. It is also stated that at least 2,000 salmon fry, varying in length from 9 inches to 10 inches, had left the fresh water and gone to the sea. 100 brown trout, about 12 inches long, were also sent, and 100 of the ova, shipped in January, are now in ponds.

Number of the *Comptes Rendus*, M. Combes and E. Haies. (Longmans & Co.)

of Sciences a round pebble, coated with a greenish micaceous schist, and possessing a fine grain, which was discovered by M. Garrigou, in the lower grotto at Massat-Arrière, in the midst of a vast quantity of human remains and flint implements, of the age of the fossil reindeer. On the smooth surface of this fragment, which is 18 centimètres long and 10 broad, is the profile of a bear in the act of walking, extremely well executed. The authenticity of this curious stone is stated to be unquestionable.

King Louis the First of Bavaria, who recently presented the town of Mannheim with the statue of Iffland, has added to this bounty by the present of another statue, which is to be finished in the course of this summer, that is, if the war does not extend to those lovely shores. It is the statue of Wolfgang Heribert von Dalberg, Reichsfreiherr, and younger brother of the Prince Primas and Grand-Duke of Frankfurt. Born in the same year as Goethe, in 1749, at Hershheim, near Worms, he afterwards devoted his services to Baden, where he filled different high posts, and at last the highest as States Minister. But more than by his high position, he has gained a reputation by his cultivation of dramatic poetry. Dalberg presided in the management of the Mannheim Theatre till 1803; under his direction, and by the protection which it offered to the rising talent of Germany, it rose to be, in fact, a national theatre. Young Schiller found a shelter at Mannheim, and began here his triumphal march with the 'Robbers' and the 'Conspiracy of Fiesco.' At the same time Mannheim became the nursery-ground for the most distinguished artists, such as Iffland, Beil, Beck, &c. Dalberg tried his own hand at several dramatic works ('Walsais and Adelaide,' 'Cora,' 'Electra,' 'The Female Marriage-Hater,' 'The Monk of Carmel,' &c.), which, however, did not keep a place on the stage. He kept up a lively correspondence with Schiller, and died one year after him, in 1806. A better counterpart than his statue to that of Iffland could not have been imagined: both represent one of the most interesting periods Mannheim ever had.

Will Close on Saturday, the 28th instant.
ROYAL ACADEMY OF ARTS.—The EXHIBITION of the ROYAL ACADEMY is OPEN in the Day from Eight till Seven. Admission, One Shilling; Catalogue, One Shilling. In the Evening from Half-past Seven till Half-past Ten. Admission, Sixpence; Catalogue, Sixpence.
JOHN PRESCOTT KNIGHT, R.A., Secretary.

Will Close on Saturday, July 28.
SOCIETY OF PAINTERS IN WATER COLOURS.—The Sixty-second Annual EXHIBITION is NOW OPEN, at the Pall Mall East, from Nine till Seven.—Admission, 1s.; Catalogue, 6d.
WILLIAM CALLOW, Secretary.

BRITISH INSTITUTION, Pall Mall.—The GALLERY, with a Collection of PICTURES BY ANCIENT MASTERS and selected BRITISH ARTISTS is OPEN DAILY, from Ten to Six.—Admission, 1s.; Catalogue, 6d.
GEORGE NICOL, Secretary.

FRENCH GALLERY, 120, Pall Mall.—The THIRTEENTH ANNUAL EXHIBITION of PICTURES, the Contributions of Artists of the French and Flemish Schools, is NOW OPEN, admitting also to HOLMAN HUNT'S PICTURE, 'The Finding of the Saviour in the Temple.'—Admission, 1s.; Catalogue, 6d.

THE NATIONAL PORTRAIT EXHIBITION, Exhibition Road, South Kensington, is NOW OPEN to the Public. Admission, on Mondays, Wednesdays, Thursdays, Fridays, and Saturdays, 1s. each person; Tuesdays, 2s. 6d. Hours from Ten A.M. till Six P.M. Season Tickets, 1s. each. Catalogues, 1s. and 1s. 6d.

EVENING EXHIBITION of A. MACCALLUM'S LARGE PICTURES of 'Sherwood Forest' and 'The Charlemagne Oak, Fontainebleau,' with Studies of Woodland, Lake, Glacier, and Italian Subjects, DUDLEY GALLERY, Egyptian Hall, Piccadilly. Open from Half-past Seven to Ten P.M.—Admission (including Catalogue), 1s.

MR. MORBY'S COLLECTION of MODERN HIGH-CLASS PICTURES is ON VIEW at the Royal Exchange Fine Arts Gallery, 24, Cornhill. This Collection contains examples of Holman Hunt, J. Phillip, R.A., T. Fae, R.A., J. Lewis, R.A., Egg, R.A., Hook, R.A., Frith, R.A., Ross, Bonheur—Goodall, R.A.—Cooke, R.A.—Creswick, R.A.—Pickersill, R.A.—Calderson, R.A.—Sant, A.R.A.—Le Jeune, A.R.A.—Andell, A.R.A.—Frost, A.R.A.—Nicol, A.R.A.—Pettie, A.R.A.—Yeames, A.R.A.—P. Nasmith, Linnell, sen., Dobson, A.R.A.—Cooper, A.R.A.—Gale—Marks—F. Hardy—John Fard—Henriette Browne, Frie—Ruperez—Brillouin—Liddell—Geo. Smith—Peter Graham, &c.—Admission on presentation of address card.

Mr. and Mrs. GERMAN REED, with Mr. JOHN PARRY, in a New Entertainment, entitled A YACHTING CRUISE, by F. C. Burnard, Esq., Scenery by Messrs. T. and W. Grieve, with THE WEDDING BREAKFAST at Mrs. ROSELEAF'S, by Mr. John Parry. Every Evening (except Saturday, at Eight; Thursday and Saturday Mornings, at Three)—Royal Gallery of Illustration, 14, Regent Street.—Admission, 1s., 2s., 3s. and 5s.

ROYAL POLYTECHNIC.—The Prussian Needle Gun, or Zündnadelgewehr, and other Breech-loading Fire-Arms of Snider, Green, Kelly & Co., Henry, Mount Storm, Westley Richards, Spencer. Explanatory Lecture, by Professor Pepper, daily at Two and Half-past Seven—and the usual Entertainments, open from Twelve till Five, Seven till Ten.—Admission, 1s.

SCIENCE

Elements of Quaternions. By the late Sir William Rowan Hamilton. (Longmans & Co.)

THIS is not a second edition of the former work but a second work: it was nearly printed when the author died, and the final superintendence devolved on Mr. William Edwin Hamilton, the author's son. We cannot of course even enter on quaternions much less on the difference of two developments by the inventor himself. But both this work and its predecessor has a table of contents which may be called a syllabus, from which general comparison may easily be made. Hamilton, to our knowledge, was strongly pressed to write a very elementary work for the use of students: he promised to do so, and no doubt intended it. But great powers cannot engage in little wars: and the present work is the result. It is much to be regretted that there is no simple elementary account of the subject. But in time some energetic young man, who takes a fancy to the subject, will be Hamilton's interpreter to the great body of students. The subject of quaternions is as yet the property of a very few: to these few the present work will be very acceptable. It is the closing effort of one of the most powerful minds of our century. We are glad to learn that a biography of Rowan Hamilton is in most competent hands.—Those who still can find Sir William Rowan Hamilton with Sir William Hamilton are requested to note that Dublin is not Edinburgh, and that mathematics is not metaphysics. By keeping these things steadily in view, they will in time make the distinction.

An Introduction to Plane Astronomy. By P. T. Main, M.A. (Cambridge, Deighton & Co.)

MR. Main is the son of the Oxford astronomer, and his book will be an excellent introduction to that of his father. And, moreover, since it is written with as little mathematics as possible being at the same time the work of a mathematician, it will be useful to a great many who cannot deal with the higher work. Mr. Main is younger, an astronomer from his earliest years, talks about instruments like a person who has used them.

The Stars, in Twelve Maps on the Gnomonic Projection. By R. A. Proctor. (Longmans & Co.) THESE are two sets of maps, in each of which the heavens are gnomonically thrown on the circumscribed dodecahedron. One set has meridians and figured constellations, the other has only white stars on black ground. The idea is pretty, and well executed; and the figured maps, mounted on a solid, would be effective. But the division breaks the great groups, and the black and white maps would not be well adapted for finding stars: even the cubic projection has a defect of this kind, which is here of course exaggerated.

The Constructive Arithmetic: a School Treatise. By J. A. Christie. (Virtue Brothers & Co.)

PARODYING the lines at the beginning of Cockney might say to every writer on this arithmetic,

Thy own arithmetic alone can show
Th' vast lots of books which on the subject go.

This book has great breadth of detail, and clearness of explanation. But before Mr. Christie writes his history, he should read it. He complains of people talking of division *sums*, and even of subtracted *sums*, to which he puts a note of exclamation. Not the fact is this: *summa* meant a number, and the notion is that a number takes its name from the name of the *highest* unit. All numbers were *sums*, and the number gained by addition was *summa totalis*, the total number. A number to be subtracted was *summa deducenda*. Gradually, the second word dropped out of *sum total*, and its meaning remained attached to the first: and hence, in common life, *sum* implies an addition and a total. But we have still the old meaning in "a *sum* of money."

The Standard Arithmetical Copybook. By H. Combes and E. Haies. (Longmans & Co.)

WE have Nos. III. and IV. of a series, on the old plan of questions entered with rows for the working, and squares for the figures. Not a bad plan for beginners.

The New Extended Cancelling Table. By William Chappelow. (Foster.)

A tract of six pages, containing tests of divisibility of numbers.

Arithmetical Examples progressively arranged. By the Rev. T. Dalton. (Macmillan & Co.)

THE author is a master at Eton, and his book is in exceptionable.

The Model Ready Reckoner. (Warne & Co.)

READY reckoners, we mean the books so called, are very much alike. The one before us is of a clear type, and has a useful appendix. But we do not think the list of addresses quite correct. Surely the most formal mode of addressing a duke is "My Lord Duke," not "My Lord." And the Baron, the degree of peerage next below Viscount, is not properly exemplified: the instance chosen is "The Right Honourable the Baron Pollock." We think the Lord Chief Baron would stare at such a superscription. The truth is that the baron of the peerage is never addressed as "Baron," but simply as "My Lord."

Step by Step; or, New and Easy Lessons on the Sliding Rule for Practical Mechanics. By Charles Hoare. (Clayton & Co.)

THE title is a fair description of the book.

Navigation. By Henry Evers. (Longmans & Co.)

THIS is one of the "School Series" conducted by Mr. Chaplain-General Gleig. It will, we doubt not, be found useful.

A Treatise on Trilinear Co-ordinates, intended chiefly for the Use of Junior Students. By C. J. C. Price, M.A.

A new and effective treatise on a subject which is gaining great currency. The tendencies of young examiners are giving it an undue share in mathematical education: mathematics is something more than a doctrine of curves.

The Celebrated Theory of Parallels. Demonstration of the Celebrated Theorem, Euclid I. Az. 12. By Matthew Ryan. (Washington, Chronicle Print.)

A printed letter to reviewers accompanies this, which states that the tract, besides wiping away the reproach of geometry, defeats atheism and idolatry. Mr. Ryan gives an account of his attempt to bring his discovery before the world. It is part of a work containing "some positive knowledge of the Deity, &c.," and "academies desiring to publish may apply for this manuscript."

A Descriptive Treatise on Mathematical Drawing Instruments, their Construction, Uses, Qualities, Selection, Preservation, and Suggestions for Improvement. By W. F. Stanley. (Printed for the Author.)

THE title promises are well performed. We like his book much, and recommend it strongly: the number of instruments described is much larger than usual. Woodcuts are profusely given, and the explanations and instructions are clear and good. The author is an inventor as well as a practitioner.

SOCIETIES.

ROYAL SOCIETY OF LITERATURE.—July 4.—Sir C. Nicholson, Bart., in the chair.—Messrs. F. H. Petrie and E. Villin were elected Members.—Mr. Vaux read a paper 'On a Greek Inscription from Thessalonica,' which had been procured by the Rev. D. Morton, through the kindness of R. Wilkinson, Esq., H.M. Consul, Salonica. This inscription is of much interest, as confirming the statement of St. Luke in the 17th chapter of the Acts of the Apostles, that Thessalonica was governed by officers, called *Politarchs*; a title, seriously enough, found in no work of classical times. Mr. Vaux traced the history of this inscription from its first publication by Muratori, in 1740, through the successive works of Pococke, Beaujour, E. D. Clarke, Leake, Swan, Cousinery, Boeckh, &c., and showed that, though some of the later copyists had recorded the inscription with tolerable fidelity, none of them had produced a rendering so perfect as that shown in the photograph sent to Mr. Morton by Mr. Wilkinson.—Sir Patrick Colquhoun read a paper 'On the Nature and Origin of Romain Greek,' in which he pointed out that this dialect is, properly, the language of the

lowest trading classes, and may be considered as a sort of Greek *Lingua franca*. It can hardly be held deserving the name of a language, nor would really be deemed to be so by any except the so-called "Modern Greeks." It has little or no connexion with the artificial language which has been invented by newspaper-writers, authors and the bar, and is wholly useless as the exponent of the ideas of any persons except the poorest and humblest classes.

ARCHÆOLOGICAL INSTITUTE.—July 6.—The Marquis Camden, K.G., President, in the chair.—The noble chairman took occasion to remind the members that their approaching Congress in London, under the special sanction and patronage of the Queen, would present features of unusual attraction. Her Majesty had been graciously pleased to direct that Windsor Castle should be thrown open to the Society. Lord Camden hoped that the opening meeting in the Guildhall, on the 17th inst., would be graced by the presence of H.R.H. the Prince of Wales.—The Hon. W. O. Stanley, M.P., gave a short notice of certain vestiges of the earlier occupants of Anglesey; he described some very ancient interments brought to light, about 1860, on the estates of the late R. Trygarn Griffith, Esq., at Carreglwyd. The bodies, which had been of unusually small stature, had not been burnt; they were deposited in rudely formed cists of stone, probably covered over by a sepulchral hillock. According to popular tradition, a great conflict took place near the spot between the inhabitants and the Danes. A large upright stone still marks the battle-field. Mr. Stanley placed before the meeting a photograph of a very elaborately ornamented urn found at Rhosbirio, in a grave closed in by slabs of stone; there were no ashes or bones in this beautiful vase, which is of the class designated, by Sir R. Colt Hoare and other antiquaries, "drinking cups," doubtless used as depositories for food in the tomb. Specimens have been found in Derbyshire, Yorkshire and Scotland; none had hitherto, as Mr. Stanley stated, occurred in Anglesey or North Wales.—Prof. Buckman read an account of implements and weapons of flint found in Dorset, especially on his own farm at Bradford Abbas; "cores" of flint from which flakes have been struck off, also knives, arrow-heads and other relics, of which specimens were shown, occur in abundance. Of these the Professor offered a classified arrangement. Some of the arrow-heads show great skill and perfection in manufacture, and are assigned to an early period,—no barbed specimen having been found. Many objects have been collected that may have served, probably, in scraping skins; others have been used as hammers, or implements of uncertain purpose. Various flints, undoubtedly wrought by man, are to be found in several parts of Dorsetshire.—Mr. F. Boyle read a memoir on the ancient tombs of Nicaragua, and on the races that seem to have occupied that district of Central America. He pointed out the characteristics and distinct funeral usages of these peoples, the Chontals, by whom the mountains were inhabited, the Caribs, and the Toltecs,—the latter having been the early occupants of the shores of the great inland lake of Nicaragua. Mr. Boyle described the examination of several remarkable burials, and brought numerous relics that throw light on the arts and usages of the early Indian races at a very remote period.—Mr. B. Williams invited attention to a Roll, belonging to the Hon. Fulke Greville, and showing the state of the lordships, manors, &c., in the Marches of Wales, 10 Henry VII., as enrolled in the Court of Exchequer; a document of singular interest in regard to the conditions of the Principality and adjacent counties in the fifteenth century.—A brief account was given, by Mr. G. Scharf, of the examination of the grave, apparently of one of the early abbots of Westminster, accidentally brought to light immediately in front of the high altar. A chalice and patin of base metal, with remains of the crosier found in the tomb, were shown by the Dean of Westminster, and called forth some remarks from Mr. Fraunce in regard to the usages connected with the interments of abbots and dignitaries in the Middle Ages.—Mr. Scharf

also read a paper 'On the curious historical Picture now exhibited at South Kensington, and hitherto regarded as portraying Queen Elizabeth's Visit to Hunsdon House in 1571.' He pointed out, however, that it really represents the Queen's visit to Blackfriars in 1600, to do honour to the marriage between Anne Russell, grand-daughter of the Earl of Bedford, and Lord Hertford; and it is recorded that Elizabeth was conveyed from the water-side in a litter borne by six knights. Mr. Scharf proceeded to identify the distinguished persons who appear in this remarkable painting, which was executed, as he believes, by Isaac Oliver, the celebrated miniature-painter, long resident in Blackfriars.—Mr. J. Gough Nichols offered some remarks on the locality of Blackfriars, as seen in the picture; the details may not be given with much reality; but the house of Lord Cobham, in which the Queen was entertained, seems to be shown. It was afterwards known as Hunsdon House, and was the scene of a memorable catastrophe, by the fall of one of the floors, when an assemblage of Roman Catholics had congregated, in 1623. The house stood near the theatre in which Shakespeare was a partner. The site is now occupied by the printing-offices of the *Times*.—An account of an Anglo-Saxon cemetery, found at Melton Mowbray, and of various weapons and relics accompanying the numerous deposits, was sent by Mr. T. North, of Leicester.—Mr. J. B. Waring exhibited a large series of drawings of stone monuments and illustrations of the ornamental art of the earliest periods in various European countries.—Mr. Hewitt brought some large maps of Eastern China, obtained in that country by Col. Gordon, R.E., and found to be of the greatest precision in their details.—Mr. Dodd contributed some Italian and German MSS. of the fifteenth century; and Mr. J. Rogers sent a large medal of rare occurrence, found at Carninow, in Cornwall.

CHEMICAL.—July 5.—Prof. W. A. Miller, M.D., President, in the chair.—Mr. J. Yates exhibited and described the new standard metres of glazed porcelain which have been recently prepared by Mr. Casella, for the Weights and Measures Committee of the British Association. They are said to be correct to $\frac{1}{1000}$ th part of their length,—show in a conspicuous manner the yard and metre, with their respective subdivisions in juxtaposition,—and are intended to serve as mural tablets.—Prof. A. W. Williamson then explained the principles of a new symbol notation adapted to the representation of organic compounds, which was criticized by Sir B. Brodie and Profs. Debus, Frankland and Odling.—Mr. W. Thorp read a paper 'On the Reduction of the Oxides of Nitrogen by Metallic Copper in Organic Analysis.'—The Secretary read a 'Note on the Hydrocarbons contained in Crude Benzol,' and also a 'Note on Ethyl-Hexyl Ether,' by Mr. C. Schorlemmer.

MEETING FOR THE ENSUING WEEK.

TUESDAY. Horticultural, 3.—Lecture and General Meeting.

FINE ARTS

Afternoon Lectures on History and Art, delivered at the Museum of Industry, Dublin, 1865. (Bell & Daldy.)

THIS is a collection of six essays delivered to mixed audiences at the place above named, the authors being Prof. D'Arcy W. Thompson, the Rev. J. Bryne, Dr. Kennedy, Justice Keogh, J. H. Pollen, and Isaac Butt, Esqs. Each of them is readable, but curiously different in its value, as well as in its literary merit, from the others. Prof. Thompson has a turn for antithesis and epigram, which is not potent enough to make him witty, but is sparkling enough to make him amusing. In the very outset of his discourse, he tells us that he has learnt to differ from no less a person than Bacon with regard to the sentence, or rather part of a sentence, which he quotes thus: "The study of poetry is a common

witty; and the study of history maketh a man wise." What Bacon wrote was, "Histories make men wise; poets witty," &c. He goes on to show how particular studies, like particular exercises of the body, give a man strength in certain ways. It is probable that Prof. Thompson has forgotten the whole of the sentence which he quotes, and has not taken the trouble to refer to the text from which, with a mouthful of objections, he starts for a goal that cannot be considered a very noble one, inasmuch as the end of his discourse is lost in a suggestion for the improvement of the art of lecturing by means of pictures and portraits. It is clear to us that Bacon did not mean to use the word "wise" as above quoted, in the limited manner which our author seems to fancy, when he demurs to the assumed opinion of the Chancellor that "practical sagacity" is to be learnt by historical studies. There is nothing unreasonable then in the idea which his "modesty" had already suggested to Prof. Thompson to account for his not agreeing with Bacon on this point; he may indeed "have failed to gather the true and full purport of his words."

Mr. J. H. Pollen chose for his theme 'Decorative Art,' and enforced the value of that result of human intelligence with great earnestness and large knowledge of the subject and of its history. What he aimed at we cannot better illustrate than by his own words: "The sum of what I maintain is, that if Art is of vital importance to a nation, so that governments, that have plenty to do with the public money, find it absolutely necessary to forward Art by every means in their power, and if all governments are so doing now, it is the decorative side or aspect of Art that needs to be insisted on. I distinguish 'decorative' from pictorial Art in its way of treating nature; and I cling to decorative, as distinguished from gallery or museum Art, as being Art, not in a formal posture, but as an every-day friend. Beauty is all about our daily life, which we should miss if we did not find it." That Art, which is now only rarely practised by the ablest among us, and almost as rarely enjoyed, was at one time in the very nostrils of the people, is proved every time we turn up a piece of red Roman pottery in an English field, every time a fresh Greek cemetery is broken into, every time daylight again enters an Egyptian tomb, every time a mediæval floor-tile is broken by the plough. How shall we make Art a thing for home even more than for the street or the museum, is the question that has to be answered by all who love Art. Mr. Pollen, in addressing a popular audience, forgot, it seems to us, to convey his knowledge in so simple and connected a manner as the occasion demanded. An audience of the already taught catches easily at a lecturer's meaning, and leaps in knowledge from argument to illustration, or from argument to argument, in a manner which is impossible to those who are less informed. It is the part of a good lecturer or critic to enter, on occasion, into details that are trite enough to students, but which cannot be avoided when a general audience is concerned. The chain of Mr. Pollen's discourse, although not really so, must have seemed broken to many of his hearers, who could not be expected to fill up gaps which the erudite lecturer overlooked.

It is a good thing to find such a theme as is afforded by Milton, as a prose-writer and patriot, chosen by Justice Keogh for his discourse. This essay is really to that effect rather than on the theme which suggests itself by the title, 'Milton's Prose,' that has been given to the lecture now before us. We never yet, without terror of the soul, listened to a lecturer

who, as Justice Keogh did, began with elaborate professions of his own unfitness to instruct or amuse. Knowing what pertains to mock-modesty, the Justice's audience must have been surprised to receive a fervent and very sensible address on a noble subject, and that of moderate length, when they feared the torment of a couple of hours and the monotony of a dull teacher. The style of Justice Keogh's opening sentences is weak enough to make the heart of a hearer sink within him; later in his work he warmed perceptibly, and was not unfortunate in elocution.

The Authentic History of Captain Castagnette, Nephew of the Man with the Wooden Head. From the French of Manuel. Illustrated by G. Doré. (Beeton.)

The Bible. Illustrated by the same. Parts I. and II. (Cassell, Petter & Galpin.)

THE illustrations to the first-named book may be styled transitional results of M. Doré's genius. Derived from efforts made between those which produced the supreme designs to the 'Contes Drôlatiques' of Balzac—by far the most original of his achievements—and others that brought forth the series which will be preserved in 'L'Enfer de Dante Alighieri' (Hachette & Co.), the pictures attached to the 'Histoire de l'Intrepide Capitaine Castagnette' combine in some degree the excellencies of both, and display but little of that crude horror which is too powerful for English stomachs whose owners rarely get to the last design in 'L'Enfer' without sickening, and never, to our knowledge, do so without exclaiming against the mannerism and grossness of the artist, whose ability is undeniable, and appears at its worst in the series of illustrations to the unillustratable poem of the grim Florentine. The atrocities of Dante's imagination require something less than literal treatment in Art ere the pitiful northern nature of the English can digest them. Unaccustomed as they now are to the long-inherited and sanguinary mediæval purgatorial legends so rife in monkish histories, from which Dante drew not a few incidents for his unsurpassed design, it could not be expected that pictorial treatment, however rich in spectacular grandeur, would be enjoyable by us, if it were more literal than that of Flaxman. It is one thing to read the *Inferno*, and another to turn over M. Doré's pictures of its incidents. He has been most fortunate with the grotesque and far-reaching imaginations of Rabelais and Balzac; very fortunate occasionally with the noble folly and mournfulness of Don Quixote; vulgarly French, spectacular, melo-dramatic, stagey and not seldom inoffensively, in dealing with the Bible, of which he seems rarely even to comprehend the sober orientalism, the massive thinking or tremendous imagery,—still less frequently does he attain to the real grace, the profound pathos—that generally takes the form of tenderness without sadness—of the greatest of all books. His failure with the Bible is so nearly complete, that it is possible to class together such works as those we have named above: bearing in mind as we do so many exquisitely pathetic studies in humanity of M. Doré's production, only two explanations of its cause present themselves to us; these are the occurrence of a natural defect in his otherwise all-absorbing power of sympathy when the Scriptures are in hand, because of which he sees no more than the surfaces of his themes, or, which we would prefer to believe most probable, the temporary exhaustion of an imagination which is vaingloriously declared to have produced not fewer than 45,000 designs. Although this estimate is merely a fine specimen of the puff-

prodigious, manufactured for the vulgar English and French markets, it is true that the pencil of M. Doré has been amazingly prolific,—not, indeed, of the best work he might have done, but in the mass of crude but powerful conceptions and unwholesome fancies. Better the labour of lives like those of Mulready and Stothard, limited in quantity as that of the former was, than the gross whole which the designer has produced whose work is before us.

When M. Doré illustrated 'Captain Castagnette,' he had not found it easiest to work in that spectacular manner to which he has been, for the most part, entirely devoted of late years. His work here is less striking because less peculiar, less original, but at the same time less mannered, than that of 'L'Enfer,' and the even less fortunate 'Bible.' Resembling the ordinary style of French book-illustrators, these pictures reach the 'Contes Drôlatiques' in the way of their execution, although they are far inferior to them in imaginative power. The text of Manuel was, of course, of a very different order from that of Balzac. In many of the designs before us the humorous felicity of the artist is obvious; among the best of this order is that which represents the stately marriage procession of the Captain's uncle, the man with the wooden head, who, exulting in the success of that wonderful operation which put a young head on his old shoulders, marches first of the line, bride on one arm and hat on the other, and is attended by his fat and lean relatives and friends, male and female—a strange crew. Although the sanguinary details of the story are not to our taste, especially as the translator has given them, it is not to be denied that some of the incidents are illustrated with consummate humour. How Desgenettes, the great surgeon, replaced the stomach of Castagnette with a leather one, is inimitable; the plunder of the silver face by Cossacks on the retreat from Moscow recalls M. Doré's ordinary manner at its best; the figure of the Prussian envoy to whom Daumesnil refused to surrender the fortress of Vincennes is admirable for its exaggerated fun. A French caricaturist's notion of an English officer of the old school is shown in the representation of that wonderful incident at Waterloo, where the hero, having lost his arms, and got to need substitutes for his legs, to say nothing of an unexploded bomb in his back, has made himself efficient by means of a spiked helmet, which, in the heat of combat, he drives into the stomach of the Duke of Wellington's horse, and effectually unseats his Grace. The catastrophe of the bomb of Castagnette, by which his career is ended and his fragments dispersed, is not badly represented; a melo-dramatic stroke is given by showing the Cross of the Legion of Honour, which the Captain had from Napoleon's hand, glittering in the very focus of the explosion, unmoved, while all around is wreck.

FINE-ART GOSSIP.

THE plans of the new ministry for the future of the Royal Academy, National Gallery and University of London will be stated in the House of Commons on Monday next.

The Report of the Department of Science and Art has been published, and speaks of the generally satisfactory progress of the body, and those others in connexion with it. As regards science the examinations show a greater number of candidates successful in obtaining certificates than at any previous time; the classes and students have made equally satisfactory progress. As regards Art, the head-master of the training school records a considerable diminution in the number of certificates taken, as compared with those of last year, and the increase of one only in the number of medals awarded. Eight students only have offered

themselves for national scholarships. It seems there are 16,621 students in the 91 schools of Art under its department. Two schools have been closed at Bolton and at Basingstoke, and three new ones opened at Abingdon, Bradford and Inverness. There has been a decrease of 7,000 in the number of persons taught drawing since last year.

Mr. Frank Howard, son of the R.A., an artist, well known a few years since, died at Liverpool on the 4th inst., in a state of great distress. He had been settled for a considerable time at that place, and gained a by no means luxurious livelihood by painting and making drawings, which he sold at very small prices; he was also theatrical critic for one of the local newspapers.

An Extract from the *London Gazette*, of the 26th ult., has been published, giving an account of the regulations respecting the nature of the rewards and the composition of the juries appointed to the Paris Universal Exhibition, 1867. By this it appears that 32,000*l.* will be given in prizes, awarded by international juries; of this sum 10,000*l.* is appropriated to the Arts section, in seventeen grand prizes of 80*l.* each, thirty-two first prizes of 32*l.* each, forty-four second prizes of 16*l.* each, and forty-six third prizes of 8*l.* each. The distribution of the above will take place on the 1st of July next. Jurymen may compete for these awards.

The sale of the Wellesey collection of prints and drawings by the old masters has come to a most successful termination under the hammer of Messrs. Sotheby, Wilkinson & Hodge. We quote the prices in continuation of our former notice: *Leopatra* reposing, after *Raffaello*, by *Marcantonio*, 45*l.*—*Peace*, by the same, 31*l.*—*Portrait*, a profile, of *Michael Angelo*, by *Bonasona*, 20*l.*—A curious collection of *Oxford Almanacks*, 44*l.*—From among the drawings the following may be noted: *Portrait* of *Cornelissen*, by *Vandyke*, 20*l.*—*Portrait* of *L. Sforza*, by *Leonardo da Vinci*, 44*l.*—*Giovanni Galeazzo*, Duke of Milan, by the same, 82*l.*—*Head of a Young Female*, by the same, 43*l.*—*Portrait* of *Philip the Second*, by *Titian*, 18*l.* 10*s.*—*St. Hubert*, by the same, 42*l.*—A *Landscape*, with waterfall, by the same, 30*l.*—*Adoration of the Shepherds*, by the same, 7*l.* 17*s.*—*Infant Saviour*, by the same, 17*l.* 10*s.*—*Ancient Roman Ruins*, by *Claude*, 65*l.* 2*s.*—*Piazza St. Marco*, Venice, an admirable example by *Canaletti*, 163*l.*—*Portrait* of *A. del Sarto*, by himself, 67*l.*—*Architectural Design*, by *Bramante*, 5*l.*—*The Marchioness of Pescara*, by *Michael Angelo*, uniting the grandeur of *Michael Angelo* with the sweetness of *Raffaello*, 290*l.*—*The Almighty appearing to Isaac*, by *Raffaello*, 35*l.*—*Portrait of Raffaello's Sister*, executed by *Raffaello* in black chalk, 240*l.*—Another *Portrait*, of the same quality, 300*l.*—Another, executed with the central point on a prepared ground, 470*l.*—*Virgin, Child, and an Angel*, by the same, a mere outline, but possessing great beauty, 380*l.*—*Virgin and Child*, by the same, full of grace, loveliness, and refinement, 600*l.* This remarkable collection produced, in the aggregate, 9,482*l.* 2*s.* The spirit of competition was kept up to the last, and many of the important lots were eagerly contested for by the numerous amateurs who were present at the sale from day to day.

MUSIC AND THE DRAMA

Duke Ernest: a Tragedy; and other Poems.
By Rosamond Hervey. (Macmillan & Co.)

THE two heroic Dukes Ernest—one of Suabia, the other of Bavaria—who flourished in the tenth and eleventh centuries, gradually became confused and blended into one by tradition, and applied to German legend a figure inferior in deed, but still analogous, to the renowned Arthur of Britain. This figure, presented ages back in the narrative poetry of Germany, and recent times made the hero of a tragedy by Land, is the animating spirit of the present drama. In some points Miss Hervey's play

resembles that of Uhland; but her conception of the characters and her treatment of the story are on the whole independent. The feature which first and most pleasingly strikes us in her work is a high-toned and generous vein of sentiment which, without ever being extravagant or visionary, still holds up a noble standard of character that should have a wholesome influence on an age too apt to regard earnestness and self-devotion as unreal and obsolete. Duke Ernest, as here portrayed, is one in whom a troubadour might have found realized his ideal of knighthood: enlightened, liberal and compassionate in his attitude to his people, courteous though firm towards his enemies, tender and reverent in his love, and nobly constant in his friendship. We close the dramatic story of Duke Ernest's career with a sense of having been in communion with a far higher nature than that which forms the general type of modern fiction. Werner, the Duke's heroic friend, who silently resigns the love that his master unconsciously wins from him; Sybil, the Duke's betrothed, whose faith in him survives every trial; and Anna the Serf, who in gratitude to her knightly sovereign and deliverer gives her life to avenge him, make a fitting group round the central figure. There is an air of nobleness about them all; and their exemption from the prevalent spirit of worldly wisdom and moral scepticism is refreshing. If it be granted that we seldom meet such ideals in life, it may still be contended that they are at least faithful to the yearnings of the mind in our best moments, and that it is better to aspire towards an unattainable perfection than to subside into a mean actuality. The greatest scene in 'Duke Ernest' is probably that in which, having been long a prisoner, the Emperor offers him freedom and the restoration of his dukedom on condition that he will surrender his friend Werner. Ernest's reply to the Duke of Saxony in this scene is a good specimen of the moral feeling and insight which pervade the play, and of its direct and forcible manner:—

Oh Saxony, you wring my heart, and make
My duty harder, not less clear. I know
My people's wrongs and sorrows, and for them
Would give my life,—but not my honour,—that
I must preserve unsullied: for our lives
Are of more value than our codes, sir: these
Will after generations, to whom time
Hath brought more wisdom, surely change; but lives
Lived in obedience to the inner law
Which cannot alter, must be sweet and bright
Whilst God endures in Heaven; and from them
Most distant ages will not scorn to learn
Lessons of patient virtue. Then, my lord,
I will not quench within my subjects' souls,
Or in the souls of any who henceforth
May read my story, the least seed of good
God's holy hand hath planted: for a lie
Crowned, robed, and accepted, is a sight to turn
All truth to falsehood on the people's lips.

'Filippo,' the second drama in the volume, does not attempt such a high flight as 'Duke Ernest,' but its story is more compact, and its interest more intense. Filippo, the hero, a young man of generous but haughty character, has resented the tyranny of his feudal superior by a blow. He is forced to fly, and, in order to avoid starvation, to join a gang of banditti in the outskirts of Naples. He falls from bad to worse; but one better feeling survives—a passionate yearning towards his yet innocent brother Luigi. He tempts the lad to his retreat, meaning, however, to preserve him from guilt. But the selfish weakness, the love of pleasure, and the vanity of Luigi, betray him into crimes more heinous than those of Filippo. At last Luigi commits a murder, but suspicion points strongly to Filippo as the criminal. Ever excusing the weak Luigi and feeling that, in having tempted him from home and innocence, he is responsible even for his sin, Filippo preserves his secret, and suffers the death which his brother had deservedly incurred. The aim of

the writer is evidently to show that a nature at once feeble and selfish is morally more hopeless than one in which even fierce passions are combined with a resolute will. In the following dialogue after the murder there is not only great dramatic force but a fine perception of the contrast between the two brothers:—

Large Room in the Tavern. Time, before Sunrise.—FILIPPO, LUIGI, GREGORIO, and other Bravoes gathered round a table drinking. FILIPPO and LUIGI a little apart from the rest.

FIL. How now, Luigi? What! an empty cup? Thou lett'st such nectar pass untasted by? Nay, thou shalt drink: he does insult his friends Who dares be sober when they all are drunk.

[*Aside to LUIGI, as he fills his cup.*
Drink, drink, weak fool: tho' red, it is not blood.
LUIGI (*dropping the cup*). Who spoke of blood? Dost taste it too, Filippo,
Mixing its savage flavour with the wine?
The air is purple with it! See, it flows,
Drop, drop, drop, drop, slow down the shuddering walls,
And on the floor it lies, a ghastly pool—
And from that pool my face stares back on me—
A murderer's face, all streaked and stained with gore.
Water, Filippo, water! Let me wash.

[*Sinks back, shuddering.*
FIL. (*soothingly*). Be calm, Luigi! call thy senses back: Our comrades' eyes are on thee: tho' they be What thou art now, let them not guess thy guilt.

LUIGI (*turning savagely*). My guilt! 'Twas thine! Man, man, thou shalt not lay This crime upon my shoulders. Thou didst swear To answer for it both to God and man.
FIL. Speak low, Luigi: these may hear thy words. Yes, thou sayst well; the deed was mine: Fear not, my brother: I will bear the guilt.

Miss Hervey, who is evidently a young writer, has as yet some serious faults. In 'Duke Ernest' the machinery of dramatic action is in many cases wanting. We see extraordinary revolutions in the fortunes of the persons, but we have no clue as to the means by which they are accomplished. In her second drama, the hero, Filippo, is, we think, too far sunk in crime for the tenderness which he cherishes for his brother; at all events, his tenderness should be the hidden sweetness of a rough nature escaping only at times to the surface, and not worn so openly as here. But these are crudities which time will cure, and in spite of which both plays may assert their claim to a large measure of pathos and strength. In the smaller poems which close the book, Miss Hervey shows that she has picturesqueness and fancy, and that the direct but somewhat severe dialogue of her dramas is the result, not of necessity, but of choice.

MUSICAL AND DRAMATIC GOSSIP.

THE benefit concerta may be described as now over. The last, *Mr. Sullivan's*, on Wednesday evening, having been the concert of the season. We can point to his settings of Shakespeare's words and to his symphony as, in themselves, sufficient to establish a first-class reputation. On Wednesday, in addition to these, he produced an overture to his MS. opera, which shows him most advantageously in another vein. More exciting a prelude (not an index) could not be. A brief *andante* on a phrase that snatches the ear by its distinct elegance, leads into a brilliant *allegro*, built on happy subjects (treated orchestrally and contrapuntally), with as much ingenuity as constructive power, and winding up with a *coda* of a vivacity almost equaling that of the overture to 'Anacreon.' As a stage overture compelling attention and increasing in interest from the first note to the last, we could name very few specimens, since Weber's, in any respect so good,—none better. If the opera be kept up to this pitch and the story prove endurable, its success, when it comes, is certain. Of its kind, there has been no such English music in our time. The main vocal attraction of the evening was, of course, Madame Lind-Goldschmidt. Besides singing Mr. Sullivan's delicious 'Orpheus,' and a sweet setting of Herbert's 'Sweet Day,' this lady showed in her 'Bird Song' (from 'Il Penseroso') that she did not earn the name of Nightingale for nothing. A winter's rest has renewed the older firmness and almost the olden delicacy of her voice. So magni-

ificent a display of executive power has never been heard in the St. James's Hall. Miss Edith Wynne and Mr. Cummings also sang, as did Mr. Santley, at his best, in M. Gounod's 'Le Vallon,' and the concert-giver's arch and capital 'O, Mistress mine.' For solo instrumentalists we had Mdlle. Mehlig and Mr. Franklin Taylor, who joined in a double *Concerto* by Sebastian Bach. The lady subsequently played Prof. Moscheles's 'Recollections of Ireland,' a graceful tribute to one of the most distinguished of Mr. Sullivan's Leipzig professors, who chanced to be present. One word more: Mr. Sullivan gave proof on Wednesday evening of possessing those not commonest of qualities out of which a real conductor is made.—Mr. Halle's admirable Beethoven Recitals were brought to a close on Wednesday. He has never played his favourite works so well as this year.—The concert of that clever violoncellist, *Signor Pezze*, in company with *Signor Traventi*, who aspires to the somewhat slight honours of a vocal Italian composer, was given on Monday.—Mr. Marshall Hall Bell's Second Recital has also been held.—The *Ballad Concert* of Wednesday attracted a great crowd to the Crystal Palace. To-day a selection from 'Iphigenia' is to be performed there.

The Report of the Musical Education Committee of the Society of Arts is before us, and may be presented as under. Information has been collected as to the rules and regulations of the music schools of Paris, Munich, Vienna, Prague, Leipzig, Milan, Naples, Berlin. Fourteen of our most eminent professors and seven amateurs have given evidence, of which notice has appeared in our columns as it passed. It is recommended that an application to Parliament for a grant should be made, the Academy having previously arranged its future plans of residence. The foundation of a certain number of gratuitous scholarships is advocated. A recommendation is expressed that the school should avail itself of temporary if not permanent accommodation in the building of the South Kensington Museum. Thus, then, the idea of re-construction following destruction appears to be rejected by the Committee. "The old coat" is to be patched,—an awkward and dubious process. Is it proposed to retain in office the present list of professors (some of whom are flagrantly inadequate to the task of instruction), or to weed it? This is only one of a score of practical questions which will have to be dealt with if we are really to have an Academy. Another is the residence, or the reverse, of the head of the college, whoever he may be. We cannot perceive that this Report advances matters far beyond the point which the Committee had reached when it began to sit, in pursuance of the idea propounded at the meeting of the Society some years ago, and wait to see what will be the next move. Meanwhile, the inconvenience of the site proposed as quarters for the Royal Academy will appear to many besides ourselves very great. Distant from the theatres, distant from the concert-rooms, distant from the music-shops, distant from the residences (so the Musical Directory apprises us) of many of our most eminent professors, unless residence on the premises be enforced, we cannot but foresee loss of time to the pupils, and infinitely more to the teachers who are to train them. It by no means follows that an Academy of Design and an Academy of Music are subject to the same conditions. The reverse has always seemed to us the case.—We have reason to imagine that the statement quoted from the *Orchestra* last week, as to the new headship of the Academy, as it is, does not get beyond the authority of a rumour. Meanwhile, this week's *Observer* reports on the late prize-day exhibition at the Academy, when compositions by the students were performed, "many of which," we are assured, "will fairly stand the test of criticism"; and two silver and two bronze medals were awarded to the four best pupils, two of each sex.

The *début* of Mdlle. Lavini at Her Majesty's Theatre as *Alice*, in Meyerbeer's 'Robert,' seems to have been of small importance. The revivals of 'Semiramide,' with Mdlle. Tietjens and Madame Trebelli-Bettini, and of Signor Verdi's best opera,

'Ernani,' have duly taken place. Mdlle. de Murska is sliding from the height of favour at which her eccentric talent placed her on her arrival in England.—The first appearance of Mdlle. Deconei, at the Royal Italian Opera, will hardly, we imagine, take place this year.—Dead silence up to this time as to the production of 'Le Nozze.'

There is a rumour, says the *Orchestra*, of a Musical Company, Limited, being started for the direction of orchestral and chamber concerts, on a new system, confided to a well-known and successful director.

A contemporary states that at a rehearsal at Her Majesty's Theatre, the other day, a "sensation" was produced by the trial of an overture by Master Cowen, which is pronounced full of promise. We have heard very good things of this young gentleman's talent, and from those whose praise is not lightly given.

The four marches performed at the late marriage of the Princess Helena were by Handel, Beethoven, Spohr and Mendelssohn.

Madame Rudersdorff is said to be occupied in the composition of a grand opera.

M. Auber is determined not to grow old, octogenarian though he be. He is writing another three-act opera, for the Opéra Comique, to be produced there next Carnival.

Our Milanese Correspondent tells us that the autumn season at La Scala will commence on the 5th of September, and that 'L'Africana' (which opera really seems to have "taken" in Italy) will be among the first works produced. M. Offenbach has got (where has he not got?) into Milan, and his 'La Bella Elena,' he assures us, is tolerably well given at a summer theatre. Certainly, his music is as champagne compared with flat beer, if it be measured against such native ware as, for instance, 'Crispino e la Comare,' sagaciously produced to gladden the weary "town" at our Royal Italian Opera this evening.

MISCELLANEA

Ballads.—In 'The Lay of the Last Minstrel,' we find—

....amid his sorrowing clan,
Her son lisped from the nurse's knee,—
And if I live to be a man,
My father's death revenged shall be!

In the ballad of 'Johnny Armstrong,' we find—

O then bespoke his little son,
As he sat on his nurse's knee,
If ever I live to be a man,
My father's death revenged shall be!

Scott was not a conscious plagiarist; and if ever he had been reminded, he would have acknowledged an unintended abstraction, in the same manner as he did the line he borrowed from Coleridge. We may suspect that he was not very familiar with the English ballad. Had he been a collector, he would have known the three volumes from which Addison probably gained his knowledge of Chevy Chase. The third edition of this 'Collection of Old Ballads' is of 1727. In the first volume is 'Johnny Armstrong'; and in the same volume is the ballad about the Earl of Essex, which Scott, when he quotes it, can only mention as "an old song which Dr. Johnson used to hum." He got his couplet from Boswell, in his 'Tour to the Hebrides.' An unintended plagiarism may cross the warp with a wrong woof; and Scott has paid for his lapse. Not many hours after the child has lisped from his nurse's knee, his mother sends him out to battle, as follows:—

The boy is ripe to look on war:
I saw him draw a cross-bow stiff;
And his true arrow struck afar
The raven's nest upon the cliff.
The red cross on a southern breast
Is broader than the raven's nest.

Education in Wales.—You have heard of the peculiar institution existing among the Welsh called *Eisteddfod*; and I believe you attempted once

to give its musical performances a discriminating but kindly notice in the *Athenæum*. Now, I was once a resident in Wales, and have good reason for entertaining a high respect for its people; but this institution, while, as an apparently natural evolution of the national genius, capable of being made an instrument of material good to the Principality, is destined, I fear, through the narrow-mindedness of its promoters, to continue a barrier to progress. It has offered one or two prizes of value in literature, showing good judgment in the selection; such as the one for the present year, on 'The Origin of the English Nation,' open to competitors in all languages—a subject emanating clearly from some source of higher intelligence than that of the usual managers; but, side by side with this sign of common sense and liberality, it displays an instance of the most absurd narrowness and exclusiveness. From a prospectus of the coming meeting at Chester, I see that the Council have determined that Welsh national music, "executed exclusively by Welsh artistes," shall be the order of the day. Now this is shutting out the light with a vengeance! The best friends of Wales and Welsh music at Eisteddfods have always been struck with the meagreness of the selection presented, and palled with the perpetual recurrence of the same pieces—'Ar Hyd y Nos,' 'Bells of Aberdyfi,' 'Watching the Wheat,' 'David of the White Stone,' &c.—for ever; and the adaptations and compositions of the same two or three persons, almost exclusively used. So Chester again is to be dunned with the "Bells," &c., and to be told, in effect, that all Wales ever possessed of music is some dozen or two pieces; and as to having composers, that she has only two or three fit to be shown to a tolerably intelligent audience. The "Welsh artistes," who have not procured some claim to be called "artistes" through English education, I have never yet heard of. Can our friends in Wales have really got beside themselves? Do they think it the best road to excellence to shut out the best models? While we are ransacking France, Germany, Sweden, Italy, and even America, for the best music and musical talent, to delight our audiences and excite the emulation of our *artistes* after higher conceptions and higher attainments, the Welsh people, as represented in their "national" institution, are so self-sufficient that they are resolved to rejoice in the light of their own "rushlights," and listen to their own triple harp, as of yore—let the age progress as it may! Nothing further is wanted to explain the cause of the general backwardness of the Welsh people. I have no doubt of their natural capacity; but capacity without culture runs wild, like the veriest weed; and culture the Eisteddfod people seem resolved not to enjoy. Z.

Whiskers.—Before it is too late, let it be remembered that *whiskers*, in the English of all centuries preceding the present, are what we now call *moustaches*. The dictionaries have never admitted the modern meaning: even down to the sixpenny Walker of the stalls, we have "hair on the lip." Of course every one is aware what the whiskers are when we speak of a cat. Nevertheless, it might be difficult to confirm the dictionaries, and the recollections of old people, by a very clear quotation; for the mode in which whiskers are usually mentioned, whether in earnest or in satire, will most often apply to any hair on the face. The following, however, is decisive: it is from the queer *fantasia* about whiskers in 'Tristram Shandy'—"La Fosseuse drew her bodkin from the knot of her hair, and having traced the outline of a small whisker, with the blunt end of it, upon one side of her upper lip, put it into La Rebours' hand." This we recommend to lexicographers. The French word *moustache* is from the Greek *μυσταξ*, of the same meaning. It was admitted into the English of the seventeenth century as a new word. What did Tom Moore mean when he satirized the whiskers of the Prince Regent? If we rightly remember old caricatures, he must have used the modern sense.

TO CORRESPONDENTS.—J. W. W.—W. B.—W. G.—received.

SAMPSON LOW & CO'S LIST OF NEW BOOKS.

The PRISON LIFE of JEFFERSON

DAVIS; embracing Details and Incidents in his Captivity, together with Conversations on Topics of great Public Interest. By JOHN J. CRAVEN, M.D. Physician of the Prisoner during his Confinement. 1 vol. post 8vo. price 10s. 6d.

The LIFE of the late Dr. MOUN-

TAIN, Bishop of Quebec. 8vo. cloth, price 10s. 6d.

SOUTH AUSTRALIA: its Progress

and Prospects. By A. FOSTER, Esq., late Member of the Legislative Council of Adelaide. Demy 8vo. with Map, cloth, price 15s.

"Supplies a gap in Colonial Literature. The book is a capital manual of its subject, and those who read it for use will find everything they are likely to require."—*Spectator*.
"A solid and satisfactory book."—*Reader*.

TRAVELLING in SPAIN in the

PRESENT DAY: being an Account of the Journey of a Party of Ladies and Gentlemen who lately Visited its Principal Cities. By HENRY BLACKBURN. With numerous Illustrations from Photographs and Drawings from Life, by John Phillip, R.A., E. Lundgren, Walter Severn, and the Author. Also, an Appendix of Routes, Fares, &c., the Expenses of the Journey, and a New Map of Spain. 16s.

A THOUSAND MILES in the RO-

BOY CANOE on the DANUBE, MOSELLE, RHINE, REUSE, AAR, MAINE, THAMES, MAINE, SEINE, MEUSE, and the LAKES of CONSTANCE and LUCERNE. &c. By J. MACGREGOR. Trip. Col. Cambridge, Barrister-at-Law. With Illustrations. Small post 8vo. with a Map, price 4s.
[Sixth Thousand now ready.]

LETTERS on ENGLAND. By Louis

BLANC. Translated under the Author's Revision. 2 vols. post 8vo. 16s.

THIRTY YEARS of ARMY LIFE

on the BORDER. Comprising Descriptions of the Indian Nomads of the Plains: Explorations of New Territory. A Trip across the Rocky Mountains in the Winter: Descriptions of the Habits of different Animals found in the West, and the Methods of Hunting them; with Incidents in the Life of Different Frontier Men, &c. By Colonel R. B. MARCY, U.S.A., Author of 'The Prairie Traveller.' With numerous Illustrations. [Shortly.]

NEW NOVELS.

Now ready.

TOILERS of the SEA. By Victor Hugo.

Third Edition. 3 vols. post 8vo. 34s.

"A free, spirited translation of a noble book. It is difficult to dissent from those who fancy they discover in the author's three volumes a romance, an epic poem, and a drama of real life. There is also in the volumes a charming idyll, full of grace, sweetness, and simplicity. If there be any one who can rise from the perusal of the book without feeling not only deeply moved, but also enlightened, chastened, and, for at least the moment, improved, let no such man be trusted."—*Illustrated London News*.

"A fisherman encounters all the fury, and caprice, and treachery of water nature in order to win a woman whom, on his return, he finds to have unconsciously, but irrevocably, lost her heart to another. But this plainest of stories is worked into genuine tragedy by an exercise of poetic power which, at least in some portions of the display, has very rarely been surpassed in literature."—*Saturday Review*.

"As an idyll of homely love and simple heroism, we know nothing more parts of 'Enoch Arden' that can compare with the touching sweetness of the closing scenes of the book."—*Athenæum*.

"It is impossible for us not to feel chained to the book by the spell and sway of a master hand. The fight of man with sea and storm is rendered as it never has been rendered before, and probably will never be rendered again, by human pen."—*Spectator*.

THE STORY of KENNETT. By Bayard

TAYLOR. 3 vols. 16s.

A CASUAL ACQUAINTANCE. By Mrs.

DUVY HARDY. 3 vols. 16s.

MATTIES and MUTTON'S. By Outhbert

BRIDE. 3 vols. 16s.

THE WHITE FAVOUR. By Henry Holl

By EDWARD NEWMAN, F.L.S. F.Z.S., &c.
 London: Van Voorst, Paternoster-row.

Crown 8vo. cloth, price 4s. 6d.
PHILOCTETES: a Metrical Drama after the Antique. By M. A.

"This is a fine poem, beautiful in detail, powerful as a whole; leaving the same sort of impression of sad majesty upon us as many of the finest Greek dramas themselves; combining the self-restrained and subdued passion of the antique style with, here and there, a touch of luxuriance of conception, and everywhere that wider range of emotions and deeper love of natural beauty characteristic of the modern."—*Spectator*.
 "There is fine poetry in 'Philoctetes'; but it is the song of despair."—*Reader*.
 "Felicities of expression are scattered throughout the poem; nor is it deficient in dramatic characterization."—*Athenæum*.
 London: Alfred W. Bennett, 5, Bishopsgate-street Without.

2 vols. crown 8vo. cloth, price 8s. Vol. I. now ready,
SERMONS of MR. HENRY SMITH, sometime Minister of St. Clement Danes, London; together with a Preparative to Marriage, God's Arrow against Atheists, Certain Godly and Zealous Prayers, &c. Printed according to his Corrected Copies in his Lifetime. With a Memoir of the Learned Author, by THOMAS FULLER, B.D. The whole carefully Edited by the Author of 'Glimpses of our Heavenly Home,' &c.
 "The Sermons of this eminent Puritan divine form a treasury of pulpit oratory, distinguished as well by wit and wisdom as by thoroughness of exposition. Their author was known in his life time as the 'silver-tongued preacher,' being, as Fuller says 'but one metal below St. Chrysostom himself.'"
 London: William Tegg, Pancras-lane, Chesham.

Newspaper for the Gardening and Farming Interest.

REGISTERED FOR TRANSMISSION ABROAD.

Published every SATURDAY, price 5d., or 6d. stamped, each Volume complete in itself.

(Enlarged to 32, frequently 36, folio pages)

THE GARDENERS' CHRONICLE AND AGRICULTURAL GAZETTE.

A Weekly Record of Rural Economy and General News.

As regards the GARDENING PART, the principle is to make it a weekly record of everything that bears upon Horticulture, Floriculture, Arboriculture, or Garden Botany, and such Natural History as has a relation to Gardening, with Notices and Criticisms of all Works on such subjects. Connected with this Part are

WEEKLY CALENDARS OF GARDENING OPERATIONS, Given in detail, and adapted to the objects of persons in every station of life; so that the Cottager, with a few rods of ground before his door, the Amateur who has only a Greenhouse, and the Manager of Extensive Gardens, are alike informed of the routine of operations which the varying seasons render necessary. It, moreover, contains Reports of Horticultural Exhibitions and Proceedings—Notices of Novelties and Improvements—in fact, everything that can tend to advance the Profession, benefit the condition of the Workman, or conduce to the pleasure of his Employer.

Woodcuts are given whenever the matter treated of requires that mode of illustration.

The FARMING PART (under the Editorship of a Practical Farmer) treats of—

The PRACTICE OF AGRICULTURE
 AGRICULTURAL SCIENCE
 ANIMAL AND VEGETABLE PHYSIOLOGY
 IMPROVEMENTS IN IMPLEMENTS, described by Woodcuts whenever requisite
 IMPROVED MODES OF HUSBANDRY
 RESULTS OF EXPERIMENTAL FARMING
 GROWTH AND ROTATION OF CROPS
 MANAGEMENT OF STOCK
 VETERINARY SCIENCE
 DRAINAGE
 IRRIGATION
 FORESTING
 ROAD-MAKING
 FARM-BUILDINGS
 LABOURERS
 TREATMENT OF POULTRY
 AGRICULTURAL PUBLICATIONS.

In short, whatever affects the beneficial employment of capital in hand.

Reports are regularly given of the English, Scotch, and Irish Agricultural Societies and Farmers' Clubs, London Markets, Prices of Corn, Hay, Cattle, Seeds, Potatoes, Butter, Wool, Coal, Timber, Bark, &c., and the Weekly Averages.

An Edition is also published every Monday in time for post, containing Reports on Mark-lane and the Cattle Market.

REPLIES to QUESTIONS connected with the object of the Paper are also furnished weekly.

Lastly, that description of DOMESTIC and POLITICAL NEWS is introduced which is usually found in a Weekly Newspaper.

On and after July 25, 1866, will be published,
A PAMPHLET on STEAM as the MOTIVE POWER in EARTHQUAKES and VOLCANOES. By R. A. PEACOCK, Esq. C.E., Jersey.

"I have no doubt that Mr. Peacock's conclusion is a right one. I have not the least doubt that steam escapes from the earth when it gets vent, and when it does not get vent it causes undulation."—*Remark by the President of the Geological Section at Birmingham, Sept. 24, 1865.*

A prepaid Copy of the Pamphlet will be sent to any address by the Author on receipt of 1s. 6d. in stamps.

Now ready, price 2s. 6d. post 8vo. cloth boards,
NERVOUS and DELICATE HEALTH. Its Symptoms and Causes; with Hints on Medicinal, Dietetic and general Hygienic Self-management. By J. WILKINS WILLIAMS, M.D.C.E., of St. John's College, Oxon., late House-Surgeon to the Lock Hospital.
 London: Free by post from the Author, 17, Conduit-street, Regent-street; and of all Booksellers.

Demy 8vo. 3s.; or with Preface, by the Rev. T. Hartley, M.A., Rector of Winwick, 3s. 6d.

SWEDENBORG on HEAVEN and HELL; also, the Intermediate State or World of Spirits: a Relation of Things heard and seen.

"This work treats on the following and other subjects:—That Heaven and Hell are from the human race—That every Angel is in a perfect human form—That Heaven consists of innumerable societies—On the Sun, Light and Heat, Space and Time, in Heaven—On Innocence and Peace in Heaven—On Infants in Heaven—On Employment in Heaven."

A Complete List of Swedenborg's Works may be had on application.
 C. P. Alvey, 36, Bloomsbury-street, London, W.C.

DESCRIPTIVE AND LYRICAL POEMS.

THIRD EDITION.—Now ready, at all Libraries, with Frontispiece by F. Gilbert, toned paper, crown 8vo. price 10s.

BEAUTIES of TROPICAL SCENERY

LYRICAL SKETCHES, and LOVE SONGS. With Notes. To which are added, LAYS NEARER BY R. N. DUNBAR.

"The merit of these poems is of a rare and attractive kind, combining rich pictorial effects in description, easy, and melodious verse. This edition is enriched by a number of poems written in Europe, which are not in those descriptive of the lavish beauties of the tropics. There are also additions to the previous Part; and these in particular—a Song of the Spanish Main—entitled 'Adios,' we invite the reader's attention, and read his admiration. It has the true ring, at once light and sad, impatient and passionate, the song of the lover rover."—*Morning Post*.

"Song and Sculpture are among the principal subjects of the additional poems. Those who have been with his two former editions, will detect no falling off in the present one."—*Reader*.

"It is replete with very beautiful thoughts, expressed in very poetic language."—*John Bull*.

London: ROBERT HARDWICKE, 192, Piccadilly.

MR. DIXON'S NEW WORK.

"A REMARKABLE AND VERY ORIGINAL BOOK."—*Saturday Review*.

"BRILLIANT, LIFE-LIKE PICTURES."—*British Quarterly Review*.

Now ready, a SECOND EDITION of

THE HOLY LAND.

By WILLIAM HEPWORTH DIXON.

With Illustrations from Original Drawings and Photographs on Steel and V

2 vols. demy 8vo. 24s.

"Mr. Dixon has written a singularly able book. His genius is essentially conservative. He contrives while his coffee or smoking his cigarette to throw off sketches, with the careless boldness of a hand sure of its own, which challenge the closest criticism, and whilst professing only to give rough-and-ready pictures of places and things which were in the day when Christ stood amidst them, the centre figure of the whole, he is really bringing the analysis to bear on the thought which after four thousand years of various development was found in a coner stripped of its vitality and crystallized into the creeds of Pharisee and Sadducee. The sharp points of contact, the gnomes, the manners, habits, and scenes of the strange race among whom Christ walked, are all graphically described before us, and we think few would rise from a careful perusal of its pages without a deeper insight into the sacred story, possibly a wider understanding of the words of One who taught as having authority, and not as a scribe."—*Spectator*.

CHAPMAN & HALL, 193, Piccadilly.

NEW WORK BY ROBERT BUCHANAN.

Next week will be published,
 Small 8vo. price 5s.

LONDON POE

By ROBERT BUCHANAN.

Griest nur hinein in's volle Menschenleben!
 Ein jeder lebt's, nicht vielen ist's bekannt,
 Und wo ihr's packt, da ist's interessant.
 Faust. Vorspiel auf dem Theater

London: Alexander Strahan.

Ready this day, post 8vo. 10s. 6d.

ARNE: A STORY OF NORWEGIAN BY BJÖRNSTJERNE BJÖRNSSON.

Translated by AUGUSTA PLESNER and SUSAN R. POWERS.

From the *Athenæum*.

"Björnsson is the name of a young writer whose we created an extraordinary sensation through Scandinavia. An obscure publisher in a small town in the North of Norway soon found its way to the right place, and when it reached the Capital of Denmark, it caused equal pleasure and admiration. After all it is no wonder. We know of nothing more beautiful than some of these stories. What originality, simplicity—what poetry! His heroes are peasants, his peasant girls; but how happy we feel in their society—be interested in what they say and do. The characters seem so true to nature, so real, that you seem to feel their presence as if they were old acquaintances after a few strokes of the pen. M. Björnsson a new era begins in Scandinavian literature."

London: Alexander Strahan.

DR. WM. SMITH'S BIBLE DICTIONARY.

Now ready, TWELFTH THOUSAND, with numerous Illustrations, medium 8vo. 21s.

A CONCISE BIBLE DICTIONARY

For FAMILIES and STUDENTS;

Comprising its Antiquities, Biography, Geography, and Natural History.

Condensed from the larger Work.

Edited by WM. SMITH, LL.D.,

Classical Examiner in the University of London.

"An invaluable service has been rendered to students, in the condensation of the Biblical Dictionary into one volume; the work has been done as only a careful and intelligent scholar could do it, which preserves to us the essential scholarship and value of each article. It has been condensed, and not amputated. The result is a dictionary of exceeding value,—a great boon to hundreds of students."—*British Quarterly Review*.

II.

Also, with 6 Maps, 30 Illustrations, and numerous Woodcuts, crown 8vo. 7s. 6d.

A SMALLER BIBLE DICTIONARY for SCHOOLS and
YOUNG PERSONS. Drawn up from the larger Work. By WM. SMITH, LL.D.

This edition has been prepared at the request of many persons for use in Schools, and seeks to render the same service to the study of the Bible as the SMALLER CLASSICAL DICTIONARIES have done for the study of the GREEK and ROMAN CLASSICS.

THE LIFE AND DEATH OF JEANNE D'ARC, CALLED "THE MAID."

By HARRIET PARR, Author of 'In the Silver Age,' &c.

"A charming idyll is the story of Joan of Arc, as it is told by Miss Parr."—*Examiner*.
"The Life of Joan of Arc is one that essentially appeals to the heart of a woman, and we are glad that the historian on the present occasion has treated it so happily. Miss Parr has written in an agreeable style a Life of Jeanne d'Arc, which undoubtedly will take a prominent place in our biographical literature."—*Press*.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

NOTTINGHAM MEETING.

22nd AUGUST, 1866.

President—W. R. GROVE, Esq. M.A. Q.C. F.R.S. &c.

GENERAL ARRANGEMENTS.

Wednesday, 22nd August—President's Address, at 8 p.m., in the Theatre.

Sectional Meetings as usual, from the 22nd to the 26th, inclusive.

Thursday, 23rd August—Soirée in Exhibition Building.

Friday, 24th August—Lecture at 8 30 p.m., in the Theatre, by W. Huggins, Esq. F.R.S. F.R.A.S., On the Results of Spectroscopic Analysis applied to the Heavenly Bodies.

Monday, 27th August—Lecture by J. D. Hooker, Esq. M.D. D.C.L. F.R.S. &c., On Insular Flora.

Tuesday, 28th August—Soirée in the Exhibition Building.

Saturday, 30th August—Excursions to the Midland Railway Works at Derby, Eastwood, Riddings, Cinder Hill, Annesley, and Newstead Abbey.

Thursday, 30th August—Excursions to the Derwent and Wye Valleys, Charnwood Forest, and Belvoir Castle.

On and after July 30th, until August 17th, Life Members, who intend to be present at the Meeting, may receive their Tickets by applying to the General Treasurer, and returning to them their Life Member Invitation Circular; Annual Subscribers, who wish to receive their Tickets, must return their Invitation Circular, with 11. enclosed, to the General Treasurer, W. Spottiswoode, Esq., 50, Grosvenor-place, London, S.W.

The Executive Committee of Nottingham will elect New Members and Associates on the following conditions:—

New Life Members, for a composition of 101., which entitles them to receive gratuitously the Reports of the Association, which may be published after the date of payment.

New Annual Subscribers, for a payment of 21. for the first year. These receive gratuitously the Reports for the year of their admission, and for every following year in which they continue to pay a subscription of 11. without intermission.

Associates for this Meeting only, for a payment of 11. They are entitled to receive the Report of the Meeting at two-thirds of the publication price.

Ladies may become Members on the same terms as Gentlemen, and Ladies' Tickets (transferable to Ladies only) may be obtained by Members on payment of 11.

After August 17th personal application for Tickets must be made at the Reception Room, Corn Exchange, Nottingham, which will be opened on Monday, August 20th.

In order to facilitate arrangements for the Meeting it is desirable that application for Tickets should be made as early as possible.

Gentlemen who have in any former year been admitted Members of the Association may, on this occasion, renew their Membership, without being called upon for arrears, on payment of 11. Without a proper Ticket, obtained as above, no person will be admitted to any of the meetings.

Notices of Papers proposed to be read, should be sent to the Assistant General Secretary, G. GIFFORD, M.A., 5, Park Villas, Oxford, before August 1st.

Members and Associates intending to be present at the Meeting are requested to apply to the Local Secretaries, who will assist them in procuring lodgings, and will forward a railway pass, entitling the holder to obtain from the principal Railway Companies a return ticket at a single fare, available from Monday, August 20th, to Saturday, September 1st, inclusive.

CHAS. C. ATKINSON, Secretary to the Council.

July 17th, 1866.

UNIVERSITY COLLEGE, LONDON.—

The PROFESSORSHIP OF THE PRINCIPLES AND PRACTICE OF SURGERY has become VACANT by the resignation of Prof. ERICHSEN, on becoming a Candidate for the Holme Professorship of Clinical Surgery.

London: Longmans, Green, and Co. Paternoster-row.

Just published,

Second Edition, handsomely bound, enlarged and revised, with numerous additional Illustrations, price 6s.

CONCISE HISTORICAL PROOFS

RESPECTING

THE GAEL OF ALBAN; OR, **HIGHLANDERS OF SCOTLAND.**

With Short Notices regarding the Highland Clans, and a Dissertation on the Gaelic Topography of Scotland; also, Explanatory Notes, Map, Illustrations, and Descriptions of the Country of the Gael.

By JAMES A. ROBERTSON, F.S.A. Scot., and late Colonel Unattached.

From the Reader.

"We not only attach considerable importance to the subject, but we regard also very favourably the manner in which it has been treated."

From the *Athenæum*.

"The author battles stoutly for the rejection of the Irish element. His zeal for the Caledonians never forsakes him. In the Highlands they have remained, and the present Highlanders are their descendants in blood and in speech. The author displays great ingenuity in seeking to establish these points."

From the *Gentleman's Magazine*.

"The author has devoted a large amount of labour to investigate a subject of real historical interest."

From the *Gloucester Herald*.

"A really valuable historical treatise. The book is one that will repay an attentive perusal, and that ought to be especially acceptable to the Highlanders."

From the *Pertk Advertiser*.

"The author has ably and satisfactorily treated the subject." Edinburgh: William P. Nimmo. London: Simpkin, Marshall & Co. Sold by all Booksellers.

Now ready, price 2s. 6d.

PROF. MELVILLE BELL'S EMPHASIZED LITURGY. Hamilton, Adams & Co.; and Simpkin, Marshall & Co.

Just published, crown 8vo. cloth, 6s.

TRANSLATIONS FROM EURIPIDES: MEDEA, IPHIGENIA IN AULIS, and IPHIGENIA IN TAURIS.

By J. CARTWRIGHT, A.M., Formerly of Christ's College, Cambridge.

London: D. Nutt & Co. 370, Strand.

French Studies condensed, Seventh Edition, 5s. 6d.

HOW TO SPEAK FRENCH; or French and France. By A. ALBITES, LL.B., Paris. "Perfect."—*Era*.

INSTANTANEOUS FRENCH EXERCISES, 2s.; Key, 2s. Longmans & Co.

Just published, small 8vo. 3s. 6d. cloth.

ERICHSEN on RAILWAY and other INJURIES OF THE NERVOUS SYSTEM.

By JOHN E. ERICHSEN, Professor of Surgery and of Clinical Surgery in University College, and Surgeon to University College Hospital.

"It will serve as a most useful and trustworthy guide to the profession in general, many of whom may be consulted in such cases, and it will no doubt take its place as a text-book on the subject of which it treats."—*Medical Press and Circular*. London: Walton & Maberly, 137, Gower street, and 27, Ivy-lane.

DR. M. J. CHAPMAN.

Now ready, in 1 vol. post 8vo. 10s. 6d. bevelled edges.

Nearly ready,

THE PROGRESSIVE ENGLISH GRAMMAR, with EXERCISES. By WALTER SCOTT DALGLEISH, M.A. Edinburgh, Vice-Principal of Drexhorn College; Author of 'English Composition in Prose and Verse; Grammatical Analysis' &c.

Edinburgh: Oliver & Boyd. London: Simpkin, Marshall & Co.

CHEAPER EDITION OF REID'S SCHOOL DICTIONARY.

Reduced to 5s., 19th Edition.

A DICTIONARY of the ENGLISH LANGUAGE, containing the Pronunciation, Etymology, and Explanation of all Words authorized by Eminent Writers. By ALEXANDER REID, LL.D., late Head-Master of the Edinburgh Institution.

This Work is adapted to the present state of the English language and the improved methods of teaching. While the alphabetical arrangement is preserved, the words are also grouped in such a manner as to show their etymological affinity; and after the first word of each group is given the root from which they are derived. These roots are afterwards arranged into a Vocabulary. At the end is an accented List of Classical and Scriptural Proper Names.

"* * * The Publishers have been frequently requested to lower the price of this Book, and it is hoped that the reduction will greatly increase its already very extensive use in Schools." Edinburgh: Oliver & Boyd. London: Simpkin, Marshall & Co.

Just published, 128 pp. demy 8vo. 5s. cloth lettered.

ALPHA and OMEGA: a Poem. By MERLYN CASTELL. London: Simpkin, Marshall & Co.

GEOLOGY of WEYMOUTH AND THE ISLAND of PORTLAND;

Containing a Map of the District, Geological Sections, Coast Views, Figures of the characteristic Fossils, and other Illustrations, with much information on the Natural History of the Coast. By ROBERT DAMON, F.G.S. Price 5s. London: E. Stanford, Charing Cross.

Just published, Fourth Edition, 2s. 6d.

THE PRINCIPAL BATHS of FRANCE. By EDWIN LEK, M.D., Author of 'The Baths of Germany' &c.

Also, by the same Author,

BATHS of SWITZERLAND and SAVOY, with Remarks on Mountain Air. 2s. 6d.

WATERING PLACES of ENGLAND. 4th Edition. 7s. 6d.

JACOB JONES,—"Best of living English sonneteers."—*Sun*. "Is simply illiterate, and incapable of understanding poetry."—*Press*. "A poet who revels in the beautiful."—*Public Opinion*. "Sonnets 'fresh as a violet-bed baptised with dew: musical as a fairy bell.'"—*Armagh Guardian*. "Distinguished for delicacy and polished ease."—*Oxford Chronicle*. "A valuable collection."—*Oxford Herald*. "Bold, tender, delicate, heart-stringing."—*Illustrated News*.
Alfred Bennett, Bishopsgate Without.

Demy 8vo. 3s.; or with Preface, by the Rev. T. Hartley, M.A., Rector of Winwick, 3s. 6d.

SWEDENBORG on HEAVEN and HELL; also, the Intermediate State or World of Spirits: a Relation of Things heard and seen.

"* This work treats on the following and other subjects:—That Heaven and Hell are from the human race—That every Angel is in a perfect human form—That Heaven consists of innumerable societies—On the Sun, Light and Heat, Space and Time, in Heaven—On Innocence and Peace in Heaven—On Infants in Heaven—On Employment in Heaven.

A Complete List of Swedenborg's Works may be had on application.
C. P. Alvey, 26, Bloomsbury-street, London, W.C.

Crown 8vo. cloth, price 4s. 6d.
PHILOCTETES: a Metrical Drama after the Antique. By M. A.

"This is a fine poem, beautiful in detail, powerful as a whole; leaving the finest sort of impression of sad majesty upon us as many of the finest Greek dramas themselves: combining the self-restrained and subdued passion of the antique style with, here and there, a touch of luxuriance of conception, and everywhere that wider range of emotions and deeper love of natural beauty characteristic of the modern."—*Spectator*.
"There is fine poetry in 'Philoctetes'; but it is the song of despair."—*Reader*.
"Felicities of expression are scattered throughout the poem nor is it deficient in dramatic characterization."—*Athenæum*.

London: Alfred W. Bennett, 5, Bishopsgate-street Without.

Price 3s. 6d. 12mo. cloth, lettered,
DR. CHARNOCK'S GUIDE to the TYROL, STYRIA, CARINTHIA, and SALZKAMMERGUT.
London: W. J. Adams, 59, Fleet-street.

Just published, crown 8vo. cloth, price 5s.
HANDBOOK of SANSKRIT LITERATURE, with Appendices descriptive of the MYTHOLOGY, CASTES, and RELIGIOUS SECTS of the HINDUS. Intended especially for Candidates for the Indian Civil Service, and Missionaries in India. By Rev. G. SMALL, formerly Missionary at Calcutta and Benares.
Williams & Norgate, 14, Henrietta-street, Covent-garden, London; and 20, South Frederick-street, Edinburgh.

On and after July 25, 1866, will be published,
A PAMPHLET on STEAM as the MOTIVE POWER in EARTHQUAKES and VOLCANOES. By E. A. PEACOCK, Esq. C.E., Jersey.

"I have no doubt that Mr. Peacock's conclusion is a right one. I have not the least doubt that steam escapes from the earth when it gets vent, and when it does not get vent it causes undulation."—*Remark* by the President of the Geological Section at Birmingham, Sept. 10, 1864.
A prepaid stamp will be sent to any address by the Author.

ARCHITECTURE AND ARCHÆOLOGY.

I. An ATTEMPT to DISCRIMINATE

the STYLES of ARCHITECTURE in ENGLAND, from the Conquest to the Reformation; with a Sketch of the Grecian and Roman Orders. By the late THOMAS RICKMAN, F.S.A. Sixth Edition, with considerable Additions, chiefly historical, by John Henry Parker, F.S.A. 8vo. with many Plates, and numerous Illustrations by O. Jewitt, price 21s. cloth extra, gilt top.

II. An INTRODUCTION to the STUDY of GOTHIC ARCHITECTURE.

By JOHN H. PARKER, F.S.A. Second Edition, revised and enlarged, with 170 Illustrations, and a Glossarial Index, fcap. 8vo. cloth lettered, price 6s.

III. A CONCISE GLOSSARY of TERMS

used in Grecian, Roman, Italian, and Gothic Architecture. With nearly 500 Illustrations. Fcap. cloth extra, 7s. 6d. Just ready.

IV. SOME ACCOUNT of DOMESTIC

ARCHITECTURE in ENGLAND; with numerous Illustrations of Existing Remains, from Original Drawings. From William I. to Henry VIII. By the late T. HUDSON TURNER, and J. H. PARKER, F.S.A. 4 vols. 8vo. with 400 Engravings and a General Index, price 21. 12s.

V. OUR ENGLISH HOME: its Early

History and Progress. With Notes on the Introduction of Domestic Inventions. Second Edition. Crown 8vo. price 5s. cloth.

"It contains the annals of our English civilization, and all about our progress in social and domestic matters; how we came to be the family and people which we are. All this forms a book as interesting as a novel; and our domestic history is written, not only with great research, but also with much spirit and liveliness."—*Christian Remembrancer*.

VI. The MILITARY ARCHITECTURE

of the MIDDLE AGES. Translated from the French of M. VIOLETTE-LE-DUC, by M. MACDERMOTT, Esq., Architect. With 151 Original French Engravings. Medium 8vo. cloth, 21s.

"We commend the research, philosophical spirit and erudition of the author, who unites to these qualities a rare power of lively and succinct description, which renders the book as delightful as it is profitable to read."—*Athenæum*, March 9th, 1861.

VII. FAC-SIMILE of the SKETCH-BOOK

of WILLIAMS DE HONECOURT, an Architect of the Thirteenth Century. With Commentaries and Descriptions by MM. LITRE and QUILBERT. Translated and Edited, with many additional Articles and Notes, by the Rev. ROBERT WILLIS, M.A. F.R.S., Jacksonian Professor at Cambridge, &c. With 64 Fac-similes, 10 Illustrative Plates, and 43 Woodcuts. Royal oct. cloth, 21. 10s. The English letter-press separate, for the purchasers of the French Edition, 4to. 15s.

VIII. GLEANINGS from WESTMINSTER

ABBEY. By GEORGE GILBERT SCOTT, R.A. F.S.A. With Appendices, supplying further particulars, and completing the History of the Abbey Buildings by several writers. Second Edition, considerably enlarged, containing many new illustrations by O. Jewitt and others, medium 8vo. price 16s. cloth, gilt top.

"The papers added to the present edition are those on the Metal-work, the Mosaic Pavements, the Retabulum, the Sedilia, the Coronation Chair, the Shrine, and the Tomb." "There are few Gothic structures that could afford more varied and more valuable materials for study than Westminster, and this volume is one really worthy of the subject, for it compresses within the limits of a manual the information which it has taken many men years to accumulate."—*Civil Engineer*, May, 1863.

IX. The CALENDAR of the PRAYER-

BOOK ILLUSTRATED. (Comprising the First Portion of the 'Calendar of the Anglican Church,' illustrated, enlarged, and corrected.) With 300 Engravings from Medieval Works of Art. Cloth extra, 6s. [Ready.]

X. The CHURCH and FORTRESS of

DOVER CASTLE. By the Rev. JOHN PUCKLE, M.A., Vicar of St. Mary's, Dover; Rural Dean. With Chromolithographs and other Illustrations, from the Author's Drawings. 8vo. price 7s. 6d. cloth, gilt top.

"It is not too much to say that this thoughtful little volume is very nearly a model of what a monograph should be. One has very rarely seen completeness and compactness so entirely reconciled. ... There is a sort of stone logic about it throughout, which is especially to our taste, and which makes its pages to be not less an intellectual treat than a valuable contribution to literature. ... It is enough to say that no one can visit the Castle and its Church hereafter without being sensible of the value of his work."—*Saturday Review*, August 6th, 1864.
"One of the most agreeable and instructive books that ever dealt with an antiquarian subject."—*Athenæum*, Sept. 10, 1864.

Oxford, and 377, Strand, London: JAS. PARKER & Co.

NEW WORKS.

TWELVEMONETHS WITH FREDRIKA BREMER in SWEDEN.

By MARGARET HOWITT.
With a Preface by Mrs. HOWITT.

2 vols. crown 8vo. with 3 Photographic Portraits and Illustrations, 21s.

"She has the hereditary genius of observation, of painting in language; in brief, commands accomplishments which do not often belong to the daughter of two poets."—*Athenæum*.
"Two volumes which give us, not only a good view of Miss Bremer in her private life, but also a most interesting description of the Swedes themselves. We are brought face to face most charmingly with Swedish manners."—*Reader*.

JESUS CHRIST:

HIS TIMES, LIFE, AND WORK.
By E. DE PRESSENSÉ, D.D.

In one handsome volume, 8vo. price 14s.

"The author, Dr. de Pressensé, is confessedly one of the ablest living Protestant writers of France on the side of moderate orthodoxy. To rare natural powers, highly disciplined, he unites a firm faith in the verities of our holy religion, uniting industry and zeal, great literary skill, and an extraordinary amount of learning. All these endowments have been put into requisition in the production of a truly admirable book, the plan of which is singularly philosophical and comprehensive, and the execution most thorough and effective."—*Journal of Sacred Literature*.
"M. de Pressensé's work is characterized by the learning, patience, brilliance, and insight which have given him so high a place among the literary men of Europe."—*British Quarterly Review*.

NOTES ON CHOLERA AND OTHER EPIDEMIC DISEASES.

FOR THE USE OF THE PUBLIC.

By FRANCIS E. ANSTIE, M.D. F.R.C.P., Senior Assistant-Physician to the Westminster Hospital.
Fcap. 8vo. cloth, 4s.

"Contains much sound information, set forth in good English. The latest and most generally accepted views of the profession on epidemic diseases in this country are very clearly described."—*Saturday Review*.

"The work of a physician who, from position, experience, and ability, is well qualified to act as a guide to the public at such a period as the present."—*Reader*.

DISCOURSES,

DELIVERED ON SPECIAL OCCASIONS.

By R. W. DALE, M.A.

In crown 8vo. price 3s. cloth.

"In Mr. Dale's 'Discourses on Special Occasions' we have some of the finest specimens of modern preaching."—*Contemporary Review*.

London: JACKSON, WALFORD & HODDER, 27, Paternoster-row.

This day is published,

TRAVELLING MAP OF SCOTLAND.

By ALEX. KEITH JOHNSTON,

LL.D. F.R.S.E. F.R.G.S.

A New Edition, thoroughly revised, comprising the latest Admiralty Surveys of the West Coast and Islands, the Railway Completed and in Progress, and an Index of easy reference to 2,700 Places on the Map. Price, in a Pocket-Case, 7s. 6d.; or in Sheets, 6s.

"A Map which has certainly nothing like a rival in any map of the country previously published. For completeness, accuracy, and finish, it is perfect. Not a sample of carriage road, or important footpath, throughout the length and breadth of the land, but has its representative here in double and single black lines.

The following Maps from KEITH JOHNSTON'S ROYAL ATLAS are published separately, uniformly with the above, in Pocket-Case, with Indexes to each Map, price 4s. 6d. for Maps of One Sheet, and 2s. for Maps of Two Sheets.

| | |

WILLIAMS & NORGATE, London and Edinburgh.

Crown 8vo. cloth, price 10s. 6d.

THE KORAN. Translated from the Arabic, with Introduction, Notes, and Index. The Suras arranged in Chronological Order by the Rev. J. M. RODWELL, M.A., Rector of Esherbury, Bishopsgate.

"Mr. Rodwell has done more than has ever yet been done to enable the mere English reader to understand the way in which the Koran grew into existence.... It is very convenient to have the date of its several parts, and this Mr. Rodwell has performed for English readers."—*Saturday Review*.

"We recommend Mr. Rodwell's edition of the Koran as the best yet issued. It is alike interesting and instructive, illustrated with erudite and suggestive notes."—*London Review*.

WILLIAMS & NORGATE,
14, Henrietta-street, Covent-garden, London; and
20, South Frederick-street, Edinburgh.

MR. AINSWORTH'S NEW WORK.

Now ready at all the Libraries, in 3 vols. post 8vo.

THE CONSTABLE DE BOURBON.

BY

WILLIAM HARRISON AINSWORTH.

"Mr. Ainsworth's last production will, we venture to say, add a fresh laurel to his literary crown, for it is one of the best of his that we have ever read. The period chosen as the subject of this novel, the age of Francis I. of France and Charles V. of Germany, is one full of incidents, fit to be worked up into a romance. The hero, the Constable de Bourbon, was, as our readers will remember, maltreated and insulted by Francis I. of France, until he threw off his allegiance to him and entered the service of the Emperor of Germany, in order to avenge himself on his cruel and unjust sovereign, whom, in the end, he takes prisoner at the battle of Pavia, and whom the Emperor then consigns to a Moorish dungeon in Spain. Our space will not permit us to enter into the details of the interesting story which Mr. Ainsworth has framed from the life of the Constable de Bourbon. Suffice it to say that it is unusually absorbing, nay, almost thrilling in some parts, and yet nearly always true to history—a fresh proof of the saying that truth is stranger than fiction."—*Public Opinion*.

CHAPMAN & HALL, 193, Piccadilly.

The MAGAZINES for AUGUST.

BENTLEY'S MISCELLANY.

The AUGUST Number will contain—

- I. The HEIRESESSES of BALLYBRENA: a Yachtsman's Tale. By the Author of 'The Six Yachtsmen.'
- Chap. I. Introduces the Heiresses.
- Chap. II. Introduces the Yachtsmen who have fallen in love with the Heiresses, in which also are narrated some highly scandalous Stories.
- Chap. III. Two Fresh Pretenders to the Hands of the Heiresses introduced, and the Mode described by which they hoped to gain their object.
- Chap. IV. The Heiresses' Guardian exhibits himself in Glowing Colours, and a new Admirer appears on the Stage.
- Chap. V. The Suitors' Plots and Treachery.—The Heiresses undertake a rash Expedition, and find themselves in a fearful predicament.
- Chap. VI. The Yachtsmen, by a wonderful coincidence, hear of the Danger to which the Heiresses are exposed, and hasten to their Rescue.
- Chap. VII. A Persian Expedition interrupted, and the Adventures of the Heiresses and the Yachtsmen brought to a Happy Conclusion.
- II. MUSHROOMS.
- III. BRIARS and THORNS. By Blanche Marryat.
- IV. ABOUT THINGS BEING TO US AS WE THINK THEM.
- V. CANUTE THE DANE. By William Jones.
- VI. THROWN AWAY. By Mrs. Alfred M. Munster. Chaps. XI. and XII.
- VII. SKETCHES of SUNNY SCENES and SOCIAL SCIENCE in SWITZERLAND.
- VIII. THE CONSTABLE de BOURBON. Concluding Chapters.

COLBURN'S NEW MONTHLY MAGAZINE.

Edited by W. HARRISON AINSWORTH, Esq.

The AUGUST Number will contain—

- I. THUNDER and LIGHTNING.
- II. The SPIRITS PROPHECY. By Mrs. Bushby. Part I.
- III. ABOUT NOT LOVING DR. FELL. By Francis Jacox.
- IV. WANDERINGS THROUGH ITALY. By Dr. Ramago.
- V. IDALIA.
- VI. PORTUGUESE DISCOVERY in AFRICA.
- VII. The BEAUTIFUL LADY. By Nicholas Michell.
- VIII. A TIGER-SKIN MEDLEY.
- IX. EGYPT. By Lieut.-Colonel R. H. Miles.
- X. TAURUMACHIA.

CHAPMAN & HALL, 193, Piccadilly.

NEW WORKS for JULY.

The SECOND Mrs. TILLOTSON, by PERCY FITZGERALD, is ready this day at every Library in the Kingdom. In 3 vols. [This day.]
Reprinted from *All the Year Round*.

BY THE AUTHOR OF 'EAST LYNNE,' &c.
ELSTER'S FOLLY. By Mrs. Henry WOOD, Author of 'St. Martin's Eve.' In 3 vols. [Ready this day.]

The RACE for WEALTH. By Mrs. J. H. RIDDELL, Author of 'George Geith,' &c. In 3 vols. Reprinted from *Once a Week*. [July 25.]

FROM CALOUTTA to the SNOWY RANGE. With numerous Coloured Illustrations, in 1 vol. By an OLD INDIAN. [Ready this day.]

KISSING the ROD: a Novel. By EDMUND YATES, Author of 'Broken to Harness,' &c. 3 vols. [Ready this day.]

The MAN of MARK: a Novel. In 3 vols. By the Author of 'Richard Langdon.' [Ready this day.]

MEMOIRS of the LIFE and REIGN of GEORGE THE THIRD. By J. H. JESSE, Author of 'England under the Stuarts,' &c. In 3 vols. [Shortly.]

NEW WORK SUITABLE FOR STUDENTS AND SCHOOLS.

A COURSE of ENGLISH LITERATURE. By JAMES HANNAY. In 1 vol. [Ready this day.]

Also, just published, uniform with the above,
MODERN CHARACTERISTICS: a Series of Essays from the Saturday Review.

SUNNYSIDE PAPERS. By Andrew Halliday, Author of 'Everyday Papers.'

The EASTERN HUNTERS. With numerous Illustrations. By CAPTAIN JAMES NEWALL. 1 vol. 8vo. [Ready this day.]

BIOGRAPHIES and PORTRAITS of SOME CELEBRATED PEOPLE. By ALPHONSE DE LAMARTINE. 3 vols. [Ready this day.]

The REGENCY of ANNE of AUSTRIA, Queen of France, Mother of Louis XIV. From Published and Unpublished Sources. With Portrait. By Miss FREER. 3 vols. [Early next month.]

Also, just published by the same Author, and uniform with it,

The MARRIED LIFE of ANNE of AUSTRIA. 2 vols. with Portrait.

LIZZIE LORTON, of GREYRIGG. By Mrs. LYNN LINTON, Author of 'Grasp your Nettle, The Lake Country,' &c. 3 vols. [Ready.]

THREE HUNDRED A YEAR. By the Hon. Mrs. HENRY WEYLAND CHETWYND. 3 vols. [Ready.]

Cheap Editions of Popular Works.

HALF-A-MILLION of MONEY. By AMELIA B. EDWARDS, Author of 'Barbara's History,' &c. [Ready this day.]

RUNNING THE GAUNTLET. By EDMUND YATES, Author of 'Kissing the Rod,' 'Broken to Harness,' &c. 6s.

London: TINSLEY BROTHERS, 18, Catherine-street, Strand.

"A BRIGHTER BOOK OF TRAVEL WE HAVE NOT SEEN FOR MANY A DAY."—*Athenæum*.

On Tuesday next, at all the Libraries and Booksellers', in 2 vols. crown 8vo. 12s.

A SECOND EDITION OF UP THE COUNTRY.

By the Hon. EMILY EDEN,

Author of
'The Semi-Attached Couple' and 'The Semi-Detached House.'

"One of the most seducing books one can get hold of. From being recorded in the form of a journal all the freshness and vivacity of colloquial description are obtained and are united with the deeper gift of reflection, and a charming book is the result."—*Reader*.

London: RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

NEW BOOKS,

At all Libraries and Booksellers'.

AFTER the STORM; or, Brother

Jonathan and his Neighbours in 1855-56. By J. E. HILARY SKINNER, Barrister-at-Law. Author of 'The Tale of Danish Heroism.' In 3 vols. post 8vo. 12s.

New Work by the Author of 'Mary Powell.'

The FAIRE GOSPELLER, Passages

in the Life of MISTRESS ANNE ASKEW. By the Author of 'Mary Powell.' In 1 vol. crown 8vo. 10s. 6d.

LIFE of the MARCHESA GIULIA

FALLETTI di BAROLO, Reformer of the Turin Prisons. By SILVIO PELLICO, Author of 'Le Mie Prigioni.' From the Original by Lady GEORGIANA FULLERTON. 1 vol. post 8vo. (Next week.)

A Missing Link in Natural History.

The NATURALIST in VANCOUVER

ISLAND and BRITISH COLUMBIA. By JOHN KEAST LORD, F.Z.S., late Naturalist to the British North American Boundary Commission. 2 vols. crown 8vo. with many beautiful illustrations. 24s.

"One of the very pleasantest works on natural history that it has been our fortune to meet with. The author has a free and happy pencil; and in his descriptions bird, beast, fish, and insect live before us, until we seem to know them."—*Globe*.

BERTHA DEVREUX: an Incident

in the Wars of the Roses. In Six Cantos. 1 vol. crown 8vo. 8s. 6d.

ALL in the DARK: a New Novel.

By JOSEPH SHERIDAN LE FANU, Author of 'Uncle Silas,' and 'Guy Deverell.' 3 vols. post 8vo.

"This is a book which deserves to be reprinted many times in years to come."—*Examiner*.

PLAIN JOHN ORPINGTON: a

Novel. By the Author of 'Lord Lynn's Wife' and 'Lady Flavia.' 3 vols. post 8vo.

A New Sporting Novel.

PAUL PENDRIL. 1 vol. post 8vo.

"A narrative of sport and adventure in Cornish. It is a very capably-written story, and highly entertaining."—*Morning Star*.

Also, immediately,

THRICE HIS: a Novel. In 3 vols.

post 8vo.

London: RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW WORKS.

FIELD-MARSHAL VISCOUNT

COMBERMERES MEMOIRS and CORRESPONDENCE. From his Family Papers. By the RIGHT HON. MARY, VIS-
COUNTESS COMBERMERE and Capt. W. W. KNOLLYS. 2 vols. 8vo. with Portraits, &c. 30s. bound.

"To the last this noble soldier and most perfect gentleman took cheerful part in the duties and pleasures of life, leaving to an only son the inheritance of a great name, and to a sorrowing widow the task of recording how the bearer of the name won for it all his greatness. This has been done evidently as a labour of love by Lady Combermere, and she has been efficiently assisted in the military details by Capt. Knollys. Apart from the biographical and professional details, the volumes, moreover, are full of sketches of persons of importance or interest who came into connexion with Lord Combermere."—*Athenæum*.

"A welcome and gracefully written memorial of one of the greatest of England's soldiers and worthiest of her sons. It is a most interesting work."—*Morning Post*.

THE SPORTSMAN and NATURAL-

IST IN CANADA; or, Notes on the Natural History of the Game, Game-Birds, and Fish of that Country. By MAJOR W. H. B. KING, F.R.S., F.E.S.A.S. Royal 8vo. illustrated with beautiful Coloured Plates and Woodcuts, 20s. bound.

"A goodly volume, splendidly illustrated. It is an important contribution to natural history, and a work the intending traveller will consult once and again. The book will take its position in the foremost rank of works of its class. Of recent British travellers few can vie with its author in close observation of nature, and in those graces of style and scholarship which make the information contained in his volume as pleasant to read as it is valuable to preserve. In fact, since the works of Eliot Warburton and Kinglake, no book of travels with which we are acquainted has been written in a style more clear, forcible, and picturesque."—*Sunday Times*.

PRISON CHARACTERS DRAWN

from LIFE. By a PRISON MATRON, Author of 'Female Life in Prison.' 2 vols. 12s.

"These volumes are interesting and suggestive."—*Athenæum*.
"A woman lodged among imprisoned women, with a kindly sympathy, a quick eye, and a mind apt to record clearly its well-directed observations, has something to tell that thousands will be glad to learn. Her quick-witted transcripts of living character are studies that nothing can make obsolete or deprive of interest for living men."—*Examiner*.

THE BEAUTIFUL in NATURE and

ART. By Mrs. ELLIS, Author of 'The Women of England,' &c. 1 vol. with Portrait, 10s. 6d. bound.

"A pleasant, healthy volume."—*Athenæum*.
"A very charming volume is this new work by Mrs. Ellis. It will interest many fair readers."—*Sun*.
"An attractive as well as useful and instructive book. It is the work of a keen-sighted, thoughtful, sensible and experienced writer."—*Illustrated News*.

SPORT and SPORTSMEN. By

CHARLES STRETTON, Esq. 8vo. with Illustrations, 15s.

"This is an amusing book; as interesting as genuine books of sporting adventure seldom fail to be."—*Globe*.

THE NEW NOVELS.

The WILD FLOWER of RAVENS-

WORTH. By the AUTHOR of 'JOHN and I,' 'DR. JACOB,' &c. 3 vols.

"A charming story, of great originality, full of pathos and grand nobility of thought and action. It is a most interesting novel."—*Observer*.

"A novel of unusual excellence. It is a story of deep interest. The characters are superbly drawn."—*Star*.

"A beautiful tale, written with deep feeling. It charms by its elegance and moves by its pathos."—*Illustrated News*.

THE WIFE'S ERROR. By Lady

BLAKE. 3 vols.

FELICIA'S DOWRY. By Mrs. Fitz-

MAURICE OKEDEN. 3 vols.

"This novel is capital, and deserves wide popularity. The characters are all well sketched."—*Star*.

"Felicia's Dowry" is the work of a highly-cultivated mind. The characters are well drawn, the language good, the interest fully sustained, and the moral excellent."—*Messenger*.

KING'S BAYNARD. By the Hon.

Mrs. GEORGE GIFFORD. 3 vols.

"Mrs. Gifford writes like a sensible woman, and like a lady. We commend 'King's Baynard' to our readers as a novel well worth reading."—*Athenæum*.

"Our hasty sketch of this story can give but little notion of the ability with which it is written. 'King's Baynard' will be read with avidity by those who admire a stirring history and well-managed development."—*Reader*.

SIR OWEN FAIRFAX. By Lady

EMILY PONSONBY, Author of 'The Discipline of Life.' 3 v.

"Lady Ponsonby writes like a lady, and like a lady who knows how to write."—*Athenæum*.

A NOBLE LIFE. By the Author of

'JOHN HALIFAX,' 'CHRISTIAN'S MISTAKE,' &c.

MIRK ABBEY. By the Author of

'LOST SIR MASSINGBERD,' 'THE CLYFFARDS of

'CLIFFE,' &c. 3 vols.

"A spirited and amusing story."—*Pall Mall Gazette*.

BOUND to the WHEEL. By John

SAUNDERS, Author of 'Abel Drake's Wife,' &c. 3 vols.

LORDS and LADIES. By the Author

of 'Margaret and Her Bridesmaids,' &c. 3 vols. [Just ready.]

MESSRS. BLACKWOODS'

NEW PUBLICATIONS.

The COMPANY and the CROWN.

By the Hon. J. T. HOVELL-THURLOW. 8vo. 7s. 6d. cloth.

VON BORCKE'S MEMOIRS of the CONFEDERATE WAR for IN- DEPENDENCE.

2 vols. crown 8vo. with a Map. [In a few days.]

FELIX HOLT, the Radical.

By GEORGE ELIOT, Author of 'Adam Bede,' &c. 3 vols. crown 8vo. 1l. 11s. 6d.

The OPERATIONS of WAR EX- PLAINED and ILLUSTRATED.

By Colonel E. B. HAMLEY, R.A., formerly Professor of Military History, Strategy, and Tactics at the Staff College; Member of the Council of Military Education. 4to. with Plans, 28s. cloth.

MISS MARJORIBANKS.

A New Series of "The CHRONICLES of CARLINGFORD." By the Author of 'Salem Chapel.' 3 vols. crown 8vo. 1l. 11s. 6d. cloth.

LORD LYTTON'S NOVELS and TALES.

Library Edition. 41 vols. crown 8vo. 5s. each (to be had separately).

SPORTING DAYS.

By JOHN COLQUHOUN, Author of 'The Moor and the Loch.' Small 8vo. 5s. cloth.

GEOLOGY for GENERAL READ- ERS.

A Series of Popular Sketches of Geology and Paleontology. By DAVID PAGE, F.R.S.E. &c. 5s. cloth.

The "TALES from BLACKWOOD."

In 12 vols. fcap. 8vo. in cloth, 18s.; in paper, 12s.

SEA-SIDE STUDIES at ILFRA- COMBE, TENBY, the SCILLY ISLES, &c.

By GEORGE HENRY LEWES. Second Edition. 6s. 6d. cloth.

CHEAP EDITIONS of TALES by GEORGE ELIOT.

ADAM BEDE, 6s.—SILAS MARNER, and SCENES of CLERICAL LIFE, 6s.—The MILL on the FLOSS, 6s. cloth.

CHEAP EDITIONS of "The CHRO- NICLES of CARLINGFORD."

45, George-street, Edinburgh; and 37, Paternoster-row, London.

LONDON, SATURDAY, JULY 21, 1866.

LITERATURE

London Poems. By Robert Buchanan. (Strahan.)

It is only fair to the poet that we should say at once, these 'London Poems' are not meant to be taken, in any sense, as poems about London. The capital of England is, indeed, a very fine subject for poetical picture-making. Its long renown, its stirring annals, its vast extent, its natural beauty, its varied life—the streets, the quays, the parks, the river, the surrounding hills—its docks in which the navies of a world may ride, its population larger than that of many a royal state, its churches, gardens, theatres, and palaces—its letters, legislation, commerce, art and science—its multitudinous society, with their genius, virtues, sufferings, passions—all these things go to make up a whole of first-rate capabilities for a poet who might be in search of a tempting theme. Parts of this theme have been seized by many poets as inexhaustible lodes of poetic gold: the pictorial effect by one, the solemn pathos by a second, the stirring romance by a third. The Elizabethan poets, with their eye for pomp and motion, for outward beauty and animal spirit, rejoiced their hearts in London, in its gay river-banks, in its busy streets and winding lanes, in its houses and gardens, in its holy wells, and in its pleasant taverns. Ben Jonson's love of London is pictured in almost every page of his verse; and, in fact, the London of every age may be found mirrored in the freshest poetry of the time, from Chaucer down to Wordsworth. It would be safe to say that the man who is blind to the beauty, the romance, and the pathos of London has no imagination, and will never be a poet.

But London as a joyous visible fact—a great city, the centre of a nation's life—is not meant to be the theme of Mr. Buchanan's song. When the young poet thinks of London, his fancy is not filled, like that of an old rhymester, with dreams of the Cheapside taverns, of the Bank-side plays, of the Fleet strawberry-gardens; he rather dwells upon the miseries crowded into Mile End courts and Westminster slums, on the secret griefs of poor milliners' girls, and on the open shame of costermongers' homes. We hear a good deal about streets and squares; occasionally we catch a glimpse of the river flowing by; and feel, as by an instinct, that a rich and mighty world is round about us; but, in all these hints of a great city, there is nothing local and peculiar; nothing that suggests a reason why these tragedies and epics might not have had their scenes laid a hundred miles from the Strand. London seems to be an accident in them, rather than a shaping, colouring force; the people who breathe and suffer in these pages being such as might have breathed and suffered elsewhere than in Islington and Southwark, without forfeiting one claim upon our tears and smiles. Such a picture gives us any city crowd:—

The crowd had voices, but each living man
Within the crowd seem'd silence-suit and hard:
They only heard the murmur of the town,
They only felt the dimness in their eyes,
And now and then turn'd, startled, when they saw
Some weary one fling up his arms and drop,
Clay-cold, among them,—and they scarcely grieved,
But hush'd their hearts a time, and hurried on.

The poet has a loftier purpose than to write a book on London. 'Langley Lane' might be a suburb of Manchester. 'The Starling' would have chirped his innocent oaths in the Salt Market. 'Edward Crowhurst' is, in fact, a rustic bard. 'The Little Milliner,' whose life of busy innocence is so exquisitely suggested,—

Fear not shame nor sin hath she,
But, like a sea-bird on the sea,

Floate hither, thither, day and night:
The great black waters cannot harm her,
Because she is so weak and light,—

might have been put into a Glasgow garret, without losing any particle of her tender story. 'Liz' has more of London in her; and the tale of her escape from Southwark into country air for a single day, when she found

The air so clear and warm and sweet
It seemed a sin to breathe it,

is terribly pathetic. Poor Liz going back to die in the rank city,—

I could not bear a life so bright and still,
All that I want is sleep,—

is a very sad, a very true touch of nature. 'Nell,' too, has also much of London in it,—a powerful and tragic poem, showing none of the silver lining of the cloud. But these are the exceptions, not the rule. 'Barbara Gray' might have lived her little life in Leeds; for it is not in any one place that people "suffer and grow strong." Again, the emotions stirred in the reader's heart by such a tale as that of 'Jane Lewson' would be no less solemnly pathetic if the scene of her temptation and repentance were laid in Exeter or in Dublin. The interest roused by these domestic dramas is never local and narrow, but rather human and broad.

What appears to have struck Mr. Buchanan in the tragedy of London life, is the sin into which poor men and women fall from habit, from necessity, from affection, not from vicious desire; and to this error in the passions, which is seldom or never a misleading of the passions, he gives a singularly intense and tragic utterance. Of this little drama in humble life, we have a bright example in 'Barbara Gray,' a poem which we can happily quote entire:—

"Barbara Gray!
Pause, and remember what the world will say,"
I cried, and turning on the threshold fled,
When he was breathing on his dying bed,
But when, with heart grown bold,
I cross'd the threshold cold,
Here lay John Hamerton, and he was dead.

And all the house of death was chill and dim,
The dull old housekeeper was looking grim,
The hall-clock ticking slow, the dismal rain
Splashing by fits against the window-pane,
The garden shivering in the twilight dark,
Beyond, the bare trees of the empty park,
And faint gray light upon the great cold bed,
And I alone; and he I turn'd from,—dead.

Ay, "dwarf" they called this man who sleeping lies;
No lady shone upon him with her eyes,
No tender maiden heard his true-love vow,
And pressed her kisses on the great bold brow.
What cared John Hamerton? With light, light laugh,
He halted through the streets upon his staff;
Halt, lame, not beauteous, yet with winning grace
And sweetness in his pale and quiet face;
Fire, hell's or heaven's, in his eyes of blue;
Warm words of love upon his tongue thereto;
Could win a woman's soul with what he said,
And I am here; and here he lieth dead.

I would not blush if the bad world saw now
How by his bed I stoop and kiss his brow!
Ay, kiss it, kiss it, o'er and o'er again,
With all the love that fills my heart and brain.

For where was man had stoop'd to me before,
Though I was maiden still, and girl no more?
Where was the spirit that had deign'd to prize
The poor plain features and the envious eyes?
What lips had whisper'd warmly in mine ears?
When had I known the passion and the tears?
Till he I look on sleeping came unto me,
Found me among the shadows, stoop'd to woo me,
Seized on the heart that flutter'd withering here,
Strung it, and wrung it, with new joy and fear,
Yea, brought the rapturous light, and brought the day,
Waken'd the dead heart, withering away,
Put thorns and roses on the unhonour'd head,
That felt but roses till the roses fled!
Who, who, but he crept unto sunless ground,
Content to prize the faded face he found?
John Hamerton, I pardon all—sleep sound, my love,
Sleep sound!

What fool that crawls shall prate of shame and sin?
Did he not think me fair enough to win?
Yea, stoop and smile upon my face as none,
Living or dead, save he alone, had done?
Bring the bright blush unto my cheek, when ne'er
The full of life and love had mantled there?
And I am all alone; and here lies he,—
The only man that ever smiled on me.

Here, in his lonely dwelling-house he lies,
The light all faded from his winsome eyes:
Alone, alone, alone, he slumbers here,
With wife nor little child to shed a tear!
Little, indeed, to him did nature give:
Nor was he good and pure as some that live,
But pinch'd in body, warp'd in limb,
He hated the bad world that loved not him!

Barbara Gray!
Pause, and remember how he turn'd away;
Think of your wrongs, and of your sorrows. Nay!
Woman, think rather of the shame and wrong
Of pining lonely in the dark so long:
Think of the comfort in the grief he brought,
The revelation in the love he taught.
Then, Barbara Gray!
Blush not, nor heed what the cold world will say;
But kiss him, kiss him, o'er and o'er again,
In passion and in pain,
With all the love that fills your heart and brain!
Yea, kiss him, bless him, pray beside his bed,
For you have lived, and here your love lies dead.

All that story is made up of coarse and common stuff. A plain woman is wooed, not "honestly," by a poor little dwarf, who is not good and pure, even to the woman who is in love with him; he casts her off; and dies like the dog he is. That is the truth, told as a respectable parish officer would put it. Does the parish officer's view contain the whole? Is there not another side to this dismal truth? The poet says so; and in his utterance, while he never tampers with the sin and shame, the poor human frailties get such hearing for themselves, before just and true men, as they might never gain from their own halting powers of speech. It surely is a gain for human nature when genius puts a new interpretation on the things which seem amiss. Consuelo going out, in her failing years, to be again a wanderer of the streets and lanes, is a passionate appeal to our noblest feelings for the homeless poor; and so, in its degree, is this frantic kiss of Barbara Gray on her dead and unworthy lover's lip an appealing note of pity in behalf of all who have gone astray.

It is the life of London—and mostly the life of poor and erring people—which has drawn the poet into song: into giving a musical utterance and a recognized poetic life to the deep and sombre morals which underlie so much of what looks like the dull and common waste of sin.

This service of humanity against itself (so to say) is one of the highest ministries on earth. We are apt to forget that we have the poor always with us. We are still more apt to forget that the poor throb with the same pulses, with the same wind, suffer under like temptation with ourselves. We are most of all apt, when we catch the poor tripping in their affections, to consider their conduct as a liberty, an intrusion, and to preach and lecture them upon their gross impertinence in being wicked. That social habit, of which Shakspeare gives us so many hints—the habit of measuring offences by the offender's station, so that what is a merry jest in the Captain is rank blasphemy in the subaltern—is with us early and late; and it is well, we think, that clearer and deeper-seeing eyes should sometimes peep beneath our social draperies and tell us what we have been lazily content to hide. A little fresh, original truth is sometimes good.

We may be wrong in feeling, and if so, heaven forgive us; but we sometimes think that poor Barbara Gray in her sin and shame has still a good deal of the angel left in her.

The story of Jane Lewson is another of these trials of courage which have scarcely ever yet found a voice. It is a tale of sin and of the suffering sin brings with it; but the weight of the story lies in the picture of endurance shown by the weak and failing woman when the better side of her nature comes to the fore. As the poet says—

nobles spoke, and common men heard and obeyed. Parr, when he stood before Charles the First, had seen feudality well-nigh worn out; he was in presence of a king who was about to lose his throne by a successful exertion of popular right, and all around him were echoes of voices uttered in spite of the attempt of governments and servile nobles to suppress them. All through Parr's long career, England was becoming less Norman and more English. The public voice, which formerly found expression only through some solitary individual who would dare address a word of monition to a king, and who found himself under the gallows for his pains, now went up in audacious chorus, clear and unmistakable through the air, not yet disloyal to the King, but determinedly loyal to the people. Democratic as things were growing on one side, there was much of the Norman element existing, or under attempt at revivification, on the other. When Charles sought to resume the ancient forest rights of the Crown, as a mode of raising money, his minister regretted that those rights had been invaded since the Norman princes had passed away. For alleged encroachments on the royal forests, lords and gentlemen were mulcted in thousands of pounds in a right ancient Norman way. Although only the wealthy suffered, men of smaller means put their hands on their purses and their fingers on their lips. They spoke louder, at least the Puritans and lay-nobility spoke louder, when Dr. Juxon fell from the skies, at Laud's invitation, and was landed in the office of Lord Treasurer. That a churchman should hold this office seriously offended the party of progress. In old Norman times such a circumstance was common; but a clergyman had not held such a post, they said, since the days of Henry the Seventh. Laud so little heeded public comment on his acts, that he added to Juxon's employments that of looking after the navy, and thus a bishop came to hold the office of First Lord of the Admiralty.

But "looking after money" was the great object of government. Laud's writ for "ship-money" (the second writ, less in accordance with ancient precedent than Noy's) was issued, —and resisted. Constables refused to collect names or make levy, and harassed and disgusted sheriffs were ordered to do constables' work. The people, when applied to, asked for the authority to levy taxes without sanction of Parliament, and that not being forthcoming, the bolder among them refused to pay. In assessing the tax, the sheriffs exhibited the utmost unfairness, fixing the rate, not according to a gentleman's income, but according to how much he spent of it. If he saved, he must save for the King!

Then when the ships were got and sent to sea, to display the King's naval power, or protect commerce, they were found comparatively useless. Light piratical vessels, well armed and well handled, snapped up our merchantmen, and shook their sails in laughing scorn at the heavy royal vessels, which could not overhaul them, but by which His Majesty's big ships were taught to go. Very dull and dilatory and damaging to English interests was the Navy Board. "In those days," says Mr. Bruce, with a touch of humour that his readers will appreciate, "it seems to have been difficult to get the Admiralty to adopt any course which was out of their common beaten track." Even when the Earl of Northumberland—he who subsequently had the custody of James, the son of Charles the First, at Sion—had the command of the fleet raised under the second levy, and came in sight of the Dutch men-of-war, he could only report, "They are so well built

and fitted for sailing, that I can never come near when they have a mind to avoid, unless by chance."

The expense, the failures, and the consequent increase of the King's debts, in spite of unscrupulous and extortionate means to raise money, only increased the royal embarrassment and the people's want of sympathy for it. One poor woman, Hester Rogers, was thrown into prison for not paying, or rather for being unable to pay, 3*l.*, the amount of her assessment due to the King. At that moment the King owed to that very Hester Rogers, the widow of his own jeweller, 2,000*l.* for jewels delivered to the King; and 1,248*l.* were still owing for jewelry supplied to his royal mother! Royal fishmongers, royal poulterers, royal silk-mercers were in the same condition of King's creditors, without hope of payment. Charles's own household were not paid, and one consequence was, as Mr. Bruce remarks, that "Every one became patriotically solicitous for the welfare of some particular class of the community, and endeavoured to promote it in the most ingenious ways." Unpaid wet-nurses to little princes petitioned to be allowed to grant warrants of the perfection of silk stockings and waistcoats, the sellers paying them for the warranty of the goods at a certain sum on each article. Other wageless servants petitioned for similar grants, which came to nothing less than this, namely, that the public, who owed them nothing, should be compelled to pay them an immense sum, because the King would or could not pay them at all!

Between heavy and unjust taxes, and the cruel vagaries of the clerical Courts of High Commission, the vessels of the State and Church were rapidly drifting among the breakers. "Few defendants were able to escape from the multiplied meshes which the Court wove around them. Once within its grasp for anything that was deemed an offence by the authorities in Church or State, submission or ruin were the only alternatives proposed, and happy was the defendant who did not discover that ruin could not be avoided even by submission."

This volume affords several examples which illustrate this assertion. It is quite as rich in miscellaneous matters that are interesting as illustrations of life and society. In Charles's reign, for instance, the ancient legal process of compurgation was in full force. If a Court of Law entertained a doubt as to the alleged guilt of a person tried before them, such person was allowed to go to his parish church for compurgation. There his compurgators—men who were required to have had long and intimate acquaintance with him—appeared; and if they swore that the oath the alleged offender had taken in support of his innocence was the oath of a man incapable of taking a false one, the individual who enjoyed this good opinion on the part of his neighbours was restored again to his good name. Our evidence to character is only a remnant of this old process of compurgation.

We have besides glimpses of the King, and of his nephews, the young Prince Elector and Prince Rupert, of whom his mother expresses "her fears that he will not make so many compliments as Lord Carlisle," and her hopes that "for his blood sake he will be welcomed, though she believes he will not much trouble the ladies with courting them, nor be thought a very brave garçon."

The able, courtly, but unparalleledly extravagant Lord Carlisle was then about to cease paying compliments, and being laughed at for the excess of the gallantry by which they were spiced. This old favourite of old King James had been known as Lord Hay, Viscount Don-

caster, and lastly as Earl of Carlisle. He was Lord Hay before he was, according to law, Baron Hay. Nine years before he gained the peerage title, James created him, by patent, A.D. 1606, Lord Hay for life, "with precedence," says Nicolas, "next to Barons, but he was not to enjoy any place or vote in Parliament." It was one of those anomalous titles which was last granted in the case of Lord Wensleydale, who was created a peer for life, but with place and vote in Parliament. It was shown, however, that the Crown had no right to create life-peerages, and the title of Wensleydale was made hereditary.

For mishaps in the Navy,—among these, the sinking of the *Anne Royal* in the Thames, under circumstances not unlike those of the *Royal George*, at Spithead,—for family quarrels, people's ailments, religious squabbles, actions showing a general tendency to oppression and unrighteousness, and fierce contests about very small matters,—we must refer our readers to the volume itself. A few entries correct the general error as to the time of day when plays were then represented. It is generally considered that there was only a day performance; but here we meet with a company at Canterbury who acted not only at day but at night also, not finishing much before midnight. This was a swaggering company, that had no respect for the mayor, would play when it liked, and were a magic of potency to all the ecstatic maid-servants in Canterbury.

It would be unjust to Mr. Bruce if we were to close this notice without acknowledging the zeal, industry, judgment, and ability by which the volume is marked throughout. The contents of the calendared documents are defined with fullness and precision; the Preface is a valuable historical paper; and the Index, without which such volumes would have little value, is a work the labour of which few may conjecture, but the worth and importance of which every one who consults it will fully appreciate.

A Century of Painters of the English School; with Critical Notices of their Works. By R. Redgrave, R.A., and S. Redgrave. 2 vols. (Smith, Elder & Co.)

THE Messrs. Redgrave have done well to supply a want in the Art-literature of this country, by producing a connected history of painting, "and of the institutions founded for its promotion in the last and present centuries." Large portions of the subject remain to be filled up by students of special knowledge, and, what is a necessity of the case, many new opinions to be advanced as to the relative importance of the artists herein named, the respective values of their productions, and their proper places in the public eye and memory. Many corrections and some extent of revision are required to bring this work up to the highest recent standard of knowledge in Art and Taste; these are, however, demanded rather in matters of detail than of principle, and may readily be effected in a second edition. The first issue of any book which treats of so large and intricate a subject as this cannot be other than, to a certain extent, tentative in its kind.

With regard to the authors' secondary aim, to treat of Art-institutions in this country, the reader must bear in mind that their treatment of all subjects wherein the Royal Academy is concerned, not only as a body, but by its individual members, is that of the warmest friendship and most perfect loyalty. Not only are the Messrs. Redgrave the consistent advocates of the Academy, but they are persistent in their office as such,—needlessly so, indeed,—and so thoroughly bent on expressing what are

evidently sincere feelings of confidence in the wisdom and success of the institution, that their zeal sometimes leads them to defend it against shadows, and re-slay the slain. Charges against the body which, whether true or false, long ago went out of date, are replied to again, sometimes fortunately, at others not so; but in general to no good or needful purpose in the matter of bygones. We are far from intending that our authors' defence of these as well as current matters is undertaken from minor motives, or that, with regard to the latter, it is always ineffectual, but desire to remind every reader of a work which has so high a value as to become a text-book in its way, that the compilers are friendly—over-friendly—to one side of all questions interesting to that academical body which in them has found far abler advocates, and much more candid, because less subservient, defenders than Mr. Sandby appeared in the almost abortive 'History of the Royal Academy.'

No means for comparison exist between either the critical or the literary values of the respective productions of the Messrs. Redgrave and Mr. Sandby. The latter had the task, and few of the good qualities, of a partial chronicler, with but small pretensions to critical ability. Mr. R. Redgrave has very remarkable critical powers, and thoroughly understands Art as Art,—that is, his technical knowledge enables him to discriminate where persons less practically qualified are likely to be at fault. To him, doubtless, we owe the frequent lucid and apt disquisitions on technical matters, and the pictorial criticisms which give the greater portion of its value to this book. Mr. S. Redgrave probably contributed most of the historical and anecdotal parts. He has done so with such vivacity and care as to remove the whole to a category very different from that which includes Mr. Sandby's work. The subject of the brethren is historical, and so large that their candour was allowed full play in dealing with artists and their pictures, which either preceded the Academy, or have since remained outside its fellowship. They have exercised powers peculiarly fitted for their task, even more liberally than might be expected, when the leaning to which we refer is admitted; nevertheless, that leaning is generally present, so that, despite their candour and occasional magnanimity, the student accepts the opinions of matters anterior or indifferent to the academical institution with less reserve than is due to others more recent or less remote.

Apart from our duty to note, for the reader's benefit, the loyalty of these authors, it would have been needless here to refer to Mr. Sandby's book about the Academy, or in any way to bring it in connexion with this one, if the fact were unworthy of observation that, within as many years, four bulky volumes have been published, having for avowed or apparent major and minor objects the defence and exposition of the Academy. Doubtless the works of these very unequal champions are the results of that internal stir and ardent—if well concealed—resentment of the body, which have been provoked by the charges and criminations of its critics and enemies, lay, literary, and professional. It suits the convenience of the Academy, or that of its advocates, to adopt what may be called forts armed with heavy artillery for defence, and to remain within for the most part of the war, out of sword-cutting, rather than to spend energy in fighting enemies, one-half of whose missiles fall short, while at least two-thirds of the remainder are aimed by persons ludicrously ignorant and childishly inconsiderate. One result of this policy is, that the latter class of challengers, by astute em-

ployment of their blunders, may be converted into buffers as serviceable as those cushions and stuffed bags which so often balked antique battering-rams, and caught the blows of the catapults. Usually, too, the dust raised by ill-guided assailants is useful for those in defence, and to hide some of the weak points of the citadel. Hence, it is not a little amusing to the reader of this work, when he observes how, out of the smoother and from under the seemingly close habits of the Academical Gemini, arrowy answers are sent, and not the less vigorously aimed because they are accompanied by courteous smiles, and blandly joined with "We submit," "We are informed, however," or "It may be said, we think," and the like. Probably the authors, so hearty in their loyalty, are not aware how often they appear as champions, how frequent are their rejoinders. Assailants of the Academy will respect the convictions of these gentlemen, and do so freely, because of the great victory not long since obtained over the blind and stubborn old conservatives of the body, which is here defended by men not illiberal. This victory has admitted to the very heart of the academical fortress those younger soldiers, the Associates, who were before placed between the walls, and not so trusted as must be their case in future.

The text begins with a lucid sketch of Art in England of old, and gives by no means liberal measure of applause to Englishmen as artists in the Middle Ages, whether as sculptors, painters, or architects. "Whatever may have been the condition of English Art prior to the commencement of the sixteenth century, its historical records are slight. They are confined to such particulars as may be found in the accounts of the Crown, the household expenses of the nobility, and the chapter records of the cathedrals, and frequently relate to the magnificent tombs, shrines and chapels which in those times were erected to the memory of the great. Now and then an English name, either as painter, sculptor or architect, appears; but the majority so employed were foreigners brought here to execute some particular work, and occasionally induced to prolong their stay." So say the authors; so said Walpole or Vertue before them. We take exceptions to these statements from first to last. If the distinctive character of architecture, sculpture, and, so far as we know of it, painting in this country in the mediæval period was less marked than it is and insufficient to declare the works in each of those arts to be proper to the country and specifically different from those of the allied Gothic nations of Spain, France and Germany, almost all the records we have would declare the contrary of this denial of originality in design to our forefathers. From William the Englishman, who laboured grandly though rudely, as was the way of his time throughout Europe, at Canterbury, to the architect and sculptor who wrought the Angel Choir at Lincoln,—a man who, curiously enough, was styled French by the English antiquaries until M. Viollet-le-Duc declared him to have been English,—the story of Mediæval Art in this country is the same. C. R. Cockerell, R.A., could have told the Messrs. Redgrave a tale about the sculptures at Wells and elsewhere, which they would not reject had they heard it. It can hardly be doubted that these carvings and this architecture were the works of natives. If for no other reasons, we may assume so much from the facts, 1, that they present peculiarities not found elsewhere, proper to the country alone; and, 2, that the Continent possessed nothing comparable with them until some time after. We do not know where records of the mediæval arts are to be sought

or expected, unless among the archives of the kingdom, great bodies, ecclesiastical, municipal and baronial; these are ample. We do not, however, need written records to show that Art flourished here, as on the Continent, before the Latin period. We have in the great and noble architecture and sculpture of that period—the remains of which, with their subsidiary art of glass-painting and decorative carving, are scattered over the whole country, and never wholly absent even in the poorest village churches, and myriads of fragments of design from earthen tiles to ivory crooks—a thousand times more than enough to satisfy all but wilful incredulity that a people, which was apt in high Art and deeply versed in the beautiful, live in these shires. Are not our cathedrals works of art, nationally characteristic, and by Englishmen? What are their sculptures?

William of Sens, who, at Canterbury, began what his namesake did not merely copy, could hardly be called a foreigner in those days, or if so, we must, on the same ground of the names being territorial, admit to be English the large numbers of sculptors, painters and architects who are so styled. Walter of Dunstable, Alexander of Abingdon, sculptor, and John of Battle, architect of the Eleanor Crosses, Richard of Reading, William of Padrynton, William of Walsingham, John de Cotton, Hug of St. Alban's, painters in St. Stephen's Chapel the last of whom, in 1350, was appointed to find assistants, not on the continent, but in the home counties, and found them there. Do the authors imagine that Gilbert Pockerig and John Elham were foreigners? We find William Torrel, who wrought the effigies of Queen Eleanor, named, as many generations of Englishmen have been named. So far is from being true that only now and then an English name occurs among the artistic records of those days, the case is precisely the reverse and only now and then does a foreign name occur. There is but one Domenic de Reynolds of the rolls of the Eleanor Crosses; but one French hand was detected by Mr. Scott—the style of the carvers is distinct enough to enable us to decide whether they follow the French or the English manner—among those who worked for King Henry in Westminster Abbey. We know at sight an Englishman from a foreign illumination, embroidery, or statue. These works were not inferior, though different from others. The burden of proof to the contrary of the facts lies with those who seem to believe that the English of mediæval times were barbarians.

In the second chapter we have a masterly study of Hogarth, which is at once vigorous and true in all its bearings, the best known to us as regards the man or his pictures. In writing thus our above-named reserve is not to be forgotten; this is preceded and followed by capital accounts of Art in the times proper to the subject. Had the authors enjoyed the opportunity of examining those pictures by Robert Walker, which, thanks to one of them, at least, we now note at the National Portrait Exhibition, they would have allowed him more applause than that his works "are not without merit." He was certainly not an inferior artist to Dobson, of whom much has justly made. It is hardly fair to say Hogarth was opposed to public exhibitions of pictures when it is true that his own and friends' work at the Foundling Hospital formed the first public gallery in London, many years before the Academy was in existence. He strongly objected, and with reason, to the displays of dilettantism and conceit which formed so large a portion of the popular art of his time. The immense preponderance of the able artists who have been formed independent of the

Academy goes far to support Hogarth's opinion of the futility of such educational institutions; these include Hogarth himself, Reynolds, Copley, Flaxman, Constable, Gainsborough, Turner and W. Hunt, who can hardly be said to owe much to the academies. In fact, Mulready, who was Varley's pupil also, is the only first-rate deceased English painter who owed much to the Academy.

We hoped to learn more of Gandy, of Exeter, than appears on page 114 of the first volume before us. There is a good thing yet to be done by adding to the particulars Northcote gathered of this artist and published as a sort of appendix to his 'Life of Reynolds.' Reynolds's estimate of the man as a painter would alone justify this, if the pictures Gandy left were less remarkable than they are. Apart from the curt treatment of a man of acknowledged ability, peculiarly interesting on account of his great influence on Reynolds, and as supplying a link in the chain of Art in England which bound Vandyke to the first President of the Academy, the account of Reynolds is candid, valuable, readable and complete. The analysis of Gainsborough, his merits and manners, is a capital and terse piece of criticism; the preference above Reynolds which the writer avows for some of his pictorial qualities is well grounded and boldly put forth. It is rather too much to say (p. 199, vol. 1) that since the death of West religious subjects have been eschewed in this country; probably the critic meant to limit the application of this remark to his brother Academicians, and he overlooked outsiders. The exceptions of Hilton, Eddy, Haydon and Martin are not sufficient to be made in this case. For an exception we were under the impression that Mr. Holman Hunt had produced two or three pictures of profound religious purport, such as will sustain, not only in their subjects, but in the art employed for them, a tolerably successful comparison with the best of West's pictures. The authors do not exclude contemporaries from their consideration, either at this point or at others. Contemporaneous principles are freely discussed. Why make this observation so sweeping?

Romney's failings and follies are rather freely dealt with, not probably more so than they deserve, but certainly to an extent and with a force which is out of proportion to his place in this book or that he held in Art. We feel dissatisfied with the estimate of Romney as an artist,—the only case of the sort which has presented itself within the scope of our reading. Romney was not an R.A., and, what was worse for his case here, declined to be made one, in no courteous or grateful manner,—a folly on his part which cannot be too much censured. It is just to say that other culprits have not their errors overlooked by the writers, although they were, in life, members of the Sacred Band itself. Yet a more flagrant case than Romney's is dissected with less care and more tersely censured. This case is more recent, it is true, and hardly yet healed over. It appears to be needful to produce it, in order to justify the long-continued neglect by the Academy of one of its most original and able members, neglect attempted to be accounted for on grounds of public morality, grounds which, however, as we are bound to declare, have not always been found under academical feet. This book is enlivened with anecdotes personal and characteristic to the artists described. Among these, the following is new. The painter with whose work it is associated is F. Danby: his 'Disappointed Love,' part of the Sheepshanks Collection, immediately in question. Mr. Redgrave, in company with Lord Palmerston and Sir G. C. Lewis, visited Mr. Sheepshanks,—

"Mr. Sheepshanks was, of course, present, and even more full of anecdote about the pictures than usual. The visitors paused before 'Disappointed Love,' struck by the deep gloom of the spot the painter had chosen for the scene of his story. Lord Palmerston remarked that it was a pity the girl was so ugly. 'Yes,' said Mr. Sheepshanks, 'one feels that the sooner she drowns herself the better. 'She always reminded me,' he continued, 'of the reply of a Judge on the Northern Circuit who had tried a girl for destroying her child. Some lady, who was deeply interested in the woman's fate, met the Judge at dinner, and ventured to say, imploringly, did he mean to leave the poor girl to be hanged.'—'Hanged, Madam!' replied the irritated Judge, 'hanged, Madam, certainly; what else is she fit for, she is so confoundedly ugly!'"

The authors are surely mistaken in the assumption which is thus indicated as to the effect of Danby's non-election to the R.A.-ship (vol. 2, p. 443):—"The road to fame seemed open before him. Why, then, was he disappointed? Why was Danby never elected to the full Membership of the Academy?" These are questions not for us to answer. We are certain, however, that the artist achieved all the fame he was likely to win, and that whether the "full honours" were his or not mattered little in the long run, on one side or the other.

In the event of republication for this work, we counsel the addition of copious references to authorities for details and historical matter. This is due not only to the reader and student who may come after the authors, and be glad of help at many points of research, but, in at least an equal degree, to those who went before the Messrs. Redgrave, and gathered so much of the material in compiling and assorting which they are at once fortunate and successful. Not to omit an example among several that present themselves, take the section about Blake, to which, for facts, this book is largely, if not wholly, indebted to Gilchrist's "Life" of the artist: no reference to the industrious and enthusiastic biographer is made, where it was surely due. We think scant justice is done to the frequency of high genius in that artist's works; his folly—insanity, it might have been—is not overlooked. We have a higher opinion of Leslie as a colourist than the authors express, and believe it was of far higher quality than that of Egg. While cordially accepting their high appreciation of the last-named painter, we should, on account of ill health, have allowed much for the morbidity of his later works. The criticism of Wilkie and his productions is remarkable for candour and brightness of treatment. As we have recently quoted a capital story from this book illustrating his intensely Scotch proclivities,—which are shown to have taken effect in something very like injustice and breach of faith,—it will not be needful to repeat the tale.

We must conclude our observations on this work with congratulation to the authors on the very large measure of success which has rewarded their efforts to produce a connected and concise history of Art in England. It is one of the most readable books of the kind. This is merit of the highest order. They have produced an immense mass of new thoughts,—a perfect mine of observation is described with perspicuity and the most obvious intention to be impartial. Even such vexed subjects as Haydon and the so-called pre-Raphaelites are candidly, if not quite conclusively, dealt with. The section about the Fine Arts Commission for decorating the Parliament House (chapter xv. vol. ii.) is eminently readable. Still more so is the considerable portion which deals with the history and practice of water-colour painting in this country. We suggest future enlargement of the Index, and a careful revision of proper names,

as desirable improvements to these pleasant volumes.

NEW NOVELS.

Felicia's Dowry. By Mrs. Fitzmaurice Okeden. 3 vols. (Hurst & Blackett.)

"All women write novels now, whether they can or they can't." We have copied, for the benefit of our readers, almost the only sentence worth reading in these three volumes, and one that might well be put as a motto in their title-page. A more melancholy warning, indeed, to ladies tempted

—in spite
Of Nature and their stars to write,

would fail to have any influence, because it would be absolutely unreadable. 'Felicia's Dowry' just falls short of this; yet, with all possible anxiety to avoid unpleasant emphasis, we can, in justice to our readers, pronounce it to be nothing better than a repulsive compound of grotesque twaddle, "genteel" vulgarity, and mild sensationalism. The snare into which its author has tumbled is an obvious one. Blinded by a tolerably ingenious imagination, she has overlooked, or never learned, the fact that such a gift, with all its worth, is not enough to secure a good novel. An outline of one is all that the most fertile imagination can achieve, without aids of other sorts. Acquaintance with the world and its ways is wanted too; knowledge of human nature, and of the links between cause and effect; above all, the power to delineate and describe, or, in a word, to fill in, as it were, the interstices of the plot with what is both pleasant and natural.

Of all these faculties Mrs. Okeden is utterly destitute; and the result is such a production as we have described. From "A Noble Lord" (to borrow the heading of one of the most singular chapters ever penned) to a school-boy, from a dancing-party to an elopement, from China to Peru, her survey of mankind is consistently unlife-like and inaccurate, and often repulsive into the bargain. We would not for a moment attempt to guess, nor do we care to know, whether it is want of experience, or want of observation of the scenes to which its author introduces us that must account for so serious a defect; but, whatever may be the explanation, we do venture to assure Mrs. Okeden, without hesitation and without reserve, that no county in England recognizes magnates or young ladies with manners and customs so queer as those of Elm Green and its neighbours; and that "live lords" (to quote our author again) and colonels in the army will equally enter their protest against the accuracy of her investigations into the habits of their species. Especially do we assure her that "doing the honours with regard to bitter beer" is not the invariable style of welcoming a nobleman on a first visit to a strange house, any more than the reply to an apology for not doing so is likely to be that "they had been drinking bitter beer at Colerworth ever since breakfast."

Lastly, as to the way in which the *dramatis personæ* talk to one another, and what they talk about, our author shall speak for herself:—

"About your toilettes, young ladies!" asked Mrs. Meriton, on . . . the morning of the dinner-party. "What are you intending to wear?"—"I suppose our white silks, mamma," replied Kate.—"No," said Adela. "At least, Kate can, perhaps, afford to wear hers; but for so very young a person as myself, I think white is too significant of the imputed bread and butter." Kate looked up and smiled. "Même, elle parle bien!" she said to her mother.—Mrs. Meriton smiled too. "Well, my dear, your pink, then?"—"I will wear," said Adela, "my blue tarlatan."—"As you please," her mother answered. "It is, indeed, extremely

pretty dress; and there is no reason why Kate, whose white silk is so becoming to her, should not wear it.—'And our coiffures, mamma!'—'For a dinner-party, nothing can be prettier than a little black velvet in the hair. But if,' added Mrs. Meriton, 'you elect for flowers, I must talk to Dawson' (the gardener), 'for I will have nothing artificial at a daylight dinner.'"

The only attempt at a joke in the book is a perpetually recurring allusion to a certain wonderful yawn on the part of Mr. Meriton—the father of the above-quoted young ladies. This, at all events, is neither unlikelike nor unreasonable.

A Life's Love. By the Author of 'The Heiress of the Blackburnfoot.' 2 vols. (Smith, Elder & Co.)

INSTEAD of being ranked with those authors who take to writing stories because they can do nothing else, the writer of this unsatisfactory tale must be regarded as one of those novelists who have merely selected a wrong field for the exercise of powers which, in the pursuit of other objects, might do the world good, if not brilliant, service. With a sufficient amount of common sense and right feeling, he has endeavoured to reproduce the old-world life of Glasgow as it was in the days when the scarlet-cloaked tobacco lords swaggered about the Saltmarket, demonstrating to their own satisfaction that the rebellious plantations would never succeed in their insane struggle for national independence. The book opens with a Hallowe'en festival in the house of Andrew Ramsay, Esq., tobacco lord and merchant prince, beneath whose roof are gathered elders and children of the best families of the city—little Johnny (afterwards Sir John) Moore; Tommy (in the after-time Major-General Sir Thomas) Monroe; Dr. John Moore, the author of 'Zeluco'; the brothers Foulis, and other members of the Hodge-Podge Club. In some respects the author's conscientious labour has not altogether missed its aim. The three most important classes of a society, scarcely a trace of which can be found in the Glasgow of our own time, are painted with some force and brought into suitable prominence. The heroine, an Erskine of Erskineland, the last of her branch of an historic house, is the chief representative of gentle birth and hereditary influence. Andrew Ramsay, the overbearing merchant, whose insolence is eventually broken by commercial ruin, and young Angus Ramsay, the selfish and dissolute soldier, who unites the vices of the *roué* and the blackleg, illustrate the evil qualities which, in accordance with the ridiculously unjust traditions of romantic art, are often assigned by novelists to manufacturers and traders who have raised themselves to great wealth from humble beginnings. The hero, Johnny M'Farlane, who expends the fervour of his chivalric nature in a hopeless pursuit of Erskineland's gentle heiress, is a Glasgow shopkeeper, whose father, mother, sisters and closest associates, no less than himself, demonstrate the brightness of the virtues and the number of the graces which romance ungrudgingly attributes to traders of the inferior sort, who mind their shops like honest men, pay proper homage to their social superiors, and have too much good taste to make themselves richer than the real old "quality" of their respective parishes. Here and there the author's delineations of these three classes are spirited and subtle; and certain touches in the picture of old Peggy's fidelity to her worthless and cruel lover indicate that the writer is not without moments of poetic insight and sympathy. But the story fails to create a permanent interest, partly from want of plot and

partly because the heroine disappoints the reader's expectations, but chiefly through the author's want of the story-teller's "knack." The poorest portions of the book are descriptive passages.

Elster's Folly: a Novel. By Mrs. Henry Wood. 3 vols. (Tinsley Brothers.)

'Elster's Folly' is a dull story; dull not so much from stagnation of incident as from the absence of all common sense and the languor that marks every page. The showman seems too much fatigued to move the wires of his puppets. Some of the characters bear a faded resemblance, in their circumstances, to portions of 'East Lynne,' though the story itself is altogether different. 'Elster's Folly' is named after the hero, Lord Elster, who is foolish in all his works and ways, and so weak and unstable that he does everything he does not wish to do at the bidding of anybody who takes him in hand. At the beginning of the story Lord Elster appears, deeply in love and still more deeply in debt. An estimable young woman accepts and returns his affection, and he is engaged to marry her. His good-natured elder brother, having received a writ intended for Lord Elster from the bungling sheriff's officer, undertakes the debts; and the young man might have escaped from all his embarrassments if it had not been for his own foolishness; but when a man is a fool, he is beyond all help.

He suddenly succeeds to the title and the estates by a fatal boat-accident, in which his brother is drowned, not without a suspicion of foul play, which promises one of the detective mysteries in which Mrs. Wood delights; but it comes to nothing. The new Earl succeeds to his brother's liabilities, as well as to the estates, the most serious of which is a terrible old dowager, calling herself his aunt, who has a beautiful daughter whom she intended the elder brother to marry; but, he being dead, she has transferred her intentions to his weak successor. She is represented as dreadfully ugly, old, wearing an ill-made flaxen front, which is always falling down upon her nose. She is noisy, violent, given to drink, dancing about like a wild Indian when angry, extremely vulgar in all her words and ways,—a person who would never be allowed to remain twenty-four hours in a decent family. Yet this dreadful old woman, who never was quiet, trepanns her victim into a "situation" which he is too irresolute to explain, assumes his attachment to her daughter, bullies, threatens, and tells lies, which the young man believes. Elster suffers himself to be led into a breach of his first engagement, and into a marriage with a woman he dislikes, hating her mother still more, and keeping her in permanence in his house. This gives the title to the book, 'Elster's Folly.' He is the victim of his mother-in-law; but he is a still worse victim to a mystery. The mystery which torments him more than his wife, or his mother-in-law, or the remembrance of his lost love, is that, shortly after his marriage to Lady Maude, he discovers that he has been quite accidentally, and unknown to himself, married before, and that his first wife is still alive, and in a lunatic asylum. He had been the victim of a trick played on him by a designing young woman and an unprincipled young man, who contrived that what he had accepted as a jest was a legal Scotch marriage. He does not seem sure whether she was even his mistress; but he had been paying, in the midst of his pecuniary difficulties, at the rate of 200*l.* a year for her maintenance. He conceals the fact as well as he can. But the difficulties and complications of his situation do not end with the death of his mad wife; for the

two children of the Lady Maude are clearly illegitimate. In his imbecile desire to escape trouble, he allows the old Countess to continue in his house, and to exercise her bad influence over the children. When at last he marries his old love, he makes her wretched by his injustice to her children, which creates a feud in the nursery, fostered by the old woman, his evil genius, because he says he cannot bring himself to correct the children he has so deeply injured. The consequences would have been serious, unless the death of the eldest son, and the discovery of the mystery by the old Countess, had not at last set him free. The old torment of a Countess is pensioned, as though she had earned his eternal gratitude, and Elster's folly comes to an end, in the book at any rate. Another mystery, hanging loose and flapping in the wind, accompanies the main story. Apparently the author at first intended to make use of it; but Pike, the wild man, and Mrs. Gum, with her "titterings," "dreams," and "quakings," are tiresome.

The Romance of Mary Constant. Written by Herself. (Saunders, Otley & Co.)

THIS story only fails of being a good one from want of force to combine the incidents of a plot and to work them out. There are good detached sketches of character and of domestic life in France and in a country town in England; but the author lacks strength to hold her story in hand and to continue it to the end. The incidents are huddled together, and the reader's interest is not safely secured for any of the characters, who look as if they would have been worth knowing if one could have seen or heard more of them. Mary Constant is a young woman left to herself, and with the reversion of a pretty sister who has been brought up in France by a French uncle and aunt. This young sister is betrothed to a Frenchman, who turns out to have been the faithless lover of Mary Constant's dearest friend. Mary Constant ruthlessly breaks off her sister's marriage, half ruins the prospects of the unlucky lover, but brings him to a manly sense of honour and generosity, so that he makes his own way in the world without the help of a wife's dowry; in fact, he improves all his virtues and leaves off all his faults, and comes back and offers himself to his original love, who forgives him, and they are married and have a tiny French *ménage*. Mary Constant marries her sister to an excellent young Englishman, but leaves herself a somewhat melancholy old maid in straitened circumstances; indeed, as she informs the reader, this romance is written by way of earning a modest pittance for her impending need. People read novels in the hope of forgetting the sordid ills and disagreeables of life, and they are not likely to be drawn to an author who talks about the want of money.

Lionel Merval: a Novel. 3 vols. (Routledge & Sons.)

WE never knew a year which produced so plentiful a crop of inferior novels as the present. The novels are not without a certain skill of composition and a pretension to occasionally speaking out of the author's own experience; but the average is mediocrity and heaviness,—utterly unsatisfactory to the common reader as to the reviewer. Inferior novels act on the mind like bad confectionery upon the digestive powers; they act on the intellect with a clogging, benumbing influence, and have a general tendency to turn it into foolishness. 'Lionel Merval' is rather more pretentious than the usual run of novels, but it is no better as a reality. Here is an extract taken at hazard:—"The face is the soul's index if you

mark it properly. Look at Titian's portraits; are they not exactly as you read of them in *Macchiavelli* or *Guicciardini*? No man or woman can long play the hypocrite without the colour and the lines coming through the mask. The beasts are no hypocrites. Compare the face of the tiger with the innocent lamb,—the eagle's ruthless eye and sharp nose with the mildness of the dove. The very flowers show their innocence and guilt on their faces. Look at the dark deadly nightshade that the monks planted beside those ruins, and the viscid, purple-veined henbane, and the fetid hellebore, offering its winter blossoms, and at the bright blue, frank-eyed speedwell, the meek violets, bending to earth, and the stately white water-lilies, spreading their purity to the eye of Heaven itself." The story, written to a running accompaniment of rhetoric, is about severed lovers, cruel parents, love of gold, fidelity, and a happy ending.

An Old Man's Secret: a Novel. 3 vols. By Frank Trollope. (Newby.)

Of course we are not going to reveal a secret that extends through three volumes. An excellent young man, who has the misfortune to be illegitimate, falls in love with a young lady of high position; he is disinherited, and turned out of the house of his protector; but a writing-desk is sent inadvertently along with his clothes and books to the humble home in which he takes refuge. A mysterious old Indian colonel, who takes a deep interest in both the young gentleman and the young lady, examines this desk, recognizes it as one that once belonged to a friend, and remembers that it had secret drawers. The spring yields to his touch, and gives to view "a casket, which, on being opened, was found to contain a number of diamonds of extraordinary size and lustre"; also "the miniature of a lady, with a lock of hair on the reverse side of the locket." The fortunes of a young man who possesses such a desk are amply assured, and we need pursue them no further—only we must say that novel-reading seems to become a more idle and profitless amusement every day. We hope that parents and guardians will issue a stringent ukase against light reading to the young people under their care—unless, indeed, it is of a much higher class than *'An Old Man's Secret.'*

Jamaica and the Colonial Office: Who Caused the Crisis? By George Price, Esq. (Low & Co.)

To those who would consign the controversy and inquiry concerning Mr. Eyre's doings to the whitened sepulchre prepared for them by the Jamaica Commissioners, it will seem that Mr. Price would have done better had he forbore to tell his story of the transactions that brought about the late deplorable disturbances in the chief of our West Indian Islands. Another view will be taken by those who have personal reasons for dissatisfaction with the Report and by the far larger number of persons who, like ourselves, without having sustained any individual injury from the ex-Governor's vigorous measures, decline to accept the dangerous doctrine that public servants should not be punished for political crimes which they appear to have committed through incompetence rather than through a malicious purpose to do wrong. Neither on our own part nor on the part of any of his censors is there any wish to deal more harshly with Mr. Eyre than the interests of public morality require. We are ready to admit that, in the circle of his private friendships, he is fairly entitled to those apologetic considerations with which the Commissioners and his more prudent defenders palliate his offences of omission and commission. But the charity,

which is productive of nothing save good when it influences men in their private relations, becomes a mischievous weakness if it impels us to smile at acts that have brought needless suffering on a large number of our fellow-creatures. To judge public men by the standard that we apply to private citizens is the part of ingratitude when they have done well, and of pernicious leniency when they have failed in the performance of duty. Just as the servants of the State are bountifully rewarded for merit, so they should be severely reprobated for demerit. If society seemed to be duly alive to the importance of observing this distinction between public and private offenders, we should be tempted to indulge in the luxury of compassion for a man who, unquestionably, has a claim on the pity of generous natures; but so long as powerful voices urge us to avow positive admiration for a career of disastrous incompetence, the time has not come for tempering justice with mercy. Moreover, if we could afford to grant Governor Eyre a free pardon, and re-instate him in the good opinion of the country, the interests of Jamaica—interests far more important than the welfare of any single individual, however honourable and good—demand that every matter connected with his administration of the affairs of that unhappy island should be brought to light and discussion. However much we desire to whitewash the man, we must know the whole truth about his policy, so far as it relates to the present condition of the people unluckily committed to his care. The Jamaica question cannot be hushed up and buried under Blue-books. If we attempt to dispose of the ugly business in that manner, not many years will pass before a similar difficulty in one of our many dependencies will cause us to regret our want of firmness and courage.

Giving scarcely so much as six lines to the riot and consequent acts of vengeance, Mr. Price confines himself to a statement of certain events which were, in his opinion, the chief causes of the dissatisfaction that unquestionably prevailed in the island during many months previous to the outbreak at Morant Bay. These events were the conspicuous facts of the Governor's policy; and to them—more than to the effects of the drought, which he admits to have been lamentable, or to the political grievances mentioned in Dr. Underhill's letter—Mr. Price attributes the general discontent. That Mr. Price is a witness who deserves attention is certified by his long residence, his public services, and his high position in the island. Jamaican politics must have been studied by a man who, during the course of twenty-two years spent in the colony, acted on the executive committees of three successive governors, and filled the important office of Custos of the Precinct of St. Catherine. Moreover, the tone of the volume indicates that the writer is a man of moderate views and liberal temper. So far as an Englishman, after passing nearly a quarter of a century in the West Indies, can be an unprejudiced and fair politician, Mr. Price may be credited with honesty and freedom from party rancour. As a churchman he exhibits a certain degree of jealousy and dislike of the Baptists; but his religious sympathies leave him at liberty to criticize with considerable severity the conduct of the Jamaican clergy. Differing from Dr. Underhill, he thinks that too much has been said about heavy taxes imposed upon the negroes; but he concurs with that influential minister in maintaining that the blacks are by no means so black as they are represented by their detractors. For Mr. Gordon he expresses cordial respect and poignant regret; and this testimony is all the more noteworthy because

on political questions he was one of that luckless gentleman's opponents. The member of the Legislative Council who introduced the Flogging Bill, which Mr. Gordon denounced as a barbarous and brutalizing measure, cannot be charged with an excess of tenderness for the inferior race; but though Mr. Price has on various occasions used his influence to put the negroes under severe discipline, he takes a hopeful view of black humanity, and maintains that the Jamaican peasants will, in most respects, sustain comparison with the inferior classes of Englishmen. "I am not a philanthropist," says the author, "for I introduced in the Legislative Council the Flogging Bill so objectionable to the late Mr. Gordon; for which, however, none clamoured more loudly than these very mountain settlers, for the protection of their growing provisions. I approved, too, of 'rice-bag breeches,' as being best suited for the work the convicts had to do, and thought the shot, crank and treadmill to be as likely to produce a salutary effect on black as on white convicts. I am, therefore, not a friend of the black, but I desire to see him dealt justly by. I think him capable of improvement, for I cannot ignore a fact proved by the returns annually laid before the Jamaica Legislature, and accepted in most countries as proving progress in a people,—that he annually increases the exports of his minor products, and his power of consuming imported articles; and that he has hitherto annually paid his portion (and no small one) of the interest and sinking fund of his debts. I know his very many grave faults, but I know faults as numerous and as grave in Englishmen and Irishmen of the lowest class, who claim a much higher degree of civilization." Speaking of the superior and prosperous blacks, Mr. Price testifies without reserve to their loyalty, their respect for order, and their readiness to submit themselves to the guidance of the authorities.

To the late Governor's neglect of duty, and his vexatious opposition to the majority of the islanders, Mr. Price attributes the disaffection which, until terror had united the whites against the blacks, prevailed quite as strongly in the superior as in the inferior race. "For Mr. Eyre's undoubted activity and zeal in suppressing the outbreak," says Mr. Price, "I readily accord him credit,—that credit which I should accord to the man who, having filled my house with gunpowder, set fire to it, and, to prevent its being blown up, pulled it down." Certain it is, that on assuming the government of the island, in March, 1862, as the *locum tenens* of Governor Darling, who had received leave of absence, Mr. Eyre found all classes well disposed to himself and the Government which he represented; and that before twelve months had elapsed he was cordially hated by every section of Jamaican society, with the exception of some half-dozen families who used him as a tool for political ends. As a temporary chief of the colony, he was especially bound to keep things as quiet as possible, to hold party conflicts in suspense, and to manage matters so that, on his intended return, Governor Darling might find things pretty much as he left them. Scarcely, however, had he entered upon his office than he made haste to irritate those whom he ought to have conciliated, to agitate in quarters where agitation was most likely to produce disaster, and to draw upon himself the suspicion and hostility of every class in the colony. Whilst he thus made himself universally hated, he contrived to set his neighbours by the ears.

Mr. Price's indictment of the Colonial Office comprises several counts, of which the most important are: that it erred in placing

Jamaica under the control of a man who had shown no special qualifications for such high employment; that, having received the fullest demonstrations of his incompetency during the time whilst he acted as Governor Darling's lieutenant, it should not have made him Governor-in-Chief; and that, between the date of his higher appointment and the summer of last year, the Colonial Department made a series of unhappy mistakes in supporting the Governor, who had rendered himself a just object of hatred to the majority of his people. Upon the conduct of the late Duke of Newcastle and his successor we offer no opinion; but it is worthy of observation that, whereas Mr. Cardwell is charged in one quarter with sacrificing Mr. Eyre to popular clamour, he is accused of the exactly opposite fault by one of the few Jamaican politicians whose opinions on recent occurrences in that island can, under existing circumstances, be regarded as authoritative.

OUR LIBRARY TABLE.

Paul Pendril; or, Sport and Adventure in Corsica. (Bentley.)

WHY the muscular part of creation (thus to designate sportsmen) should be so prone to sentiment and fine language when they put themselves on paper, we have never been able rightly to understand. But the fact is so. The successors of racy old Izaak Walton are few and far between. When the fraternity who diversify their mighty and moving achievements on flood, fell, and fiord (since Norway has become fishing-quarters),—their tales of the chase, whether the scene be Scotland's Highlands, the Adirondack, or the Eastern jungle,—with sketches of human character, such characters bear a curious family likeness one to the other. Among them is sure to figure the adventurous pioneer sportsman, sometimes as simple as Leatherstocking, sometimes bearing the questionable reputation of contrabandist or poacher, in which case he is sure to be full of dry, good stories, all amazingly cut to the same pattern. There is always some country beauty—oftentimes an innkeeper's daughter—who distracts the irresistible one of the party from the great and grave duties of the expedition. Corsica, the savage and revengeful, with its boars and its *mouflons*, might have been expected to add some novelty to this monotonous series of wild open-air books; but, so far as the island is represented in 'Paul Pendril,' it fails to do so; and, by aid of a map, a few sketches, a guide-book, and a dashing pencil, expert in the sky-blue-scarlet style of rhapsodical painting, the book might have been written in Great, or Little, Britain, for any flavour or freshness it contains. The sporting adventures are alternated with the love-chase, by one of the party, of a contrabandist's daughter, to whom the shabby fellow has no intention of offering marriage, though he deludes her by promising it. This is a perilous game to play in the home of the "vendetta," as Temple finds to his cost. But the adventures, whether of healthy or unhealthy sport, are told in a turgid, pretentious style, which deprives them of reality or interest; and we dare not recommend the tale of them as an addition to the libraries of yacht-cabin or shooting-box.

Poultry as a Meat Supply; being Hints to Henwives how to Rear and Manage Poultry Economically and Profitably. By the Author of 'The Poultry Kalender.' (Edinburgh, Nimmo.)

THIS little work has been written with the desire of making some modest suggestions for mitigating the deficiencies caused to our meat supply by the rinderpest. Not that poultry can ever compensate for the lack of beef and mutton. But the author makes out a good case for the increase of poultry as a profitable investment, requiring but little capital and only moderate care and intelligence. The book is well and sensibly written; the directions are clear, and the promises held out very probable. To all interested in the subject, this book will be useful; and the anecdotes of hens and other fowl

which make it entertaining. Those persons who do not mind having their morning slumbers broken by "the lively din" of crowing cocks and clucking hens may be induced to set up poultry even in their own house-yard; but let them have compassion on their neighbours, and keep the creatures closely shut up until the "proper hour to rise" calls people from their beds.

England at the Time of the Reformation—[England im Reformationszeitalter, Vier Vorträge, von Wilhelm Maurenbrecher.] (Williams & Norgate.)

THESE four lectures, delivered at Bonn, are founded on thorough study of the rich materials lately brought to light, as well as of those which have been longer before the world, and of the early as well as the modern historians. Dr. Maurenbrecher has profited by the example of the recent writers whom he quotes, so as to be thoroughly dramatic, and to select with much care the details needed for the general effect, while leaving less important matters in the background. As a lecturer he must, of course, be rather compressed; but in his notes he sometimes enters into the discussion of more complicated questions, and deals happily with conflicting authorities. We think he errs in attributing too much importance to the popular theory of self-government as co-existent with English history—a theory which he refutes elaborately, but without adducing one instance of any man of eminence having held it. He will find that many have preceded him in the refutation.

Hymn-Writers and their Hymns. By the Rev. S. W. Christophers. (Partridge.)

THERE are few better subjects than Sacred Poetry. It is one, moreover, capable of infinite diversity of treatment. As handled in the form of picturesque essay, we cannot but recall the delightful papers by Prof. Wilson, among his happiest criticisms—free in fancy, exquisite in intelligence, reverent, without a grain of cant. Neither are Mrs. Browning's more mannered, but not less sincere and genial, contributions to what may be called the literature of hymnology, to be forgotten. The Rev. Mr. Christophers cannot rank with the two writers of genius just mentioned. He is foppish and fantastic, he dances before the Ark, and (unlike the great Psalmist) dances not "high and disposedly," but with trippings and simperings more absurd than appropriate. Take, as a specimen, his dedication "to the daughter of a home once rich in the music of hymns and psalms—to Emma, the wife and mother, whose voice and smile still awaken daily songs in the house of my pilgrimage," &c. Take, again, his prefatory self-recommendation "to the reader." His book, he tells that gentle and much-enduring person, "is something like another, as there are hymns in it; and yet it is rather unlike any other, in that it has the hymns interwoven with what may be called gossip, innocent, and it is hoped, not unpleasant gossip. * * Here and there is a chat about hymns, their birth and parentage. * * These pages make no pretensions to learning—that is left to the doctors. Nor do they aim at criticism—that belongs to those who go up the Rhine." What can the Rev. Mr. Christophers mean by the last allegory on the banks of—not the Nile? Gossip and chat about hymns! As well pretty tales taken from Ezekiel! Such an employment of language reminds us of a saying of one of the quaintest of musicians that ever drew breath, who, on hearing a young singer attempt Handel's "Rejoice greatly," observed that the air demanded "agility,—devout agility, that is." The increased leaning shown by our writers, especially essayists, when treating serious matters, towards that familiarity of style "which breeds contempt," cannot be passed over; least of all in a case like the present one. Though the Rev. Mr. Christophers "chats" and "gossips" about hymns with an amount of not devout agility which is wondrous in a reverend gossipier, he has still gathered material with a versatility of research sufficient to prove his right to put forth a new book concerning the hymn-writers. Almost all his specimens are good: many are unfamiliar; and he is expressly to be thanked as having vindicated the cause of the Low Church and Methodist hymn-writers, who, because of frequent

vulgarity and confusions of "the lilt" with the song in the House of Worship, have been subjected to wholesale ridicule and contempt by scholars who have assumed themselves to be "elect and precious." We are glad to meet Toplady and Wesley by the side of Addison and Heber and Milman and Keble.

Golden Leaves from the American Poets. Collected by John W. S. Hows. With an Introductory Essay by Alexander Smith. (Warne & Co.)

THERE is not much in the introductory essay either to admire or object to. The selection is copious and well made: the volume is handsomely printed and portable.

History of Delaware County, Pennsylvania, from the Discovery of the Territory included within its Limits to the Present Time. With a Notice of the Geology of the County, and Catalogues of the Minerals, Plants, Quadrupeds, and Birds. Written under the Direction and Appointment of the Delaware County Institute of Science. By George Smith, M.D. (Philadelphia, Ashmead; London, Trübner & Co.)

ONE of those elaborate local histories on which America expends so much labour and money, this account of Delaware County, Pennsylvania, will be accepted as a satisfactory record by persons familiar with the district. Liberally supplied with maps and illustrations, it is a good specimen of works of its not highly interesting or very important kind.

We have on our table *The Profits of Panics*; showing how Financial Storms arise, who make Money by them, who are the Losers, and other Revelations of a City Man, by the Author of the 'Bubbles of Finance' (Low).—A new edition of *The Money Market: what it is, what it does, and how it is managed*, by Henry Noel-Fearn, F.R.S. (Warne).—*Bank of England Charter Act of 1844: Results under Act 7 & 8 Vict. cap. 32, dated 19 July, 1844, showing every change in the Rate of Discount, the Stock of Bullion, Bank Notes in Reserve, and Amount held by the Public; with the price of Consols on the respective days of change, continued up to the 12th of May, 1866; also, the Variations in the rate of Discount charged by the Banks of England and France from the 19th of July, 1844, to the 12th of May, 1866*, by Charles M. Willich (Longmans).—*Principia in the Science and Errors in the Practice of Political Economy in the United Kingdom*, by Alexander Gibbon, M.A. (Ridgway).—*A Brief Essay on the Position of Women*, by Mrs. C. H. Spear (Trübner).—*The Two Faces, Human and Divine; or, the Face as it is, and as it will be, with Remarks on the Nature and Destiny of the Soul*, by James Maze Burbank (Published by the Author).—*A Chronological Synopsis of the Four Gospels*, designed to show that on a minute Critical Analysis the Writings of the Four Evangelists contain no Contradictions within themselves, by H. Grenville (J. R. Smith).—*The Liturgies of 1549 and 1662*, edited by the Rev. Orby Shipley, M.A. (Masters).—*The Moral Gulp: a twisted Man and the Brute: an Essay*, by Charles Wallwyn Radcliffe Cooke, B.A. (Macmillan).—Second Editions of *The Coal Question: an Inquiry concerning the Progress of the Nation and the probable Exhaustion of our Coal Mines*, by W. Stanley Jevons, M.A. (Macmillan).—*Mattie: a Story*, by the Author of *High Church* (Chapman & Hall).—and a Ninth Edition of Mr. Anthony Trollope's *Doctor Thorne* (Chapman & Hall).

LIST OF NEW BOOKS.

Waterton (Chas.), *his Home, Habits, and Handiwork*, 12mo. 10/6

WILLIAM HOOKHAM CARPENTER.

THE Keeper of Prints and Drawings in the British Museum died on Thursday, the 12th inst., at his official residence in Bloomsbury, at the age of seventy-five years, nearly twenty-one years of which period were passed in the public service. The deceased was son of Mr. James Carpenter, a well-known publisher in Old Bond Street; and for some time his partner in business. A considerable portion of his early literary life was occupied in the publication of a valuable edition of Spence's 'Anecdotes.' In 1844 he produced the well-known and excellent original work, 'Pictorial Notices' of Van Dyke and his contemporaries. This was the fruit of much special study in Art-history, and a welcome addition to the knowledge of the subject: it resulted in his appointment to the British Museum on the death of Mr. Josi. Mr. Carpenter's services to his department were of the most extensive and valuable kind. By his energy and good taste, the Print Room has immensely benefited, as regards the value, extent, and artistic importance of the acquisitions made under his direction: these include engravings by the Italian masters, once the property of Mr. Coningham; a very large number of Rembrandt's etchings, and those of other Dutch masters, from the portfolios of Baron Verstolk and Lord Aylesford; many fine works from Sir Thomas Lawrence's collection; and marvellous drawings by Michael Angelo, the last obtained by special purchase from the descendants of the great artist. In 1855 Mr. Carpenter was sent on a mission to Venice, and procured for the British Museum a remarkable volume of drawings by Jacopo Bellini. The collection of engraved British Portraits, formerly of minor importance, was much enlarged by him. The other day we recorded the purchase, for 600*l.*, at the sale of Dr. Wellesley's collection, of a Virgin and Child, by Raphael, which has peculiar interest in being the original study for the famous Garvagh Raphael, a picture not long since placed in the National Gallery. The Print Room was thus enriched at the recommendation of Mr. Carpenter, who procured a grant of 1,500*l.*, in order to the acquisition of treasures from this collection. This may be described as the last act of his official life. Personally, the deceased was highly and affectionately esteemed in his own circle, and noted for courtesy and kindness to all inquirers in his department. He married Miss Geddes, daughter of the A.R.A., herself a well-known and very able painter; was a trustee of the National Portrait Gallery; F.S.A., and Member of the Academy of Fine Arts, Amsterdam.

ARCHÆOLOGICAL CONGRESS.

THE Archaeological Institute, after holding a series of pleasant and useful congresses in our chief provincial towns, has had the daring thought of making a learned holiday in London. Up to this time, the wandering societies of learned men have shrunk from the trial of making this great city the scene of their autumn labours; not because London is less rich in curiosities, less attractive in social life, than its country rivals; but because it is so vast in size, so varied in population, so divided into ranks and classes. In a country town there is always a magnate—a Mayor, a Bishop, a Lord Lieutenant—to take the lead, and hold himself responsible for the success of any enterprise in which the locality embarks. In London there is no such personage. London is, in fact, too big for any management, even by the best committee that could be named. Still the archaeologists have set the example; and, so far as we can yet judge, with promise of a complete success.

The weather has been fine, with less of inconvenience from heat than might have been feared. On Tuesday the Congress was formally opened at Guildhall, by the Lord Mayor receiving the Marquis Camden, President, and the members. The usual welcomes were offered, and the customary speeches of compliment were made in return, by Lord Camden, the Bishop of Oxford, Mr. Beresford Hope, and Mr. Tite. After dinner a large party of members gathered in the Deanery, Westminster, where, under the care of Dr. Stanley and Lady Augusta Stanley, they spent a pleasant evening,

enlivened by glees and madrigals, excellently sung by the Abbey choir.

On Wednesday morning the Historical Section met in the Royal Institution, where the Dean of Westminster (President of the Section) gave a preliminary discourse 'On the Origin of Westminster'; after which Mr. E. A. Freeman lectured 'On the Architectural History of Waltham Abbey,' to which Abbey the members made an excursion in the afternoon. The Primeval Antiquities Section met in the Geological Museum, where Sir John Lubbock (President of the Section) delivered a lecture on Primeval Antiquities, which will be found below.

On Thursday, Mr. Beresford Hope delivered his inaugural address as President of the Architectural Section, in the theatre of the Royal Institution; and was followed by Dr. Guest 'On the Origin of London,'—a discourse which will be given next week. Dr. Birch delivered his introductory address as President of the Section of Antiquities. Some other papers followed. In the Chapter House the Dean of Westminster gave an account of the Abbey, of which he is official custodian; followed by Prof. Westmacott on the sculptures, and by Mr. G. G. Scott, who explained in detail the architecture.

In the evening, the members assembled in the theatre of the Geological Museum, when Mr. W. Hepworth Dixon read a paper (also to be found below) 'On the Tower,' preparatory to the visit which was to be made to that royal stronghold on the following day. In the Theatre of the Royal Institution, Mr. George Scharf read a paper 'On the Historical Paintings at Windsor and Hampton Court.'

SIR JOHN LUBBOCK ON THE PRESENT STATE OF ARCHÆOLOGICAL SCIENCE.

My object on the present occasion is to vindicate the claims of Archaeology, to point out briefly the light which has, more particularly in the last few years, been thrown on ancient times; and above all, if possible, to satisfy you that the antiquaries of the present day are no visionary enthusiasts, but that the methods of archaeological investigation are as trustworthy as those of any natural science. I purposely say the methods rather than the results, because, while fully persuaded that the progress recently made has been mainly due to the use of those methods which have been pursued with so much success in geology, zoology, and other kindred branches of science, and while ready to maintain that these methods must eventually guide us to the truth, I must also admit that there are many points on which further evidence is required. Nor need the antiquary be ashamed to deny that it is so. Conceding then frankly that from much of what I am about to say some good archaeologists would entirely dissent, I will now endeavour to bring before you some of the principal results of modern research, and especially to give you, so far as can be done in a single address, some idea of the kind of evidence on which the conclusions are based. I must also add, that I confine my observations, excepting where it is otherwise specified, to that part of Europe which lies to the north of the Alps, and that by the Primeval period I understand that which extended from the first appearance of man down to the commencement of the Christian era. This period may be divided into four epochs: first, the Palæolithic, or First Stone Age; secondly, the Neolithic, or Second Stone Age; thirdly, the Bronze Age; and lastly, the Iron Age. Attempts have been made, with more or less success, to establish sub-divisions of these periods, but into these I do not now propose to enter: even if we can do no more as yet than establish this succession, that will itself be sufficient to show that we are not entirely dependent on history.

We will commence then with the Palæolithic age. This is the most ancient period in which we have as yet any proofs of the existence of man. There is, however, a very general opinion that he did exist in much earlier times. Indeed, M. Denoyers has already called attention to some bones from the Pliocene beds of St. Prest, which appear to show the marks of knives; and Mr.

Whincopp will, I believe, exhibit one from the Orag, which certainly looks as if it had been purposely cut. Neither of these cases, however, are quite conclusive; and as yet the implements found in the river-drift gravels are the oldest traces of man's existence,—older far than any of those in Egypt or Assyria, though belonging to a period which, from a geological point of view, is very recent.

The Palæolithic age.—1. The antiquities referable to this period are found in beds of gravel and loam, or, as it is technically called, "loess," extending along our valleys, and reaching sometimes to a height of 200 feet above the present water-level. 2. These beds were deposited by the existing rivers, which then ran in the same directions as at present, and drained the same areas. 3. The geography of Western Europe cannot therefore have been very different at the time those gravels were deposited from what it is now. 4. The Fauna of Europe at that time contained the mammoth, the woolly-haired rhinoceros, the hippopotamus, the urus, the musk-ox, &c., as well as the existing animals. 5. The climate was much colder than it is now. 6. Though we have no exact measure of time, we can at least satisfy ourselves that this period was one of very great antiquity. 7. Yet man already inhabited Western Europe. 8. He used rude implements of stone: 9. Which were never polished, and of which some types differ remarkably from any of those that were subsequently in use. 10. He was ignorant of pottery; and, 11, of metals.

1. These beds of gravel and "loess," which have been most carefully studied by Mr. Prestwich, extend along the slopes of the valleys, and reach sometimes to a height of 200 feet above the present water-level.

2. That these beds of gravel and loess were not deposited by the sea is proved by the fact that the remains which occur in them are all those of land or freshwater, and none of marine species. That they were deposited by the existing rivers is evident, because they never contain fragments of any other rocks than those which occur in the area drained by the river itself. As, then, the rivers drained the same areas as now, the geography of Western Europe cannot have been at that period very different from what it is at present.

3. The Fauna, however, was very unlike what it is now, the existence of the animals above mentioned being proved by the presence and condition of their bones.

4. The greater severity of the climate is indicated by the nature of the Fauna. The musk-ox, the woolly-haired rhinoceros, the mammoth, the lemming, &c., are arctic species, and the reindeer then extended to the south of France. Another argument is derived from the presence of great sandstone blocks in the gravels of some rivers, as, for instance, of the Somme; these, it appears, must have been transported by ice.

5. The great antiquity of the period now under discussion is evident from several considerations. The extinction of the large mammalia must have been a work of time; and neither in the earliest writings nor in the vaguest traditions do we find any indication of their presence in Western Europe. Still more conclusive evidence is afforded by the conditions of our valleys. The beds of gravel and loess cannot have been deposited by any sudden cataclysm, both on account of their regularity, and also of the fact already mentioned, that the materials of one river-system are never mixed with those of another. To take an instance: the beds in the Somme valley are entirely formed of debris from the chalk and tertiary beds occupying that area. But within a very few miles of the head-waters of the Somme comes the valley of the Oise. This valley contains remains of other older strata, none of which have found their way into the Somme valley, though they could not have failed to do so had these gravels, &c. been the result of any great cataclysm, or had the Somme then drained a larger area than at present. The beds in question are found in some cases 200 feet above the present water-level, and the bottom of the valley is occupied by a bed of peat, which, in some places, is as much as 30 feet in thickness. We have no means of

making any accurate calculation; but even if we allow, as we must, a good deal for the floods which would be produced by the melting of the snow, still it is evident that for the river to excavate the lower part of its valley to a depth of more than 200 feet,† and then for the formation of so thick a bed of peat, much time must have been required; if, moreover, we consider the alteration which has taken place in the climate and in the Fauna, and, finally, remember also that the last 1,800 years have produced scarcely any perceptible change,—we cannot but come to the conclusion that many, very many, centuries have elapsed since the river ran at a level so much higher than the present, and the country was occupied by a Fauna so unlike that now there existing.

6. Man's presence is proved by the discovery of stone implements. Strictly speaking, these only prove the presence of a reasoning being; but, this being granted, few, if any, would doubt that the being in question was Man. Human bones, moreover, have been found in cave deposits, which, in the opinion of the best judges, belonged to this period; and M. Boucher de Perthes considers that various bones found at Moulin Quignon are also genuine. On this point long discussions have taken place, into which I will not now enter. The question before us is whether men existed at all, not whether they had bones. On the latter point no difference is likely to arise; and as regards the former, the works of man are as good evidence as his bones would be. Moreover, there seems to me nothing wonderful in the great rarity of human bones. A northern country, where the inhabitants subsist by the chase, can never be otherwise than scantily peopled. If we admit that for each man there must be a thousand head of game existing at any one time, and this seems a moderate allowance,—remembering also that most other mammals are less long-lived than men,—we should naturally expect to find human remains very rare as compared with those of other animals. Among a people who burned their dead, of course this disproportion would be immensely increased. That the flint implements found in these gravels are implements, it is unnecessary to argue. The regularity of their forms, the care with which they have been worked to a cutting edge, clearly prove that they have been *intentionally* chipped into their present forms, and are not the result of accident. That they are not forgeries we may be certain—firstly, because they have been found *in situ* by many excellent observers,—by all, in fact, who have looked long enough for them; and, secondly, because they are stained like the gravel in which they occur. Moreover, as the discoloration is quite superficial, and follows the existing outline, it is evidently of later origin. The forgeries, for there are forgeries, are, of course, dull lead colour, like other freshly-broken surfaces of flint. This evidence then justifies us in concluding that the implements are coeval with the beds of gravel in which they are found.

8. Without counting flakes, we shall certainly be within the mark if we estimate that 3,000 flint implements of the Paleolithic Age have been discovered in northern France and southern England. These were all of types which differ considerably from those which came subsequently into use, and they are none of them polished.

9. and 10. From the same evidence, I think we may conclude that the use of metal, as well as of pottery, was then unknown, as is the case, even now, among many races of savages.

(Sir John Lubbock also referred to the researches in caves of this period, alluding especially to the labours of Messrs. Busk, Christy, Falconer, and Pengelly.)

II. We now pass to the later Stone, or Neolithic Age, as to which the following propositions may, I think, be regarded as satisfactorily established:—1. There was a period when polished stone axes were extensively used in Europe. 2. The objects belonging to this period do not occur in the river-drift gravel beds; 3. Nor in association with the great extinct mammalia. 4. They were in use long

before the discovery or introduction of metals. 5. The Danish shell-mounds or *kjökkenmøddings* belong to this period; 6. As do many of the Swiss lake-dwellings; 7. And of the tumuli or burial-mounds. 8. Rude stone implements appear to have been in use longer than those more carefully worked. 9. Hand-made pottery was in use during this period. 10. In Central Europe the ox, sheep, goat, pig and dog were already domesticated. 11. Agriculture had also commenced. 12. At least two distinct races already occupied Western Europe.

We take these in order.

1. That there was a period when polished axes and other implements of stone were extensively used in Western Europe is sufficiently proved by the great numbers in which these objects occur. For instance, the Dublin Museum contains more than 2,000, that of Copenhagen more than 10,000, and that of Stockholm not fewer than 15,000.

2. The objects characteristic of this period do not occur in the river-drift gravels. Some of the simple ones, as, for instance, flint flakes, were abundant both in the Neolithic and Paleolithic periods. The polished axes, chisels, gouges, &c., however, are very distinct from the ruder implements of the Paleolithic age, and are never found in the river-drift gravels. Conversely, the Paleolithic types have never yet been met with in association with those characteristic of the later epoch.

3. Nor do the types of the Neolithic age ever occur in company with the Quaternary Fauna, under circumstances which would justify us in regarding them as coeval.

4. The implements in question were in use before the introduction or discovery of metal. It is, however, a great mistake to suppose that implements of stone were abandoned directly metal was discovered. For certain purposes, as for arrow-heads, stone would be quite as suitable as the more precious metal. Flint flakes, moreover, were so useful and so easily obtained, that they were occasionally used, even down to a very late period. Even for axes and chisels, the incontestable superiority of metal was for awhile counterbalanced by its greater costliness. Capt. Cook, indeed, tells us that in Tahiti the implements of stone and bone were in a very few years replaced by those of metal: "A stone hatchet is at present," he says, "as rare a thing as an iron one was eight years ago; and a chisel of bone or stone is not to be seen." The rapidity with which the change from stone to metal is effected depends on the supply of the latter. In the above case Cook had with him abundance of metal, in exchange for which the islanders supplied his vessels with great quantities of fresh meat, vegetables, and other more questionable articles of merchandise. The introduction of metal into Europe was certainly far more gradual; stone and metal were long used side by side, and archaeologists are often much too hasty in referring stone implements to the Stone Age. It would be easy to quote numerous instances in which implements have been, without sufficient reason, referred to the Stone Age, merely because they were formed of stone. The two Stone Ages are characterized, not merely by the use, but by the exclusive use of stone to the exclusion of metal. I cannot, therefore, too strongly impress on archaeologists that *many stone implements belong to the metallic period*. Why, then, it will be asked, may they not all have done so?

5. The Danish shell-mounds are the refuse heaps of the ancient inhabitants, around whose dwellings the bones and shells of the animals on which they fed gradually accumulated. Like a modern dust-heap, these shell-mounds contain all kinds of household objects; some purposely thrown away as useless, but some also accidentally mislaid. These mounds have been examined with great care by the Danish archaeologists, and especially by Prof. Steenstrup. Many thousand implements of stone and bone have been obtained from them; and as, on the one hand, from the absence of extinct animals and of implements belonging to the Paleolithic Age, we conclude that these shell-mounds do not belong to that period, so, on the other hand, from the absence of all trace of metal, we are justified in referring them to a period when metal was unknown.

6. The same arguments apply to some of the Swiss lake-dwellings, the discovery of which we owe to Dr. Keller, and which have been so admirably studied by Desor, Morlot, Troyon and other Swiss archaeologists. While in some, objects of metal are very abundant, in others, which have been not less carefully or thoroughly explored, stone implements are met with to the exclusion of metallic ones. It may occur perhaps to some that the absence of metal in some of the lake-villages and its presence in others is to be accounted for by its scarcity,—that, in fact, metal will be found when the localities shall have been sufficiently searched. The settlements in which metal occurs are deficient in stone implements. Take the same number of objects from Wangen and Nidau, and in the one case 90·7 will be of metal, while in the other the whole number are of stone or bone. This cannot be accidental: the numbers are too great to admit of such a hypothesis. Neither can the fact be accounted for by contemporaneous differences of civilization, because the localities are too close together; nor is it an affair of wealth, because we find such articles as fishhooks, &c. made of metal.

7. We may also, I think, safely refer some of the tumuli or burial-mounds to this period. When we find a large tumulus containing a number of flint implements, it is evident that it must have been erected in honour of some distinguished individual, and when his flint daggers, axes, &c., which must have been of great value, were deposited in the tomb, it is reasonable to conclude, that if he had possessed any arms of metal, they also would have been buried with him. This we know was done in subsequent periods. In burials of this period the corpse was either deposited in a sitting posture, or burnt.

8. It is an error to suppose that the rudest flint implements are necessarily the oldest. The Paleolithic implements show admirable workmanship. Moreover, every flint implement is rude at first. A bronze celt is cast perfect; but a flint one is rudely blocked out in the first instance, and then, if any concealed flaw comes to light, or if any ill-directed blow causes an unintentional fracture, the unfinished implement is perhaps thrown away. Moreover, the simplest flint flake forms a capital knife, and accordingly we find that some simple stone implements were in use long after metal had replaced the beautifully worked axes, knives and daggers, which must always have been of great value. The period immediately before the introduction of metal may reasonably be supposed to be that of the best stone implements, but the use of the simpler ones long lingered. Moreover, there are some reasons to believe that pierced stone axes are characteristic of the early metallic period.

9. Hand-made pottery is abundant in the shell-mounds, the lake-villages, as well as in the tumuli which appear to belong to the Stone Age. No evidence that the potter's wheel was in use has yet been discovered.

10. The dog is the only domestic animal found in the shell-mounds; but remains of the ox, sheep, goat, and pig appear in the lake-villages. There is some doubt about the horse, and the barndoor fowl as well as the cat were unknown.

11. The presence of corn-crushers, as well as carbonized grain and flax, in the Swiss lake-dwellings, proves that agriculture was already pursued with success in Central Europe. Oats, rye and hemp were unknown.

12. At least two forms of skull, one long and one round, are found in the tumuli, which appear to belong to this period. Until now, however, we have not a single human skull from the Danish shell-mounds, nor from any Swiss lake-dwelling which can be referred with confidence to this period.

III. We will now pass to the Bronze Age.

1. It is admitted by all that there was a period when bronze was extensively used for arms and implements. The great number of such objects which are preserved in our museums places this beyond a doubt.

2. It would, however, be a mistake to suppose that stone implements were entirely abandoned. Arrow-heads and flakes of flints are found abundantly in some of the Swiss lake-villages which

† M
the ri
for
th
difficulty in understanding how
drift gravel at so great a height,
was not then excavated to any

contain bronze. In these cases, indeed, it may be argued that the same site had been occupied, both before and after the introduction of bronze. The evidence derived from the examination of tumuli is, however, not open to the same objection, and in them objects of bronze and of stone are very frequently found together. Thus it appears, from the investigations recorded by Mr. Bateman, that in three-fourths of the tumuli containing bronze (twenty-nine out of thirty-seven), stone objects also occurred.

3. Some of the bronze axes appear to be mere copies of the stone ones. No such simple axes of iron, however, are known.

4. Many of the Swiss lake-villages belong to this period. A table furnished me by Dr. Keller places this beyond a doubt, and gives a good idea of the objects in use during the Bronze Age, and the state of civilization during this period.

5. The presence of metal, though the principal, is by no means the only point which distinguishes the Bronze Age villages from those of the Stone period. If we compare Moosseedorf, as a type of the last, with Nidau, as the best representative of the former, we shall find while bones of wild animals preponderate in the one, those of tame ones are most numerous in the latter. The vegetable remains point also to the same conclusion. Even if we knew nothing about the want of metal in the older lake-villages, we should still, says Prof. Heer, be compelled, from botanical considerations, to admit their great antiquity. Moreover, so far as they have been examined, the piles themselves tell the same tale. Those of the Bronze Age settlements were evidently cut with metal; those of the earlier villages with stone, or, at any rate, with some blunt instrument.

6. The pottery was much better than that of the earlier period. A great deal of it was still hand-made, but some is said to show marks of the potter's wheel.

7. Gold, amber and glass were used for ornamental purposes.

8. Silver, zinc and lead, on the contrary, were apparently unknown.

9. The same appears to have been the case with iron.

10. Coins have never been found with bronze arms. To this rule I only know of three apparent exceptions. Not a single coin has been met with in any of the Swiss lake-villages of this period.

11. The dress of this period, no doubt, consisted in great part of skins. Tissues of flax have been found, however, in some of the lake-villages, and a suit of woollen material, consisting of a cloak, a shirt, two shawls, a pair of leggings, and two caps, was found in a Danish tumulus, evidently belonging to the Bronze Age, as it contained a sword, a brooch, a knife, an awl, a pair of tweezers, and a large stud, all of bronze, besides a small button of tin, a javelin-head of flint, a bone comb, and a bark box. We have independent evidence of the same fact in the presence of spindle-whorls.

12. The ornamentation on the arms, implements and pottery is peculiar. It consists of geometrical patterns, straight lines, circles, triangles, zigzags, &c. Animals and vegetables are very rarely attempted, and never with much success.

13. Another peculiarity of the bronze arms lies in the small size of the handles. The same observation applies to the bracelets, &c. They could not be conveniently used by the present inhabitants of Northern Europe.

14. No traces of writing have been met with in any finds of the Bronze Age. There is not an inscription on any of the arms or pottery found in the Swiss lake-villages, and I only know one instance of a bronze cutting-instrument with letters on it.

15. The very existence of bronze proves a considerable and extensive commerce, inasmuch as we only know two countries, namely, Cornwall and the island of Banca, whence tin could have been obtained in large quantities. There are indeed very few places where it occurs at all. The same fact is proved by the great, not to say complete, similarity of the arms from very different parts of Europe.

16. Finally, as copper must have been in use before bronze, and as arms and implements of that

metal are almost unknown in Western Europe, it is reasonable to conclude that the knowledge of bronze was introduced into, not discovered in, Europe.

Two distinguished archaeologists have recently advocated very different views as to the race by whom these bronze weapons were made, or at least used. Mr. Wright attributes them to the Romans, Prof. Nilsson to the Phœnicians. The first of these theories I believe to be utterly untenable. In addition to the facts already brought forward, there are two which by themselves are, I think, almost sufficient to disprove the hypothesis. First, the word *ferrum*, iron, was used as a synonym for a sword, which would scarcely have been the case if swords had been usually made of some other metal. Secondly, the Romans never entered Denmark; it is doubtful whether they ever landed in Ireland. Yet while 350 bronze swords have been found in Denmark, and a large number in Ireland also,* I have only been able to hear of a single bronze sword of the typical leaf-shaped form in Italy; this is in the Museum of Parma; and the National Museums at Florence, Rome and Naples do not appear to contain a single specimen of the bronze swords which are, comparatively speaking, so common in the north. That the bronze swords should have been supposed to be introduced into Denmark by a people who never came there, and from a country in which they are almost unknown, is surely a most improbable hypothesis.

It is, no doubt, true that a few cases are on record in which bronze weapons are said to have been, and very likely were, found in association with Roman remains. Mr. Wright has pointed out three, one of which, at least, I cannot admit. Under any circumstances, however, we must expect to meet with some such cases. The only wonder to my mind is that there are so few of them.

As regards Prof. Nilsson's theory, according to which the Bronze Age objects are of Phœnician origin, I will only say that the Phœnicians in historical times were well acquainted with iron, and that their favourite ornaments were of a different character from those of the Bronze Age. If, then, Prof. Nilsson is correct, they must belong to an earlier period in Phœnician history than that with which we are partially familiar.

It would now be natural that I should pass on to the Iron Age; but the transition period between the two is illustrated by a discovery so remarkable that I cannot pass it over altogether. M. Ramsauer, for many years head of the salt-mines at Hallstadt, near Salzburg, in Austria, has opened no less than 980 graves, apparently belonging to an ancient colony of miners. The results are described and the objects figured in an album, of which Mr. Evans and I have recently procured a copy from M. Ramsauer himself. We hope soon to make this remarkable find known in a more satisfactory manner; for the moment I will only extract the main facts which are necessary to my present arguments.

That the period to which these graves belonged was that of the transition between the Bronze and Iron Ages is evident, both because we find cutting-instruments of iron as well as of bronze, and also because both are of somewhat unusual, and, we may almost say, of intermediate types. The same is the case with the ornamentation. Animals are frequently represented, but are very poorly executed, while the geometrical patterns are well done. That the passage was from bronze to iron, and not from iron to bronze, is clear; because here, as elsewhere, while iron instruments with bronze handles are common, there is not a single case of a bronze blade with an iron handle. This shows that when both metals were used for weapons the iron was preferred.

The conclusions to which I have endeavoured to bring you are these:—1, there was a period when bronze was extensively used for arms and implements; 2, stone, however, was also in use, especially for certain purposes, as, for instance, for arrow-heads, and in the form of flakes for cutting;

* The Museum at Dublin contains 282 swords and daggers; unluckily, the number of swords is not stated separately.

3, some of the bronze axes appear to be mere copies of the earlier stone ones; 4, many of the Swiss lake-villages belong to this period; 5, this is shown, not merely by the presence of metal, but also by other arguments; 6, the pottery of the Bronze Age is better than that of the earlier period; 7, gold, amber and glass were used for ornamental purposes; 8, silver, lead and zinc appear to have been unknown; 9, this was also the case with iron; 10, coins were not in use; 11, skins were probably worn, but tissues of flax and wool were also in use; 12, the ornamentation of the period is characteristic, and consists of geometrical markings; 13, the handles of the arms, the bracelets, &c. indicate a small race; 14, writing appears to have been unknown; 15, yet there was a very considerable commerce; 16, it is more than probable that the knowledge of bronze was introduced into, not discovered in, Europe.

IV. The Iron Age is the period when this metal was first used for weapons and cutting-instruments. During this period we emerge into the broad and, in many respects, delusive, glare of history. No one, of course, will deny that arms of iron were in use by our ancestors at the time of the Roman invasion. Mr. Crawford, indeed, considers that they were more ancient than those of bronze, while Mr. Wright maintains that the bronze weapons belong to the Roman period. I have already attempted to show, from the frequent occurrence of iron blades with bronze handles, and the entire absence of the reverse, that iron must have succeeded and replaced bronze. Other arguments might be adduced; but it will be sufficient to state broadly that which I think no experienced archaeologist will deny, namely, that the objects which accompany bronze weapons are much more archaic than those which are found with weapons of iron. That the bronze weapons were not used by the Romans in Caesar's time, I have already attempted to prove. That they were not used at that period by the Northern races, is distinctly stated in history. We will, however, endeavour to make this also evident on purely archaeological grounds. We have several important finds of this period, among which I will specially call your attention to the lake-village of La Tène, in the Lake of Neuchâtel. At this place no flint implements (excepting flakes) are met with. Only fifteen objects of bronze have been found, and only one of these was an axe. Moreover, this was pierced for a handle, and belonged, therefore, to a form rarely, if ever, occurring in finds of the Bronze Age. On the other hand, the objects of iron are numerous, and comprise 50 swords, 23 lances and 5 axes.

The other find of the Iron Age to which I will now refer is that of Nydam, recently described at length by Mr. Engelhardt, in his excellent work on 'Denmark in the Early Iron Age.' At this place have been found an immense number of the most various objects: clothes, brooches, tweezers, beads, helmets, shields, coats of mail, buckles, harness, boats, rakes, brooms, mallets, bows, vessels of wood and pottery, 80 knives, 30 axes, 40 awls, 160 arrow-heads, 100 swords, and nearly 600 lances. All these weapons were of iron, though bronze was freely used for ornaments. That these two finds belonged to the Roman period is clearly proved by the existence of numerous coins belonging to the first two centuries after Christ, although not one has occurred in any of the Bronze Age lake-villages, or in the great find at Hallstadt. It is quite clear, therefore, that neither bronze nor stone weapons were in use in Northern Europe at the commencement of our era. A closer examination would much strengthen this conclusion. For instance, at Thorsbjerg alone there are seven inscriptions, either in Runes or Roman letters, while, as I have already stated, letters are quite unknown, with one exception, on any object of the Bronze Age, or in the great transition find at Hallstadt. Again, the significance of the absence of silver in the Hallstadt find is greatly increased when we see that in the true Iron Age, as in the Nydam, and other similar finds, silver was used to ornament shield-bosses, shield-rims, sandals, brooches, breast-plates, sword-hilts, sword-sheaths, girdles, and harness, and was used for clasps, pendants, boxes and tweezers, while in one case a

helmet was made of this comparatively rare material.

The pottery also shows much improvement; the forms of the weapons are quite different, and the character of the ornamentation is very unlike, and much more advanced than, that of the Bronze Age. Moreover, the bronze used in the Iron Age differs from that of the Bronze Age, in that it frequently contains lead and zinc in considerable quantities. These metals do not occur, except as impurities, in the ancient bronzes, nor even in those of Hallstatt. These finds clearly show that the inhabitants of Northern and Western Europe were by no means such mere savages as we have been apt to suppose. As far as our own ancestors are concerned, this is rendered even more evident by the discoveries of those ancient British coins which have been so well described and figured by Mr. John Evans ('The Coins of the Ancient Britons').

And now, before I sit down, suffer me to make two practical suggestions. The first is, that, in the Authorized Version of the Bible, we should in future omit the date 4004 B.C., which now stands before the first verse of Genesis. No geologist or archaeologist believes this to be true, and it is wonderful that a truth-loving people as we are should continue to print the Bible with that which we all believe to be a mis-statement at the very commencement. Secondly, I cannot but think that it would be well if the Government would appoint a Royal Conservator of National Antiquities. We cannot put Stonehenge or the Wansdyke into a Museum; all the more reason why we should watch over them where they are; and even if the destruction of our ancient monuments should under any circumstances become necessary, careful drawings ought first to be made, and their removal ought to take place under proper superintendence. We are apt to blame the Eastern peasants, who use the ancient buildings as stone-quarries, but we forget that even in our own country, Abury, the most magnificent of Druidical remains, was almost destroyed for the sake of a few pounds; while recently the Jockey Club has mutilated the remaining portion of the Devil's Dyke, on Newmarket heath, in order to make a bank for the exclusion of scouts at trial races. In this case, also, the saving, if any, must have been very small, and I am sure that no society of English gentlemen would have committed such an act of wanton barbarism if they had given the subject a moment's consideration.

But I have already occupied your attention longer perhaps than I ought; much longer, at any rate, than I at first intended. I have endeavoured, as well as I was able, to bring before you some of the principal conclusions to which we have been led by the study of primeval antiquities, purposely avoiding all reference to history, because I have been particularly anxious to satisfy you that in archaeology we can arrive at definite and satisfactory conclusions on independent grounds, without any assistance from history; and, consequently, as regards times before writing was invented, and before written history had even commenced. I have endeavoured to select only those arguments which rest on well-authenticated facts. For my own part, however, I care less about the facts than the method. For an infant science, as for a child, it is of small importance to make rapid strides at once; and I confess, therefore, without hesitation, that I care comparatively little how far you accept our facts or adopt our results if only I have succeeded in convincing you that the method is one which will eventually lead us to sure conclusions, and that the science of Pre-historic Archaeology rests undoubtedly on a sound and solid foundation.

MR. DIXON ON THE TOWER.

We are about to visit, in the Tower of London, a pile which may be fairly described as one of the most poetical monuments in Europe. The grey walls, the green slopes and trees, the dark gates and battlements—above all, the gleaming face and turrets of the White tower, stand out, grim, pictorial, menacing, among the objects which, on either side of our great river, strike the imagination of a traveller entering London from the sea; and

the most callous sailor dropping down the pool on his outward voyage can hardly pass by Traitors' Gate—that low and dismal opening in the bank, through which so many of the wise, the beautiful, the brave, have entered, never to come back—without feeling in his heart some touch of tender pity, perhaps without thinking to himself that on the whole it is better to be a modest blue-jacket under Queen Victoria, than a splendid admiral like Sir Walter Raleigh under James the First.

Whether we take the Tower as a state prison, as a royal palace, as a fortress, as a mint, as a court of justice, as an arsenal, as a military museum, as a strong jewel-box, it fills the mind with picture, poetry and drama; and if we dwell upon it chiefly as a state prison, and only in a lesser degree as a royal palace, it is because the human interest in a place is always keener than the official interest. Even as to length of days, the Tower has no rivals among palaces and prisons—being so old, that its origin, like that of the Iliad, that of the Sphinx, that of the Newton Stone, is lost in the nebulous ages, long before our definite history took shape. Old writers date it from the days of Cæsar—a legend taken up by Shakespeare and the poets, and in favour of which the name of Cæsar's tower remains in popular use to this very day. A Roman wall is still visible near the ditch. The Tower is mentioned in the Saxon Chronicle, in a way not incompatible with the fact of there having been a Saxon stronghold on the spot. The actual buildings were commenced by William the Conqueror; and the series of apartments in Cæsar's tower,—hall, gallery, council-chamber, and chapel,—were used as portions of the royal residence by all our Norman kings. What can Europe, what can Asia, show us to compare against such a story?

Set against the Tower of London—with its eight hundred years of historic life, its nineteen hundred years of traditional fame—all other palaces and prisons appear but of yesterday. The oldest bit of palace in Europe, that of the west front of the Burg, in Vienna, is of the time of Henry the Third. The Kremlin in Moscow, the Doge's Palazzo in Venice, are of the fourteenth century. The Seraglio in Stamboul was built by Mohammed Second, and the oldest existing part of the Vatican by Pope Borgia, whose name it bears. The old Louvre was commenced in the reign of our Henry the Eighth, the Tuileries in that of his daughter Elizabeth. In the time of our Restoration Versailles was yet a swamp. Sans Souci and the Escorial belong to the eighteenth century. The palaces of Cairo and Tehran are of modern date. Neither can the prisons which have earned any large celebrity in history and drama—with the one exception of St. Angelo in Rome—compare against the Tower. The Bastille is gone, with all its romance, all its crime; the Bargello is a museum of the peaceful arts; the Piombi are removed from the Doge's roof. Vincennes, Spandau, Spielberg, Magdeburg, are all modern in comparison with the jail in which Ralph Flambard, our unruly Bishop of Durham, was confined so long ago as the year 1100, in the time of the First Crusade.

Standing on Tower Hill, looking down on the dark lines of wall, rising high above the green fringe of garden—picking out turret and terrace, bastion and ballium, chapel and belfry—the jewel-house, the armoury, the embrasures, the casemates, the open leads—the Bloody tower, the Beauchamp tower, the Martin tower—the whole edifice seems to be alive with story: the story of a nation's splendour, misery and shame. The very grass beneath your feet has been wet with blood; for out upon this sod on which you stand has been poured, from generation to generation, a stream of the noblest life in our land. Should you have come to this spot alone, in the early day, when the Tower is alive with its martial exercises, you may haply catch, in the hum which rises from the ditch and issues from the wall below you—broken by roll of drum, by blast of bugle, by tramp of soldiers—some echoes, as it were, of a far-away time; some hints of a May-day revel, the murmur of an execution, the noise of a coronation, the thrum of a Queen's virginals, the cry of a victim on the rack, the laughter of a bridal feast.

From the reign of Stephen down to that of James the Second, that square white edifice in the centre, known in all ages as Julius Cæsar's tower, was a main part of the royal palace of our English kings; and for that large interval of time its story is in some measure that of our English society as well as of our English court. Here were the royal wardrobe and the royal jewels; and hither came with their goodly wares, the tiremen, the goldsmiths, the chasers and embroiderers, from Flanders, Italy and Almaine. Here were the mint, the lions' dens, the old archery-grounds, the Court of King's Bench, the Court of Common Pleas, the Queen's gardens, the royal banquetting-hall. William Fitzstephen, a monk of Canterbury, born in London a few years after the Conquest, mentions that the mortar used in building the walls was mixed with blood—the blood of animals slain for the purpose; a dark, as the poets would say a symbolical hint of much future history. The great prison was begun by a prelate, and the first prisoner confined in it (so far as we know) was also a prelate. Perhaps it is worth noting, as a trait of clerical manners in the Middle Ages, that the early Constables of the Tower were all in the Church; generally bishops, sometimes archbishops. The first prisoner was Ralph of Durham, famous in the history of that See, as a man who not only trampled on the commons but actually robbed the monks. In our chronicles he is known as Ralph Flambard—that is to say, as Ralph Firebrand. For his many crimes—he was a Lord Chancellor as well as a Bishop of Durham—he was seized on the death of Rufus becoming known, and was lodged in the Tower under guard of some sturdy knights; but the Tower was incapable of holding in its grip a man who was at once a crafty lawyer and an audacious priest. Sending for a flagon of good wine, and inviting the knights who kept watch over him to supper, his friends brought in a jar with a strong rope coiled round the bottom, inside, and when the officers who had feasted with him were drunk and asleep, he drew out the cord, and, fastening it to a mullion, let himself down and escaped into France. A window in the Tower is shown as that from which Firebrand escaped.

Every wall, every stone, in the Tower is connected, more or less closely and romantically, with the story of our arts, our liberties, and our manners. Gundulph, Bishop of Rochester, who mixed the lime with blood to make it hard, was one of our chief architects. Matilda, our Saxon queen, reconciler of the English and Galfic branches of the Norman race, loved and enlarged the Tower. John gave it up to his barons: a pledge of his good faith in observing the Great Charter. One of the points which King John had been forced to surrender to his people was a claim, on the part of his Tower-warden, to catch fish in the Thames improperly, by placing kideles in the stream. For three or four reigns, the great kidel question was our chief domestic topic; agitating Essex, Kent, and Middlesex, especially the riverside taverns; leading to endless orders in council, and many disorders in the streets. A kidel was a weir, fitted up with nets; in fact, a dishonest fish-trap. The King's people not only set their own kideles in the Thames, but sold their rights of dishonest fishing to others, so as to interfere with the legitimate trade, to destroy the salmon and shad, and to diminish the poorer people's food. Lionheart tried to settle this kidel dispute. In the eighth year of his reign, being pressed by his wars, he made a merit of giving up his right of kideilling the Thames; enacting—as the grant expresses it—that, for the salvation of his soul, for the salvation of his father's soul, for the salvation of the souls of all his ancestors, as well as for the good of his realm, there shall be no more kideles. I am sorry to say his royal word was not kept; and it is to be hoped that the souls of these pious kings do not suffer for his servant's fault. Even after the Great Charter had been sworn, the Tower wardens put kideles into the river; and you may read, in the 'Liber Albus,' that they long continued to vex the fishmongers, not only by taking salmon unfairly from the water, but by seizing on any stray waggon of oysters, mussels, red herrings, and smelts, which they found coming into London overland.

At times the Englishry from the city wards—we were called Englishry under these Plantagenets, as the Irish were called the Irishry under the Tudors—were allowed to enter into the Tower, and make complaint to the King of such wrongs; but they took care to enter in a stated and formal manner, so as to run little risk, and to show themselves at their best.

Baron and citizen—that is to say, alderman and commoner—met in Barking Church, on Tower Hill, and sent six of their body into the Tower to ask leave for a deputation to see the King, and for free access to the Courts. These six were to beg that the King would forbid any of his guards either to close the gates or to keep watch over them, while the citizens were coming and going; it being against their freedom for any one to keep the doors and gates, except their own people whom they should appoint to that office. The reason for this strange stipulation was, that the Courts of justice—the King's Bench and the Common Pleas—were held within the Tower; and the old English practice had been—as it still is—for our Courts of law to be open and unguarded. On these concessions being made, three persons, discreet in words, moderate in opinions, were elected by the citizens as Presenters, to wait upon the king in his palace. They were to be decently clothed and shod, since no gentleman ought to appear in the presence without shoes. Their attendants were all to be trim and spruce, dressed in the bravery of coat and surcoat, not in their ordinary suits of cloak and cape. No man was to march in the Presenters' train who had sore eyes. No man was to join them who had weak legs. Mayor, alderman, sheriff, bedel, cryer—every one going into the Tower on public duty—must have his hair cut and his face newly shaven.

The Court of King's Bench was held in a room which the writs describe as the Lesser Hall beneath the east turret, which I take to be one of the ante-chambers in Caesar's tower. The east turret is, of course, that known as the Observatory, from Flamsteed having there set up that watch of the stars which has since been transferred to Greenwich Hill.

The Court of Common Pleas was held in a place which the writs describe as the Great Hall by the river, a structure of the same date, probably of the same style, as Westminster Hall, but now gone to decay, pulled down, and replaced by a pile of warehouses—mean and ugly even for a military magazine.

In the wall, near the Wakefield tower, you will see a doorway, leading into the Record Office; an old doorway, seen in the earliest plans, and probably as ancient as the ballium wall. This door has often puzzled the antiquaries; for why, these gentlemen ask, should the Wakefield tower have been entered from the outer side? Of the dozen towers standing on the ballium, none but this Wakefield tower has an opening to the front, all the rest being entered from the inner court, in accordance with a general rule of military architecture in the Middle Ages. Why this exception in the case of the Wakefield tower? Is it not evident that the tower and its adjoinings were applied to some purpose different from the rest; that it was not a part of the defences, not a state prison, not a royal palace? A passage in the 'Liber Albus,' telling us that the Court of Common Pleas was held in the Great Hall by the river, explains the puzzle. We have seen how much the citizens desired a free access to the Courts of justice held within the Tower, while the king was in residence there, insisting that the gates should be either left open and unguarded, or else held by their own men,—demands which never could have been made in respect of the military and royal portions of the Tower; but only of such outer gates as the Lion's tower and the Byward tower. The Wakefield tower and the adjoining Great Hall may be considered as a non-combatant section of the Stronghold, and the doorway leading into them as lying beyond and without the defensive lines.

Henry the Third, who was fond of living in the Tower, spent a good deal of money in building new works, to the great annoyance of his people, in whose eyes it was the weapon and the refuge of

a tyrant. When a new wall and tower which he added to the fortress fell down, without seeming cause, the people are said to have dropped on their knees and thanked their saints for the blessing. When the king had rebuilt the wall and tower, and they had again fallen, without seeming cause, the people all said their favourite saint, Thomas à Becket, had come up in the spirit from Canterbury and had thrown them down.

In the reign of that sovereign, Richard, Earl of Cornwall and King of the Romans, was confined in the Tower, after the Battle of Lewes, in which he was taken prisoner by the insurgent barons; also Elinor of Provence, Henry's Queen, during the ascendancy of Simon de Montfort, Earl of Leicester. La Belle Elinor endeavoured to escape, but the walls and gates of the fortress were too strictly watched for her success.

Edward the Second and his Queen, Isabella the Fair, kept a splendid and unhappy court in the Tower; enlivened by love and war, by political quarrels, religious festivals, and criminal intrigues. Here the princess known in history as Joanna de la Tour was born; of uncertain fatherhood, and in the midst of sharp discomfort. The royal apartments were in such a state that the rain came rattling into the queen's bed; and John de Cromwell, the Constable—one of those who had maintained against the fishmongers of Billingsgate his right to seize oysters, smelts and sprats coming into London overland—was blamed, and dismissed from his office. Roger Mortimer was then a prisoner in the Tower; lodged in a room of the palace, adjoining the royal kitchen. Edward was away from London, on his wars and other follies; and in her consort's absence the fair Isabella was ruffling her indolence by receiving visits from the handsome and audacious Border chief. Mortimer made a hole through the wall dividing his chamber from the kitchen, crept through it in the night, got up the kitchen chimney, came out on the roof, whence he escaped to the river, and so away into France. It is an old story: you can break through the strongest bars when you have fallen in love with the jailer's wife! Every one is familiar with the story of their guilty passion, their stormy career, and their tragic end; the most singular, the most shameful episode in the history of all our royal race.

During the Wars of the Roses, the Tower, as the strongest place in the south of England, was the magnificent home—sometimes the miserable jail—of our Yorkist and Lancastrian princes. Here Richard the Second held his court, and was barred in durance; here Henry the Sixth was immured; the Duke of Clarence was drowned in wine; King Edward and the Duke of York were murdered, and Margaret of Salisbury suffered her tragic fate. Harry of Richmond kept his royal state in the Tower, receiving his ambassadors, counting his angels, making presents to his queen, Elizabeth of York; among others, of a book which contains the earliest view now known of the Tower.

And what, in these days of its magnificence as a royal palace, was its economy as a state prison? The case of Sir Henry Wyatt, father of the wit, poet and courtier, Sir Thomas Wyatt, takes us back to the latter days of the Red and White Roses. Wyatt was a Lancastrian in politics, and under the reign of Richard the Third he spent not a little of his time in the Tower. The Wyatt Papers say—"He was imprisoned often; once in a cold and narrow tower, where he had neither bed to lie on, nor clothes sufficient to warm him, nor meat for his mouth. He had starved there had not God, who sent a crow to feed his prophet, sent this his and his country's martyr a cat both to feed and warm him. It was his own relation unto them from whom I had it. A cat came one day down into the dungeon unto him, and as it were offered herself unto him. He was glad of her, laid her in his bosom to warm him, and, by making much of her, won her love. After this she would come every day unto him divers times, and, when she could get one, bring him a pigeon. He complained to his keeper of his cold and short fare. The answer was, 'he durst not better it.'—"But," said Sir Henry, "if I can provide any, will you promise to dress it for me?"—"I may well enough," said he, the keeper,

'you are safe for that matter;' and being urged again, promised him, and kept his promise, dressed for him, from time to time, such pigeons as his accator the cat provided for him. Sir Henry Wyatt in his prosperity for this would ever make much of cats, as other men will of their spaniels or hounds; and perhaps you shall not find his picture anywhere but, like Sir Christopher Hatton with his dog, with a cat beside him." The prisoner had this faithful cat painted, with a pigeon in his paws, offering it through the grated window of his dungeon. That picture is in the collection of Historical Portraits now on view in South Kensington. Wyatt was put to the torture, a thing unknown to our law, but very well known, I am sorry to say, to our lawyers. Racks, boots, barnacles, thumb-screws, were occasionally used in the Tower. The barnacles was an instrument fastened to the upper lips of horses to keep them still while they were being bled; and Richard was rather fond of putting this curb on his enemies. One day, after putting it on Wyatt, he exclaimed, in a fit of generous admiration, "Wyat, why art thou such a fool? Thou servest for moonshine in water. Thy master," meaning Harry of Richmond, "is a beggarly fugitive; forsake him and become mine. Cannot I reward thee? And I swear unto thee I will." To all of which his prisoner replied: "If I had first chosen you for my master, thus faithful would I have been to you, if you should have needed it. But the Earl, poor and unhappy though he be, is my master, and no discouragement, no allurements, shall ever drive me from him, by God's grace.

When fortune changed in the royal houses, and the fierce wars of the Roses came to an end, Sir Henry found that he had served for something better than moonshine in water, being made a Gentleman of the Privy Chamber, a knight banneret, Master of the Jewel House, Treasurer of the King's Chamber, and a Privy Councillor. He bought the estate of Allingham, in Kent, and lived to see his gifted son a prisoner in the Tower.

The case of Thomas Howard, the great Duke of Norfolk, gives us glimpses of the Tower three-fourths of a century later, in the reign of Edward the Sixth.

Norfolk was the first nobleman in England, uncle to Queen Catherine, and nearly related to the king in blood,—a peril rather than a fortune in such dangerous times. He had served his country in the Council chamber and at foreign Courts, in the fleet and on the field of battle; he had won the king's confidence so far as to have been named one of his executors during the minority of his son, Prince Edward. But some enemy of the Howards, who had access to the king, whispered in his ear that Norfolk's eldest son, Lord Surrey, the poet of whose genius we are all so proud, was looking for the hand of Mary, and had quartered the arms of Edward the Confessor on his shield. Father and son were lodged, unknown to each other, in the Tower. Surrey, not being a peer of the realm, was tried at Guildhall by a common jury, before whom he pleaded his right to the royal arms, a right of usage sanctioned by the heralds; but the Court pronounced his assumption treason, and the brilliant young noble was conducted to the block. The peers passed a bill of attainder against the duke, and a warrant for his execution was signed by the king; but in the night, while the headmen were preparing for the business, Henry expired, and the Protector Somerset feared to carry out the writ. Yet as Norfolk was a stern enemy of the Reformation, he was kept in prison until Edward died, and in this interval of quiet endurance there is one letter extant, in which he humbly begs to have some books sent to him from a house in Lambeth, saying (very pathetically, as it seems to me,) that unless he has a book to engage his mind, he cannot keep himself awake, but is always dozing, and yet never able to sleep, nor has he ever done so for a dozen years. Of all the tragic complaints, and they are many, from prisoners in the Tower, I know of none more appalling to the imagination than this sleepless vigil from year to year. The Duke beseeches his good masters—even a Duke of Norfolk must be humble in the Tower of London—to give him leave to walk in the daytime in the outer chamber of his cell, for the sake of his health,

which has suffered very much from his close confinement. They can still, as he says, look him up in his narrow cage at night. He craves to be allowed some sheets to lie on, to keep him warm.

Such were the comforts of a prison, to the first peer in the realm, at a period when the laws did not pretend to be equal for the great and the obscure.

Glancing at a plan of the Tower, we see that it may be distributed into three parts or groups: first—the outer walls, towers, gates and approaches, including the Bridge-way, the By-ward tower, the Traitors' Gate, St. Thomas's tower, the Esplanade, the river front, the Well tower, the powder magazine, the ramparts, casements, batteries, and the long narrow street of canteens; second—the balium, or tower proper, entered, in ancient times, only by the strong gateway of the Bloody tower, with its grim and frowning walls, its lines of tenelements, curtains, offices and cells, including the Bloody tower, the lieutenant's house, the Bell tower, the prisoners' walk, the Beauchamp tower, the Devereux tower, St. Peter's Church, the Flint, Bowyer, Brick and Martin towers, the Constable tower, the Broadarrow tower, the Salt tower, that abominable pile of warehouses (which might excuse a good-natured man for wishing, with Mr. Disraeli, that somebody would hang an architect!), and then the grand old structure known as the Wakefield tower; third—the White tower, with its chapel, vaults, galleries and chambers. The modern buildings we may leave alone, except those shameless piles of store-rooms on the river front. At those it will be the duty of every antiquary—indeed, of every man who can feel the poetry and romance of the Tower—to cast a stone, until all their windows shall be, metaphorically, smashed.

The first group need not detain us. Passing over the ditch, and through the By-ward tower, we have on our right hand a building recently restored—St. Thomas's tower; called so from our popular saint of Canterbury, perhaps because this was the very tower which Henry the Third built, and St. Thomas threw down, a first and a second time. Ings, the Cato Street conspirator, was the last person confined in this tower.

Under this tower is the water-gate, leading to the Thames, by which prisoners were carried to Westminster for trial, and through which they were brought back, accompanied by the headsman and his axe. It is popularly known as the Traitors' Gate. Beneath this gate has moved a long procession of our proudest peers, our fairest women, our bravest soldiers, our wittiest poets—Buckingham and Stafford; Elinor the Fair, Anne Boleyn, Lady Jane Grey; William Wallace, David Bruce; Wyatt, Surrey, Raleigh,—names in which the splendour and poetry and sentiment of our national story are embalmed. They left it high in rank and rich in life, to return, by the same dark passage, in a few brief hours, poorer than the beggars who stood shivering on the bank; for in the eyes of the law, and in the words of their fellows, they were already dead. Hither came the barge of that proud Duke of Buckingham (the rival of Cardinal Wolsey) who refused, on his return from Westminster, to take the seat of honour, saying to Sir Thomas Lovel: "When I came to Westminster I was Lord High Constable and Duke of Buckingham; but now—poor Edward Bohun!" On these stairs, beneath the Confessor's chamber, Elizabeth, then a young fair girl, with gentle, feminine face and golden hair (there is a sparkling portrait of her, aged 16, in the rich collection at South Kensington), was landed by her jealous sister's servants. As she set foot on the stone steps, she exclaimed, in a spirit prouder than her looks—for at that time she had none of the leonine beauty of her later years—"Here landeth as true a subject, being a prisoner, as ever landed at these stairs; and before Thee, O God, I speak it." Perhaps she was thinking of her mother, who had entered at the same dark portal, with the gleaming axe before her, thirsting for her blood! Anne had fallen on her knees upon these cold stones, and here had called on God to help her, as she was not guilty of the things of which she had been accused. In those two attitudes of appeal you have the two proud and gentle women,

each calling Heaven to witness her innocence of crime.—Elizabeth defiant, erect; Anne suppliant, on her knees.

Opposite to the water-gate is that entrance into the wall which led to the Great Hall and the Hall tower. The tower remains in nearly its original state. Tradition makes this place the prison of Henry the Sixth, and the scene of his murder by the Duke of Gloucester, very much as Shakespeare paints it.

Entering the lines, by the embattled gateway of the Bloody tower, we notice behind the right valve, as we go in, a private door, leading, by a concealed staircase, into the upper chambers; a day room, a closet, a bed-room, and a staircase winding up to the leads. By this concealed door, Tradition says, the murderers of the two princes brought out the dead bodies of their royal victims. Bailey, as you know, disputes the scene of this dramatic crime, inclining to the belief that it must have occurred in the White tower, because the children's bones, now lying in Westminster Abbey (and supposed to be those of Edward and Richard), were found, not in this gateway, as they should have been, but near a door on the south side of the White tower. Sir Thomas More, who wrote a century and a half before these bones were found, says the bodies had been removed by a priest from the spot where they had first been laid by Tyrrel, on the night of their murder, to a less dishonourable grave. This priest had removed them at the King's request; and as priest and king died suddenly, the secret of their new resting-place perished with them. Such facts would account for Henry the Seventh being unable to find them, when it was of supreme importance for him to show that they were dead. Tyrrel, who thrust them into the earth, could not find them when they were worth a province; proof beyond cavil that they lay no longer at the foot of the tower in which they had been slain.

The discovery of bones (every way answering to those of Edward and Richard) under the old staircase leading into the Chapel of St. John the Evangelist, in the White tower, agrees exactly with the narrative in More. Richard might well object to the burial of his nephews in a place so public as the gateway under the Bloody tower. The staircase of St. John's Chapel would offer him a spot which he might consider as at once secret and sacred.

During the Tudor and Stuart reigns, it is not known that any one ever doubted in what chamber of the Tower the princes had been killed. On James the First arriving in London, the Bloody tower was shown to him as the spot in which Edward and Richard had been put to death.

Many prisoners besides King Edward and the Duke of York have helped to make this gloomy tower a centre of romance, from Henry Percy, eighth Earl of Northumberland, who was found dead in his cell, with three slugs in his chest, down to Arthur Thistlewood, of Cato Street renown.

The most illustrious in this long line of prisoners are Thomas Cranmer, Edward Courtney, and Walter Raleigh.

The fact of Cranmer's imprisonment in the Bloody tower is unknown to his biographers, early and late. It is mentioned by a Resident in the Tower, whose diary has been printed by the Camden Society under the title of 'The Chronicle of Queen Jane.' Percy had just been murdered in the room; the place was already beginning to be known as the Bloody tower, from that mysterious crime; and Cranmer was lodged in it as the most terrible dungeon in all the Tower. Here the Archbishop lay until he was carried down to Oxford, to be tried and burnt.

Edward, Lord Courtney, Earl of Devon, and afterwards Marquis of Exeter, was confined on his second imprisonment in the Bloody tower. Courtney, a grandson of Katherine Plantagenet, daughter of Edward the Fourth, was not only a prince of the royal race, a kinsman of King Henry's children, but the man whom all Englishmen designated as the best husband, first of Queen Mary, and afterwards of Queen Elizabeth. When Mary had made up her mind to marry Charles of Spain, she was afraid that Courtney and Elizabeth should combine against her. They were young and popular,—each

being a favourite; Courtney as representing the Yorkist nobles, Elizabeth as representing the reformed religion; and under the advice of Renard, Charles the Fifth's imperial agent in London, Mary had resolved to have their blood. When Courtney was brought to his prison, the Bloody tower was occupied by Cranmer, and Courtney was lodged for awhile in his old apartments in the Bell tower. But on Cranmer being sent to Oxford, on his way to the stake, Courtney, already condemned and executed in Mary's heart, was placed in the more fearful custody of the Bloody tower. In this chamber occurred that strange scene when Sir Thomas Wyatt, on his way to Tower Hill for execution, was carried into Courtney's room, by Mary's command, in the hope that, on a chance of his own life being spared, he would implicate Elizabeth and Courtney in the Kentish plot. The room was full of men; many lords of the Council, the lord mayor and sheriffs, gentlemen of the guard, officers of the Tower,—all eager for the words on which Elizabeth's life as well as Courtney's life then hung. But the undaunted poet—a man worthy to die for such a woman—would not win his pardon by a lie. Lord Chandos, his bitter enemy, says he implored Lord Courtney to confess the truth; the sheriffs of London declared that he asked Courtney to forgive him for having spoken of him and the Lady Elizabeth in connexion with his plot. A few minutes later, with the axe gleaming close beside him, he told the people on Tower Hill that he had never accused either Elizabeth or Courtney; that he could not truly do it, as neither had known of his rising until the commotion had begun. In another moment his head was in the dust.

Walter Raleigh had his home in this Bloody tower; and here he wrote that magnificent fragment of a History of the World, into which he has poured so much of the daring genius, the wise experience, and the chastened sorrow, of his heroic life. Beauchamp tower and the White tower claim the glory of having been Raleigh's prison home; and as he was three times committed, each may have a genuine claim; but his twelve long years of imprisonment were passed in the Bloody tower, the scene of his historical labours, of his chemical experiments, and of his political conversations. It was hither that Prince Henry came to spend his hours with the great prisoner; and where he one day said to his attendants, as he rode away, that no King save his father would keep such a bird in such a cage. It was to these narrow chambers that Lady Raleigh, the bright Bessie Throgmorton of his youth, leaving all the splendours of Sherborne Castle, came to reside with her hero. Here her son Carew was born. Into these rooms came Jonson and the poets, with whom Raleigh loved to converse about their art. In this dungeon he began a treatise on the art of conducting war by sea; made a new model of a ship; and invented the famous cordial which still bears his name. Having access to the little garden, which, though open now, is still green with trees, he converted a hen-roost into a laboratory, and spent his time in distilling waters from herbs and flowers, until he had perfected that drink of which Anne of Denmark and her grandson Charles the Second were so fond. But his main solace lay in writing; especially in composing that book of noble thought, his History of the World. Standing in the dark cell of the Bloody tower in which he wrote, we can fancy the feelings which led him into saying of his book and its future critics,—"The general acceptance can yield me no other profit, at this time, than doth a fair sunshine day to a seaman after shipwreck; and the contrary no other harm than an outrageous tempest after the port attained." The author, you see, was alarmed for the fate of his book; you must remember, there were no professional critics in those sad times, to turn away the edge of public condemnation from an author and his work!

Connecting the Bloody tower with the Bell tower stand the Lieutenant's lodgings (now occupied by Lord De Rose), with the Old Council Chamber, used also as a torture room, and said to be haunted. James the First came down to this Council Chamber to question Guy Faux. The fact is commemorated by a long Latin inscription over the fireplace; also by a bust of the king, in coarse stone, painted,

which some people take to be Guy himself. The walls of this Chamber are painted with pictures of men undergoing

The rack, the maiden, and the wheel, by way of gentle hint to the prisoners under verbal examination; but the upholsterers have kindly withdrawn these horrors from our sight. The room is commonly used to sleep in; and ladies of nervous temperament object to looking, as they lie abed, on figures of men being torn, and crushed, and singed with fire.

An inscription, recently found in an adjoining room, tells us a state secret—that Margaret Douglas, Countess of Lennox, mother of unhappy Darnley, was confined in these lodgings by Elizabeth, on suspicion of being concerned in the marriage of her son with Mary Queen of Scots. Margaret lived in London for many years. The last personage confined in these apartments was Sir Francis Burdett; his offence being an article in a newspaper.

We pass through Margaret's chamber into the Bell tower, in which John Fisher, the last Catholic Bishop of Rochester, lay so long, and wrote such piteous letters to the Earl of Essex. Fisher was arrested for denying the king's supremacy, at the same time with his illustrious friend, Sir Thomas More, whose opinions he shared and whose wit he imitated—at a distance. Condemned by his peers, and brought back to the Water-gate, he turned round and dismissed his escort, as though they had been a guard of honour, and he was only coming in from a feast, saying, that as he had nothing else left he should give them his hearty thanks. He was eighty years old; but he stood at the head of a discontented party, and Rumour was busy with his name in the pulpits and in Paul's Churchyard. One day, when it was said he was to die, his cook brought him no dinner to the Bell tower. "How is this?" asked the prelate.—"Sir," said the cook, "it was commonly talked of in the town that you should die, and therefore I thought it vain to dress anything for you."—"Well," said the Bishop, "for all that report thou seest me still alive; therefore, whatever news thou shalt hear of me, make ready my dinner, and if thou see me dead when thou comest, eat it thyself." Neither Henry nor Essex would have put the law in execution against the old man but for Pope Paul the Third, who chose to defy the English Government by sending the prisoner a Cardinal's hat. On hearing of this hat coming from Rome, the King exclaimed, "Fore God, then, he shall wear it on his shoulders." The death-warrant came to the Tower at midnight, and the Lieutenant, Sir Edmund Walsingham, went into the Bell tower at five o'clock, to let the new Cardinal know his fate. "You bring me no great news," said Fisher; "I have long looked for this message. At what hour must I die?"—"At nine," said Walsingham.—"And what is the hour now?"—"Five," answered the Lieutenant. It was June, and of course broad daylight, even in the Bell tower.—"Well, then, by your patience, let me sleep an hour or two; for I have slept very little." Walsingham left him, and he slept until seven, when he rose and put on his finest suit. On his servant wondering why he dressed in such bravery, he said, "Dost thou not mark, man, that this is our marriage day!"

This Bell tower, one of the safest dungeons in the stronghold, was considered as next in rank to the Bloody tower. Elizabeth is said to have been first of all lodged in its strong room, until the murmurs of all London and the threats of Lord Howard and the fleet persuaded Mary to treat her with some show of justice. It was the prison, as we see, of Courtney and Lady Lennox, both of the royal race, of the blood of Edward the Fourth.

Between the Bell tower and Beauchamp tower runs the Prisoners' Walk. Beauchamp tower may be considered as the common prison of the Tower: a place which was never empty of victims; and when the rooms were crowded with offenders, those who stood well with the Council—indeed, with the Lieutenant—were allowed, as a mighty favour, to take exercise on this walk. You will notice some inscriptions on the wall, and a great many more, which have been often figured, in the principal chamber of the Beauchamp tower. All these are

tolerably well described in the histories and guide-books; and this room need not detain us more than a moment. All the printed books say that the four sons of John Duke of Northumberland were lodged in the Beauchamp tower when Lady Jane Grey was arrested. This is an error; only Lord Guildford and Lord Robert were so lodged. Each has left an inscription on the wall; and as they enjoyed the liberty of the Prisoners' Walk, the husband of Queen Jane and the favourite of Queen Elizabeth may be pictured leaning on the parapet and gazing on the river and the bridge. Lord Ambrose and Lord Henry were confined in Cold Harbour, with permission to walk upon the leads.

The upper room of the Beauchamp tower, into which the public are not admitted, was the prison of Edmund Pole.

In the summer of 1562, when Elizabeth was in the prime of her youth and beauty, an astrologer named Prestal, pretending that he had cast her horoscope, affirmed that she would die in the following spring, when the crown would devolve by right on the Queen of Scots. Edmund Pole and his brother Arthur, two youths of Plantagenet race (being nephews of Cardinal Pole, grandson of Edward, Duke of Clarence), when they heard of this prophecy, thought it would besem them, as members of the royal family, to prepare for the coming in of Mary by raising a body of troops and throwing them into Wales. Mary was young, and a widow, and it was whispered to the poor boys that she might marry Edmund and make Arthur Duke of Clarence. Cecil seized them at the Dolphin Tavern, on the Bankside, near the Globe playhouse and St. Mary's Church, as they were about to take boat for Flanders. They protested that they had never sought their sovereign's life, that they had never dreamt of laying hands upon her crown, that their aim, however wrong, had been confined to bringing in the true heir when the throne was vacant; but their name was against them, the jury found them guilty of high treason, and the court condemned them to die a traitor's death.

Edmund was barely twenty, Arthur about thirty, when they were lodged in the Tower. Their youth, and perhaps their folly, pleaded with the queen; she would not sign the warrants for their death, but left the two brothers the consolation of each other's society in the Beauchamp tower; Edmund being in the upper, Arthur in the lower room. Each has left sad memorials of himself on the wall, the sadder, as I think, those of the younger and more innocent boy. In the first year of his imprisonment the young Plantagenet wrote in the stone: Dio Semin. In Lachrimis In Exultatione Meter. Æ. 21. E. Poole, 1562.—God sows in tears, to reap in transports.

Six years later there is a second inscription, now illegible. Half way down the winding stair, in a narrow slit through the masonry, he must have sat very often, with the gay life of the river spread out before him, the ships coming up and going down, the horsemen with their swords and plumes, the children playing on the bank, the country folks staring at the lions, and a little further off the processions on the bridge. From his seat on the stairs he could see the fatal spot near St. Mary's, where, deceived by a lying astrologer, he was taking boat for Flanders when seized by the queen's officers. Unhappy youth! Yet he was less unhappy in the Tower than he might have been elsewhere. He might have been married to Mary. He might have stood in the shoes of Darnley. Even in the Beauchamp tower he was luckier than the princes of his race. His great grandfather, the Duke of Clarence, had been drowned in the Bowyer tower; his grandmother, Margaret of Salisbury, had been hacked in pieces on Tower Green; his father had been executed on Tower Hill. Compared with most of his race—who had inherited the curse of royal blood—his fate was mild and soft. As in the upper room, so on the staircase, he has left two records of his long imprisonment. In the slit, through which he could see the ships, the river and the bridge, the church of St. Mary's and the Playhouse at Bankside, he has twice inscribed his name.

You will be surprised to hear that during the recent restoration of Beauchamp tower these inter-

esting memorials have been dug out of the wall, taken from their true locality, and inserted in the lower storey, so as to enrich the show of inscriptions in the public room. Antiquaries have to be rather sharp with country churchwardens; but what are we to say when a restorer of the Tower of London is allowed to remove inscriptions—to deface the work of ages, to obliterate romantic records, and to make the walls bear false witness as to what has occurred within them? Of course it is only needful to draw attention to this singular fact, in order that Edmund Pole's inscriptions may be restored to the places in which he made them.

In the Devereux tower was lodged Robert, Earl of Essex, the young and petulant kinsman of Queen Elizabeth; grandson of that Catherine Carey, who was Elizabeth's cousin by blood, her sister by affection; a man born into her lap and into her love; in everything but the name a grandson of the aged and childless Queen. What this young noble was, and how he acted, and what became of him, rank among the most romantic and best disputed passages in our history; for though the man himself was little, events had thrown him into the midst of our Immortals; and his story touches that of Bacon, that of Shakespeare, that of Raleigh, that of Elizabeth.

St. Peter's Church, being a public show-place, well described in the books, I may pass in silence. Of course you will walk through it; there is not much to see; and Bailey will tell you the ordinary facts of its history.

The Bowyer tower is said to have been the place in which Clarence was drowned in the butt of wine; the Brick tower that in which Lady Jane Grey was lodged.

In the lower room of the Beauchamp tower, you will find among the crowd of Dudley inscriptions the name of JANE. It is probably the work of her husband, Guildford Dudley, who could not think of her, even in the Tower, as other than the rightful Queen. But Jane herself, after her midsummer game of royalty was over, never used that perilous style. Fox has preserved a Latin couplet, which it is said she wrote on her prison wall, and of which the English is

Unto the common lot thy heart resign,
My fate to-day to-morrow may be thine.

If these lines could be found, they would give the room in which Lady Jane was lodged; but the search has been often made, and always in vain. I am clear that her prison was not the Brick tower; for in a contemporary journal, kept by a resident in the Tower, and describing her daily life, it is said that she lodged in the house of Master Partridge, and that her window commanded a view of the Tower green, so that she could see the cart which brought in for interment her husband's headless corpse. Partridge's house, and Lady Jane's prison, I take to have been the house standing between the Lieutenant's lodgings and the Bloody tower.

The Martin tower—properly St. Martin's tower—was the home for a few weeks of the gentleman arrested on the charge of having been favoured by the love of Queen Anne. A coat of arms, and the name of Boulton, are cut in the wall near the door,—probably the work of her brother George, Lord Rochfort. Anne herself was lodged in the state apartments; the same in which she had lived as Queen.

The Constable tower, the Broad-arrow tower, and the Salt tower have all been used as prisons; but for a lower class of offenders than those on the western and northern walls. A Bristol astrologer, one Hugh Draper, who kept a tavern and cast nativities, has left some strange memorials of his art. He was suspected of bewitching Lady St. Lowe, better known as Bess of Hardwick, and her third husband, Sir William St. Lowe, servants of Elizabeth.

Cæsar's tower, commonly called the White tower,—now used as an armoury and museum,—comprises a basement story, the beautiful church of St. John the Evangelist, the council chamber, two ante-rooms of considerable size, a staircase leading to the leads, a promenade on the roof, four turrets, the easternmost of which was used by Flamsteed as an observatory.

This edifice, a part of the royal palace, was the

centre of our national life from the accession of Stephen down to the flight of James the Second.

Here were lodged our royal prisoners: Griffin, Prince of Wales, who was killed in trying to escape; Baliol, King of Scots; William Wallace; David Bruce; Charles of Blois; John, King of France, captive of Poitiers; the Duke of Orleans and the Duke of Bourbon, taken prisoners on the field of Agincourt; not to mention our domestic prisoners, Richard the Second, Elinor the Fair, Henry the Sixth, Queen Margaret, the Duke of Clarence, and Edward the Fifth. Of our foreign captives, the most engaging was Charles of Orleans.

This French prince, grandson of Charles the Fifth, and father of Louis the Twelfth,—a soldier, a poet, a politician,—had been one of the chief commanders of the French at Agincourt, and had fallen, together with a host of princes and nobles, into the hands of Harry the Fifth. His life is an epic of love and war, of glory and defeat, of suffering and resignation. Nature and events had forced the conqueror and the captive into opposite lists. They were not only enemies, but rivals. Their fathers, Louis of Orleans and Henry of Lancaster, had each affected to consider himself the legitimate heir to the crown of France; and these splendid claims had, of course, descended to their sons. Louis of Orleans, making himself the champion of a royal and unhappy lady, Isabella of Valois, Queen of England, widow of Richard the Second, had sent a challenge to Henry of Lancaster, as he contemptuously called the King of England, which Henry had declined with cold and proud disdain. The young princes had been both in love with the "fair woman," as Shakespeare calls her,—the widowed English queen, a daughter of Charles the Sixth. Harry was then our mad-cap Prince of Wales, the friend of Poins, the companion of Sir John. Charles was a poet, a musician, a courtier; and although Hal was of higher rank and riper age, Isabella had chosen the softer, more accomplished prince for her future mate. The married life of Charles and Queen Isabella had been brief and clouded, though they had loved each other with a perfect heart. Her father, the King of France, was mad; and her mother, Isabeau the wicked, was suspected of a guilty intrigue with Charles's father, Duke Louis of Orleans. Suspicion is an ugly word; but conjugal infidelity was one of the lightest of Queen Isabeau's many crimes. Louis was murdered in the streets, at midnight, just as he was leaving the palace gates, by command of John the Fearless, Duke of Burgundy, who openly avowed and justified the deed. Violante, Duchess of Orleans, Charles's mother, and Isabella, Queen of England, his betrothed wife, went about the streets and churches in the deepest mourning, crying for redress against the shedder of blood; but no redress could be obtained from the crazy king. Violante died of a broken heart; and Charles, now orphaned on both the father's and the mother's side, was married by his kinsfolk to the beautiful English queen. In one year he lost her; lost her in childbirth; and the young prince, who was but nineteen when she died, bewailed her loss in verses which have made him famous as a poet, and which are still recited as a consolation by widowed lips. Reasons of state induced him to marry a second wife; he selected Bona, daughter of Bernard, Count of Armagnac, the soul of his party in the Court; and Bona became a tender mother to the infant princess left to his care by the dying Queen.

When Henry Bolingbroke died, and mad-cap Hal, casting off Poins and Jack, broke into Normandy, putting his claims on the crown of France to the rude arbitrament of war, the young poet flew to arms, with Bourbon, D'Albret, Bar, Brabant, Alençon, to defend his uncle's crown and his own eventual rights. Henry, after capturing Honfleur, was marching by the coast-line into Picardy; but a vast, and in their own belief unconquerable array of chivalry blocked up his way to Calais. Shakespeare, in the tent-scene on the night before Agincourt, has caught with a subtle art, though merely in a few light passing words, the characters of the French princes. Orleans, who talks of sonnets, and swears by the white hand of his lady, girds at the English King, his ancient

rival in ambition and in love. But no braver soldier fell among the wounded on that fatal field than Charles, the poet-prince, who was found by his conqueror under a heap of slain. At first he refused to eat food; but his royal captor, who carried him to his tent, persuaded him to live, and brought him into England, where he set a ransom of 300,000 crowns upon his head.

At that time Charles was only twenty-four years old. His infant daughter by Queen Isabella, afterwards Duchess of Alençon, and his second wife, the Duchess Bona, were left behind in France. The latter he was not to see again; for where in a broken and defeated France could such a sum as 300,000 crowns be raised?

Henry preferred his prisoner to his money; for, after his march on Paris, and his marriage to Princess Katherine of Valois (Isabella's sister), it had become of vast importance to him that Charles should have no male offspring. Henry had been promised the crown of France, after the dauphin's death; a promise which could only be carried out, except by brute power, on Charles of Orleans dying without male issue. So long, therefore, as the ransom was unpaid, and Henry had a pretext for detaining him, the poet was likely to remain a prisoner in the Tower. In fact, he remained a prisoner five-and-twenty years.

This time was occupied in writing verses in French and English, both of which languages he spoke and wrote with ease; lyrics on his lost love and on his absent wife. The dead Queen was his muse, and the most beautiful and tender of his verses are addressed to her.

In the MS. department of the British Museum there is a copy of his French poems, an exquisite volume, nobly illuminated, being a bridal present from Henry the Seventh to Elizabeth of York. One of the drawings in this MS. is of peculiar interest; in the first place as being the oldest view of the Tower extant; in the second place as fixing the exact chamber in the White tower in which the poet was confined, and displaying dramatically the life which he led. First, we see the prince at his desk, composing his poems, with his gentlemen in attendance, and his guards on duty. Next we observe him leaning on a window-sill, gazing outwards into space. Then we have him at the foot of the White tower, embracing the messenger who brings him the ransom. Again, we see him mounting his horse. Then we have him, and his friendly messenger, riding away from the Tower. Lastly, he is seated in a barge, which lusty rowers are pulling down the stream, for the boat which is to carry him to France.

But Harry of Agincourt had been dead nearly twenty years, and the French had recovered nearly the whole of France (many thanks to Jeanne Darc, and to Charles's natural brother, the famous Bastard of Orleans) before this day of liberation came. Every year the life of Charles had become more precious to France, as the sons of Charles the Sixth dropped, one by one, leaving no heir to the crown. At length the Duke of Burgundy, as an act of expiation for the past, of reconciliation for the future, paid the enormous ransom, and set the royal poet free.

On his return to Paris, he found Bona dead, and his daughter, whom he had left a baby, a woman of thirty. But reasons of State compelled him to begin life again, and he married, for his third wife, Mary of Cleves, by whom he had a son, called Louis in remembrance of his father, who lived to mount the throne of France, as the politic and successful prince so well known in history as Louis the Twelfth.

OUR WEEKLY GOSSIP.

ON the occasion of Her Majesty's recent journey to and from Balmoral, an experiment was made at every junction on the long line of 600 miles, to hold communications, by means of a new electrical apparatus, between the guard and engine-driver while the train was in motion. The communications were made by Her Majesty, to whom the mechanism was explained by Lord Charles Fitzroy, and in every case with instant and complete success. This apparatus, we are glad to hear, has been permanently attached to the royal train. Mr.

Martin, electrical engineer to the North-Western Railway Company, is the inventor and patentee of this new safety-guard; one of the chief peculiarities of which consists in there being a visible as well as an audible signal, the visible signal being permanent until the instructions given by the guard to the driver have been complied with. Each compartment is fitted with a "lever box," each box bearing an engraved tablet of instructions in the following terms: "To communicate with the guard for stopping the train, pull the lever." The effect of a passenger pulling the lever is to set a bell ringing in each of the guard's vans, and these bells, when once so started, will continue to ring until stopped by the guard. The guard of the rear-van (who is the guard in charge of the train) then depresses a key, which rings a bell on the engine. The attention of the engine-driver being thus aroused, he consults a galvanometer which is attached to the bell, and upon that he finds exhibited, in a simple and unmistakable manner, the signal "Stop instantly," or, "Stop at next signal-station." The driver acknowledges by his engine whistle. The rear-guard uses his discretion as to whether the train shall be stopped instantly, or at the next signal-station. Of course, if he sees any danger to the train he will give the first-named signal. When a lever has been pulled, it can only be replaced by the guard, who has to unlock the box containing the apparatus, and re-set the lever; repudiation by a passenger of having given the signal is therefore effectually checked. So important an invention should be at once extended to all trains running on the line, since the royal train has certainly no monopoly of the perils encountered on the iron way.

There seems to be some fatality presiding over the Print Department in the British Museum. Although the late Mr. Carpenter held the appointment for more than twenty years, yet in the last forty years there have been as many Keepers of the Prints, &c., as Keepers of all the other Departments put together,—J. T. Smith, Young, Ottley, Josi, and Carpenter. All the Keepers of the Printed Books, Baker, Panizzi, and Jones, are still alive. Of the Keepers of the Manuscripts, Ellis, Forshall, Madden, only one has died; of the Mineralogy, Koenig, Waterhouse, and Maskelyne, only one; of the Zoology, Children and Gray, only one; of the Antiquities, Hawkins, Birch, Newton, and Vaux, all alive; of the Botany, Brown and Bennett, only one; so that all the four successive Keepers of the Prints have died in office, while all the other Keepers of Departments, with the exception of Forshall, Koenig, Children, and Brown, are still alive. Of the four Principal Librarians, Planta, Ellis, Panizzi, and Jones, all are alive but one.

The vacancy in the Keepership of the Prints at the British Museum will, according to precedent, be almost immediately filled up. The decision of this matter is in the hands of what are called the Parliamentary Trustees of the British Museum; these are the Archbishop of Canterbury, the Lord Chancellor, and the Speaker of the House of Commons. Mr. William Smith has been commonly designated as pre-eminently capable of the office, on account of his special knowledge and personal qualities; of these there can be no doubt. We understand, however, that this gentleman declines to become a candidate. Also Mr. G. Scharf, secretary to the Trustees of the National Portrait Gallery. Mr. F. T. Palgrave, well known as the author of the section on Italian Engraving in Kugler's 'Handbook,' is named as peculiarly fitted to the duty, if he would undertake it. Mr. Reed, for many years the chief assistant in the Print Room, is a candidate; his knowledge is unchallengeable; he seems to have deserved the place. Also Mr. Holmes, of the Department of Manuscripts.

On Monday, Mr. Cyril Graham will read a paper before the Archaeological Institute, 'On Exploration in Palestine.' Several members of the Committee will attend the meeting, and take part in the discussion.

'The Ethics of Literature' is the title of a volume of papers by Mr. Thomas Purnell, Secretary

of the Archaeological Institute of Great Britain and Ireland.

Mr. Woodward, Her Majesty's Librarian, has recommended the *Pine Arts Quarterly Review*, with a good specimen. The illustrations, which ought to be treated as the chief feature in this quarterly organ, are—Jehan Fouquet's 'Coronation of the Virgin' (in gold and colours); Reynolds's Portrait of himself, from the picture in Mr. Stuart's possession; Raphael's cartoons of 'Christ's Charge to Peter,' and 'The Beautiful Gate'; Flandrin's 'Christ and St. John'; the Pitti 'Ecce Homo'; Perugino's 'Ascension'; together with some minor works, initial letters, and the like. The articles are for the most part well written; the one on Eastlake is far below the rest in tone and power.

The new number of 'Photographic Portraits of Men of Eminence' contains sun-portraits and memoirs of Mr. Mark Lemon, Mr. Shirley Brooks, and Prof. Ramsay,—all good in their way. The memoirs (written, as we infer, by the editor, Mr. Edward Walford) are creditably free from either cynical or laudatory passages, and are well supplied with facts.

Among the papers read at the closing meeting of the Royal Society's session, there was one by the Master of the Mint, which is likely to engage the attention of chemists and metallurgists, for it carries on, and with striking results, the researches arising out of Mr. Graham's important discovery of dialysis. Treating of the absorption and dialytic separation of gases by colloid septa, the first part of the paper gives the results obtained by a septum of caoutchouc, and the second part those of different metallic septa at a red heat. It has long been known that palladium and some other metals, when heated, absorb gases. Mr. Graham now finds that palladium will take up several hundred times its bulk of hydrogen, and that iron at a low red heat absorbs a considerable quantity of carbonic oxide; and that, contrary to long-standing belief, this gas does not act on the surface of the metal only, but permeates its entire substance. This fact is particularly interesting to metallurgists. Having taken up the gas, the iron will retain it for any length of time, and in this condition is best adapted for conversion into steel, as by the permeation of the carbonic oxide the subsequent process of carbonization is largely facilitated. Hence arises the suggestion that the process of aeration would be best accomplished by changes of temperature; a low red heat to fill the iron with carbonic oxide, after which it may be put away, if required, to await the final process at a high temperature of conversion into steel. Concerning another form of iron, Mr. Graham remarks that wrought iron, in the course of its preparation, "may be supposed to occlude six or eight times its volume of carbonic oxide gas, which is carried about ever after. How the qualities of iron," he asks, "are affected by the presence of such a substance, no way metallic in its characters, locked up in so strange a way, but capable of reappearing at any time with the elastic tension of a gas, is a subject which metallurgists may find worthy of investigation." It would not be easy to overrate the importance of the paper of which we have given here so brief a sketch, for it is remarkably suggestive and original throughout. When published in the *Philosophical Transactions*, with all the details, it will secure the attention it deserves. If Mr. Graham had never written more than this paper, it would suffice to place him in the foremost rank of the chemists of Europe; and it may be that metallurgists will now be ready to claim him as one of themselves for what he says about iron and other metals.

Mr. Tweedie has in the press a work 'On the Choosing, Tempering, Annealing, and General Management of Steel in its Various Applications,' by George Ede, of the Royal Arsenal, Woolwich.

The actual works for the Holborn Viaduct have been begun in the erection of a portion of the western abutment on both sides of Farringdon Street; foundations have been laid and brickwork executed. We trust the Viaduct will be no longer delayed in completion.

A very ingenious and most convenient show-case

for prints and drawings may be seen in the North Court of the South Kensington Museum. This must be peculiarly serviceable in situations where space is valuable. It is constructed thus:—Attached, by hinges, to an upright cylinder, that may be made of any wood, and decorated according to its office and character, is a series of glazed frames, each of which is double, so as to display on both sides of the leaf whatever may be placed between. These leaves radiate from the centre of the cylinder, and, by moving on the hinges as required to present their contents to the spectator, are so contrived that one stand or show-case will display more than the walls of a large room. The whole revolves on a pivot, so as to bring the objects to any required light. To illustrate the serviceableness of such a thing, we may say that one of these cases will contain the whole of Turner's 'Liber Studiorum,' each plate of which, by merely making the case revolve on its axis, may be seen without the spectator leaving his seat, and without exposing the prints to injury by handling. The contents may be readily taken out from between the glasses, because each double panel (or leaf, as we have styled it) opens on hinges. There is no waste space in such a piece of furniture as this; the walls of the room are left for pictures.

The Treasury, at the instance of the competitors for the designing of the new Law Courts, has consented to enlarge the space of land originally devoted to that building on the south-west corner of the site, so as to render the plot more truly square than before, and increase the extent of the Strand front.

In this season of home travel we may remind our readers that the Southampton Exhibition, which was opened on Tuesday last, will well repay those who may have a few hours to spare at Southampton. The Queen has sent many Art-treasures from Osborne. There are upwards of five hundred oil and water-colour pictures from various houses of note in Hampshire, and a great variety of other contributions, some unique, and several of a highly-interesting nature. The price of admission to the Exhibition is one shilling on each day but Saturday, when it is two shillings and sixpence.

We venture to call the attention of the Benchers of the Temple to the statement of a Correspondent, who alleges that Goldsmith's tomb, near the Round Church, is in need of protection, being open to ravage by any idle or too-fond loiterer. The railing appears to have been removed from this sacred spot.

The grand horse-flesh banquet in Paris is *un fait accompli*. Under the Presidency of M. de Quatrefages, Member of the Institute, one hundred and eighty-two guests sat down to table, and all, without exception, declared that the dinner, of which the principal dishes were formed of various parts of horse, was excellent. The soup made from *bouillon de cheval*; the *sauçisson de cheval*, *filet rôti*, and *cheval à la mode* were all eaten with great gusto, and pronounced most palatable. And to further celebrate the occasion, two new songs, composed for the occasion, were sung; one of which is entitled, 'C'est le Cheval qu'est le Bœuf.' It is not so stated, but we presume that the motto of this Société Hippophage is, "De gustibus non est disputandum."

A sale of extraordinary MSS. and autographs has just been concluded by Messrs. Puttick & Simpson. The collection was formed, about a hundred years since, by Sir John Fenn, who edited the 'Paston Letters.' The following were amongst the most remarkable lots, with the prices they produced. From amongst the Autograph Letters—Browne (Sir Thomas), author of 'Religio Medici,' five letters relating to the Tumuli in the Fens, &c., Norwich, 1658, 3*l.* 10*s.* (Preston).—Cornwallis (Sir Charles), forty-seven autograph letters to Sir John Hobart, Sir Basingbourne Gaudy, Lady Lestraunge, and Lady Scudamore, from 1595 to 1627, 11*l.* 5*s.* (Boone).—A series of eighteen proclamations and letters, each signed by Queen Elizabeth, produced 63*l.* 18*s.*, some being bought by the Society of Antiquaries.—Gardiner (Stephen), Bishop of Winchester, letter, as Chancellor, to the Sheriff of London, directing the release of one

John Pykarell, who was imprisoned for debt, June 30, 1554, 3*l.* 10*s.* (Webster).—Henry VIII. Letter to the Earl of Shrewsbury, Steward of the Household, dated from Calais, 7*l.* (Boone).—Mary, Queen of England, a letter to the Earl of Shrewsbury, President to the Council in the North, Manor of St. James, 26 Jan. 1553, relating to the Rebellion of Peter Carew and others in Devon and Cornwall, and of Thomas Wyatt in Kent, 4*l.* 4*s.* (Waller).—Order prescribed by the King and Queen's Majesties unto the Justices of Peace for the good government of their Majesties' loving subjects, 26 March, 1555, with signatures "Philip," and "Marye the Queen," 10*l.* (Waller).—Sterne (Laurence), author of 'Tristram Shandy,' &c. letter, dated Rome, 19 April, 1767, 5*l.* 10*s.* (J. Gibbs).—Washington (George), President of the United States, letter to Rev. Mr. Boucher, Mount Vernon, 5 May, 1772, 5*l.* 5*s.* (Appleton).—Two Warrants, addressed to Mr. John Pym, for inclosing the disforested grounds of Blackmore and Pewsam in the County of Wilts, with autographs of Archbishop Abbot, Lord Chancellor Bacon, as Baron Verulam, Bishop Andrews, and others, Whitehall, 20 Nov. 1618, 10*l.* 10*s.* (Waller). From amongst the miscellaneous MSS., Deeds and Rolls—The Arms and Names of the Officers under William Duke of Normandy, afterwards King of England, when he besieged the Isle of Ely in 1056, a very curious and early roll of vellum, with 44 coats of arms, emblazoned; the copy from which Blomefield printed in his 'Collectanea Cantabrigiensi,' 8*l.* 5*s.* (Boone).—An interesting and curious Roll, being a transcript made in the sixteenth century, containing the "Complaynte made to Kynge Henry the VI. by the Duke of Gloucester (Humphrey Plantagenet) upon the Cardynall of Wynchester (Beaufort)," with the parts marked which are not published in the *London Chronicle*; an account of the murder of the King of Scots, &c., 35*l.* (Boone).—Heraldic Roll containing the Arms of the Lords and Earl Marshalls of England, from Gilbert de Clare, Earl of Pembroke, 42 coats emblazoned in gold and colours, 10*l.* (Boone).—Grant from John, Earl of Moreton, son of Henry II., King of England, and afterwards King himself by the title of King John, to Bertram de Verdun, of land in Charems, dated at Rouen, about 1189, 12*l.* (Boone).—Account of Giles Wenlok, Comptroller of the Household of Margaret Lady Marshal, Countess of Norfolk, at Framlingham, 1385-6, 10*l.* 5*s.* (Boone).—Rental of the Estates of Thomas Mowbray, Earl Marshal, Duke of Norfolk, &c., with the Expenses, Inventory of the Gold and Silver Vessels, &c., 1401-3, 10*l.* 10*s.* (Boone).—Norfolk (John Mowbray, Duke of), Household and other Accounts, 1422-3, 10*l.* 10*s.* (Boone).—Exemplification of the Act of Attainder of John de la Pole, Earl of Lincoln, for endeavouring to make Lambert Simnell, the Counterfeit Plantagenet, King, 9 Feb. 1498, 5*l.* 7*s.* 6*d.* (Boone).—The Declaration of the Account of John Pikarell, Cofferer of the Household of Edward, late Duke of Somerset, the Protector, from 1548 to 1551, 12*l.* (Boone).—Charter of King Stephen, granting to the Church of St. Peter of Eye and the Monks there, all the valuable possessions which they held in the time of Robert Malet, and before the King (Stephen) came to the throne, free from all exaction, dated at Eye, 1137, 30*l.* (Boone).

The small cabinet of English coins of the late Mr. William Gott, of Leeds, was sold during the past week by Messrs. Sotheby, Wilkinson & Hodge. The following may be selected as among the more valuable pieces: Sovereign or Double Ryal of Henry VII., 39*l.*—another specimen, of a different type, 15*l.*—Sovereign of Henry VIII., of his eighteenth year, 15*l.*—Sovereign of Edward VI., 12*l.*—Angelet of Queen Mary, 11*l.* 5*s.*—Pound Sovereign of Elizabeth, 5*l.* 10*s.*—The Half-Sovereign, 4*l.* 19*s.*—Thirty-Shilling Piece of James I., of his seventeenth year, 7*l.*—Sovereign of Charles I., by Briot, 7*l.* 10*s.*—Treble Unite, 7*l.* 2*s.* 6*d.*—Gold Medal on his Coronation, by Briot, 7*l.* 2*s.* 6*d.*—Broad, of Cromwell, 6*l.*—Half-Broad, of the same, 12*l.* 5*s.*—Five-Guinea Piece of Charles II., 10*l.*—Five-Shilling Piece of Charles II., in gold, 6*l.* 10*s.*—Five-Guinea Piece

of William III., 7l.—another of George I., 7l.—Pattern of a Two-Guinea Piece of George III., by Eger, 9l. 2s. 6d.—Set of Mint Proofs of the Coinage of William IV., 12l. 10s.—another Set of the Coinage of Victoria, 11l. 17s. 6d.—Styca of Ecgrif, King of Northumberland, of great rarity, Charles I., Oxford Pound Piece, of fine work, 19l. This small cabinet realized 814l. 12s. 6d.

Will Close on Saturday, the 28th inst.
ROYAL ACADEMY OF ARTS.—The EXHIBITION is NOW OPEN, in the Day, from Eight A.M. till Seven P.M. Admission, One Shilling; Catalogue, One Shilling.—In the Evening, from Half-past Seven till Half-past Ten. Admission, Sixpence; Catalogue, Sixpence.
JOHN PRESCOTT KNIGHT, R.A., Secretary.

Will Close on Saturday, July 28.
SOCIETY OF PAINTERS IN WATER COLOURS.—The Sixty-second Annual EXHIBITION is NOW OPEN, 5, Pall Mall East, from Nine till Seven.—Admission, 1s.; Catalogue, 6d.
WILLIAM CALLOW, Secretary.

Will Close on Saturday next.
INSTITUTE OF PAINTERS IN WATER COLOURS.—The Thirty-second Annual EXHIBITION is NOW OPEN, at their Gallery, 53, Pall Mall, near St. James's Palace, daily, from Nine till Dusk.—Admission, 1s.; Catalogue, 6d.
JAMES FAHEY, Secretary.

BRITISH INSTITUTION, Pall Mall.—The GALLERY, with a Collection of PICTURES by ANCIENT MASTERS and deceased BRITISH ARTISTS, is OPEN DAILY, from Ten to Six.—Admission, 1s.; Catalogue, 6d.
GEORGE NICOL, Secretary.

FRENCH GALLERY, 130, Pall Mall.—The THIRTEENTH ANNUAL EXHIBITION of PICTURES, the Contributions of Artists of the French and Flemish Schools, is NOW OPEN, admitting also to HOLMAN HUNT'S PICTURE, 'The Finding of the Saviour in the Temple.'—Admission, 1s.; Catalogue, 6d.

THE NATIONAL PORTRAIT EXHIBITION, Exhibition Road, South Kensington, is NOW OPEN to the Public. Admission, on Mondays, Wednesdays, Thursdays, Fridays, and Saturdays, 1s. each person; Tuesdays, 2s. 6d. Hours from Ten A.M. till Six P.M. Season Tickets, 1l. each. Catalogues, 1s. and 1s. 6d.

EXHIBITION of a PORTION of MODERN LANDSCAPE ART.—A MACCALLUM'S LARGE PICTURE of 'Sherwood Forest' and 'The Charlemagne Oak,' Fontainebleau, with Studies of Woodland, Lake, Glacier, and Italian Subjects, DUDLEY GALLERY, Piccadilly. Open daily, from Ten to Six. Admission, 1s. Evening, from Half-past Seven to Ten P.M. Admission (including Catalogue), 1s.—Will shortly Close.

MR. MORBY'S COLLECTION of MODERN HIGH-CLASS PICTURES is ON VIEW at the Royal Exchange Fine Arts Gallery, 94, Cornhill. This Collection contains examples of Holman Hunt—Phillip, R.A.—T. Faed, R.A.—J. Lewis, R.A.—Eger, R.A.—Hook, R.A.—Frith, R.A.—Rosa Bonheur—Goodall, R.A.—Cooke, R.A.—Creswick, R.A.—Pickersgill, R.A.—Calderon, R.A.—Sant, A.R.A.—Le Jeune, A.R.A.—Ansell, A.R.A.—Frost, A.R.A.—Nicol, A.R.A.—Petrie, A.R.A.—Yeames, A.R.A.—P. Nasmith—Linnell, sen.—Dobson, A.R.A.—Ansell, A.R.A.—Gale—Marks—F. Hardy—John Faed—Henriette Browne—Frère—Ruilperre—Brillouin—Lidderdale—Geo. Smith—Peter Graham, &c.—Admission on presentation of address card.

Mr. and Mrs. GERMAN REED, with Mr. JOHN PARRY, in a new Entertainment, entitled A YACHTING CRUISE, by F.C. Burnand, Esq., Scenery by Messrs. T. and W. Grieve, with THE WEDDING BREAKFAST at Mrs. ROSELEAF'S, by Mr. John Parry. Every Evening (except Saturday), at Eight; Thursday and Saturday Mornings, at Three.—Royal Gallery of Illustration, 14, Regent Street.—Admission, 1s., 2s., 3s., and 5s.

ROYAL POLYTECHNIC.—Exhibition of the Prussian Needle Gun at Professor Pepper's Lectures daily—the Kaleidoscope, and Pepper and Tobin's Wonderful Illusions, 'The Cherubs Floating in the Air,' 'The Modern Delphic Oracle,' varied by the Recitals of F. Damer Cape, Esq., in the Illusive Scene, entitled 'Shakespeare and his Creation,' by Henri Drayton's Musical Entertainments at 1 and 5; Lectures by Messrs. King and Stokes, &c. Open from 12 till 5 and 7 till 10.—Admission, 1s.

SCIENCE

How to become a Successful Engineer: being Hints to Youths intending to adopt the Profession. By Bernard Stuart, Engineer. (Edinburgh, Nimmo.)

WHEN a celebrated and eminently successful man reveals the secret sources of his greatness, and tells humbler persons the means by which they may achieve distinction, the world is laid under an obligation. Mr. Bernard Stuart has, therefore, a claim upon our gratitude. Moreover, the rules which he prescribes can be so easily observed, that in thanking him for valuable advice, we have also to thank him for advice which can be carried out without self-sacrifice or labour. In order that he may rise to the highest grade of his profession, the engineer should start free from the burdensome disqualifications of a liberal education; and having commenced his strictly professional career with all the advantages of general ignorance and a contracted knowledge of human nature, he should confine his attention to matters immediately connected with the profession, and promise a speedy

return in money, or money's worth, for labour expended upon them. This counsel is all the more impressive because it comes from a teacher who sees so little of the tendency of his admonitions, that we can, at certain points of his pamphlet, give him credit for wishing to inculcate views directly opposite to those which he really enforces. To give boys a smattering of a score of different kinds of knowledge is to leave them in almost total ignorance of everything, and without those mental and moral forces which are the chief objects of every good scholastic system. Speaking on matters about which he is, of course, qualified to lecture authoritatively, Mr. Stuart observes, "The truth is, that our systems of education are not based upon philosophical principles. They pretend to take us in hand, and prepare us for the battle of life which we have all to fight, and yet they ignore the fact that there is a battlefield at all; or, if the upholders of these educational systems do admit that it exists, they turn their back upon it, and invite the attention of their pupils—so called—to the fields of Elysium, peopled with the gods and goddesses of yore, and invested with an interest of mythological traditions. Of course this is all very crotchety, and will be set down as utterly Gothic in taste, and false in principle. But patience: we do not ignore, or ever have ignored, the immensely mental advantages obtained by a study of classic lore. Nor would we, like some, object, with an over-refinement of feeling which may approach to prudery, to the time given to impart to youth a knowledge of the intricate intrigues and the careless loves of heathen gods and goddesses; but what we insist upon as being eminently ridiculous in this present nineteenth century of ours is, that while our youth in our superior schools are taught all this, they are taught nothing more." Without stopping to inquire how Mr. Stuart became so familiar with the system pursued in our public schools, readers may reflect on what the world would have missed, had the author of this manual been trained like our high wranglers and first classmen. Had his intellect been exposed to the enervating and depressing influences of a public school, he would never have produced those marvels of constructive skill and mechanical genius which entitle him to speak for his profession, and say how our engineers should be trained. What reason has he to be thankful that his youthful energies were not extended in fruitless toil on what he is pleased to call "the fields of Elysium," and that from a higher course of study he was permitted to draw powers more valuable than "the immensely mental advantages obtained by a study of classic lore." When Mr. Stuart, having finished his remarks on the preliminary education of engineers, gives counsel as to their special training, he makes a series of observations which incline us to think that he knows almost as much about "the fields of Elysium" and "the gods and goddesses of yore" as he does about the machinery and workshops of the nineteenth century. This teacher of engineers is actually under an impression that George Stephenson invented the locomotive and then raised it to perfection by a series of improvements. "Was it not," he asks, "through a series of the most apparently hopeless failures and baffling difficulties that Stephenson brought this wonderful machine to such perfection?—difficulties, indeed, which were beyond reasonable hope of being surmounted, considering the incorrigible prejudice of the people in those days against the introduction of such engines." A writer on mechanical science ought to know what every apprentice

in a civil engineer's office knows by this time,—that George Stephenson neither invented the locomotive nor contributed to it a single important improvement. At one period of his career George Stephenson, together with other persons in whose steps he followed, did good service as an advocate of the locomotive; but far from being superior to "the incorrigible prejudice of the people in those days," he at a later period of his career opposed those engineers who recommended a wider use of the travelling engine. When Sir John Rennie advised the employment of the locomotive on the Blackwall Railway, George Stephenson maintained, before a Parliamentary Committee, that if it were used on that line it would very likely set fire to London.

MEETING FOR THE ENSUING WEEK.
SATURDAY. Botanic, 31.

FINE ARTS

THE BRITISH INSTITUTION.

Newington Butts, Surrey, July 16, 1866.
THE lovers of Art will be sorry to learn that the British Institution is on its last legs, and that the most interesting and important of all exhibitions of the works of the great masters in this country, the delight of connoisseurs, and the Art-treat of the London season, is about to shut up for ever—in other words, the lease of the premises at No. 52, Pall Mall, expires at Lady Day, and the terms on which alone it can be renewed are beyond the resources of the governors. When, however, its claims on public consideration and on the goodwill of the Government are considered, it is to be hoped that some means will be found for continuing its utility, at least for two generations more. The British Institution dates its existence from 1806, and, long before the British nation was thought rich enough to have a gallery of its own, the annual exhibitions of the works of the great masters, here held, were the only ones accessible to the public. These exhibitions are still of the greatest importance to the lovers and students of Art, as, by their means, the finest pictures in the private galleries of Great Britain are annually brought forth and set before the public. Since 1813 up to 1859 inclusive, 7,683 works of the great masters, Italian, Flemish, Dutch, Spanish, German, &c., with the best productions of our own school, have been exhibited. (See 'Recollections of the British Institution,' by Thomas Smith.) The Institution, as is well known, is chiefly supported by subscribers, who receive honorary titles and obtain certain privileges, according to the amount of their subscriptions,—100 guineas, 50 guineas, 5 guineas, or only three. The late Sir John Soane and the late Samuel Woodburn left each 500l. to the Institution. It may be some consolation to its friends to know that it holds consols of the nominal value of 15,000l.; but these will not procure a new lease of the premises. Sixty years ago 5,000l. was paid for the lease, as I understand, with a yearly rental of 125l.; but now 25,000l. will be required to purchase the same, to say nothing of an increased rent. This sum, however, would not have been beyond the means of the Institution but for its liberality to the nation in the promotion of Art, since, in the purchase of pictures which have been presented to the National Gallery and to other public establishments, and in donations to charities, the Institution has spent 28,515l. The items constituting this sum are as follows:—For premiums and complimentary donations, 6,080l.; in the purchase of pictures and busts by modern artists, 10,161l. 10s.; in the purchase of pictures by the great masters and deceased artists, 7,875l.; donations to charitable institutions, 4,398l. 10s.; in all, 28,515l. What a world of good the British Institution must have achieved, to say nothing of the gratification it has afforded, during this sixty years of its valuable life! The National Gallery has greatly benefited by its generosity. We are indebted to it for 'The Vision of St. Jerome,' by Parmigiano (3,302l. 10s.); for 'The Holy Family,' by Reynolds

(1,995l.); for 'The Consecration of St. Nicholas,' by Paul Veronese (1,575l.); and for Gainsborough's 'Market Cart' (1,102l. 10s.). The picture by West, of 'Christ Healing the Sick in the Temple,' which cost 3,000 guineas, was also presented by the Institution to our Gallery. These good deeds and many others entitle it to public gratitude. As a nursery for rising artists, and as the means of spreading a love for real Art among the people, it has rendered invaluable service to the State, and must not be allowed to fall to the ground. If Government will not help it, the nation must. Let those who are rich give something of their abundance; and those who are poor, according to their means,—so that, what with the noble patrons of Art and their humble imitators, enough may be forthcoming to procure a renewal of the lease, and so preserve to us all the advantages of the British Institution.

H. C. BARLOW.

** We acknowledge freely the ample services of the British Institution in respect to the annual exhibitions of ancient pictures. The growth of the public collection renders such gatherings less needful than at the beginning of the century; but their entire cessation will be lamentable. Let us hope, however, that some means may be found to supplement them. As to the causes of this failure—for such it is in the case of an institution having aims like those of the moribund gallery, moribund after an existence of sixty years—they are obviously due to neglect of trust on the part of the gentlemen managers, whereby the exhibition of modern pictures has fallen into contempt, so that public opinion has been incessantly invoked against its abuses. Nobody will aid an institution which lies open to such charges, and shows no disposition to amend. In competent hands the British Institution might have flourished. There is ample need for it as a check to that Royal Academy which it could not rival; this office it performed admirably for many years, and had advantages not attainable for the gathering in Trafalgar Square. These were: *the space to be hung was moderate*; well lighted; the situation and prestige excellent; no personal interests were to be consulted; no member's pictures claimed the line. All these advantages have been wasted, mainly, we believe, because the aristocratic managers, that is to say, the "lay element," having not more than temporary and sentimental interest in their duties, so it is averred, relegated them to persons whose low order of taste involved a low order of pictures for exhibition, and consequent decay of the Gallery.

FINE-ART GOSSIP.

A cast from Mr. Woolner's seated statue of Macaulay, for Cambridge, has been placed in the West Court of the South Kensington Museum. This work possesses that excellence of composition for which the designs of Mr. Woolner are generally distinguished,—this is, that it looks finely and composes well from all points of view. We too often see statues which only look fairly from one point of view. The art of the sculptor is called into play with the greatest felicity when the result we attribute to Mr. Woolner has been attained. Macaulay sits in his gown, half turning round in his chair—an attitude full of simplicity and naturalness; at the same time, not at all "pictorial,"—that is, unapt to sculptural art as understood and practised in the greatest and severest schools. The likeness, all attest, is most successful. We may heartily congratulate Cambridge folks on their approaching possession of the statue.

Mr. E. M. Ward informs us, for the benefit of those artists who regard the preservation of their pictures in the original condition, that the white of the letter, which forms so prominent an object in his work, 'The South-Sea Bubble,'—now at South Kensington, executed twenty years since,—is as pure and brilliant in its character as on the day it was used; that it is ordinary Flake White (Roberson's), and that the only vehicle employed was "Roberson's Medium."

A bust in marble, representing the "Daughter of Jove! Relentless Power!" whom the Greeks styled *Ἀνάγκη*, is now on view at Messrs. Col-

naghi's. It is by the Duchess Castiglione Colonna, the sculptress to whom we owe the head of 'La Gorgone,' shortly to be installed at South Kensington.

Those interested in the recent efforts made by the Department of Science and Art to introduce mosaic as a means for decoration in this country will be glad to study the very successful reproduction of Mr. Leighton's design for the wall arcade—the figure of Cimabue. This is now in the "boiler" building, close to the collection of works in mosaic, and should attract much attention. The figure is mainly white; the ground upon which it is placed gold. The process of manufacture is as follows: Minton's earthenware tesserae are gummed, face downwards, upon a cartoon in outline of the figure to be reproduced; this cartoon having been prepared by a competent draughtsman and the design reversed, in effecting which tracing serves, the act of placing the tesserae is intrusted to females, for whom very little training suffices. We note this because one of the objects in view is to afford profitable employment for persons who are not adapted to physical labour or are unfitted by any means for ordinary female employments. When the whole surface has been covered by dice of colours proper to the design, a frame adapted to the space to be decorated is placed about the work and Portland cement poured in, so as to form one mass of dice, frame and cement. The work is then turned face uppermost, the cartoon washed off, and the picture appears complete and practically imperishable. The colour of these works is subject to improvement in many respects, the figure of Cimabue being peculiarly well adapted to the process as at present employed. Beyond a doubt, these improvements can be made and the chromatic scope of the materials enlarged. As it stands, however, the resemblance of the mosaic to a fresco-painting, except as concerns the peculiar lucidity and brilliancy of that method in Art, is striking. There is considerable clearness and great freshness of colouring in the picture, and, what is best, none of the glitter which is so injurious to the artistic effect and decorative propriety of the more brilliant glass mosaics, such as have been hitherto employed for figures of the series to which that of Cimabue pertains. The material seems peculiarly fitted for external use, and is to be employed for the decoration of certain panels inserted in the upper part of the new nearly complete façade of the new buildings at the South Kensington Museum. The process is recommendable on account of its comparative cheapness. While examining the figure to which we have referred, the visitor will do well to note the complete and very interesting collection of mosaic works as produced in many countries and at different periods. There are, close to the Cimabue, antique Roman, later Italian and Romanesque mosaics, from San Ambrogio, at Milan, and Ravenna, of the fifth and earlier centuries,—also, a small but very fine specimen of the so frequently depicted fish, on a black ground, of the southern Italians; Byzantine mosaics; the pictures proper of the Zucatti of Venice, of the sixteenth century; recent Italian, English and German works.

Messrs. Bell & Daldy are about to publish a series of about twenty photographs, by Messrs. Cundall & Fleming, from so many of the finest impressions in the British Museum Print Room of Rembrandt's etchings. This comprises such famous works as 'The Three Trees,' 'Ephraim Bonus, with the dark ring,' one of the 'St. Jeromes,' 'The Raising of Lazarus,' 'The Descent from the Cross,' 'The Appearance of the Angels to the Shepherds,' and 'The Hundred Guilder Piece.' A letter-press descriptive text will accompany the photographs.—The same publishers will issue at the usual season a Memoir of Mulready, by Mr. F. G. Stephens, illustrated by about sixteen photographs from the artist's most famous pictures.

Mr. M'Lean has published an engraving, by Mr. T. Parkes, from a picture by Mr. G. Hicks, styled 'The Sunshine of Life,'—a young mother playing with her infant, who crawls on the floor at her feet. The story is capitally told; the execution

is satisfactory in its class, and within the artist's aims. Of its kind we have seen few, if any, pleasanter productions. Many portions, especially as concerns chiaroscuro, might be greatly improved. The lighting, as with Mr. Hicks's pictures in general, is hard. The mother's face and the actions of both figures are suitable, and not too "pretty."

MUSIC AND THE DRAMA

MR. MOSCHELES begs to announce that he will give a GRAND EVENING CONCERT ON MONDAY, July 30, in St. James's Hall, for the Benefit and Relief of the Sick, Wounded, and Sufferers of all Nations engaged in the present War, in conjunction with the Ladies' Association, established for that purpose. Madame Lind-Goldschmidt, Mr. Goldschmidt, and Madame Parpa have already promised their kind assistance. Further particulars will be announced immediately. To commence at eight o'clock.—Box Stalls and Balcony, 10s. 6d.; Gallery, 6d. Tickets to be had of Chappell & Co., 50, New Bond Street; Austin, 28, Piccadilly; and of Mr. Moscheles, now at 8, Clarges Street, Piccadilly.

NEW PUBLICATIONS.

INSTRUMENTAL MUSIC.

In two or three paragraphs the residue of the instrumental music "standing over" at our last notice can be dealt with. The most noticeable item is Mr. Waterson's *First Grand Duet Concertante for two Clarinets* (S. A. Chappell). There is an ambition to do good things in the leader of the military music of the 1st Life Guards, meriting all consideration;—and especially since, in the case of a work like the one before us, the writer's profit can bear no proportion to the labour and special knowledge embarked in it. To do justice to this duett there must be two first-class clarinet players. Let it be set against any bit of *Claribel-waltz*—a no-tune available for anybody, or everybody, or nobody, on the singing of which inane music ("royalty granted") vocalists coin scores of pounds where Mr. Waterson must hardly hope to gather pence. There is too violent a disproportion betwixt the fruits of musical work conscientiously done, as here, and those of Charlatanry—no matter where, no matter when, no matter by whom, administered.

The other music to be noticed to-day is for the pianoforte. Mr. Ignace Gibsons presents a second set of *Six Meditations* (Hutchings & Romer); these making up the dozen of which the entire *opus* consists. Among them we like best the Nos. 8, 10 and 12. Mr. Gibsons has mostly elegant ideas, as these *Meditations* show. They are difficult enough to interest, but not so difficult as to discourage the average pianist.—Mr. Charles Salaman's *Kalembi* (Op. 35), a *Fantasia* on national songs of Jamaica (Metzler & Co.), reminds us, without disadvantage to him, of the 'Marche Marocaine,' which M. Leopold de Meyer used to be fond of playing, and, to Mr. Salaman's advantage, of M. Gottschalk's show-pieces, also professedly founded on Negro tunes. It is a spirited movement *alla marcia*, on a rather monotonous theme.—*Les Chants du Peuple: Mélodies Autrichiennes*, Op. 181, and *Berger et Bergère: Idylle*, Op. 226, by Jules Eggard (Ewer & Co.), are trifles without significance.—*L'Espérance*, by John Francis Barnett (Schott & Co.), in some degree justifies its second title, which is 'Morceau Éléphant.'—*Les Murmures de la Seine*, by Mr. I. F. Taylor, Op. 10 (Boosey & Sons), is not what it professes to be, a brilliant waltz, but merely an attempt to emulate the flowing melodies of Mr. Godfrey's 'Mabel' and 'Hilda.' The piquancy and contrast which the great Viennese waltz composers knew so well to ensure by variety of rhythm have been too much lost sight of, of late, in this form of dance-music.—From the same hand (same publishers) we have a *Tarantella*, which cannot be commended. The humour of this dance is exhausted.—*The Hunter's Horn*, calling itself an original melody,—*Près du Berceau*, a song without words, also without any novelty of pattern.—*Benediction*, a mannered nocturne, are signed E. V. Kornatzki (Cocks & Co.). *Sommer Abend*, Op. 161,—*Valse Mélodieuse*, Op. 148, No. 2 (a shade better, because not without the surprises of rhythm, to which allusion has been just made).—*Husarenritt*, Op. 140 (so far as the all but illegible title on the cover can be deciphered).—*Aeolus* (a fantasia without fancy, more pretending, but not less silly, than 'The Bird Waltz,' so dear to Miss Lucretia Tox), are by Fritz Spindler (Ewer & Co.). *Warc-*

let *Waltzes*, are waltzlets by Mr. Treffry (Ashdown & Parry), very weak and very meek.—We have not met Mr. J. Alexander before. He puts himself forth exuberantly. Here are *Don Giovanni: Fantaisie Dramatique*; *Nelson*, a brilliant fantasia on Brahms's vulgar *bravura*; *Bon Vivant: a Mazurka brillante* (this not very brilliant, as *bons vivants* are apt to be); *Passing Clouds* (a rattling affair); *Sans Fagons* (another *Mazurka*—not good for much); *The First Daisy: Valse de Salon*; *Ariel* (an improvisation on Dr. Arne's "Where the bee sucks," which, it may be submitted, Mr. Benedict's better fantasia on the fresh, delicious tune had rendered superfluous); *Seguidilla* (more Seymour Place than Spanish); *Gleams of Summer* (innocent of warmth or colour); *Modern Dithyrambe* (not exuberantly Greek); *Seaside Fancies* (Augener & Co.), these are all from this prolific producer's hand.—In his *Etude Expressive* (Jewell), Mr. A. C. Wellesley, though not without idea, has lost his way. His study is overcharged with difficulties, and whenever the question is of overcoming the same, expression must perforce go to the wall. Finger-agonies and a *Cantabile* can no more agree than "crabbed age and youth," unless the fingers be those of a Liszt or a Thalberg.—Lastly come *Mosses*, and *Showers of Pearls*, by George Reynard (Ewer & Co.).

Without any cruel desire to rack butterflies, it may be suggested to those who cover paper by the square inch, that trifles such as the above are not worth numbering as achievements. It is weary work, in the mean time, to examine such a mass of music,—to sift into such a heap of husks without finding the intimation of a solitary small kernel. What a falling off is represented if it be recollected that the last Pianoforte trifles with which we have been dealing were Beethoven's 'Bagatelles,' and Mendelssohn's 'Lieder.'

MUSICAL AND DRAMATIC GOSSIP.

Mr. Mapleson's regular opera season at Her Majesty's Theatre has ended. His cheap nights are now to begin. Very few words will offer a sufficient retrospect of his transactions. As seems to be the inevitable habit of opera-managers, they have drifted, in place of holding a definite course. This may in part have arisen from the nature of his *troupe*, which has been anything but an Italian one,—possibly, too, from the pretensions of its *prima donna*. Not all the amount of applause, bouquets and praise in print,—not all the natural power of her magnificent organ,—not all her gains, however great they be,—can raise Mdle. Tietjens to anything like equality, whether as singer or actress, with former *Normas*, *Semiramides*, *Lucrezias*. In German music of a less ornate character she is more at home, and made a real impression in Gluck's 'Iphigenia,' for which opera, we are satisfied, there is a public, and the withdrawal of which is much to be regretted. It was a disappointment not to hear 'Le Nozze,'—less so, to be deprived of Spontini's 'La Vestale,' an opera which, in spite of the splendour of the *finale* to its second act, is dry. Gluck exhausted classical opera, as a comparison of his glorious 'Iphigenia' with Mozart's 'Idomeneo,' with Sacchini's 'Œdipe,' with Cherubini's stately 'Medea' (last year produced by Mr. Mapleson, and this year unaccountably shelved), with M. Gounod's 'Sapho' (since Cherubini's the best Greek opera written), will prove to any one who in art measures the antique against the pseudo-antique. Mr. Mapleson's best female vocalist has been Madame Trebelli-Bettini. His meteor-singer (for such is Mdle. de Murska), though more meteoric, is less bright than she was a year ago. The available powers of Madame Sinico claim a word. It may seem (but it is not) equivocal praise to say that she spoils nothing. A better "*comprimaria*" (to adopt the Italian theatrical classification) is not in our experience. His best men have been Signor Gardoni, our invaluable Mr. Santley, and Herr Rokitsansky. There is something to be made of Signor Stagno, as his *Pedrillo*, in 'Il Serraglio,' showed us. Mr. Mapleson's band, chorus, and scenic decorations have been sufficient and liberal.

Year by year Mr. Gye's policy becomes stranger and stranger; and, having "had the ball at his

foot," he seems more and more disposed to kick it over the precipice. Fancy, thrusting such a revival as that of 'Le Nozze' to the last two nights of his season, and bringing out in preference 'Crispino' by the Riccis; weak music, on a strained and foolish story, by one of the pair of brother composers who have never in England arrived at the consideration which such slight Italian musicians of genius as Donizetti and Bellini have commanded by their exceptional works. The Riccis are not unknown in England. Some thirty years ago the 'Scaramuccia' and 'Il Nuovo Figaro' were produced at the Lyceum Opera Buffa, and on being tried, "died, and made no sign." Some eight years later 'Corrado d'Altamura' was attempted at Her Majesty's Theatre, and failed. This was in part to be ascribed to public distaste to one of the artists,—that English lady with an Italianized name, who had been forced on the public and the press as a new Malibran, whom an English audience, tardy, but just in the long run, would accept at no price, and who was in that opera treated as none of her sex, we hold, should be, unless she forgets her modesty. Fourthly, this inane 'Crispino' was produced more recently at the St. James's Theatre, by an inefficient company, it is true, but made not the slightest effect there. With these known facts staring him in the face, Mr. Gye thrusts off Mozart's 'Figaro' till the very last hour of the season and brings out this piece of utter inanity:—a transaction which pairs with his production of M. von Flotow's 'Stradella,' an opera which nobody saw, nobody heard: one which nobody having a well regulated musical or dramatic mind could desire to see or hear. Further, as if to draw attention from 'Le Nozze,' the hacked-out 'Il Trovatore' is announced, with Madame Vilda as heroine.

We were premature in announcing the close of the Concert season. This week there has been another ballad gathering at the *Crystal Palace*, and a grand Concert at the *Royal Italian Opera*, with Mdle. A. Patti's name at its head.—Those two amateur bodies, *The Wandering Minstrels* and *The Civil Service Musical Society*, have given performances during the week; the former at the South Kensington *Conversazione* in aid of one of the Schools of Art. For the latter, given in aid of a charity, a new *Cantata*, by Mr. Frederic Clay, was announced.—When last week "writing to the moment" of Mr. Sullivan's excellent Concert, two features of interest were overlooked. The one was Madame Goldschmidt's singing of the ballad of 'The Three Ravens,' in its way as remarkable as her execution of Handel's 'Nightingale Song.' The other was the hearty and spontaneous ovation to Prof. Moscheles, who was called for and loudly cheered at the close of Mdle. Mehlig's performance of his Irish Fantasia. He announces a *Matinée* on Thursday next, for the benefit of the sufferers by the war at Leipzig. He will be assisted by Madame and Herr Otto Goldschmidt.—Among the strange events of 1866 is Madame Grial's determination to "sing on, sing ever." It is true that she sings now with "clipt wings," and goes everywhere on the strength of two simple ballads, 'The Minstrel Boy' and 'Home, Sweet Home.' On "the falling off" we must dwell, there being nothing more to be deprecated than the desperation (the word is not too strong) with which veterans who have been favourites with the public cling to the last planks of the wreck, determined to beat Time and change, and not to disappear. The hardship of forced retirement cannot but be hardened by this undignified pertinacity.

The Worcester Musical Festival will begin on the 11th of September, to be conducted, as is the habit of the Three Choirs, by the local organist, Mr. Done.—We understand that a new *Cantata*, on a national subject, by Mr. John Thomas, will be produced at the Chester *Eisteddfod*, for which the most promising of our young English singers, Miss Edith Wynne, has been retained,—and that Mr. Benedict's new composition, in preparation for the Norwich Festival, is a setting of the 'Legend of St. Cecilia,' the text of which is by Mr. Henry F. Chorley.—Some of the musical papers state that an oratorio, 'Lazarus,' by Mr. J. F. Barnett, will possibly be given at the Birmingham Festival next year.

For many a long year Margate, justly or unjustly, enjoyed the reputation of being the most coarsely-peopled and mannered of any of our southern watering-places. An effort has just been made to provide its inhabitants and visitors with good amusement. A music-hall—the building having been originally destined for railway purposes, and, we are assured, thoroughly transformed, handsomely decorated, and capable of accommodating a very large audience—was opened this day week by a grand concert, for which some of our leading London artists went down. M. Jullien is musical director. Such a place of resort, decorously managed (and there is no possible reason for the contrary, as our best metropolitan music-halls show), must have a real value in every haunt where there is a large floating population scantily provided with home resources and comforts.

A new periodical, with the title of the *Musical Standard*, is announced. It speciality is said to be total independence of any publisher's interests.

The Prize of Rome, given by the Conservatoire of Paris, has this year fallen to M. Émile Pessard, of whose music a very high opinion is expressed.

M. Mermet's blustering and empty 'Roland' has been revived at the Grand Opéra.

The "Grand Concours of International Sacred Music of Belgium"—an institution somewhat strangely named, it will be admitted—was to be held on Tuesday, the 17th. The jury to be composed of French, Belgian, German, Dutch, and English professors, all tried and esteemed men,—save the one representing this country. Who has ever heard the name of Father Maher?

It does not seem, after all, that the war has put an entire stop to the delights of the German baths. Italian operas are announced at Homburg;—a grand concert lately took place at Wiesbaden,—music to come is advertised at Baden-Baden. The opera-house at Vienna opened on the 1st of this month, with 'Guillaume Tell,' and in it a new tenor, Herr Nachbauer, from Darmstadt.

M. Gevaert, whose historical knowledge is known to be considerable, is preparing an important collection of old Italian music, to be entitled 'Les Gloires d'Italie.'—Dr. Liszt has given out a 'Hymne des Marins,' with a fac-simile of the autographic approbation of the Pope!

A new organ, by MM. Merklin, Schutze & Co., has been just opened by a concert of organists in the Cathedral of Geneva.

Two Italian dramatic novelties are mentioned in *Il Trovatore*. Signor Armenta has produced an historical drama, 'Lamberto Malatesta,' at Naples; Signor Gentili, 'Carlo Baglione,' a tragedy, at Rome.

Theatrical journals announce that Mr. Fechter has secured the co-operation of Mr. and Mrs. Boucicault for the re-opening of the Lyceum Theatre.

'La Bergère d'Ivry,' a new five-act drama, by MM. Grangé and Thiboust, has been produced at the Ambigu, Paris.

MISCELLANEA

Guide-Books.—May I, through your columns, direct attention to the practice certain guide-book publishers have of issuing old guide-books at the commencement of each season, with a fresh title-page, so as to induce tourists to buy them for new? I bought the other day, 'Where shall we go,' fourth edition, 1866, published by Messrs. Black; and find that the book is substantially, if not identically, the same as a copy I have, bearing a much earlier date. To give two instances showing its real age, not a word is said about the London, Chatham, and Dover Railway going to Margate and Ramsgate, and the Grand Hotel is not named amongst the Brighton hotels. I also find that at the back of the first page is printed a notice, dated May, 1864, which is doubtless the real date of the publication. The advertisements which inconveniently add to the bulk of this and other guide-books, are probably printed this year; but I would submit that the only honest course is that pursued by Mr. Murray, who re-issues his guide-books each year, heading the advertisements with the date of the then

current year, but leaving the original title-page showing the actual date of publication.

ARTHUR BREWIN.

Pose.—The verb to *pose*, more fully to *appose*, comes to us from the French *apposer*, "to lay or place near to" (e.g. "to set a seal to a bond"). In this sense it is used by Chapman in his translation of Homer:—

Atrides to his tent
Invited all the peeres of Greece, and food sufficient
Apposed before them; and the peeres *apposed* their hands
to it.
Iliad, ix.

Then he *apposed* to them his last-lefte roste,
And in a wicker basket bread engroste."

Od. xvi.

It was, however, far more usually employed in the sense in which it still lingers among us,—that of *setting a specific task, or putting a question to which a definite answer is required*. It thus came to stand for the work of an examiner. An examination was called an *apportion*, as it still is at St. Paul's School, and the examiners were termed *posers*. The placing of the scholars was the consequence of this *posing*, or *apportion*, but the name of *poser* had no reference to it. Our early English literature is full of examples of this use of the verb *pose* or *appose*, for which Richardson's Dictionary, or Wedgwood's 'Dictionary of English Etymology' may be consulted. From the frequency of the case when the person under examination proved unable to give a suitable answer to the questions thus *posed* to him, the verb with its congeners came to be used in the sense of "puzzling or perplexing," in which meaning it is familiar to us as a living word. Richardson's derivation of *pose* from the Latin *pausa*, "Pausam facere, to give pause to, to stay (sc.) the judgment," is an instance of that etymological weakness which is the fundamental defect of his otherwise valuable Dictionary. Under *appose* he shows some inkling of its real parentage; though even here, strangely enough (perhaps the fault is the printer's), he gives "Apposere, from ad and posere, the Latin to put or place near to," as the root. An *apposite* answer, it may be noticed, is an answer to the questions thus *apposed* to one. The reference in the 'World of Words,' "Pose, see catarrh," is quite correct. *Pose* is an old English term for a bad cold in the head, which has come down to us directly from the Anglo-Saxon "gepose," explained in Bosworth's Dictionary as "The pose, stuffing of the head, gravedo." Richardson informs us that the word frequently occurs in Holland's translation of Pliny. The readers of Chaucer will remember its occurrence in 'The Reeve's Tale':—

He yoketh, and he speaketh through the nose,
As he were on the quakkō or the pose.

And again, in the introduction to 'The Manciple's Tale,'—

For were it win, or old or moisty ale,
That he had dronke, he speketh in his nose,
And smeeeth fast, and eke he hath the pose.

We find it also in Herrick:—

Meg yesterday was troubled with a pose,
Which this night hardened sodders up her nose.

And in Lyly's 'Mother Bomb':—

H. I am sure he had no disease.
D. A little rheum or pose, he lacked nothing
But a handkerchief.

These last two quotations are from Nares's 'Glossary,' where it is added, that in Polwhele's 'Cornish Vocabulary' the word occurs as *paوزه*. Perhaps some of your readers will be able to tell us whether it is still in use in Cornwall, or elsewhere in England. It is hardly likely that a word once so entirely belonging to the vernacular should have completely died out.

E. V.

Bonchurch, July, 1866.

The Supplement to Bryan.—You objected to insert a letter I sent to you last week, in reply to Mr. Bohn, upon the ground that you "cannot lend your columns to the discussion of private arrangements between publisher and author." I restricted myself to disproving two assertions made by Mr. Bohn, which, if left uncontradicted, would go to charging me with misrepresentation of facts in notes I had addressed to you, and to which you had given insertion. I must beg now to recur to them. 1. Mr. Bohn states, "Mr. Otley ignores that my contract with him was for a Supplement to what bears the title of a Biographical and Critical Dictionary." I

ignore no such thing; but I know that that Dictionary did not include living artists, and insist that Mr. Bohn had no right to describe my 'Supplement' as an integral work under the title of 'A Biographical and Critical Dictionary of Recent and Living Painters and Engravers.' Mr. Bohn goes on to say, "that an agreement entirely in his (Mr. O.'s) own handwriting, is 'to write and complete (for which read compile) a biographical-critical continuation of Stanley's edition of Bryan's Dictionary of Painters and Engravers.'" In reply to this, I have to state that the agreement for this work was a verbal one, and that it was not until many months, nearly a year, afterwards, when the bulk of the work throughout the alphabet was compiled and in his hands, that Mr. Bohn sent a voluminous manuscript, purporting to be the draft of an agreement between us on the subject, for my approval. To this I replied that there was no need for a written agreement to perform what had already been agreed upon and in great part performed; and that many of the conditions set forth by him were wholly inadmissible. To meet his wishes as far as possible, however, I made in my "own handwriting" an abstract of such portions of his draft as appeared to me to be unobjectionable, including that marvellous compound "biographical-critical," and forwarded it to him, intimating my willingness to sign an agreement drawn up upon the basis so described. The proposed "agreement," however, came to nothing,—was never signed. 2. Mr. Bohn says, "Mr. Otley seems to forget that I was never requested to add my initials to anything I had written till the book was printed off, and his preface in hand,"—a very short sentence, but travelling a long way, and in more than one direction from the truth. I should explain that from the first I had no direct relations with the printer, whose name even was unknown to me, and that after the first few sheets I received no "revises," although the state of the proofs, replete with "pie," was such as to render further strict supervision absolutely necessary. Mr. Bohn, however, undertook this duty himself, promising to "see everything right," an announcement which made me tremble for the crop of blunders which might and since actually have occurred. At an earlier period, finding that Mr. Bohn persisted in interpolating matter without previously submitting it to me, I informed him in writing that if anything should thus be introduced of which I could not approve, I reserved the right of disavowing the work, and of withdrawing my name from the title-page. When at length, at the commencement of the year, I received, for the first time, a complete bundle of the revise sheets, worked from stereotype blocks (the work was not then "printed off"), I was horrified to see the sort of stuff Mr. Bohn had inserted; and I wrote to tell him that I could not possibly allow it to appear under my name. Some time afterwards, at an interview of Mr. Bohn's seeking, having discussed the matter with him, and being desirous to make the best of a bad job, I consented to let the matter stand, provided he caused his initials (H. G. B.) to be inserted after those articles which, in my opinion, were the most objectionable. To this he at once assented; and the next day I sent an additional paragraph for insertion in the prefatory notice, referring to this arrangement, and returned the revise sheets, with one or two corrections marked, as well as Mr. Bohn's initials in the required places. As a proof that the process so agreed to be adopted was perfectly feasible, and not very difficult, I may mention that several alterations were actually made in the stereotyped pages, at my suggestion,—amongst the rest, by the omission of an extraordinary statement advanced by Mr. Bohn in one of his little notices, that Mr. A. Cooper, R.A., was the father of Mr. T. Sidney Cooper, A.R.A., which, considering that in the memoir of the latter his father is stated to have "deserted his family" whilst our artist was yet a boy, might have been construed as a libellous imputation. I promise not to trouble you any more on this subject, whoever else may. HENRY OTLEY.

TO CORRESPONDENTS.—F. C. A. B.—R. L.—A. F. L.—J. W.—R. T.—W. H. N.—received.

This day, at all the Libraries,

"The careless cannot read it without improvement; and to the devout soul it is full of strengthening thought."—*Daily News*.

"The art of selection is not often so successfully displayed."—*Fortnightly Review*.

"The selections appear to have been judiciously made, the passages given being generally good, and the book is very neatly printed."—*Illustrated Times*.

London: Sampson Low, Son & Marston, Milton House,
Ludgate-hill.

NEW BOOKS.—Ready this day.

I.

SOUTH AUSTRALIA: its Progress

and Prospects. By A. FORSTER, Esq., late Member of the Legislative Council of Adelaide. Demy 8vo. with Map, cloth, price 15s.

"Supplies a gap in Colonial Literature. The book is a capital manual of its subject, and those who read it for use will find everything they are likely to require."—*Spectator*.

"A solid, satisfactory book."—*Reader*.

II.

The LIFE and CORRESPONDENCE

of BENJAMIN BILLIMAN, M.D., LL.D., late Professor of Chemistry, Mineralogy, and Geology in Yale College, U.S.A. Chiefly from his own MSS and Diary. By GEORGE FISHER. 2 vols. post 8vo. with Portrait, price 34s.

III.

The LIFE of the late Dr. MOUNTAIN, Bishop of Quebec. 8vo. cloth, price 10s. 6d.

IV.

A HISTORY of SAVINGS BANKS;

with an Account of the Origin and Progress of Mr. Gladstone's Financial Measures for Post-office Banks, Government Annuities, and Government Life Insurance. By WILLIAM LEWINS, Author of 'Her Majesty's Mail.' Dedicated, by permission, to the Right Hon. the Chancellor of the Exchequer. 8vo. price 16s.

"Those who desire to know all that can be known of the career of a valuable class of provident institutions should read Mr. Lewins's 'History of Savings Banks.' The last few years have seen some extraordinary and beneficial legislation in respect to these institutions,—have seen, indeed, a new order of them created—calculated largely to extend their salutary influence. All these, together with the past history of savings banks, Mr. Lewins describes. And he does it with so much lucidity, that there is no possibility of the reader of his book stumbling upon any doubts. The merits of the institutions, their failings, the advantages they confer, and the drawbacks upon their usefulness, are all clearly pointed out. Mr. Lewins dedicates his book to Mr. Gladstone, and speaks in deservedly high terms of the admirable manner in which the Chancellor of the Exchequer has dealt with savings banks. Those who know nothing, or very little, of this subject should read the book. In every respect it will amply repay perusal."—*Morning Star*, June 18th, 1866.

London: Sampson Low, Son & Marston, Milton House,
Ludgate-hill.

THE GATES OF PRAGUE.—PORTSMOUTH.

—The BUILDER of THIS WEEK contains fine Views of the Bridge Gates in Prague and of Old Houses. Published every SATURDAY, price 5d., or 6d. stamped, each Volume complete in itself,

(Enlarged to 32, frequently 36, folio pages)

THE GARDENERS' CHRONICLE

AND

AGRICULTURAL GAZETTE.

A Weekly Record of Rural Economy and General News.

As regards the GARDENING PART, the principle is to make it a weekly record of everything that bears upon Horticulture, Floriculture, Arboriculture, or Garden Botany, and such Natural History as has a relation to Gardening, with Notices and Criticisms of all Works on such subjects. Connected with this Part are

WEEKLY CALENDARS OF GARDENING OPERATIONS,

Given in detail, and adapted to the objects of persons in every station of life; so that the Cottager, with a few rods of ground before his door, the Amateur who has only a Greenhouse, and the Manager of Extensive Gardens, are alike informed of the routine of operations which the varying seasons render necessary. It, moreover, contains Reports of Horticultural Exhibitions and Proceedings—Notices of Novelties and Improvements—in fact, everything that can tend to advance the Profession, benefit the condition of the Workman, or conduce to the pleasure of his Employer.

Woodcuts are given whenever the matter treated of requires that mode of illustration.

The FARMING PART (under the Editorship of a Practical Farmer) treats of—

THE PRACTICE OF AGRICULTURE
AGRICULTURAL SCIENCE
ANIMAL AND VEGETABLE PHYSIOLOGY
IMPROVEMENTS IN IMPLEMENTS, described by Woodcuts whenever requisite
IMPROVED MODES OF HUSBANDRY
RESULTS OF EXPERIMENTAL FARMING
GROWTH AND ROTATION OF CROPS
MANAGEMENT OF STOCK
VETERINARY SCIENCE
DRAINAGE
IRRIGATION
FORESTING
ROAD-MAKING
FARM-BUILDINGS
LABOURERS
TREATMENT OF POULTRY
AGRICULTURAL PUBLICATIONS.

In short, whatever affects the beneficial employment of capital in hand.

Reports are regularly given of the English, Scotch, and Irish Agricultural Societies and Farmers' Clubs, London Markets, Prices of Corn, Hay, Cattle, Seeds, Hops, Potatoes, Butter, Wool, Coal, Timber, Bark, &c., and the Weekly Averages.

REPLIES TO QUESTIONS connected with the object of the Paper are also furnished weekly.

Lastly, that description of DOMESTIC and POLITICAL NEWS is introduced which is usually found in a Weekly Newspaper.

ADVERTISEMENTS:

NET, COVENT-GARDEN,
ON, W.C.

Now ready, a New Edition, Revised, with Portraits, price 5s.

PROFESSOR CRAIK'S PURSUIT OF KNOWLEDGE UNDER DIFFICULTIES. Illustrated by Anecdotes and Memoirs.

Now ready, 2 vols. price 3s. 6d. each,

EMERSON'S COMPLETE WORKS. Re-printed from the last American Edition.

Now ready, a New Edition, Revised, price 5s.

CHARLES KNIGHT'S KNOWLEDGE IS POWER: a Popular Manual of Political Economy.

Now ready, price 3s. 6d.

SCHILLER'S HISTORY of the THIRTY YEARS' WAR. Complete.

Nearly ready, price 5s., a New Edition of the

YOUNG SPORTSMAN'S MANUAL; or, Recreations in Shooting. Illustrated with 62 Engravings on Wood and 9 Engravings on Steel, after A. Cooper, R.A.

London: Bell & Daldy, 4, York-street, Covent-garden, and 136, Fleet-street.

This day is published,

The TENTH THOUSAND, with a NEW PREFACE, of

E C C E H O M O :
A SURVEY of the LIFE and WORK of JESUS CHRIST.

8vo. cloth, 10s. 6d.

Macmillan & Co. London.

Now ready at all the Libraries,

MR. BAKER'S GREAT NILE BOOK.

THE ALBERT N'YANZA,
GREAT BASIN OF THE NILE,
AND EXPLORATIONS OF THE NILE SOURCES.

By SAMUEL WHITE BAKER, M.A. F.R.G.S.,
And Gold Medallist of the Royal Geographical Society.

With Maps, numerous Illustrations engraved on Wood by J. Cooper from Sketches by Mr. Baker, and a Chromo-lithograph Frontispiece of the Great Lake from which the Nile flows, and Portraits of Mr. and Mrs. Baker beautifully engraved on Steel by Jeens after Photographs, 2 vols. 8vo. cloth, 36s.

"This narrative of Mr. Baker's wanderings in the centre of Africa is the most picturesque description of the country and its inhabitants that has yet been given to the world. It is written in excellent taste and in an animated and vigorous style. It abounds with striking incidents, remarkable situations, sporting adventures, and valuable geographical information. The best parts of the English character have rarely been more admirably exemplified than by Mr. Baker in his manifold trials, peripatetics, and privations. His contributions to ethnology and natural history are also valuable and important."—*Quarterly Review*.

"The reader will not have travelled ten pages in the company of Mr. Baker, before he perceives that the last and most successful explorer of the sources of the Nile is a far more accomplished writer than any of the gallant adventurers who have preceded him on the rugged tracks of African discovery. . . . Mr. Baker combines in so remarkable a degree all the qualities of a great traveller, that he has not only made one of the most extraordinary journeys ever recorded by civilized man, but he has given to his account of it an interest not to be surpassed in the pages of romance. . . . He has conferred additional lustre on English discovery, which had already contributed so largely in the present century to a more complete knowledge of the habitable and uninhabitable portions of the globe. He has approached nearer than any living man to the solution of that great mystery of the Nile, which has been the wonder of ages. He has accomplished these great objects by his own sole resources, alone and unaccompanied by any European, except that intrepid lady, who is the worthy mate of such a husband; and the record of his travels will be read with interest wherever the English language is spoken."—*Edinburgh Review*.

Macmillan & Co. London.

Nearly ready, Second Edition, Re-written and Enlarged, with Illustrations, crown 8vo.

THE SPORTING RIFLE AND ITS PROJECTILES.

By Lieut. JAMES FORSYTH, Bengal Staff Corps.

SMITH, ELDER & Co. 65, Cornhill.

Just published, with Portrait, 2 vols. crown 8vo. 16s.

THE LIFE AND DEATH OF JEANNE D'ARC,

CALLED "THE MAID."

By HARRIET PARR, Author of 'In the Silver Age,' &c.

"The Life of Joan of Arc is one that essentially appeals to the heart of a woman, and we are glad that the historian on the present occasion has treated it so happily. . . . Miss Parr has written in an agreeable style a Life of Jeanne d'Arc, which undoubtedly will take a prominent place in our biographical literature."—*Press*.

"A charming idyll is the story of Joan of Arc, as it is told by Miss Parr."—*Examiner*.

"On the whole the stirring tale has, perhaps, never been more creditably narrated than in this instance."—*Athenæum*.

SMITH, ELDER & Co. 65, Cornhill.

Just published,

THE IRISH EDUCATION QUESTION.

A VINDICATION of the Past Course and Present Position of the Irish Clergy in Reference to the National System of Education for Ireland, in a Speech delivered by JAMES THOMAS O'BRIEN, D.D., Bishop of Ossory, Ferns and Leighlin. With a Preface and Appendix. 8vo. 2s. 6d.
Macmillan & Co. London.

Now ready, price 2s. 6d. post 8vo. cloth boards,

NERVOUS and DELICATE HEALTH.

Its Symptoms and Causes; with Hints on Medicinal, Dietetic and general Hygienic Self-management. By J. WILLIAMS, M.R.C.S.E. of St. John's College, Oxon., late House-Surgeon to the Lock Hospital.

London: EDWARD STANFORD, Passport Agent, 6, Charing Cross, S.W.

MR. DIXON'S NEW WORK.

"A REMARKABLE AND VERY ORIGINAL BOOK."—*Saturday Review*.

"BRILLIANT, LIFE-LIKE PICTURES."—*British Quarterly Review*.

Now ready, a SECOND EDITION of

THE HOLY LAND.

By WILLIAM HEPWORTH DIXON.

With Illustrations from Original Drawings and Photographs on Steel and Wood.

2 vols. demy 8vo. 24s.

"Mr. Dixon has written a singularly able book. His genius is essentially conservative. He contrives while sipping his coffee or smoking his cigarette to throw off sketches, with the careless boldness of a hand sure of its own accuracy, which challenge the closest criticism, and whilst professing only to give rough-and-ready pictures of places and scenes as they were in the day when Christ stood amidst them, the centre figure of the whole, he is really bringing the most subtle analysis to bear on the thought which after four thousand years of various development was found in a concrete form, stripped of its vitality and crystallized into the creeds of Pharisee and Sadducee. The sharp points of contact and antagonism, the manners, habits, and scenes of the strange race among whom Christ walked, are all graphically described in the work before us, and we think few would rise from a careful perusal of its pages without a deeper insight into the sacred story, possibly a wider understanding of the words of One who taught as having authority, and not as the scribes."—*Spectator*.

CHAPMAN & HALL, 193, Piccadilly.

SALOM'S NEW OPERA and FIELD GLASS,
and THE RECONNOITERER GLASS, price 10s. 10d., sent free.—This "Tourist's Favourite," through extraordinary division of labour, distinctly shows small windows 10 miles off, landscape at 30 miles, Jupiter's moons, &c.—The MARQUIS of CARMARTHEN: "The Reconnoiterer is very good."—EARL of BRADDAKE: "I find it all you say, and wonderfully powerful for so very small a glass."—EARL of CAITHNESS: "It is a beautiful glass."—REV. LORD SCARPALE "approves of it."—LORD GIFFORD: "Most useful."—LORD GARVAGH: "Remarkably good."—SIR DIGHT CAYLEY: "It gives me complete satisfaction, and is wonderfully good."—CAPT. SENDREY, Royal Small Arms Factory, Enfield: "I have found it effective at the 1,000-yards range."—F. H. HAWKES, of Farnley, Esq.: "I never before met an article that so completely answered the recommendation of its maker, nor, although I have tried many, a Glass combining so much power for its size with so much clearness."—*The Field*: "We have carefully tried it at an 800-yard rifle range against all the Glasses possessed by members of the Corps, and found it fully equal to any of those present, although they had cost more than four times its price."—*Notes and Queries*: "What intending tourist will now start without such an indispensable companion to a pleasure trip?"
The celebrated "HYTHE" GLASS shows bullet-marks at 1,200 yards, and men at 34 miles, price 31s. 6d. All the above Glasses, respectively bearing the registered trade-marks, "Salom," "Reconnoiterer," and "Hythe," are only to be had direct from SALOM & CO. 98, Princes-street, EDINBURGH, and 137, Regent-street, LONDON.
No Agents of any kind anywhere.

No. 37, Cornhill, London.

BONUS YEAR.—Established 1824.

SCOTTISH UNION INSURANCE COM- PANY (FIRE and LIFE),

No. 37, CORNHILL, LONDON.

Capital £5,000,000.

Five years' profits to be divided in the Life Department at 31st
July: all Policies issued before that date will share in the profits.

FREDK. GARLE SMITH, Secretary to
the London Board.
No. 37, Cornhill, London.

SUN LIFE ASSURANCE SOCIETY, THREADNEEDLE-STREET, and CRAIG'S-COURT, CHARING CROSS, LONDON.

The attention of persons desirous of making a provision for
their Families by means of Life Assurance is directed to the para-
mount importance of resorting for that purpose to an Office of
ESTABLISHED CREDIT.

Amongst the advantages offered by this old-established Society to
persons effecting Assurances now are—

LOW RATES OF PREMIUM,

especially for Young Lives,

PAYABLE ANNUALLY, HALF-YEARLY, OR QUARTERLY.

PARTICIPATION IN 80 PER CENT. OF THE PROFITS.

A BONUS EVERY FIVE YEARS,
apportioned to Policies on which three or more Annual Pre-
miums have been paid at the period of division, and receivable
in Cash, or applied in augmentation of the Sum Assured, or Re-
duction of the Premiums, at the option of the Policy-holder.

N.B. Proposals are now received, and Assurances may be
effected at the Office in Craig's-court, as well as at the Chief Office
in Threadneedle-street.

JAMES HARRIS, Actuary.

BREAKFAST.—EPPS'S COCOA

more commonly called Epps's Homoeopathic Cocoa, as being
prepared and introduced by James Epps, the Homoeopathic Chem-
ist, first established in England. The very agreeable character of
this preparation has rendered it a general favourite. For
breakfast, no other beverage is equally invigorating and sustain-
ing. This Cocoa is used by thousands who never used Cocoa
before. *Cocoa stands far higher than tea or coffee.* Dr. Hamall
says—Sold in 1 lb., 1 lb., and 1 lb. packets.

PHILLIPS & COMPANY'S TEAS ARE

COCKLE'S ANTIBILIOUS PILLS.—

To remove or avert the symptoms of indigestion, conse-
quent on irregularity of diet, torpid liver from sedentary con-
dition, or residence in a tropical climate, COCKLE'S ANTI-
BILIOUS PILLS, which have stood the test of public opinion
for upwards of 55 years, are highly recommended for their mild
aperient, tonic and aromatic properties, and for the power they
possess in equalising the secretion of the liver, and strengthening
the digestive organs.

PIANOFORTES AND HARMONIUMS.

PRIZE MEDALS were awarded to CHAPPELL & CO. for Pianofortes and Harmoniums at the International Exhibitions of 1862 (London) and 1865 (Dublin), and to ALEXANDRE & CO. for their Harmoniums at all the Exhibitions for the last Twenty Years. The Medal in 1865 was given to ALEXANDRE & CO., with the following Commendation, which ranks them above all others in regard to the all-important points, cheapness and quality of tone:—
 "Novelty of construction of Harmoniums, cheapness, combined with excellence of manufacture, and fine quality of tone."—Award of the Jury.
 Testimonials to their superiority over all others have also been given by Professors Sir Frederick Gore Ouseley and Sterndale Bennett, Dr. Rimbault, Herr Engel, Messrs. Graess. Turle Wallace, Macfarren, Lendy Sloper, &c.
 An immense Stock of every possible Description of Pianofortes and Harmoniums may be seen at 50, New Bond-street, either for Sale or Hire, and arrangements can be made for the Purchase of any Instrument by Instalments in advance, if desired, or a liberal allowance be made on Purchases for Cash.

CHAPPELL'S TWENTY-GUINEA PIANOFORTE,

IN PLAIN WALNUT OR SOLID MAHOGANY, THE BEST ENGLISH MANUFACTURE,

With perfect Check Action, the Full Compass, and all the Latest Improvements.

A Prize Medal was awarded to Messrs. CHAPPELL & CO., in the Dublin Exhibition, for this Instrument—"for the 20 Guinea Pianette (quality not sacrificed to cheapness), and for extra Cottage Pianofortes."

 In the case of parties purchasing and paying for an Instrument within Six Months from the time of hiring, the amount due for hire will be given up in lieu of discount for ready money.

ALEXANDRE'S BOUDOIR HARMONIUM

(THE QUEEN'S MODEL).

As Manufactured expressly for Her Majesty's use.

In Rosewood Case, with Ten Stops and Percussion Action—viz. Percussion or Flute, Clarinet, Hautbois, Forte, Tremolo, Percussion or Cor Anglais, Bourdon, Forte, Bourdine, Grand Jeu, and Grand Jeu, and Expression. Size, 3 ft. 6 in. by 1 ft. 8 in.; height, 3 ft. Price Fifty new Guineas. price Thirty-five Guineas.

Also, with Fourteen Stops and Percussion Action—viz. Percussion or Flute, Clarinet, Hautbois, Forte, Tremolo, Percussion or Cor Anglais, Bourdon, Clarion, Basson, Grand Jeu, and Expression. Size, 3 ft. 6 in. by 1 ft. 8 in.; height, 3 ft. Price Fifty new Guineas.

These Instruments are eminently adapted for Boudoirs and Drawing-rooms; the tone more pure and sweet than that of the ordinary kinds, and greater care is taken in the work.

NEW DANCE MUSIC.

ADELE WALTZ. By DAN GODFREY. Played at Her Majesty's State Ball. 4s.

BARBE-BLEUE QUADRILLE. By DAN GODFREY. On Airs from Offenbach's Opera. Played at Her Majesty's State Ball. 4s.

LES DEUX ARLEQUINS QUADRILLE. By STRAUSS. 2s.

THE CLAPHAM GRAMMAR SCHOOL,
LONDON.

Head-Master—Rev. ALFRED WRIGLEY, M.A. F.R.S. &c.
Professor of Mathematics and Classics in the late Military College, Addiscombe.

Pupils are prepared for the Universities, the Civil and Military Examinations, &c. On the School Premises are provided a Chapel, Gymnasium, Swimming Bath, Laboratory and Observatory. The names of more than twenty Cambridge Wranglers, including that of a Senior Wrangler, of several First-class Oxford men, and of many highly distinguished in the Civil and Military Examinations, are on the Honour List. Pupils will assemble on the 16th of August.

NEW REFORM CLUB.—Temporary accommodation has been provided, and is now open, for the Members at DRAPER'S HOTEL, 25, Sackville-street, Piccadilly, pending the alteration and fitting up of the Club Premises in Jermyn-street. Gentlemen desirous of becoming Members are requested to send their Applications without delay to the Secretary, 71, Jermyn-street, St. James's, from whom Prospectuses and any information on the subject may be obtained.

DR. PICK'S LECTURES on MEMORY,
as delivered by him at the University of Oxford, at King's University, and Queen's Colleges, London, &c.—Dr. PICK is now OPEN to ENGAGEMENTS for the Winter Session in Schools and Institutions. Syllabus, &c., on application.—Just published, a New (Fourth) Edition of 'On Memory'; to which has been added, Dr. Pick's Method of Studying German, 3*s.* 6*d.* How to Study French, 3*s.* 6*d.* Sent by post on receipt of stamps.—4, Bryanston-street, Portman-square.

A N.M.A., Scholar and Gold Medallist of the University of London, is OPEN to an ENGAGEMENT as RESIDENT TUTOR in a Gentleman's Family, to read with Young Gentlemen preparing for Matriculation or Graduation in that University. First-class references given and required.—Address M.A., 5, Wellington-terrace, Weston-super-Mare.

RAWDON HOUSE, FORTIS-GREEN, WINCHELEY.—The Pupils under the care of Miss HELEN TAYLOR, late of Hoddson, will assemble at her NEW RESIDENCE, as above, on MONDAY, September 2nd.

A GRADUATE in Classical Honours of Trinity College, Cambridge, with excellent Testimonials, would be glad to meet with a TUTORSHIP till the middle of September. He can teach moderate Mathematics.—H. H. H., Staplehurst, Kent.

THE COMMERCIAL, ENGINEERING and SCIENTIFIC COLLEGE, CHESTER, offers a thoroughly sound English Education, together with instruction in the Modern Languages and Classics.
In the Upper Classes particular attention is given to Mathematics, Mechanics, Chemistry, Physical Science, and Drawing. The College has been recognised by the Secretary of State for India, as possessing efficient Classes for Civil Engineering, Chemistry, and Physics.
Apply to the Rev. ARTHUR BIGG, College, Chester.

HURST COURT, ORE, HASTINGS.—Dr. MARTIN REED prepares the SONS of GENTLEMEN, between the ages of six and eighteen, for the Public Schools and Universities, or for Mercantile Pursuits. The situation is one of the finest and healthiest possible. The arrangements are those of a first-class Private School.
The CLASSES RE-ASSEMBLE on WEDNESDAY, August 1.

COMPETITIVE EXAMINATIONS for the ARMY, the NAVY, and the CIVIL SERVICE.—A Gentleman, having obtained the highest honours in the TUTORIAL, has VACANCIES for TWO PUPILS, of good position. The highest references given.—Address F.R.S., 2, Arundel-gardens, Nottingham, W.

A WRANGLER and Classical Scholar, Graduate of Cambridge University, experienced in Tuition, devotes his evenings to PREPARING CANDIDATES for University and other Public Examinations. Address E. E., 2, Regent's Park-terrace, Gloucester-gate, N.W.

CIVIL SERVICE EXAMINATIONS.—CANDIDATES are PREPARED by a Gentleman in H.M. Civil Service, who obtained his appointment by competition, and who is assisted by thoroughly qualified Tutor.—References to former Pupils in all Departments of the Service.—Address E. W. JONES, 4, Gordon-street, Gordon-square, W.C.

QUEENWOOD COLLEGE,
near STOCKBRIDGE, HANTS.

The Course of Study embraces the ordinary English branches, Drawing, Latin, and Surgery, the Classical and Modern Languages, The Natural Sciences, and Practical Chemistry form a prominent feature, and instruction in them is very efficiently provided for. For terms and further particulars, apply to
CHARLES WILLMORE, Principal.

A N ENGLISH LADY, just returned from the Continent after a residence of five years, is desirous of finding a SITUATION as GOVERNESS in a Nobleman's or Gentleman's Family.—Address E. G. G., Post-office, Upper Norwood, Surrey.

MENTAL AFFECTIONS.—A Physician, residing within an easy distance of London by rail, has at the present time VACANCIES in his house for TWO LADIES and ONE GENTLEMAN. This House has been established over 30 years for the reception of ten high-class Patients only.—Address M. D., care of Messrs. Whicker & Blaise, 47, St. James's-st., & W.

HYDROPATHIC ESTABLISHMENT.—The ARDRETTUM, Linton-on-Ouse, under the careful and experienced medical superintendence of the founder, JOHN HITCHMAN, Esq. M.R.C.S. For Prospectuses apply to the Secretary.

STAR and GARTER HOTEL, Richmond Hill, Surrey.—The spacious New Coffee-Room, commanding the finest view which Richmond Hill affords, is now completed, and open to the Public. The New Family Hotel, adjoining the Tavern, was opened on the 26th February last.
DAVID LAWRENCE, General Manager.

HERALDRY.—A LECTURE, or a COURSE of LECTURES, profusely illustrated, by CHARLES BOUTELL, M.A. Author of 'Heraldry, Historical and Popular,' &c.—Address, to the care of Mr. BENTLEY, Publisher, to His Majesty, New Burlington-street, London, W.; or, to the care of Mr. ASPINALL, Stationer, Fenge, Surrey, S.E.

LITERARY.—WANTED, for a high-class Illustrated Journal, a good SERIAL TALE, NOVEL, ETTES, SKETCHES, and SOCIAL ARTICLES.—List of Subjects, MSS., and (where possible) reference to Print, with Terms, to W. H. S., 3, Grove-villa, Jasmine-grove, Fenge, London, S.E.

THE PRESS.—A Gentleman, of much experience on the Daily and Weekly Press, is open to an Engagement as EDITOR or SUB-EDITOR. The highest references.—JOURNALIST, care of Adams & Francis, 59, Fleet-street, E.C.

TO PUBLISHERS.—The Advertiser, who has been engaged in the Trade for several years past, is desirous of obtaining a SMALL SHARE in an established Publishing Business.—Address A. B. C., care of Messrs. Adams & Francis, 59, Fleet-street, E.C.

A PROSPECTUS of a New Work on the LIFE and WRITINGS of SHAKESPEARE, printed for Subscribers only, to be profusely illustrated by Wood Engravings will be sent free to any persons forwarding their Names and Addresses, legibly written, to J. O. HALLIWELL, Esq., No. 6, St. Mary's-place, West Brompton, near London.

TO ADVERTISING AGENTS and ADVERTISERS.—WANTED, a few permanent LONDON ADVERTISERS for a First-class Weekly Paper, largely circulated in Durham and Yorkshire.—Address M. MASON, South Durham Herald Office, Princess-street, West Hartlepool. Objectionable Advertisements excluded.

ADAMS & FRANCIS insert ADVERTISEMENTS in all the London, Country, Colonial, and Foreign Newspapers and Periodicals.

* * Terms for transmitting business, and List of London Papers, to be had on application to—
ADAMS & FRANCIS, 59, Fleet-street, E.C.

TO MEMBERS of the ENGLISH ALPINE CLUB, TOURISTS in SWITZERLAND, &c.

I, the undersigned, hereby beg to inform Members of the English Alpine Club, Tourists, &c., that the English Alpine Guides known as COLANI & Co., at Pontresina, Engadin, was DISSOLVED at the end of May.

In the event of new Bureaux being formed, I beg to state that, in future, I shall not join any, and request Gentlemen who may wish to employ me to apply to me at 22, St. James's-square, London, W.

With grateful thanks for past favours and patronage.
ALEXANDER FLURY,
Mountain Guide and Photographer,
Pontresina,
Engadin,
Switzerland.

NEW SILKWORM.—The superb BOMBYX CYNTHIA feeds on leaves of the *Alnus glutinosa*, &c. For Eggs apply to Dr. WALLACE, Colchester, Essex.

MR. HOLMES is instructed to SELL the following BUSINESSES:—an old-established Concern in the Country; in same hands twenty-one years; returns nearly 1,500*l.* 700*l.* required.—A Business at the West End, near Sloane-street, 500*l.* to 700*l.* required. Two Machines, Steam-Engine, Boiler, several Presses, and a capital Office, fitted up with every requisite for doing a large trade.—Apply to Mr. HOLMES, Valuer, &c., 48, Paternoster-row.

MR. HOLMES is instructed to SELL a very desirable PRINTING BUSINESS, not far from Regent-street, 500*l.* to 700*l.* required. Two Machines, Steam-Engine, Boiler, several Presses, and a capital Office, fitted up with every requisite for doing a large trade.—Apply to Mr. HOLMES, Valuer, &c., 48, Paternoster-row.

THE UNITED LIBRARIES, 307, Regent-street, W.—Subscriptions from One Guinea to any amount, according to the deeply required. All the best new books, English, French, and German, immediately on publication. Prospectuses, with Lists of New Publications and Catalogues of Cheap Books, gratis and post free.—BORTH'S, CHURTON'S, HOBSON'S, and SANDERS & O'NEILL'S United Libraries, 307, Regent-street, near the Royal Polytechnic Institution.

GOODWOOD RACES.—The New Aluminium RACE GLASSES, though of the largest size, weigh but a few ounces. Patronized by H. R. H. the Prince of Wales, the Duke of Edinburgh, the Duke of Cambridge, and the Duke of the Jockey Club.—CALLAGHAN, Optician, 22 A, New Bond-street, W., corner of Conduit-street, and the celebrated Race and Field Glasses made by Voigtlander, Vienna. The Derby Race Glass, 50*s.*, carriage free.

THE ATHENÆUM for GERMANY and EASTERN EUROPE.—Mr. ALPHONS DÜRR, of Leipzig, begs to announce that he has made arrangements for a weekly supply of THE ATHENÆUM JOURNAL. The subscription will be 1 thaler for three months; 3 thalers for six months; and 6 for twelve. Issued at Leipzig on Thursday.

Orders to be sent direct to ALPHONS DÜRR, Leipzig, Germany.
* German Advertisements for the ATHENÆUM Journal also received by ALPHONS DÜRR, as above.

SOLID GOLD FLUTE, of exquisitely mellow tone; a Gold Clarinet, a Gold Double Flageolet, one Gold and one Silver Cornet à Piston, a Silver French Horn, and a Silver Sax-Horn; all of the finest and richest tone, highly engraved and finished by eminent makers, and latest and best improvements, and all parts bearing the Goldsmiths' Hall mark: TO BE SOLD, together or separately, at prices little above their metallic values. Also, a genuine Cremona Violin and two other Instruments. Examination and trial allowed.—Address, in first instance by letter only, M. L. Mr. Kemmels, Stationer, Ebury-street, Finsbury.

CONCHOLOGY.—A Remarkable Collection of Shells, &c.—An Mounted Glass Cabinet, inlaid with Brass, 4 feet in height, 4 feet broad, and 24 inches in depth, fitted with sixteen sliding Trays, containing a rare and valuable Collection of English and Foreign Shells and Conchological Fossils, comprising upwards of 1,100 Specimens, in the finest preservation, arranged, labelled, and catalogued according to the Linnean System. A Manuscript Catalogue accompanies the Collection, making reference thereto easy and agreeable. The Cabinet is surmounted with a three-tier Bookshelf, with a Plate-glass Back, forming, with the Cabinet beneath, a handsome piece of Furniture, and admirably adapted for the reception of a select Library of Books on Conchology and the kindred Natural Sciences. Price only 35s.

This valuable Collection—the original cost of which it is impossible to estimate—was formed by a late and deceased, who, in furtherance of her object, spared neither time nor money to obtain the finest and rarest specimens from the most distant parts of the globe. Anyone interested in, or wishing to commence, this most fascinating branch of study, has here an opportunity, with comparatively small outlay, and no trouble, of obtaining that which—a handsome object in itself for the library or drawing-room—would otherwise require a large expenditure of time, labour, and money, to become possessed of.

Apply to J. H. W. Gassner, 58, New-street, Birmingham.

A CLEARANCE LIST of Scarce, Curious and Uncommon Books on Antiquities, Coins, Fine Arts, Poetry, The Drama, History, Biography, Trials, and Illustrated Works, READY THIS DAY, gratis and postage free for one penny stamp.—JOHN MILLER, Bookseller, removing from No. 8 to No. 7, Green-street, Leicester-square.

W. & J. BURROW, MALVERN.
London: Arnold, 73, Baker-street; Wals & McCulloch, 55, Chancery.

GRATIS and POST FREE, a NEW CLASSIFIED LIST of Two Thousand MICROSCOPIC OBJECTS, first-class specimens, prepared and sold by EDMUND WHEELER, 42a, TOLLINGTON-ROAD, HOLLOWAY, N.

MR. MAYALL'S PHOTOGRAPHS.—CARTE-DE-VISITE, full-length, half-length, or vignettes, TAKEN DAILY.

Set of Twelve..... 41 1 0
Set of Thirty..... 2 3 0
Set of Fifty..... 3 3 0
Several positions taken, and proofs submitted; it being in the choice of the sitters to have all from one, or some from each, as may be preferred. Immediate sittings with or without appointments. 42a and 236, REXHAM-ROAD, corner of Argyl-place; and 90 and 91, King's-road, Brighton.

DISDERI, PHOTOGRAPHER, INVENTOR of the CARTE-DE-VISITE, Patent the 27th of November, 1854: 70, 71 and 72, BROOK-STREET, Manchester-square, and for Equestrian Portraits at Hereford Lodge, Gloucester-road, Old Brompton-road, and 8, Boulevard des Capucines, Paris. M. Disderi has on Sale 65,000 Celebrities of the day, and Panoramic Views.—ESTABLISHMENTS in LONDON, PARIS, MADRID, and TOULON, for enlargements up to life size.

DISDERI, PHOTOGRAPHIC ARTIST to H. I. Majesty the Emperor Napoleon III. and the Imperial Family—to H. I. Majesty the Emperor of all the Russias—also to H. I. Majesty the Queen of Spain and the Royal Family—to His Majesty the King of Italy—to His Majesty the King of Holland—to His Majesty the King of Prussia—to the Imperial Gallery of Music—Photographer of the Palace of the Universal Exhibition of 1855, &c.

DISDERI, PHOTO PAINTING.—In oil on canvas.

DISDERI, PHOTOGRAPHIE on SILK.—His own new process.

DISDERI, PHOTOGRAPHIE ÉMAIL.—New process.

DISDERI, NATURAL PHOTOGRAPHY, without retouching. Reproductions and Enlargements of every kind.

DISDERI.—The Excellent Situation of Mr. DISDERI'S Studios enables him to OPERATE REGARDLESS of the WEATHER.

DISDERI.—NOTICE.—By a NEW PROCESS of Mr. DISDERI'S the "PORTRAITS CARTE-DE-VISITE" are Enlarged on Canvas to any size. The Public can thus obtain a Photographic Drawing by means of which skilful artists attached to the house can, on simple indications—such as the colour of the complexion, the eyes, and the hair—obtain a splendid and truthful oil painting.

Mr. Disderi's New Process is valuable in this respect, that it avoids the tediousness of long sittings, and also that it has the charms of oil painting the great advantages of the truthfulness and accuracy of Photography.

Salons and Studios, 70, 71, 72, Brook-street, Manchester-square; and for Equestrian Portraits at Hereford Lodge, Gloucester-road, Old Brompton-road.

CONTANSEAU'S

APPROVED FRENCH SCHOOL-BOOKS,

FORMING A COMPLETE COURSE OF MODERN FRENCH.

Now ready, in One Volume, post 8vo. price 10s. 6d.

NEW PRACTICAL DICTIONARY of the FRENCH and ENGLISH LANGUAGES. By LÉON CONTANSEAU, Professor of the French Language and Literature in the late Royal Indian Military College, Addiscombe; French Examiner for Military and Civil Appointments, &c. Eleventh Edition, price 10s. 6d.

Part I. FRENCH-ENGLISH, price 5s. 6d.

Part II. ENGLISH-FRENCH, price 5s. 6d.

A POCKET DICTIONARY of the FRENCH and ENGLISH LANGUAGES; being a careful Abridgment of the Author's 'Practical French and English Dictionary,' preserving all the most useful features of the original work condensed into a much smaller Volume. New and Cheaper Edition.

Pocket size, 3s. 6d.

Of these two works the larger, or 'PRACTICAL DICTIONARY,' intended mainly for the use of schools, contains a more full vocabulary, together with many phrases and idioms which are necessarily excluded from the plan of a pocket volume. The 'POCKET DICTIONARY,' adapted for beginners, tourists, and travellers, aims at the utmost conciseness of definition, while it still retains for general use the features of accuracy, completeness, and orderly arrangement to which the immediate and enduring success of the 'Practical Dictionary' is fairly attributable.

THE FIRST STEP in FRENCH: an

Easy Method of Learning the Elements of the Language: 1. Vocabulary of Words intended for Exercise in Pronunciation.—2. A Few Simple Rules of Grammar.—3. Easy Exercises in French and English, with Conversations on Ordinary Topics.—4. Selection of Easy and Entertaining Pieces in French, for Reading and Translation. Fifth Edition. Price 2s. 6d. KEY, 3s.

PREMIÈRES LECTURES: a Selection of Instructive and Entertaining Stories from the best French Authors who have written for the Young, with English Notes; followed by a few Easy Poetical Pieces suitable to be committed to Memory. Third Edition. 12mo. 2s. 6d.

MODERN FRENCH GRAMMAR;

comprising Vocabulary, Conversational Lessons, and Copious Exercises, composed from the best Authors of the Present Day. With Hints for the English Pupil, in brief Grammatical Foot-notes. Seventh Edition, remodelled and enlarged. Price 5s. KEY, 3s.

GUIDE to FRENCH TRANSLATION;

being a Selection of Instructive and Entertaining English Extracts, with Hints for their Translation into French; adapted to exhibit a Comparison between the French and English Idioms. Ninth Edition, price 3s. 6d. KEY, being a close French Translation Price 3s. 6d.

PROSATEURS et POÈTES FRAN-

ÇAIS; or, Selections from the best French Authors, arranged in Chronological Order, from the Age of Louis XIV. to the Present Day. With Biographical Sketches, and an Introduction of Easy Pieces. Ninth Edition. Price 6s. 6d.

PRÉCIS de la LITTÉRATURE FRAN-

ÇAISE, depuis son Origine jusqu'à nos Jours. Compiled expressly for the use of Schools and Students graduating for the Competitive and other Examinations. Second Edition. Price 5s.

ABRÉGÉ de l'HISTOIRE de

FRANCE, from the Earliest Times to the Year 1860. Compiled from the Works of Guizot, Simond, De Barante, Thiers, Michelet, &c., for the use of Schools and Students. Price 5s. 6d.

* * The above Series of Works form a complete Course of Modern French for Students in Schools and Colleges, and carefully adapted for use in Young Ladies' Schools.

London: LONGMANS, GREEN, READER, and DYER, Paternoster-row.

ELEMENTARY MATHEMATICAL WORKS,

BY THE

Right Rev. J. W. COLENSO, D.D.,
LORD BISHOP OF NATAL.

Stereotype Editions, thoroughly
Revised.

COLENSO'S ARITHMETICS.

ARITHMETIC designed for the Use of
SCHOOLS: To which is added, a Chapter on DECIMAL
COINAGE. New Edition (1858), thoroughly revised; with the
addition of NOTES and EXAMINATION PAPERS.... 4s. 6d.

**HUNTER'S KEY to COLENSO'S
ARITHMETIC** 12mo. 5s.

**COLENSO'S ELEMENTARY
ARITHMETIC** designed for the Use of NATIONAL,
ADULT, and COMMERCIAL SCHOOLS: consisting of a Text-
Book of Arithmetic, accompanied by a Series of easy and amusing
Examples, arranged progressively in order of difficulty, beginning
from the first steps ... 18mo. 1s. 6d.; or with ANSWERS, 2s. 6d.

Or in FIVE PARTS, sold separately, as follows:—

- I. TEXT-BOOK, price 6d.
- II. EXAMPLES, PART I. *Simple Arithmetic*,
price 4d.
- III. EXAMPLES, PART II. *Compound Arith-*
metic, price 4d.
- IV. EXAMPLES, PART III. *Fractions, Deci-*
mals, Duodecimals, &c., price 4d.
- V. ANSWERS to the EXAMPLES, with
SOLUTIONS of the more difficult QUESTIONS, 1s.

COLENSO'S ALGEBRAS.

THE ELEMENTS of ALGEBRA
designed for the Use of SCHOOLS, PART I., containing the
Simpler Parts of the Science, suitable for general School purposes,
and for the attainment of a B.A. Degree... 12mo. 4s. 6d.—KEY, 5s.

HUNTER'S EXAMINATION-QUES-
TIONS on COLENSO'S ALGEBRA, PART I.... 12mo. 2s. 6d.

COLENSO'S ELEMENTS of ALGE-
BRA designed for the Use of SCHOOLS, PART II., adapted
to suit the wants of more advanced Students: containing the
higher parts of the subject, with an APPENDIX of more difficult
Examples and Equation Papers 12mo. 6s.—KEY, 5s.

**COLENSO'S MISCELLANEOUS
EXAMPLES and EQUATION PAPERS** from PARTS I.
and II. of the ALGEBRA; with the ANSWERS... 12mo. 2s. 6d.

COLENSO'S ELEMENTS of ALGE-
BRA, adapted for the Use of NATIONAL and ADULT
SCHOOLS: containing numerous easy Examples and Questions
under every Rule, with a Selection of Miscellaneous Exercises
for Practice 18mo. 1s. 6d.—KEY, 2s. 6d.

COLENSO'S ELEMENTS of ALGE-
BRA, adapted for the Use of TEACHERS and STUDENTS
in the UNIVERSITY: being a Large-Paper Edition of the
ALGEBRA, PARTS I. and II., as above—the complete work.
8vo. 12s. 6d.—KEY, 12mo. 7s. 6d.

COLENSO'S TRIGONOMETRY.

PLANE TRIGONOMETRY, PART I.,
comprising the Measurement of Lines and Angles, the Nu-
merical Values of the Trigonometrical Ratios; with Logarithms
and the Exponential Theorem 12mo. 3s. 6d.—KEY, 3s. 6d.

COLENSO'S PLANE TRIGONOME-
TRY, PART II., comprising the Summation of Series, the
Trigonometrical Solution of Equations, and a large Collection of
Miscellaneous Problems 12mo. 2s. 6d.—KEY, 5s.
. The KEYS to the Two PARTS of the TRIGONOMETRY
together, price 8s. 6d.

COLENSO'S EUCLID.

THE ELEMENTS of EUCLID (the
parts usually studied in the Universities), from the Text of
Dr. SIMPSON; with a large Collection of PROBLEMS.
18mo. 4s. 6d.; or with a KEY to the PROBLEMS, 6s. 6d.

COLENSO'S GEOMETRICAL PRO-
BLEMS and KEY 18mo. 2s. 6d.

COLENSO'S GEOMETRICAL PRO-
BLEMS separately, for the Use of Schools where other
Editions of 'Euclid' may be employed 18mo. 1s.

STEVENS AND HOLE'S SCHOOL SERIES.

The STANDARD ARITHMETICAL COPY-BOOKS,

In SIX BOOKS or STANDARDS, price SIXPENCE each; intended as a finishing Course of Arithmetic in the several
Standards of the Revised Code, but suitable also for Pupils in Private Schools and Families; and calculated to insure
Good Figures, Concise Methods, and Correct Results. By HENRY COMBES and EDWIN HINES.

- I. Figures, Counting, Simple Addition, and Subtraction
Sums. Price Sixpence.
- II. Numeration, Simple Addition, Subtraction, the Multi-
plication Table, Questions, and Answers to the
Sums. Price Sixpence.
- III. Simple Multiplication, Short Division, Long Division,
Tables, Questions, and Answers to the Sums.
Price Sixpence.
- IV. Addition, Subtraction, Multiplication, Division and

Reduction of Money, Tables, Questions, and An-
swers to the Sums. Price Sixpence.

- V. Addition, Subtraction, Multiplication, Division, and
Reduction of Weights and Measures, Tables, Ques-
tions, and Answers to the Sums. Price Sixpence.
- VI. Simple and Compound Practice, Bills of Parcels and
Book Debts, Forms of Receipts, Tables of Aliquot
Parts, &c., Questions, and Answers to the Sums.
Price Sixpence.

By the same Authors, a Companion to the above, in 18mo. price ONE SHILLING,

ARITHMETIC STEP BY STEP, PART I.

THE SIX STANDARDS OF ARITHMETIC ACCORDING TO THE REVISED CODE.

The READY WRITER;

A Course of EIGHTEEN carefully Graduated Narrative COPY-BOOKS, price THREEPENCE each, designed to meet as
far as possible the Writing requirements of the several Standards of the Revised Code, and generally to lead to Good and
Correct Writing. By HENRY COMBES, E. T. STEVENS, and CHARLES HOLE, F.R.G.S.

TEXT LINES.

1. ELEMENTARY STROKES and SMALL LETTERS. Copy on
every half-page.
2. TWO SMALL LETTERS in combination and singly.
Figures 1 to 20. Copy on every half-page.
3. CAPITAL LETTERS (and small recapitulated). Copy on
every half-page.
4. SHORT WORDS (recapitulating all the Capital and Small
Letters). Figures up to 100. Copy on every half-page.

ROUND LINES.

5. NARRATIVE COPY on every other line: "The Boys and
the Peaches."
6. NARRATIVE COPY on every other line: "The Idle Little
Boy."

SMALL ROUND LINES.

7. NARRATIVE COPY on every other line: "Bob, the
Blind Fiddler's Dog."
8. NARRATIVE COPY on every other line: "The Boy who
would not tell a Lie."
9. THIRD STANDARD WRITING BOOK. Exercises for
Transcription alternately in Script and Roman type.
10. FOURTH STANDARD WRITING BOOK. Exercises for
Transcription alternately in Script and Roman type.

DOUBLE SMALL LINES.

11. NARRATIVE COPY on every other line: "A Dinner in
an Old Manor House—Time of Edward I."
12. POETRY COPY (from Archbishop Trench's 'Proverbs'
and Herbert's 'Church Porch'), two consecutive
lines on every half-page.

SMALL LINES.

13. POETRY COPY (Gray's 'Elegy'), four consecutive lines
on each page. Alternate lines ruled.
14. SPECIMENS of CORRESPONDENCE—BILLS, RECEIPTS,
&c.

ANGULAR DOUBLE SMALL LINES.

15. POETRY COPY ('A Mother's Love' and 'To my
Brother'), arranged as in 12. For Girls.

ANGULAR SMALL LINES.

16. POETRY COPY (from Goldsmith's 'Deserted Village'),
arranged as in 13. For Girls.

DICTION BOOKS.

17. THIRD and FOURTH STANDARD DICTION BOOKS.
Small round lines, with margin for corrections.
18. FIFTH and SIXTH STANDARD DICTION BOOKS.
Small lines, with margin for corrections.

STEVENS and HOLE'S GRADE LESSON-BOOKS,

IN SIX STANDARDS OR PARTS.

Each embracing Reading, Spelling, Writing, Arithmetic, and Exercises for Dictation. Especially adapted to meet the
Requirements of the Revised Code. Complete in Six Parts or Standards, price 5s. 3d.

STANDARD I., pp. 96, price 6d. | STANDARD III., pp. 160, price 9d. | STANDARD V., pp. 224, price 1s. 3d.
STANDARD II., pp. 128, price 9d. | STANDARD IV., pp. 160, price 9d. | STANDARD VI., pp. 224, price 1s. 3d.

. ANSWERS to the Arithmetical Exercises in STANDARDS II., III. and IV., price 4d.; in STANDARD V., price 4d.
and in STANDARD VI., price 3d.; or complete, price 1s. cloth.

STEVENS and HOLE'S ADVANCED LESSON-BOOK:

Consisting of Reading Lessons in History, Geography, Literature, and Science; together with a complete Course of
Examples in the higher parts of Arithmetic and Mensuration. A SEQUEL to the 'Grade Lesson-Books,' for the use
of Advanced Classes in Schools and Institutions. 12mo. pp. 428, price 3s. bound.

STEVENS and HOLE'S GRADE LESSON-BOOK PRIMER,

For the Use of Infant Classes; Introductory to the 'Grade Lesson-Books.' With Ten attractive Woodcuts, price 3d.

The GRAMMATICAL SPELLING-BOOK,

IN FOUR PARTS.

By HENRY COMBES, Head-Master of the Poplar and Blackwall Free School; and EDWIN HINES, Head-Master of
the Middlesex Society's School, Cannon Street Road. [PARTS I. and II. in the press.]

FIRST LESSONS in READING;

A Series of Illustrated Reading Sheets, printed in bold type, and carefully graduated on the plan of the Primer and
First Standard of the 'Grade Lesson-Books.' For the use of Infants in Schools and Nurseries. By E. T. STEVENS
Associate of King's College, London; and CHARLES HOLE, F.R.G.S., Head-Master, Loughborough Collegiate School
Brixton. [In the press.]

SCRIPTURE FACTS CHRONOLOGICALLY ARRANGED,

in Plain and Concise Lessons, with References and Questions for Self-Instruction; forming a complete Abstract of the
Old and New Testaments. By HENRY COMBES and EDWIN HINES. 18mo. price 1s. 4d., or in Two Parts, the
Testament Facts and the New, price 9d. each.

London: LONGMANS, GREEN, READER, and DYER, Paternoster-row.

Now ready, price One Shilling, the AUGUST Number of

THE TEMPLE BAR MAGAZINE.

Contents.

LADY ADELAIDE'S OATH. By the Author of 'East Lynne.'

Chap. 13. Changes.
14. Wilfred Lester comes to grief.
15. Lord Dane home again.

ALURED: an Allegory. By Frances Power Cobbe.

THROUGH SURREY.

HOW WE KILLED GROUSE AT CANTYRE.

ARCHIE LOVELL. By the Author of 'Miss Forrester.'

Chap. 25. Dead Rose Leaves.
26. By the Riverside.
27. Working up a Case.

GETTING AWAY FROM LEIPZIG.

COUSIN TOM AND THE NEW CURATE: a Sketch. By the Author of 'Charlie Thornhill,' &c.

MODERN ECCENTRICS.

RICHARD BENTLEY, New Burlington-street.

"ONE OF THE MOST SEDUCING BOOKS ONE CAN GET HOLD OF."—Reader.

Now ready, at all the Libraries and Booksellers', in 2 vols. crown 8vo. 21s.

A SECOND EDITION OF UP THE COUNTRY.

By the Hon. EMILY EDEN,

Author of

'The Semi-Attached Couple' and 'The Semi-Detached House.'

"Anything more refreshing, genial and laughter-provoking than these letters, it would be difficult to find."—Spectator.

"A brighter book of travel we have not seen for many a day."—Athenæum.

RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

A Missing Link in Natural History.

Now ready, in 2 vols. post 8vo. with many beautiful illustrations, 24s.

THE NATURALIST IN VANCOUVER ISLAND AND BRITISH COLUMBIA.

By JOHN KEAST LORD, F.Z.S.

Late Naturalist to the British North American Boundary Commission.

"One of the very pleasantest works on natural history that it has been our fortune to meet with. The author has a free and happy pencil; and in his descriptions bird, beast, fish and insect live before us until we seem to know them."—Globe.

RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

At all Libraries and Booksellers', in 2 vols. post 8vo. 21s.

AFTER THE STORM;

OR,

Brother Jonathan and his Neighbours in 1865-6.

By J. E. HILARY SKINNER,

Author of 'The Tale of Danish Heroism.'

"Written with much ability, and gives us the evidence of a trustworthy witness. It is the work of a traveller as judicious as he is interesting in his remarks."—Reader.

RICHARD BENTLEY, Publisher in Ordinary to Her Majesty.

13, Great Marlborough-street.

HURST & BLACKETT'S NEW WORKS.

FIELD-MARSHAL VISCOUNT

COMBERMERE'S MEMOIRS AND CORRESPONDENCE. From his Family Papers. By the RIGHT HON. MARY, VIS-
COUNTESS COMBERMERE and Capt. W. W. KNOLLYS.
3 vols. 8vo. with Portraits, &c. 30s. bound.

"To the last this noble soldier and most perfect gentleman took cheerful part in the duties and pleasures of life, leaving to an only son the inheritance of a great name, and to a sorrowing widow the task of recording how the bearer of the name won for it all his greatness. This has been done evidently as a labour of love by Lady Combermere, and she has been efficiently assisted in the military details by Capt. Knollys. Apart from the biographical and professional details, the volumes, moreover, are full of sketches of persons of importance or interest who came into connexion with Lord Combermere."—Athenæum.

TRAVELS in FRANCE and GER-

MANY in 1863 and 1866; including a Steam Voyage down the Danube, and a Ride across the Mountains of European Turkey, from Belgrade to Montenegro. By Capt. SPENCER, Author of 'Travels in Circassia,' &c. 3 vols. 12s.

[Just ready.

THE SPORTSMAN and NATURAL-

IST IN CANADA; or, Notes on the Natural History of the Game, Game-Birds, and Fish of that Country. By MAJOR W. ROSS KING, F.R.G.S. F.S.A.S. Royal 8vo. Illustrated with beautiful Coloured Plates and Woodcuts, 30s. bound.

"A goodly volume, splendidly illustrated. Since the works of Elliot Warburton and Kinglake, no book of travels with which we are acquainted has been written in a style more clear, forcible, and picturesque."—Sunday Times.

"To the British sportsman, and to all who may meditate a visit to Canada, or are curious about its game and fish, this work will prove most valuable."—Field.

PRISON CHARACTERS DRAWN

from LIFE. By a PRISON MATRON, Author of 'Female Life in Prison.' 3 vols. 12s.

"These volumes are interesting and suggestive."—Athenæum.
"The author's quick-witted transcripts of living character are studies that nothing can make obsolete or deprive of interest for living men."—Examiner.

THE BEAUTIFUL in NATURE and

ART. By Mrs. ELLIS, Author of 'The Women of England,' &c. 1 vol. with Portrait, 10s. 6d. bound.

"A pleasant, healthy volume."—Athenæum.
"This volume is written with great skill and beauty. It should be in the hands of every teacher and in the library of every young person."—British Quarterly Review.

COLBURN'S UNITED SERVICE

MAGAZINE and NAVAL and MILITARY JOURNAL for AUGUST contains: The Balance of Europe and their Probable Effect on the Balance of Power.—The Health of the Navy.—The Army in India.—The Needle Gun.—Light Drill in the French Army.—Advantages of the Naval Compulsory Retirement.—The British Army, its Recruiting.—Curiosities of Naval Literature.—The Continental War.—The Navy as it was and as it is.—Fighting the Tailpings.—The Wimbledon Volunteer Encampment.—The Loss of the Amazon.—Foreign Summary.—Promotions and Appointments, &c.

THE NEW NOVELS.

The WILD FLOWER of RAVENS-

WORTH. By the AUTHOR of 'JOHN and I,' 'DR. JACOB,' &c. 3 vols.

"A charming story, of great originality, full of pathos and grand nobility of thought and action."—Observer.

"A novel of unusual excellence. It is a story of deep interest. The characters are superbly drawn."—Star.

"A beautiful tale, written with deep feeling. It charms by its elegance and moves by its pathos."—Illustrated News.

THE WIFE'S ERROR. By Lady

BLAKE. 3 vols.

LORDS and LADIES. By the Author

of 'Margaret and Her Bridesmaids,' &c. 3 vols. [August 3.

FELICIA'S DOWRY. By Mrs. Fitz-

MAURICE OKEDEN. 3 vols.

"This novel is capital, and deserves wide popularity. The characters are all well sketched."—Star.

MIRK ABBEY. By the Author of

'LOST SIR MASSINGBERD,' 'THE CLYFFARDS OF

CLYFFE,' &c. 3 vols.

"A spirited and amusing story."—Pall Mall Gazette.

MR. AINSWORTH'S NEW WORK.

Now ready at every Library, in 3 vols. post 8vo.

THE CONSTABLE. DE BOURBON.

BY

WILLIAM HARRISON AINSWORTH.

"As a writer of fiction Mr. Harrison Ainsworth has certainly left his mark upon the age. In his historical romances he has been distinguished by a purity of style befitting their connexion with history; to which their adherence, however, is not too close to exclude the episodes of love, ambition, or revenge, that give interest and variety to the recorded events. When we noticed the first appearance, in *Bentley*, of his 'Constable de Bourbon,' we predicted that it would be one of the best works he had ever written; and its completion, in three beautifully printed volumes, confirms our opinion. De Bourbon is himself one of the most extraordinary characters that ever threw a splendour over unworthy motives, or dazzled and bewildered the world; and, connected with his career, the names of Bayard, of Francis I., of Diane de Poitiers, and many others upon whom our recollections love to dwell, give attraction to the narrative. The siege of Marseilles and its abandonment are well given; the quarrels in the besiegers' camp reading like a scene from the 'Iliad.' These are followed by the battle of Pavia, which is powerfully described, its well-known incidents being skilfully mingled with those of the romance; and by De Bourbon's march to Rome, where, on the day of the assault, he falls by a shot from the arquebus of Benvenuto Cellini. That Mr. Ainsworth's work will be extensively popular we cannot doubt, and its popularity will be deserved."

Cheltenham Examiner.

CHAPMAN & HALL, 193, Piccadilly.

The MAGAZINES for AUGUST.

BENTLEY'S MISCELLANY.

Contents for AUGUST. No. CCCLVI.

- I. THE HEIRESSSES OF BALLYRENA: a Yeatsman's Tale. By the Author of 'The Six Yeatsmen.'
- Chap. I. Introduces the Heiresses.
- Chap. II. Introduces the Yeatsmen who have fallen in love with the Heiresses, in which also are narrated some highly-sensational Stories.
- Chap. III. Two Fresh Pretenders to the Hands of the Heiresses introduced, and the Mode described by which they hoped to gain their object.
- Chap. IV. The Heiresses' Guardian exhibits himself in Glowing Colours, and a new Admirer appears on the Stage.
- Chap. V. The Suitors' Plots and Treachery.—The Heiresses undertake a rash Expedition, and find themselves in a fearful predicament.
- Chap. VI. The Yeatsmen, with a wonderful coincidence, bear of the Danger to which the Heiresses are exposed, and hasten to their Rescue.
- Chap. VII. A Fenian Expedition interrupted, and the Adventures of the Heiresses and the Yeatsmen brought to a Happy Conclusion.
- II. NOTES of a RIDE from HEBRON to PETRA in the SPRING of 1865.
- III. BRIARS and THORNS. By Blanche Marryat.

LITERATURE

The Biographical Treasury: a Dictionary of Universal Biography. By Samuel Maunder. Thirteenth Edition, reconstructed, thoroughly revised and partly rewritten. With above One Thousand Additional Memoirs and Notices. By William L. R. Cates. (Longmans & Co.)

WHEN we express an opinion that biography has in these later years enjoyed an undue share of public attention and approval, it is scarcely necessary to observe, that we do not speak of biography as it might be, or ought to be, but as it is, and that our words have no reference to those personal histories which are amongst the chief ornaments of our literature, and to the rare excellence of which is mainly attributable the respect generally accorded to all books of their class. It would not be easy to over-estimate the dignity of those labours to which we are indebted for knowledge of the great men of past times, or to rate at more than their worth the writers who have relieved any of our heroes from stains put upon them by misapprehension or malignity. Honour also may be given with no sparing hand to the scribes who gather from the previously ascertained facts of great men's lives lessons useful for the guidance of inferior mortals amidst the perils and perplexities of existence, and offer those lessons to the world in elegant and impressive language. But of the thousands of biographies registered at Stationers' Hall, or in the catalogues of the Museum Library, as the productions of English authors, what is the number of those which have attained or deserve permanent rank amongst works of standard and familiar literature? How many of our brightest and bravest admirals between Blake and Nelson have met with worthy chroniclers? Johnson and Scott are preserved to future generations in biographies that are models of art; but how brief is our roll of writers whose lives have been commemorated by fairly competent biographers! The same may be said of our statesmen, jurists, soldiers, painters, men of science. Literature never thought of her duty in this respect to such a hero as Cromwell, until the time had passed when a writer of Milton's power might have placed the Protector's personal character beyond the spite of slander and the misconceptions of dullness. Marlborough has had enough biographers; but his fame is so little indebted to them that his personal characteristics are almost entirely unknown to the majority of those of his countrymen who are sufficiently acquainted with his battles. Whether Wellington will fare better, so far as biography is concerned, we have some gloomy doubts.

To assign the dearth of really good biographies to the true cause, or rather the true combination of causes, would be no easy task. Until the latter half of the last century had learnt to lament its want of definite information concerning the prominent actors of immediately preceding times, a general absence of curiosity on the part of the public may have accounted for the general neglect of writers to study critically, and portray minutely, the more remarkable personages with whom they came in contact. The miserable, ill-written, straggling, unobtrusive notices, which the book-venders of the Row and Little Britain used to announce as "lives done by eminent hands," and which the bookish subjects of Queen Anne or George the First were content to accept as adequate portraits of famous men and women, indicate a

condition of public taste which fully accounts for the poverty and weakness of the efforts made for its gratification. Of these puny memoirs, Gilbert Burnet's 'Life of Sir Matthew Hale' may be taken as a favourable and significant specimen. When a writer no less eminent as a divine than as a man of letters could send to the press such a comically inadequate sketch of so remarkable a character as the venerable and learned Chief Justice, it is manifest that readers did not require much from biographers, and that authors did not feel themselves bound by honour or interest to expend much pains on essays in personal history. But in more recent times—since Samuel Johnson's 'Lives of the Poets' created in the popular mind a taste which Boswell's book enlarged as well as gratified—the public appetite for biography has rapidly increased, and the number of writers willing to cater for the appetite has grown in proportion.

The conditions under which biographies are usually written, no less than the special undeclared objects for which they are in most cases composed, encourage even when they do not necessitate trickery, evasion, and directly false testimony. Under favourable circumstances, the ordinary biography is written to order, for the honour of a dead man, the satisfaction of his friends, and the glorification of his children. When finished, like the epitaph on his tomb, it tells "not what he was, but what he should have been." Under less favourable circumstances, it is the manifesto of the religious, political, or scientific clique of which the dead man was an active member, and is seasoned with ungenerous judgments and malicious attacks upon the enemies of the dead man's clique. Often these kicks at, and aspersions upon, the dead man's surviving antagonists, are unseen, or unintelligible to readers who live outside the warring coteries, and have no key whereby to construe covert insinuations and mysterious suggestions; but the slander is none the less sharp, and the spite is none the less likely to rankle because the blow and its consequences are known only to the circles which comprise the bitterest enemies and warmest friends of the injured reputation. Personal history is surcharged with rancour and malignity; and those who have studied biographic literature under circumstances favourable to accurate observation, will admit that religious biographies are by no means free from this particular kind of offence. So long as the writers of these vindictive books speak no evil of the dead men whom they are specially employed to praise, they feel themselves at liberty to insinuate any amount of evil against the living whom they are paid to annoy.

Even in cases where the dead man's friends cannot be charged with intentional untruthfulness, or a malignant desire to hurt surviving adversaries, the difficulties to be encountered in a search for the truth of his career are so great, that the biographer, specially retained for the defence, apportioning his exertions to the amount of his fee, usually stops short in his labours of investigation, ere he has fairly begun them. The sources to which he is referred for information are usually treacherous; and unless he is a very vigilant, clear-headed, suspicious, and persevering collector of evidence, he gathers to his pile of materials a wondrous lot of mistold gossip and apocryphal or unquestionably spurious stories. It is the custom for executors and other persons officially concerned in covering a hero's grave with honour to give their retained biographer written statements concerning the deceased gentleman's birth, education, virtues, achievements,—nothing of course

being ever intimated about his want of education, his vices, or his blunders. Sometimes these testimonials agree in nothing save a determined intention to speak handsomely of the dead man. Years since, a friend of ours was employed to write the life of a successful and eminent gentleman, who had left a large amount of money to the persons who were most anxious to perpetuate his fame; and it was not till he entered upon his undertaking that he had any adequate knowledge of the sorry fountains from which biographers are required to draw their data, and of the ridiculous processes by which our veritable histories of human lives are concocted. First of all, he received letters containing reminiscences of the deceased gentleman from some fifteen of his most intimate friends; twenty or more letters of introduction, from executors and others, to twenty or more of the testator's less intimate friends; a collection of many hundred obituary notices of, and passages having reference to, the deceased, taken from newspapers during a course of many years; certain boxes of letters, journals, diaries, account-books. Had this fund of information been less good, this witness would never have discovered its badness; had the sources been less abundant, he would never have detected their shallowness. At the outset, critical examination detected several strange discrepancies in the fifteen letters from most intimate friends,—fourteen of them praising the hero with a fervour natural to legates, but with a perplexing inconsistency as to the grounds of their favourable opinions. The fifteenth intimate friend—who, by the way, was not a legatee—made some remarkable disclosures, which imparted a suggestive significance to the words of the other fourteen witnesses. Interviews with the less intimate friends taught the writer how little men know about the history of the associates whom they are wont to address in terms of affectionate endearment. Intercourse with the veterans of the eminent gentleman's family soon satisfied him that they had only the most confused and shadowy and irreconcilable notions concerning the earlier years of their distinguished relative. Conversation with the junior members of the family at first occasioned the writer lively surprise, and then caused him to reflect on his own family relations, and see how little he knew about what his own father, mother, uncles, and aunts had done in this life before he came to years of discretion. But the informants—or rather the misinformants—who occasioned the greatest amount of trouble, were certain elderly but very intelligent gentlemen, who were supposed to be the persons best able to afford accurate accounts of the dead man's professional career. These men had been his professional coadjutors, the partners of his labours, the sharers of his triumphs. His victories had been their victories; indeed, in some cases, the works which had increased the lustre of his renown were conceived, planned, and carried out by them, almost without his supervision.

With respect to the principal matters in which these subordinate actors had been thus especially concerned, it was naturally felt by the writer that they would be safe historical guides. Just as a general of division knows more than his superior commander, or the colonel of a regiment sees more than the general, of certain minor operations on a great battle-field, it was thought that the dead man's assistants would be able to speak more fully and exactly on certain points than the living chief himself could have spoken. Well, these gentlemen did speak fully and authoritatively as to important events, which were the

grand incidents of their lives, and concerning which they were better qualified to tell the truth than any other living persons. They were still in the possession of mental vigour; they were under no temptation to make false statements, and even had the case been otherwise, they were not men likely to yield to such temptation; they spoke clearly, minutely, confidently, and with perfect consistency, of conflicts, labours, results, which had engrossed their attention day after day throughout the best years of their lives; and yet time after time, by written testimony drawn from the "certain boxes of documents," and from another collection of papers that came to hand in a most unexpected manner, and rendered it necessary to modify the most important assertions in the almost finished manuscript of the biography, these educated, honest, and specially-qualified witnesses were convicted of mis-telling in important particulars the chief episodes of their own lives. Admitting some important errors in his own communications, one of these gentlemen exclaimed, "Yesterday I would have sworn to the truth of every statement I made to you; to-day, I am so confounded by the proofs of my own inaccuracy, that I really do not feel myself able to say anything positively about my own life." Few persons are aware how treacherous a companion the memory is, and how prone we all are to mistake imaginations for reminiscences. Of biographic inaccuracies and fictions, a large proportion must be attributed to this mental tendency in witnesses who, so long as they speak of affairs in which they were personal actors, are regarded by the ordinary biographic collector as narrators incapable of error.

Few persons are better able to estimate the prevailing inaccuracy of biographic literature than the compilers of those dictionaries, into which the principal data of published memoirs are from time to time drawn. In their endeavours to deal satisfactorily with conflicting statements and irreconcilable dates, these useful collectors are often sorely perplexed between a readiness to believe everything and a disagreeable doubt whether they ought to believe anything. In his Preface to the first edition of the commendable book which has now attained the honour of a thirteenth edition, Mr. Samuel Maunders observed: "Persons not in the habit of consulting different biographical authorities can have no idea of the discrepancies that are to be met with in the relation of mere matters of fact; but this, perplexing as it is, bears no proportion to the wilful perversions that abound where scope is given for the expression of poetical feeling or the promulgation of a particular doctrine. So prone, indeed, are many to this corrupt practice, that it appears as though they considered it a paramount duty to carry on, *per fas et nefas*, an eternal crusade against all opinions which are not in accordance with their own,—against every one who is disposed to take a straightforward and rational view of things, rather than to glance at them through the oblique medium of some wild or fanciful theory. The amount of injury thus done to the cause of truth, it is impossible to estimate; sentiments, glossed over by a false philosophy, are slavishly copied from one work to another, till the dissemination of error becomes general, and the evils inflicted on society are past redemption." This testimony from an honest student of judicious mind and equable temper, who knew more about modern biography than most writers of his day, is so valuable that we cannot thank Mr. Cates for omitting it from the present edition.

In some respects the present edition is a great

improvement on its precursors; but though we have no inclination to speak lightly of Mr. Cates's labour, a cursory survey of the book has satisfied us that much room still remains for further amendment. In the 900 memoirs which Mr. Cates has rewritten, we here and there come upon errors for which Mr. Maunders is not to be held accountable; other notices retain blunders committed by the originator of the work; and though Mr. Cates presents us with more than a thousand new "lives," he has neglected to remedy some of Maunders's worst omissions. To make much of a few slips in such a work would be unfair, and we therefore refrain from drawing up a list of mis-spelt names, typographical defects and other errors that will creep into printed matter in spite of extreme care. Our chief objection to Mr. Cates is not that he occasionally drops a letter, as where he spells the name of Attwood, the composer, with a single *t*; or that he sometimes drops an entire notice, as where through inadvertence he omits Maunders's memoir of Dr. Matthew Gwinne; but that his emendations have not been made upon any satisfactory system. Hence it happens that whilst he says more than enough of such people as Maurice and Eugénie de Guérin, Sarah Martin the Yarmouth dress-maker, and Madame Tussaud of wax-work celebrity, he neglects to notice personages of real importance. In vain we have referred to his pages for memoirs of such eminent men as Lord Keeper Orlando Bridgeman, Lord Keeper Nathan Wright, Lord Chancellor Macclesfield, Lord Chancellor Charles Yorke. Amongst other legal chiefs, conspicuous in this volume by their absence, we may mention Sir John Pratt, Chief Justice Ryder, Sir James Mansfield, and Chief Justice Jervis, as well as such historical notorieties as Chief Justices Wright, Scroggs, Pemberton, Rainsford. Notice is taken of Sir William Knighton, physician and secretary to George the Fourth, whilst other not less important members of the medical profession, such as Dr. Addington, the first Lord Sidmouth's father, Sir Richard Jebb, Revell Reynolds, Tuthill, are unmentioned. Something is said of Yates the actor, nothing of Mrs. Yates the actress. No impartial selection of distinguished soldiers of the Confederate army would have marked Stonewall Jackson for enthusiastic eulogy, and put aside General Albert Sidney Johnston as a person too insignificant for remark. No student of American history capable of estimating the relative powers of the leading politicians of the United States would award biographic prominence to Edward Livingston, and withhold it from Aaron Burr. Since Mr. Cates makes honourable mention of George Stephenson as a man "whose name will be forever identified with the greatest mechanical revolution effected since the days of Watt—the application of steam to railroads," he might have devoted a little space to Trevithick, the inventor of the locomotive, and Hedley, the engineer who first made the travelling engine an actual substitute for animal power on a colliery railway, and furnished the Killingworth engine-wright with models for reproduction. The editor's omissions are all the more remarkable because he encumbers his volume with memoirs of fortunate traders and other comparatively obscure persons who, though they were respectable and useful in their lives, deserve no commemoration now that they are in their graves. When compilers of biographical dictionaries feel it necessary to notice such a man as Guest, the iron-master, they must, for the sake of consistency, make up their minds to admit within the Temple of Fame the thousands of prosperous men of business who, in this rich country, raise themselves to

opulence by energy, intelligence, and honourable dealing in the course of each generation.

Moreover, several of the memoirs are disfigured by inaccuracies or defects which would not have marked them had their writers been thoroughly acquainted with the facts under consideration. Though the number of students is rapidly growing who hold that Francis Bacon's reputation has been cleared of the imputations of venality, his judicial character is still regarded by many intelligent writers as a question open to controversy; but no one accurately informed as to the circumstances of the Chancellor's fall could have penned Mr. Cates's words, "Complaints were made of his venality as a judge, which on inquiry by a parliamentary committee were fully verified." Influenced by one of Macaulay's extravagant caricatures, the author of the memoir of Judge Jeffreys says, "His conduct on the bench was, in the highest degree, *discreditable at all times*, and he indulged in scurrility and abuse of the most degrading description,"—a statement that is at variance with conclusive testimony. By no two persons was George Jeffreys more cordially detested than by Francis and Roger North; to Roger's malignant and incisive pen Macaulay was indebted for some of the most telling touches in his repulsive portrait of the bloody Chief Justice; but notwithstanding his violent hostility to Jeffreys, notwithstanding his unscrupulous delight in speaking evil of his enemies, Roger North—writing at a time when the memory of Jeffreys was unspeakably odious to politicians of all parties—expressly admits that when Jeffreys was not influenced by political passion or some strong animosity he was a decorous and upright judge. "When he was in temper," says Roger North of his brother's insolent adversary, "and matters indifferent came before him, he became his seat of justice better than any other I ever saw in his place." Reproducing the story which Mr. Charles Knight has proved to be a mere biographic calumny, the 'Biographical Treasury' says of Thomas Guy, the benevolent bookseller, "his principal gains arose from the disreputable purchase of seamen's prize tickets, and jobbing in the South Sea Stock." The omission of all mention of Charles Lee's conclusively demonstrated treason from the memoir of that Transatlantic scoundrel is significant. Frequently we come upon a memoir which contains no important assertion that is absolutely erroneous, but yet is calculated, through want of precision and fullness, to mislead the reader. Thus of Lord Keeper North it is said, "In 1683 he was appointed Lord Keeper, and raised to the peerage. Soon after the accession of James the Second, he was succeeded in his office by the notorious Jeffreys." Francis North received the Seals in 1682, a few days earlier than the writer represents; and he died *in office*,—a fact which no reader would infer from the memoir, which, whilst it is literally right in stating that Lord Guilford was "succeeded in his office by the notorious Jeffreys," will create in many readers an impression that Francis North was superseded as well as succeeded. Here and there, but not often, we come upon a very faulty notice like the following:—"Thellusson, Peter Isaac, a native of Geneva, who settled as a merchant in London, where he acquired a prodigious fortune, and died in 1788. He left about 100,000*l.* to his family, and the remainder of his property, considerably above half a million, is to accumulate, during the lives of the three sons and the lives of their sons, *when*, if there are none of his descendants and name existing, the whole is to be added to the sinking fund. The singular will being contested by the heirs-at-law, was established by a decision of the

House of Lords in 1805; it, however, occasioned the passing of an Act restraining the power of devising property for the purpose of accumulation to twenty-one years after the death of the testator. His eldest son was raised to the peerage by the title of Baron Rendlesham." In the first place, no notice is here taken of Thellusson's connexion with Necker, or of the peculiar basis of his great wealth,—facts that certainly ought to have been mentioned; in the second place, the Thellusson trust is at an end, and the foolish man's money, after much litigation and sorrow, caused by his iniquitous will, has been distributed in accordance with the testament; in the third place, old Peter Isaac Thellusson's son was not raised to the peerage, but to the baronage of Ireland. Errors of another kind—unimportant in themselves, and venial because unavoidable by the most careful writers—appear in many places. Thus, the memoir of William Makepeace Thackeray observes, "He was early brought to England, and was educated first at the Charterhouse." Thackeray's first place of education, after his arrival in England, was a private school at Southampton, kept by a master who was a warm believer in the efficacy of that birchen discipline which is very generally condemned by the refinement and good sense of the present generation. Not long before his death, Thackeray was recalling the life of his school-boy days at the Charterhouse, when a companion asked him how he came to make no mention in his 'English Humourists' of Steele's essay against public school flagellations,—a paper which could have been used with excellent effect by the old Carthusian of the nineteenth century lecturing about the older Carthusian of the eighteenth century. With characteristic warmth and frankness Thackeray exclaimed, "I would have gladly given you 50l. for a reference to that essay when I was preparing my lectures; I never heard of it before. It is provoking to hear of it now that it is too late to use it." After speaking about the discipline of Charterhouse in "his time,"—where, by-the-by, he represented himself as never having been birched,—he described in terms of ludicrous horror the torture which he had endured under the besom of the Southampton schoolmaster. "It was awful, it was awful; but fortunately I was soon removed from the brute's power."

We have indicated the shortcomings of this work, not without due recognition of the difficulties which the compilers were required to encounter, and of the apologies with which their errors may be fairly covered. Let us add that, notwithstanding many defects, it is a highly commendable book. Further revision and more methodical pains will greatly improve it in future editions; but in its present condition it is the most comprehensive, honest, convenient, and trustworthy volume of its kind that has hitherto been offered to the public.

Pictorial History of the Civil War in the United States of America. By Benson J. Lossing. Illustrated by many Hundred Engravings on Wood. Vol. I. (Philadelphia, Childs.)

Less offensive to fairness than good taste are the style and tone of this verbose volume, which—commencing the history of the Civil War with Mr. Lincoln's contest for the presidential throne—brings the story no further than the rout of Bull Run. A northerner writing for those of his countrymen who fought for the Union against the slave-owners, Mr. Lossing does well to condemn the operations and aims of the Southern leaders; but he would have

been more impressive, and therefore more successful in his attempts to deprive Mr. Jefferson Davis and his coadjutors of the sympathy and respect which are still felt for them by many spectators of the conflict, had he been more sparing of hard words. In the heat of the fight violent language accorded with the fierce blows that were being given on either side; but now that the struggle is over, history should speak of it with calmness and dignity, and refrain from railing at the authors of the trouble as "conspirators." But Mr. Lossing is a compiler from the newspapers, rather than a thoughtful historian drawing his materials with patient labour from every source of information; and, like most compilers of his kind, he shows but little discrimination in selecting his facts. At least two-thirds of his work refer to comparatively unimportant matters, to which he gives a page where a line would have been sufficient. Portraits and notices are given of very worthy, but, for the purposes of history, very little men, about whom total silence might have been advantageously maintained. Moreover, Mr. Lossing fails in gratitude and justice to the numbers of Englishmen who consistently, and to good purpose, spoke in no uncertain terms for the North, at the time when the South had too many unscrupulous champions in this country. "In addition," writes Mr. Lossing, "to affected indifference to the fate of the nation, British legislators, orators, publicists, and journalists were lavish of causeless abuse, not only of the Government, but of the people of the Free-Labour States, who were loyal to that Government. That abuse was so often expressed in phrases as unmanly and ungenerous, and even coarse and vulgar at times, that high-minded Englishmen blushed with shame. Only here and there throughout the kingdom, for a long time, was heard a voice of real sympathy for a great and enlightened nation struggling for existence, which had in a measure, as it were, sprung from the loins of the English people. Those few voices were pleasant to the ears of the earnest champions of the republic and universal freedom during the conflict; and the memory of the utterers will be ever cherished in the heart of hearts of a grateful and generous people, who can, with the magnanimity of true nobility, forgive the arrogant and the misinformed in other lands, who, failing to comprehend the dignity of the cause for which the loyal Americans were contending, treated them unkindly in the hour of their greatest distress." This is a favourable specimen of the author's style and temper. As a sharer in that "magnanimity of true nobility" of which the Americans, it appears, have so large a store, Mr. Lossing should reflect that in the northern section of his own country there was much acrimonious difference of opinion with regard to the war, and that if London contained a considerable body of noisy sympathizers with the South, the same was the case in New York. Like the Americans, we are accustomed to speak our opinions freely, and in our jealousy for freedom of discussion we permit talkers and writers to utter sentiments that encounter the silent disapprobation of the thoughtful and good, even when they do not elicit stormy contradiction. From time to time speaking bitterly of ourselves, we also from time to time utter harsh and unjust judgments with regard to our neighbours. In like manner, America occasionally pours the vials of her irritability upon this country; and when American journalists are offended by the conduct of Great Britain, they neither hesitate to say so, nor exhibit any high degree of conscientious care not to over-state the case against the "old country." Mr. Lossing does not need us to remind him of

the complimentary criticisms showered upon us during the war by the American press; but he would be astonished if an English historian were to use them as instruments for rousing amongst his countrymen feelings of hostility to the States, or were even to give them so much as a line of passing notice.

13. *Discourses.* By [the late] Alexander J. Scott, M.A. (Macmillan & Co.)

WHAT is the original meaning of *salad* or *salade*? In the oldest use of the word it means a kind of helmet-cap worn by soldiers, both in French and Norman-English. We venture, though not without hesitation,—especially remembering that some derive it from *sald*,—a surmise that the mixture of herbs and dressing got its name, just as a comfortable dose before going to bed came to be called a night-cap; as a good kind of thing for the head. Be this as it may, we have before us a *salad*, in either sense: a mixture of various esculents, and a stiff kind of wear over the brain; not without salt either, though there might have been more. But this was not the way we came to use the word. It was our own considering-cap we thought of. Our readers know that of late years we have been obliged to put books of mental philosophy together in a heap, and make one job of them: how can we do otherwise when the nature of things, in its totality, is presented to us for consideration once a fortnight? On the present occasion, when we saw that we had a budget ready, there came into our minds, in a whimsical way, two lines of the satire on Wolsey,—

Arise up, Jacke, and putt on thy sallatt,
For the tyme is come of bage and wallatt.

And so we were reminded to ask for the connexion between the two meanings of *salad*, and to refer the question to the Philological Society.

We are by no means sorry that mental philosophy is exciting so much attention; but we should be in despair if it were necessary to give a discussion every time we open a book on the subject. It is desirable to examine the works whenever we find the time of

day. We proceed to a short notice of the several writings before us, which will be of more use to our readers than any detached reviews.

1. Joseph Henry Green, so well known as a surgeon, died December, 1863, as his biographer ought to have told us, but forgot it. It is not very widely known that he was all his life a diligent student of philosophy, a pupil of Tieck, the intimate friend of Coleridge, whose literary executor he was. The posthumous works which have appeared under Green's editorship have been very little thought of in connexion with their editor. The present work is not Coleridge, but Green founded on Coleridge. Its subdivisions are, "On the Intellectual Faculties," "On First Principles in Philosophy," "On the Truths of Religion," "On the Idea of Christianity in relation to Controversial Theology." The reading will repay those who have a strong appetite for such subjects; and it will give information, of a general kind, to those who want to know something of Coleridge, subject to the difficulty of separation incident to the writings of teachers who found their own instructions upon those of the master. With those who come between these two classes, we do not think these volumes will find much acceptance: in fact, Green is not Coleridge.

2. Dr. McCosh's work involves no fewer than nine points: the nature of things, Hamilton, J. S. Mill, the relations of each to the other, Dr. McCosh's relation to either, and Dr. McCosh's relation to the way in which either looks at the other. In this subject nothing but a very long article would allow us to go into detail. Though, by title, we should suppose that only Mill is examined, yet this is far too brief a description of the work. There are twenty-one chapters, running through as much difference of matter as could be brought in under the general subject. Dr. McCosh holds his ground fairly, and will be useful to all readers of the psychology of the day. In such points as his attack on Mr. Mill's notions of intuition and necessity, he will have the voice of mankind with him: in things which are more like matters of opinion, there are many who will find him useful in attaining perception of the point at issue. In the matter of Hamilton and his impugnors and defenders, we shall soon want a digested index, if we are to avoid utter confusion. Dr. McCosh has given two pages of reference to the places of his own writings which concern the matter; and it may fairly be said that these are two of his most useful pages.

3. We shall not enter on freedom and necessity. Mr. Alexander writes in a style of a "little vivacity of expression," for which he apologizes: this so far as Mr. Mill is concerned. If the reader should ask which are the vivacities, he will get from us no other answer except that given to the little boy who asked which was Wellington in the peep-show—"Whichever you please, my little fellow! You pays your money and you takes your choice." As to the article on Mr. Carlyle, there is internal evidence that it was intended for wit from beginning to end. The author "entirely honours" Carlyle, and considers him "simply our greatest man of letters living." Accordingly, he invests him with the name of *Sauerteig*, which the German dictionary makes to be *sour dough*, and gives him more than forty pages, of which the following is a specimen:—"Sauerteig indeed, nothing doubting, girt with his cook-aprons, infinitely manipulating with his hero-gridirons, and due 'inimitable sauce piquante,' cooks busily, with vigour even unusual in him. 'Right stuff of properest hero-porkhood here,' iterates the singular Sauerteig-Soyer, cooking..." Surely this must be wit!

4. Mr. Shedden's three essays are on the Infinite, on Arabic Peripateticism, and on the controversy between Mr. Mill and the school of Hamilton. In the third he ranges himself rather on the side of Mill, but not wholly. In his last sentence he expresses, but in other words, that he has much more agreement with Mr. Mill than with Hamilton, except as to the value of formal logic, which he holds Mr. Mill grievously to underrate.

5. The inquirer into the battle of the two philosophies takes the other side: he assails Mill and defends Hamilton on various points. With a bias which is not uncommon,—that of having a grand field of opponents,—he informs us, that while Mill's work against Hamilton was "hot from the press, it was pronounced by the writing public to be a complete success." We really were not aware of this. There are individuals who will decide between two such opponents at a glance; but they are neither the whole writing public nor the whole reading public.

6. Mr. Robertson's philosophy of the unconditioned is strong *à priori* theism: the existence of God is to be finally reduced to a logical axiom. He attacks both Hamilton and Mill, and criticizes many others. There is a great deal of vagarious thought, in less than a hundred pages.

7. Mr. Maguire informs us that his essay is the result of an independent study of Plato; and of this there is good appearance. His first "conviction that mental science was not mere verbiage," was derived from the chapter on Socrates in Grote's history: and his essay was complete before Grote's 'Plato' appeared; on this his criticisms, &c. are added in notes. Plato, under nine heads, in one hundred and fifty pages, is of a concentration which we cannot separate; but many readers who have the first smattering will find this short treatise both enlarge and bind their knowledge.

8. Dr. Hartwig's book at first looks like a system of natural history: it swarms with woodcuts of zoology and comparative anatomy. But it properly belongs to general psychology: for its object is comparison and deduction, and a view of the chain of being, which, in a rough way, may be described, like a rod and line, as having a fly at one end and a fool at the other. After some general cosmogony, this book begins at the lowest phases of vegetable life and ends with man. How little the collection of harmonies can pretend to be a system of zoology is manifest from the very small space taken up by the mammals when compared with that given to low creatures with hard names. One great object seems to be to illustrate the way in which all living things are the destroyers of their inferiors and the destroyed of their superiors. This is carried the length of saying that it is the "business" of the Deirodon snake to restrain the undue increase of the smaller birds by devouring their eggs. It is just as much the business of the smaller birds to produce eggs enough, over and above what are wanted for hatching, to nourish the Deirodon family. There is one great omission. When man is arrived at, it is not pointed out that, for want of a higher race to destroy him, he is furnished with a wish to do the job for his fellow creatures, and with inventive power to find out means. A treatise on weapons of all kinds, from the club to the needle-gun, would have been the proper ending. There should have been a double frontispiece: on one side a Deirodon robbing a nest; on the other two high-minded gentlemen snapping pistols at one another for their mutual satisfaction; and both performing the function assigned to them in the order of things, as seen from the standpoint of a natu-

ralist. This book is very interesting, and fills a very useful place.

9. Mr. Laurie's system of ethics places first manifestation of the moral sense in a feeling of being pleased or displeased (complacency or displacency), and, denying that right is discriminated by a special inner sense, finds all the rest in promotion of "felicity," either that of the agent himself or of others. There is power of analysis shown in this work: all other judgment we leave to the reader.

10. What is it that moves? This the author does not explain, and we cannot find out. There are chapters on Truth, Experience, Space, Time, &c. We do not think much of them. The author desires for his jury those who think calmly and examine closely: we doubt if they would need to retire. We cannot approve of the division of the cardinal virtue, justice, into justice towards one's own self, and justice towards other people: it is a perversion of terms quite parallel with the division of murder into suicide and slaughter of others. We hardly know whether the author is in joke or in earnest when he reconciles freewill and foreknowledge by the hypothesis that God foresees what he pleases, and does not choose to foresee the acts of his creatures. The old chapter from Volney, the meeting of the religions, to prove that there can be no revelation because men advance and defend opposite revelations in much the same way, is really behind the age. Most opponents of revelation would now say, each for himself, Well! I know I do not believe; but I trust I know a better defence of my unbelief than that comes to! The only chapter of which we can almost unreservedly approve is that on Space. There is in it a little reiteration, but no fallacy. It consists of four pages, no one of which contains anything but the head-line and the number of the page. Some more of the paper might have been advantageously treated in the same way.

11. Mr. Garvey's work begins, as a barrister's work will often begin, with a sound and sufficient table of contents. It goes through a large number of points connected with the education of the reason and of the feelings, and abounds in just remarks. At the end of each chapter is a supplement, headed "Practical," containing suggestions of books to read or courses to take. The whole is rather too much spun out: condensation is wanted. But those who make education a study should consult this book.

12. The odd bricks are piled into as much of system as is seen in some of the buildings. They are in dialogue, brought out by a loan of Mill upon Hamilton.

13. The late Alexander Scott—it will set him up with many to say that he was a bosom friend of Julius Hare—was a man of remarkable life, thoughts, and words. When he used to deliver Sunday evening discourses at we forget what institution, he collected around him a small audience who thought his sermons—so to call them—among the most remarkable things of the day. In the work before us the greater part has been printed before; but some discourses appear for the first time.

Having thus looked through a considerable number of psychological essays, a thought comes into our minds which has intruded itself on former occasions. It is this: Do our writers mean the same things by the same words? Certainly, it will be answered, in some cases at least; for they explain their words in exactly the same way. We know they do, is our reply: but *Quis custodiet ipsos custodes?* Do the words in which they explain carry the same sense in all the minds? On this point we crave leave to doubt; but we by no means despair of a final

settlement. Once more, to authors of all amounts of knowledge, and of all grades of reputation, we recommend curtailment of prolixity. We suspect that the streams of words which go to very fundamental points indicate that the writers have no very brief enunciation which *themselves would understand*: that is, that their fundamental words are not well settled in their own minds.

Translations from Euripides. By J. Cartwright, A.M. (Nutt.)

THESE Translations embrace three plays of Euripides, the *Medea* and the two *Iphigenias*. There is a short Preface, giving some account of the Greek drama and the Greek stage. At the end of it Mr. Cartwright apologizes for taking up Euripides late in life, and translating with a view to publication, saying that it is more pleasant to translate than to read translations, which, after all, are but a kind of sad necessity. We can understand and sympathize with the feeling; but we think it requires to be tempered with discretion. The wish to translate does not necessarily imply the power; nor is unwillingness to read the translations of others the best qualification for becoming a translator one's self. On the contrary, we do not see how one who wishes to submit his own labours to the public can dispense with the task of studying what has been done by his predecessors in the same field. Had Mr. Cartwright read other translations, we think he would have seen reason to doubt the wisdom of publishing. It is true that Euripides has been comparatively neglected by translators, and that, for versions of most of his plays, we have to go back to the works of Potter and Wodhull, eighty years ago. But it does not appear to us that Mr. Cartwright has any advantage over Potter and Wodhull, so far as we remember their translations. In two out of his three plays he is even at a disadvantage as compared with them in one not unimportant respect. They, as a general rule, translate lyrical dialogues into the blank verse of the ordinary dialogue of the play, thus sacrificing much that gives the Greek drama its peculiar charm; but they render the choral odes, properly so called, into English lyric rhyme. Mr. Cartwright, in the two earlier plays, turns choral odes and all into the heroic or dramatic blank measure of ten syllables. In the third play, however, the *'Iphigenia in Tauris,'* he not only renders the choral odes into lyric rhyme, as they should be rendered, but introduces rhyme into his version of a lyric dialogue between *Iphigenia* and the Chorus. From this it would seem that he regards the question as an open one, as otherwise, supposing him to have arrived at his final conviction after the translation of the two former plays was finished, he would surely have thought it worth his while to recast the lyric part of them into a more fitting shape. However this may be, there can be no doubt that his second thoughts are the wiser, not only as leading him to preserve more of the character of the Greek, but as enabling him to do more justice to himself. We extract successively two pieces resembling each other in character,—the one from a chorus in the *'Medea,'* the other from a chorus in the *'Iphigenia in Tauris,'*—which will show how much in such cases is gained by rhyme.

Chorus from the 'Medea.'

Happy were those Athenians of old,
Descendants of the ever-blessed Gods,
Whose minds were fed with the exalted lore
Of an inviolate and holy land,
Who moved beneath that ever-glorious sky
Where it is said that once upon a time
The yellow-haired *Hermione* (*Harmonia*?) brought forth
The Muses nine, the sweet *Pierides*,
And where, to draw from the bright-flowing stream
Of fair *Cepheus*, *Venus* also came;

And o'er the plain breathed soft and perfumed gales;
And binding on her flowing locks of hair
Wreaths of the fragrant rose, sent forth the Loves,
As Wisdom's own assessors, by whose aid
All kinds of excellence might be attained.

Chorus from the 'Iphigenia in Tauris.'

O Halcyon! sweet ocean bird,
Whose plaintive voice is often heard
Upon the rock-encumbered sea,
Singing those elegies of woe
Which understanding men well know—
For from the wounded heart they flow—
In sorrow for a husband lost to thee:
With thine I mingle my lament,
Thou wingless bird! in hope intent
Of seeing feasts of Argive men
And rites of *Artemis* again,—
The delicate and full-tressed palm,
The verdant laurel's deeper calm,
The shooting olive, light and fine,
Latona's favourite anodyne,
And the bright water circling on
To music of the vocal swan.

We do not say that the latter piece is all that could be wished; but there can, we conceive, be no doubt that it is superior to the former. Blank verse is, in fact, as we have frequently had occasion to urge upon our readers, the very worst form of composition for an unskilled writer. Differing from prose only in the fact that its syllables succeed each other according to a certain cadence, which is, of all cadences, the most easily learnt and imitated, it is of itself chaotic, shapeless, and interminable; and the form and rhythm which it requires to convert it into something poetically pleasing have all to be supplied by the artist. The result is, that it is apt to be prosaic beyond all other measures, at the same time that it cannot plead the privilege of prose,—which may be high or low, as the subject demands,—but is bound by its metrical form to maintain a certain standard of excellence both in sound and in expression. But in the case of rhyme, where the metre chosen is not too difficult, half the battle is won already. The writer is forced, in spite of himself, upon a certain phraseology, which is more or less poetical; he cannot be as prolix and ineffective as blank verse would allow him to be. Such lines as the first and last of the extract from the *'Medea,'*

Happy were those Athenians of old,
and

All kinds of excellence might be attained,

may be poured forth by a writer of blank verse without stint and without compunction. But in rhyme a thoroughly prosaic expression has to be smuggled in, as it were, among a crowd of others more respectable than itself. Once, indeed, Mr. Cartwright falls into absolute flatness, where he says,

Which understanding men well know;

but his verse enables him to recover himself immediately, and the rest of the extract does not fall below the ordinary level of conventional poetry, while the latter part may fairly be called pleasing.

The blank verse in Mr. Cartwright's dialogue, we fear, does not rise above the blank verse of his choruses, though, as poetical elevation can be more easily dispensed with in that part of the play, its absence is not so perceptibly felt. Where Euripides is greatest, but little of his greatness will be found reflected in the translation; where he is most trivial, his triviality will be found exaggerated. An English reader will not readily believe that the following lines form part of a speech which, as a representation of the conflict of human feelings, stands almost alone in Greek tragedy—the speech of *Medea* before she resolves to put her children to death:

Woe! woe! ah, why do ye thus gaze on me,
My children, with that look? why smile on me
With that last parting glance? Alas! alas!
What shall I do? My very heart, it breaks
As I look on each gladsome countenance.
I cannot do it. I here bid adieu
To my design. I will remove the boys.
Why should I, to avenge me on their sire,
By striking them, entail upon myself

Tenfold distress? No! I dismiss the thought.
Yet what have I endured? Shall I incur
The scorn of leaving all my foes at peace?
I never will. 'Tis my own cowardice
That brings these tender feelings to my mind.
Children, go in! To him who must not look
Upon this sacrifice,—to him the pang!
I will not stay my hand. Alas! alas!
My soul, abstain from prompting such a deed!
Leave them, unhappy woman! Spare thy sons!
Dwelling with me they still may give me joy.
No! by the dwellers in stern *Pluto's* realms!
It ne'er shall be that I will leave my sons
To be insulted by mine enemies.
So die they must; and since they must, e'en I
Who bore them will destroy: it is decreed,
And the decree shall not be set aside.

We are glad to be able to show by another extract that Mr. Cartwright can do better in rhyme. Annexed to the translations from Euripides is a rhymed version of Ovid's epistle, *'Cenone Paridi.'* The passage which we quote is of no extraordinary merit, but it may be read with pleasure:—

Yes! thou didst weep on parting, and didst see
Mine own eyes streaming as they turned to thee.
Our tears were mingled. Closer than the vine
Upon some neighbouring elm is seen to twine,
Closer than this, I say, thine arms were wound
In strict embrace my glowing neck around.
And ah! how often when thou didst declare
The wind detained thee, though the wind was fair,
Thy shipmates laughed! How oft didst thou dismiss
Thy wife, and yet repeat the parting kiss!
How oft thou murmuredst a last farewell,
As on each mast the breeze began to swell
The pendent canvas, and the water, torn
By straining oars, in foaming waves was borne!
Far as I may, thy parting sails I view,
And with my tears the moistened sand bedew;
And all the sea-green *Nereids* implore
To bring thee back to thine own native shore,
To my destruction. Aye! thou hast returned,
And for another partner I am spurned.
Alas! alas! the Gods have heard my vow,
All for that woman who enchains thee now.

As we said at the beginning of our notice, we can well understand the feeling which makes Mr. Cartwright find his work of translation pleasant. But we think he might have gratified the feeling without submitting the results of his labours to an ordeal which, to speak plainly, they will not bear. A translation may have an interest for the personal friends of the translator, though it has none for the public. To say that, in that case, it had better have been privately printed, or left in manuscript, is not the same thing as to say that it had better not have been undertaken at all.

The Lives of the Seven Bishops committed to the Tower in 1688. Enriched and Illustrated with Personal Letters, now first published, from the Bodleian Library. By Agnes Strickland. (Bell & Daldy.)

THE months of May and June, 1688, were among the most eventful, in fact and in their consequences, of any between the accession and the flight of James the Second. His declaration for liberty of conscience was one of those tricks of tyranny which are made to take the guise of liberality. By making that declaration, James placed his own Church on an equality with that of England, in order that he might with greater ease subsequently elevate his Romish system above that by law established.

Seven prelates—*Sancroft* of Canterbury, *Lake* of Chichester, *White* of Peterborough, *Turner* of Ely, *Ken* of Bath and Wells, *Lloyd* of St. Asaph, *Trelawny* of Bristol—saw the matter in this light, presented a petition to the King that they might be excused from having the declaration read in their dioceses, and, certainly to the surprise of all but one of them, heard this petition, written by the hand of *Sancroft*, and privately presented to the King, publicly announced for sale, in a printed form, at the corners of the streets, exactly, *Miss Strickland* tells us, as the evening papers are now.

When the bishops were subsequently sum-

moned before the Council, they acknowledged their signatures, but refused, in their character of peers, to pledge more than their word to appear to answer for their act in the Court of King's Bench. James sent them to the Tower; the Court of King's Bench released them on insignificant bail; and a few days after an English jury found that the petition was not a libel, nor seditious, as it was privately presented,—that the subject-matter of it was not false, but true,—and that it was not malicious, seeing that the intention of those who signed it was good, and the act itself one to which they were driven by necessity. All this was included in the verdict of "Not Guilty." This verdict raised a shout of exultation, not only in town and country, but in the camp. The King was dining in Lord Faversham's tent at Hounslow, and his dinner was seriously disturbed by the exulting cry of the orthodox soldiery among whom he temporarily dwelt. James was alarmed by its significance; and if he consoled himself by the thought that his dynasty was safe, by the birth of his son,—that heir to a lost inheritance who was born while the bishops were in durance,—he might have remembered, too, that by the imprisonment of Sancroft, one of the best legal and customary witnesses to such an incident in a royal household was prevented being present. As James, with his usual thoughtlessness or arrogance, had foretold that a prince would be born, the forced absence of Sancroft gave additional weight to the suspicions that many entertained as to the fulfilment of the royal prophecy.

Of these seven bishops, five became non-jurors, refusing to take the oaths to William the Third, for which act they were deprived of their benefices. Two, Trelawny of Bristol, and Lloyd of St. Asaph, "swam with the revolutionary current," and were present at the coronation of William and Mary. The "Royalists" as the Jacobites are here called, made a fair joke out of this fact. They said that "King James had sent seven of his bishops to the Tower to be tested, that five had been proved pure gold, but that Sir Jonathan of Bristol and Dr. Lloyd of St. Asaph had turned out only prince's metal!" This joke is considered so good that Miss Strickland tells it more than once.

Apart from the subject which led to the trial of the seven bishops, there is very little that is interesting in their lives. Miss Strickland has shown her usual industry, and, we must add, her usual shortcomings, in compiling this volume. With scant exception, the lady adds no information to that already known to general readers. Her partisanship is as unpleasantly manifest as ever, and the dogmatism of her assertions is not less decided than it was of old. Nevertheless, she has done her best, and if her success be not great, it is, perhaps, because her materials were not very available. The lives, separately given as they are, with no attempt at comparison of character, no parallels, no contrasts, read like so many articles from a biographical cyclopædia. As portraits, they are not ill drawn, often indeed cold and flat, wanting light and shade, but occasionally relieved by the prominent traits of a bishop who can use his fists, or of one who is not afraid to back his word by an oath. The very good men are less interesting than those with defects of character.

We are occasionally puzzled, however, to discover whether Miss Strickland is more inaccurate or undecided in her historical views. For example: Sancroft had said that the "wicked and wickedly men who murdered the father (Charles the First), likewise drove out the sons, as if to say to them, 'Go, serve other

gods!' the dreadful effects of which we feel every moment." This opinion Miss Strickland adopts as "true" and "reasonable." The young Stuart princes spent part of their time of exile among Roman Catholics. "They did not seek the Roman religion, but were driven into it." This is said at page 56; but in page 57 we are told that "James was certainly led by his first wife, Anne Hyde, into the Roman Catholic confession, and confirmed in it by the long and virulent sermons against it, the only spiritual pasture provided by Dr. Tillotson." Nothing can well be more opposed than these two accounts, neither of which, be it said, is correct.

At p. 171 we come upon a very novel fact in a paragraph which commences with these words: "The death of Charles the Second occurred soon after his consecration to the see of Ely." Some other portions of historical information are curiously conveyed. The author speaks of Lord Houghton as a gentleman who is "better known to the lovers of poetry and moral justice as the Hon. Monckton Milnes, M.P." It will be news to Lord Houghton that he was ever an "Honourable."

Miss Strickland has shown in most of her writings that she is a very good hater of those personages who are not on the side of her heroes and heroines. Some historians write, as judges, with strict impartiality; others as advocates, putting forward only the bright side of the cases which they support; there is a third division of historical writers, and these only know the facts of one side. Miss Strickland is less of the judge or the advocate than the eager witness, where her prejudices are concerned. When she is in the vein for hating an individual, the lady is carried away into error by her well-meant but mistaken impetuosity. If there be one person whom Miss Strickland hates more heartily than "the Dutch King," as she calls King William the Third, it is Oliver Cromwell. Young people are informed in this volume that there is no sacred right of insurrection: "Whoever," says this lady, "incites rebellion" (*sic*) "is undoubtedly guilty of a breach of the sixth article of the Decalogue." Henceforth there is to be no doubt on the subject, and Oliver is to be ranked amongst murderers. That modern historians should not see that England and the English went to rack and ruin under the Protector is a marvel to her. If those superficial writers had only studied "the local histories, the diaries and private letters of that dark period," they would see what the doings were of Cromwell and his Ironsides, and Miss Strickland would not have to "marvel at the ignorance of their eulogists"! Had Miss Strickland consulted "local histories" herself on this occasion she would have avoided some of the inaccuracies that are to be found scattered over this volume. The biography of the bishop, Sir Jonathan Trelawny, opens with these words: "Earl, or baron, or baronet, had not in the Church of England ever blended the duties of the temporal with the ecclesiastical noble before the time of Sir Jonathan Trelawny." When Miss Strickland wrote these lines she had evidently forgotten that, among other examples of what she affirms never to have existed, is that of Hugh Pudsey, Earl of Northumberland and of Sadberge, and Bishop of Durham from 1153 to 1195. If Miss Strickland had consulted a well-known local history, Raine's 'Parish of Blythe,' she would there have found that the bishops of Durham, from the Right Rev. Earl Hugh's time down to the death of Van Mildert, in 1836, blended the temporal and ecclesiastical duties. Bishop Van Mildert, "as Count Palatine and Earl of Sadberge," says Mr. Raine, "received, on enter-

ing the diocese at Croft Bridge, suit and service as lord paramount, from the lady of the manor of Sockburn, was welcomed by the congratulations of the mayor and corporation of the city in their town-hall, in his attire as a temporal peer, with a sword at his side, and in after-life occasionally opened the proceedings of the assizes, with the judges on each side of him, as *custos rotulorum* of the County Palatine."

Further, when Miss Strickland tells us that commerce, trade and manufactures all came to naught, and that there was an "utter collapse of literature and art under the Protectorate," we have only to say that statistics disprove the former assertion; that, as to Art, Dobson, Walker, Sadler and Cooper executed works which are now exciting admiration in the National Portrait Exhibition; and with respect to Literature, Milton wrote his best prose works under the Commonwealth, and prepared himself for that great epic which the men of the Restoration did not value. Cromwell, moreover, pensioned Usher, and favoured Waller. Andrew Marvel, as well as Milton, was in his service; Cowley wrote and published poems under the Protectorate and before the Restoration. Dryden gave to the world his 'Heroic Stanzas on the late Lord Protector.'

Some inaccuracies in grammar accompany the errors in history in this work. Miss Strickland, speaking of the 30*l.* a year and a gelding offered to Sancroft as his salary for being tutor, says that they were "terms which in these days would have been considered with contempt by a butler"; that they *would be* so considered we do not doubt. On Sancroft's tomb, we are informed (p. 101), are the words, "*Propter hanc murum jacet*," which we very much doubt, as Sancroft wrote his own epitaph and was a good Latinist. We think, too, that Miss Strickland as incorrectly renders the Latin furnished by Turner of Ely for his tomb, as well as the English of it, when she says (p. 233), that he was buried "without any other memorial for himself than his name and the word *Epergitur*, 'I shall awake.'" It is not to be believed that a scholar like Turner furnished this word, or that any scholar at all did it into such English.

NEW NOVELS.

A Troubled Stream: a Story. By Charlotte Handcastle. 3 vols. (Newby.)

'A Troubled Stream' resembles the old Minerva Press novels. It is the story of a distressed heroine, who loses home, fortune and lover, goes through many rough experiences of life, which she enhances by her own sensibility; for she is like the princess in the fairy-tale, who was so high bred that she could discover the three peas laid beneath a straw mattress and four feather beds. 'A Troubled Stream' is in truth a very foolish story, narrated in the style of a boarding-school girl. The chief pains and penalties of the heroine arise from an idiotic governess, who meddles in her affairs, and makes much mischief, as well as causing much inconvenience by her selfishness, for which Miss Beaudette, the heroine, sweetly rewards her by giving in to all her absurd exactions. After trying to be a governess, and giving quasi-satirical descriptions of those who had the prickly honour of her services, she finds the lover with whom she had hastily and foolishly quarrelled; they have explanations, and she marries him, becoming once more a lady of fortune and position, as well as being highly favoured in finding a husband who fulfils all he promised as a lover.

Captain Sauvage—[*Le Capitaine Sauvage*]. Par Jules Noriac. (Lévy Frères.)

THE characters in this book are types, many of which will be familiar to every reader who has abided in a French provincial town. In the favourite shady avenue—the exterior boulevard—of the town, amid picturesque *bonnes* and chubby children, lounge yellow-visaged old men, now turning a skipping-rope, and now exchanging a few saucy words with the nurses. Many of these ancients of the place wear the faded ribbon of the Legion, dearer to them than aught in the world beside. Their talk is of the brave days of old,—of Wagram and Austerlitz; and all their ire is reserved for the Bourbons and the enemies of Bonaparte. Such a man is M. Noriac's Antoine Sauvage. A man of lofty phrases, with a tone of authority; an adorer of Bonaparte and the soldier's vocation; in exterior harsh and domineering, with a tender heart deep under the old uniform, Antoine Sauvage is a French parallel of Col. Newcome. Sauvage is more stagey than the Colonel; but then Sauvage is a Frenchman. The delight with which Sauvage harps on his accurate accounts (only a few centimes wrong after a life of responsible service) belongs to his character and his nation. We are not much surprised that young Michel sneered at the weakness. Antoine Sauvage lives in a dreary house in the Rue du Temple, at Limoges, with an old servant, Nanie, and his son. La Nanie is an admirable character of the old, devoted provincial servant. The familiarity and deference with which she treats her rigid master and his son are pictured in all particulars true to the life. She will put her point into the conversation, as when Furétou is describing the wickedness of Michel; but she has that sense on which English mistresses set so high a value, viz., the sense "to know her place." Her master is poor when compared with the Michels; yet she despises them, while he is a hero to her. Furétou is excellent. He is the busybody of the town; a most amiable nose has he, so that, when he pokes it into the rooms of his neighbours, it escapes without punishment. There is fine humour in the description of his pompous propositions at the municipal council. After reading a long, high-flown paper on Limoges, he ends by craving from their bounty the sum of thirty francs to paint the statue of St. Martial, which surmounts the fountain of Angoulême. His peroration is measured:—

Gentlemen, you will grant this sum, which will be, relatively, only a light burden in your budget. You will grant it, gentlemen, not for an embellishment suggested by urban vanity, but because you owe it to the history of our country, to archeology, to morality, to religion, and also because Clio, armed with her quill, will inscribe upon the marble of History the names of those among you who shall refuse their groat to the illustrious apostle of Aquitaine.

The care and the power with which the characters and the career of the Michel couple are worked out show M. Noriac to be an artist of fine dramatic perceptions. First, old Michel's terrible death-bed, his interview with the candid doctor, and his craven spirit bargaining his way to Heaven with the priest; then, the still more terrible end of his wife and accomplice of his sins, are the two episodes in the book which rivet the attention of the reader, and leave a strong impression of a terrible truth on his mind. When Michel, having summoned the candid doctor, M. Dutreuilh, to learn the exact truth on his condition, rewards the candid physician who tells him that he is beyond hope, by calling him an ass, the varied play of the emotions in the craven

old sinner is exquisitely touched. Avarice is the canker in the heart of the Michels. The old man is besought on his dying bed to give up his ill-gotten gains to those whom he has robbed. He fears the bourn to which he is tending, and would give up his treasure to buy his peace in Heaven; only hope will not leave him. He might recover, after he had given up his money, and so he puts off the act of restitution until it is too late, and his wife clutches his money when he is dead. The canker of avarice has eaten deeper into her heart even than it had eaten into that of her husband. And when she, in her turn, is on her death-bed, stricken by a paralytic stroke, she cannot tell her children where she has hidden all the treasure of the family. And so it is lost to them, and they find themselves poor, and poor they remain. The children of the Michels are one and all excellently-drawn characters. The scapegrace boy who squanders the father's ill-gotten gains, and has a taste for low *cabarets*, seems exactly the natural result of the union of the two parent Michels. Micheline is the good angel of the story—the flower among the weeds and tares. Her love-story with the son of old Sauvage makes the tender interest—the silver peg on which the story hangs. Micheline and Joseph, next-door neighbours, love one another as young folk of twenty love; but it is impossible for the Sauvages and the Michels to agree as to settlements, and the young man goes into the army. The *dénouement* is very cruel. The tell-tale years flow fast. Young Capt. Sauvage lies wounded during the Italian campaign. His constant Micheline travels to nurse him in his tent. He is forty and she is thirty-seven. They meet, and he no longer loves her, for she has wrinkles and red eyes, and is middle-aged, and altogether is a "*femme ridicule*." So, when his wounds open in the night, he allows himself to bleed to death. Poor Micheline returns to Limoges, gives lessons on the piano, and takes care of old Nanie, who has become demented.

M. Noriac has treated these materials in a masterly way. The reader feels the pulse, the throbs, the breath of his characters. Col. Sauvage becomes the reader's close friend whom he cannot shake off. The scene between the Colonel and Fougeryas, or Furétou, the gossip, when this Monsieur Pry is asked to describe the crimes of Michel in order to deter young Joseph from Micheline, is a fair sample of M. Noriac's qualities:—

M. Sauvage and his acquaintance often remarked to each other that it was a pity that that devil of a Fougeryas did not belong to Paris! He would have made himself famous in the capital. In addition to his public duties Fougeryas had another and particular occupation; he concerned himself in the affairs of other people; and, without any personal interest in them whatever, had for forty years contrived to make daily note of every petty event incidental to provincial life. Families had no secrets from him; but as everything in a country town is known sooner or later, Fougeryas could not boast of much perspicacity—he only gave proof of his patience. The worthy man, indeed, exercised his profession of chamber-spy purely and simply from love of the art, and was never known to make use of any little secret spitefully or unkindly. His fellow-townsmen, however, perfectly aware of his propensity, had innocently avenged themselves by betowing on him the name of Furétou, at the same time looking on him with a certain amount of consideration, since every man has something to hide—if not his vices, his virtues. M. Sauvage rose eagerly on seeing M. Fougeryas, and called out, "Come and sit down, comrade," pushing an arm-chair towards him; "sit down and warm yourself while we wait for our cup of tea!"—"As to sitting down and warming myself," answered Fougeryas, "I desire nothing better;

but as to taking a cup of tea, that is another affair; thank you all the same."—"Just as you like, old fellow," said M. Sauvage. "You knew," answered the gossip, "I never could accustom myself to the physic. I suppose you have become used to it during your travels; otherwise I cannot understand what pleasure you can take in drinking a lot of hot water every night. On my word, if I did not know you, I should take you for an Englishman!"—"No impertinent jokes, if you please, my boy," replied the Captain, frowning; "or, if you wish to joke, choose another subject."—"Good Heavens!" said Fougeryas, "these are good people everywhere, I hope; are these not, Joseph?"—"I hope so, certainly," answered the young man, smiling.—"Possibly, possibly," murmured the Captain:—"but let us talk of something else."—"As you please, Captain."—"And now I am going to tell you what is the matter," answered the Captain; "I want you to do me a service."—"Two, if you like; tell me what it is."—"I want you, my dear Fougeryas, to relate in the presence of Joseph, who is a good boy, the history of Jean-Baptiste Michel, our neighbour. I know you are not ill-natured, and beg of you to be candid. A very serious matter depends on it, which I will explain to you by-and-by."—"I know all about it," said Fougeryas with a self-satisfied air; "Joseph wants to marry Micheline."—"How do you know that, Monsieur?" asked Joseph. "My dear young friend, such as I am, I know everything. I know how long you have loved Micheline, and how long she has loved you. I know that ten months ago the Captain surprised you together, and I know that the day before yesterday you threw her a bouquet over the wall tied to a piece of string, and that you drew back with the string a letter. You kissed the letter, which was in these terms:—'I love you, and I shall always love you: Micheline.' You hugged the paper to you as you would a stolen diamond, and then you went up to your room. After searching about for a hiding-place for your treasure, you decided to put it under your pillow, and after having read and re-read it, you went to sleep happy. Yesterday morning, when you awoke, you immediately sought for the sweet paper, to see if you had not been dreaming; you kissed and read it by turns during the day, and then you put it in your pocket. You fancy it is next your heart; but it is not anything of the sort. It is separated from your heart by your skin, your shirt, your waistcoat and the lining of your coat. Am I right?"—"Ah! my boy," cried M. Sauvage, laughing, "this time you have found your master." All the time the little man was talking Joseph was dreadfully pale; but when he had finished, he made an effort to conquer his timidity. "That you should know, Monsieur," said he, "that I throw over a bouquet and received a letter I can understand: you have, perhaps, spies about. But before asking you the reason of this extraordinary proceeding, I should certainly like to be informed of how you know of my hiding the letter, and of the other details with which you have favoured us."—"They are true, then?" asked the little man, laughing.—"Yes, Monsieur," answered Joseph, "you have said but the truth, and I do not blush for it."—"That is not necessary," observed the Captain: "Come, Fougeryas," added he, "now for the history of that old rascal Michel." Fougeryas blew his nose and commenced: "To say the truth, the whole establishment is worth very little, if we except the little Micheline. In himself and in his belongings Michel is thorough *canaille*."

The sad end of this interesting story leaves a strong impression on the reader's mind.

Letters of Eugénie de Guérin. Edited by G. S. Trebutien. (Simpkin, Marshall & Co.)

Memorials of Henrietta Robertson, Wife of the Rev. R. Robertson, compiled chiefly from Letters and Journals, &c. By Anne Mackenzie. (Bell & Daldy.)

THESE memorials of two religious women are set as widely apart by their faith, country, habits of life and temperament, as documents of the kind can be. But the wisest of men had

regard for the hyssop on the wall as well as the cedar of Lebanon. The eager, intrepid, Scottish missionary's wife, who seems to have had a pleasure in "roughing it," in bringing out of heathenism and adopting all manner of Kaffir children (such are to be definitively bought from their parents),—the timid, superstitious, papistical, French old maid, whose existence was circumscribed within the narrowest possible ring of home duties, affections and sufferings, may, at first sight, appear to have nothing in common beyond their sex. But it is not so. Wheresoever real devotedness is to be found, let it take the forms of enthusiastic action or of submissive quietism, in the spirit of self-sacrifice, the idea of duty remains to be one and the same; and those who recognize these as the leading principles of a religious life and conversation can feel no discrepancy in coupling, as we here do, the French spinster and the British wife. On the tomb of both the same motto might be written: "She did her best according to her conscience."

Of Mdlle. Eugénie Guérin we have spoken, and not over-kindly. Who does not tire of reading such petty details as made up the book by which she was first introduced to her English readers! But on going through her letters in this second book the impression of her gentleness, unselfishness, willingness to make the best of life and the least of sorrow, is so simply made as to place her in the roll of good (if not of great) women. She was a rigid Roman Catholic. When her beloved brother, Maurice de Guérin, an author of promise, into whose life she appears to have bound up her life, into whose soul she appears to have bound up her soul, was fading away prematurely, she could memorialize Prince Hohenlohe, and entreat him to pray for a miraculous restoration of the dying man! But the sweet and holy submission to a trial so crushing as her brother's death, the utter absence of anything like vain-glory in one who, it is obvious, was an object of not common admiration and solicitude, are not to be undervalued. No doubt there is a large amount of verbosity and trivial detail in her letters, written for her friends and not for the public of these days—to be read by electric light; but the same fault might be found with Cowper's. Yet what student of character (not to speak of literature) is there that would dispense with these?

Mrs. Robertson was as widely apart from Mdlle. Eugénie de Guérin as is "the Cape" from Rome. But she was akin to her, in the conviction that life is not to be toyed or trifled away, but to be put to its best uses by all who recognize its value. Whereas the French spinster confined herself to going to mass and hearing favourite preachers, to comforting the sick and sorrowful, to bearing her awful bereavement in the loss of her brother without moan or groan, the Scottish (?) widow lady,—such was Mrs. Wodrow (later Mrs. Robertson),—flushed out into religious adventure; for such is all missionary service. She appears to have been fit for the task. Though an unhealthy, fragile woman, she drew affection and confidence to her. Even in Kaffirland, where wives were purchased by the transfer of cows, and heathen parents could be induced to part with their children, Mrs. Robertson, having chosen her field, dealt with both difficulties in a loving and christian spirit. She obviously possessed the power of drawing hearts to her; of throwing a charm over the wilderness, of making the most of every inch of ground on which (so to say) she could plant her foot. She could see beauty even in the hideous native

features, wherever there were affections to work on, and to respond to kindness. Further, the *tuang* of sectarianism which, meet it where we will, whether it be under the Quaker's broad brim or the Jesuit's hat, is always unpleasant, and tending to excite suspicion, if not of the sincerity, of the humility of the sectarian—is excellently absent from all these records, furnished by herself. Her letters were written in the utmost confidence to the sister of good Bishop Mackenzie. They are not without graphic touches when features of scenery and nature are in hand, though, of course, their main subject is the result of missionary enterprise. It seems hard that this should be so small, considering the amount of time, talent, honest zeal and wealth embarked in it; but the fact, we fear, must be admitted. No doubt generous and earnest effort brings with it its own reward, and cannot fail to fertilize the world, be it ever so indirectly; but the waste of life and energy are sad to contemplate, and not to be contemplated without the question from time to time arising whether the same might not have been better employed. In whatever form the answer comes, both these books are of their kind good, and worthy especially of the consideration of all good women.

OUR LIBRARY TABLE.

The Last Days in England of the Rajah Rammohun Roy. Edited by Mary Carpenter. (Trübner & Co.)

THE title of this book is hardly a proper one for describing its contents. The volume should rather have been called *Materials for a life of Rammohun Roy*. On turning over the pages, we find, first, a short biographical sketch; then five chapters, the first of which is called 'English Impressions,'—the second, 'Arrival in England and Residence in London,'—the third, 'Visit to Bristol. The Rajah's Death and Interment,'—the fourth, 'Tributes to the Rajah's Memory,'—and the fifth, 'Funeral Sermons.' We can see no reason why a biographical sketch should be given separate from the chapters which follow. Such an arrangement makes the work seem crude and undigested. Rammohun Roy is admitted on all hands to have been one of the most remarkable and attractive characters of the age in which he lived. The biography of such a man ought to interest the general reader; but this volume is dull and wearisome indeed. There is an entire absence of anecdote; and the narrative consists of a bare enumeration of works written by the illustrious Hindú, interspersed with letters and extracts, and wound up with four funeral sermons, through which lugubrious peroration the most zealous and ardent reader will hardly be expected to make his way. Born in 1774, Rammohun went, at the age of fifteen, to Thibet, where he spent three years studying the faith there prevalent. His experiences there made so deep an impression upon him as never to be forgotten; yet in this book there is but the briefest possible allusion to the subject. In the same way, little or no light is shed on what may be called the domestic history of the great Hindú reformer. The volume, in short, may serve as a pioneer to a better work, but will hardly satisfy any inquirer.

German Constitutional History.—[*Deutsche Verfassungsgeschichte*, von Georg Waitz. Erster Band. Zweite Auflage.] (Williams & Norgate.)

THIS first volume of Prof. Waitz's able work deals with the constitution of Germany in the earliest times, as it is reported on by Caesar and Tacitus. The manners and character of the people, family life, village life, agricultural and popular customs, the estates of the realm, princes and kings, armies and laws, are all dealt with in turn; and in dealing with all Prof. Waitz displays not only the extensive knowledge which is natural to Germans, but a clearness of diction which is unusual in them. We wish we could say as much for the German publisher, who has fallen into the common fault of sending out a book unstitched, so that it comes

to pieces in our hands. But Prof. Waitz pays more attention to the thread of his discourse; and his book would have been worth binding even if that step had not been forced upon us by its present condition. With a second edition before us, we need not enter into further particulars.

The Use of Organs and other Instruments of Music in Christian Worship Indefensible, &c. By James Begg, D.D. (Edinburgh, M'Phun & Son.)

A more angry divine than Dr. Begg has not often thumped cushion, supposing that the restrictions to which his ascetic dogma binds him accommodate him with a cushion to thump. A more patent case of spiritual infallibility does not occur to us. He fancies that he is the wearer of Calvin's Geneva bands,—the continuer of the thunders by which the harsh but high-minded John Knox, in a ruder day, struck a terror into the hearts of all Papistical Scots, and marvellously comforted himself in so doing. Does it ever present itself to persons of Dr. Begg's calibre that humility is a Christian grace,—whereas it was the Lady of Babylon who said "I am, and there is none beside me,"—and that whenever they venture to expound, on their finite principles of interpretation, the oracles of the highest truth, they are only setting forth their own bleak and prejudiced wisdom? A wretched thing seems, and has always seemed to us, this organ question. Once granted the establishment of a house for worship as something more habitable than the

lonely wold
Or battlemented rock,

among which the persecuted believers prayed and praised, what follows save that each congregation should consult its own means, desires and conveniences? If it please a Jenny Geddes to sit on a hard bench in one kirk, a Lady Nairn will not find that apostolic truth is outraged because she listens to it, comfortably supported, in another. Dr. Begg, it may be presumed, would get beyond the wigwag as a place of assemblage, and not accept, instead of his manse, the old oak-tree, which figures so prettily in ballads, but makes so comfortable a shelter on a rainy day. He patronizes singing; conceiving, nevertheless, that any given Jenny Geddes or Lady Nairn can "tear away" at a hymn-tune without instruction and without support, and utterly ignoring the fact that, if music there is to be in the Tabernacle, it behoves every one concerned that such music shall be "decently presented, and in good order." Of course, if the organ be papistical, and, as such, an outrage on the practices of the early Christians, the pitch-pipe is just as much so; yet without some guide and guardian the scream and the snivel and the howl and the grunt and the groan of the zealous singers could hardly begin in unison, and must end in a discord unbecoming even a wigwag for Divine worship. The organ is merely an extension of the pitch-pipe—a means to bind the congregational singers together. If the same be misused—if it be abandoned for fopperies offensive to the ascetic—let the synod of each church decide on the organist's demeanour. But it is going back to the dark, grim, ruthless times of Puritanism with a vengeance, if the "kist fu' o' whistles" can be once more made the object of such a diatribe as this silly and unscriptural book contains.

Sporting Days. By John Colquhoun. (Blackwood & Sons.)

THIS book is a republication of articles contributed to an Edinburgh weekly journal. The last chapter alone is new, and it consists of but fifteen pages. This being the case, it is unnecessary to dwell much on the volume which has already, in another form, been read and commented on. It is, however, a lively and amusing book, written in a most graphic style, and by one whose zest for sport shines out in every line; by one, too, who adds the tastes of the naturalist to the ardour of a Nimrod. "No man," says the Highland proverb, "has a right to a hunter's badge who has not killed a red deer, an eagle, a salmon, and a seal." The author of these pages has killed all these, *secundum artem*, and many a rare bird besides. Had his lot fallen in wilder countries, how many a savage beast would have fallen to his bullet. Of all his chapters, we

like his "Sea-fowl Shooting" and "Autumn Angling" best. We commend them to the young sportsman for instruction, and to all alike for amusement.

July is as sure to bring us guide-books as May is to show hawthorn-blossom; and the success of Mr. Murray's capital itineraries was sure to breed a swarm of imitators, dear, middling, and cheap. Here is a second edition of *Vacation Rambles on the Continent*; told so as to be a *Complete Guide to the most Interesting Places in Switzerland, Belgium, and the Rhine* (Stock), by a heavy person, who signs himself "Olim Juvenis."—Here is a more costly, but a complete, guide to *Normandy, its History, Antiquities, and Topography* (Cassell's Topographical Guides), which, besides being a minute and intelligent guide-book, is a book of agreeable reading; such would well fill the spare corner of the knapsack of a Normandy traveller, to be turned to on a drenching day, or on a dull evening, or in a bad inn. But Mr. Murray's French Handbook is, nevertheless, not superseded.

We have on our library table *Posthumous Gleanings from a Country Rector's Study*; also *Essays contributed to the 'Saturday Review'*, by the late Rev. E. Budge, B.A. (Rivingtons).—*A Layman's Faith, Doctrines and Liturgy*, by a Layman (Trübner).—*Nature and the Bible in Agreement with the Protestant Faith*, by James Davis, C.E. (Houlston & Wright).—*A Third Edition of A Book of Church Hymns* (Bosworth).—*First Steps in Geography*, for the Use of Beginners, corrected to the present Year (Nisbet).—*A Fourth Edition of Memory and the Rational Means of Improving It*, by Dr. Edward Pick (Trübner).—*The Story of Timothy Topper, the City Lad, showing how he was tempted and fell and how he rose again*, by Cornelius Griffith (Pitman). We may also mention, *Metropolitan Board of Works: Returns of the Names of Streets in the Metropolis regulated by the Orders of the Board since 1856*, including Streets re-named and Houses numbered, Street Names abolished, New Streets named.—*The Glasgow University Calendar for the Year 1866-7* (Glasgow, Maclehoose).—*Vestments: what has been said and done about them in the Northern Province since the Reformation*, by James Raine, M.A. (Rivingtons).—*Instructions for the Management of Open Boats in Heavy Surfs and Broken Water*; with Practical Hints for the Consideration of Merchant-Seamen and others having charge of Ships' Boats; to which are appended Instructions for the Restoration of the Apparently Drowned, the Use of the Barometer, &c. (Royal National Life Boat Association).—*La Vita di N. S. Gesù Cristo*, pel Sacerdote Teologo, Felice Cuniberti, Parroco di San Giovanni, in Savigliano (Savigliano, Racca & Bressa).

ENGLAND'S HELICON.

Maidenhead, July 19, 1866.

I have this afternoon sent off by post my reprint of Part I. of the fifth of our Poetical Miscellanies, 'England's Helicon,' which made its original appearance in 1600, and its re-appearance in 1814. With one or two exceptions, it contains poems only written during the Shakspearean age of our literature. I am not aware of the existence of more than four copies of the first impression, and two of them are in one of our great public libraries: if I am not mistaken, the British Museum possesses neither the

edition of 1600 nor that of 1814. I have had fifty copies of my reprint struck off for distribution; but it seems that I am likely to be considerably out of pocket by this part of my enterprise, because a number of individuals, who were glad to obtain 'Tottel's Miscellany,' hung back when I offered to reproduce 'The Paradise of Dainty Devices,' and a still larger number hesitated when I brought forward my reprint of 'The Gorgeous Gallery of Gallant Inventions.' The candidates for 'The Phoenix Nest' were still fewer, and now for 'England's Helicon' I have only twenty-five instead of fifty subscribers. Still, I have made my calculations as if I had fifty eager purchasers: I have divided the cost of print, paper and transcript into fifty portions, and the consequence is that the expense of each copy of Part I. of 'England's Helicon' is only 10s. I am, therefore, at present a loser of nearly 10s. upon every copy of my reprint.

I do not apprehend that I shall ultimately be 12l. 10s. out of pocket, because, at all events, a few of those who have defaulted will see the folly of possessing only an incomplete series of works in *pari materia*, which contains specimens of the poetry of a period when the best of our national poets flourished. As to type and paper, I boldly assert that the reprints are admirable—quite "books of luxury," as the French call them; and as to accuracy of text, I spare no pains to make my reproductions, even as to errors of punctuation, exactly represent the originals. I leave to the well-informed reader the correction of all mistakes, and if, in consequence of a blunder, a passage be ambiguous, or even unintelligible, I do not take upon myself to endeavour to remove the difficulty. I reproduce.

Here I may, perhaps, be permitted to show what literary antiquaries are well aware of; I mean the manner in which different copies of the same edition of the same old book explain and illustrate each other. My remark applies to the very work under consideration—'England's Helicon'; and the passage has hitherto escaped notice: it occurs in one of the later poems of that collection, where in two copies that I have used "comfort" is absurdly and nonsensically misprinted *come for*, while in a third copy the true reading is substituted, the blunder having been discovered and the change made from *come for* to "comfort" while the sheet was proceeding through the press. I could point out several other instances of the same kind, which show the necessity of collating the texts of several copies (where they are to be had) even of the earliest impressions of works of established reputation.

I shall not be able to do so in reference to the Miscellany I next wish to undertake—'Davison's Poetical Rhapsody'—because I only know of a single copy of the oldest edition of 1602. It seems, however, very doubtful whether there are in England, Scotland and Ireland a sufficient number of lovers of our best and oldest poetry to carry me harmless through the undertaking. I only want just as much as will pay for transcript, print and paper; and I may mention that, should my experiment fail here, I have had a very handsome offer from the other side of the Atlantic (where my last bibliographical work has been expensively reprinted in four handsome volumes) to enable me to carry it on, not only without risk, but with sure advantage. My purpose is to secure the preservation of good and rare books, and while I can effect this purpose among my own countrymen, without a heavier positive loss than I can be expected to bear, I shall persevere. To have obtained only twenty-five names for a cheap, yet exact, reproduction of 'England's Helicon,' 4to. 1600, seems to me most extraordinary! J. PATNE COLLIER.

ARCHÆOLOGICAL CONGRESS.

THE London Congress of the Archæological Institute has been held,—on the whole with a very fair balance of success. If there has been less of social intercourse than is usual with these annual meetings of learned men and women, there has been far more than the average of good and useful work. On Friday the Tower visit was made, according to programme, when Mr. Clarke discoursed on

the military architecture of that royal stronghold. In the evening Mr. Beresford-Hope, as President of the Royal Institute of British Architects, received the members in Conduit Street.

Saturday was a busy day,—a large party going down to Windsor and Eton. Mr. Woodward, Her Majesty's Librarian, conducted parties over the royal library; and Mr. Parker lectured in the open air on the antiquities of Windsor Castle. At two o'clock, a select party enjoyed the hospitalities of the Provost of Eton and Mrs. Goodford; and at four, Prof. Willis led the whole body of visitors round the building and gardens, giving them, as he moved from point to point, one of those *ad fresco* expositions in which he is unrivalled.

On Monday there was an early sitting, under the presidency of Dean Stanley, when Mr. Foss read a paper on Westminster Hall, and Mr. Cyril Graham an account of recent explorations in Palestine, after which the Congress visited Lambeth Palace, St. Mary Overies, and some other City churches.

Tuesday was occupied, first, by the reading of a paper 'On Semitic Palæography and Epigraphy,' by Mr. E. Deutsch,—next, by a visit to Hampton Court,—after which a party met on the lawn, at Fulham, in the Bishop of London's seat, on the Thames.

The annual meeting of the members was held on Wednesday, in the Council Chamber at Guildhall, when it was decided that the invitation from the Mayor and Corporation of Hull should be accepted, and that the next meeting of the Institute should be held in that town. After the election of candidates and other business of a formal nature had been transacted, the general concluding meeting took place, the President, Lord Camden, K.G., in the chair, when the usual votes of thanks were passed, and the twenty-first Congress held by the Institute came to an end. Afterwards, by the permission of the Trustees of the British Museum, members of the Institute visited the Christy Collection of Antiquities, at 103, Victoria Street, Westminster.

The principal papers will be found below, under their proper heads.

DR. GUEST ON THE ORIGIN OF LONDON.

Sandford Park, Oxon, July 21, 1866.

I could wish the Lecture I delivered at the Royal Institution last Thursday were laid before the public, not only with the arguments correctly given, but also without the redundancies which almost necessarily accompany a spoken address. I have, therefore, revised a shorthand-writer's report, and should feel obliged by the insertion of such revised report in your Journal.

Before we can discuss with advantage the campaign of Aulus Plautius in Britain, it will be necessary to settle, or at least endeavour to settle, certain vexed questions which have much troubled our English antiquaries. The first of these relates to the place where Cæsar crossed the Thames. Cæsar tells us (B. G. v. 11) that "the river called Tamesis divided the country of Cassivelaunus from the maritime states about eighty miles from the sea"; and, in another passage (B. G. v. 18), that "he led his army unto the river Tamesis to the country of Cassivelaunus. The river was passable on foot only at one place, and that with difficulty. When he came there, he observed that there were large bodies of the enemy drawn up on the opposite bank. The bank, also, was defended by sharpened stakes fixed in front, and stakes of the like kind were fixed below under water, and concealed by the river. Having learnt thus much from the prisoners and deserters, Cæsar sent forward the cavalry and immediately ordered the legions to follow them; but the soldiers went at such a pace and with such an impetus, though they had only the head above water, that the enemy could not resist the impetus of the legions and the cavalry, but deserted the bank and took to flight."

According to Orosius, "nearly the whole ford under water" was covered with the stakes; and Bede, when he copies the statement, adds (H. E. i. 2), "The remains of the stakes are to be seen there to this very day (*usque hodie*); and it

appears, upon inspection (*inspexitibus*), that each of them was as thick as a man's thigh, and that they were covered (*circumfusa*) with lead, and fixed immovably in the depths of the river." Bede never saw the Thames; but it is not difficult to point out the man from whom he derived the information he has handed down to us. In the opening of his *Ecclesiastical History* he acknowledges his literary obligations to a London priest named Nethelm. Nethelm was a Londoner born, and died Archbishop of Canterbury, and there can be little doubt he was Bede's informant. It appears, therefore, that in Bede's time, that is, some seven or eight centuries after Caesar's invasion, there was some place on the Thames where the bottom of the river was covered with stakes, and which educated men, who must have been well acquainted with the river and its neighbourhood, considered to be the place where Caesar crossed it.

Camden was the first of our modern antiquaries to direct attention to this subject. He lighted on a place near Walton called "Coway Stakes," and as it was "about eighty miles from the sea," and as he found there stakes driven into the bed of the river, he fixed upon it unhesitatingly as the place where Caesar crossed the Thames. It is probable that many of the stakes had been removed even before Camden's time, owing to the requirements of the navigation; but a considerable number of them were, no doubt, remaining when Gale visited the place in 1734. He tells us (*Arch.* i. 183), "As to the wood of the stakes, it proves its own antiquity, being, by its long duration under water, so consolidated as to resemble ebony, and will admit of a polish, and not in the least rotted. It is evident from the exterior grain of the wood that the stakes were the entire bodies of young oak trees, there not being the least appearance of any tool to be seen upon the whole circumference, and if we allow in our calculation for the gradual increase of growth towards its end where fixed in the river, the stake, I think, will exactly answer the thickness of a man's thigh, as described by Bede; but whether they were soldered with lead at the end fixed in the bottom of the river is a particular I could not learn: but the last part of Bede's description is certainly just, that they are unmovable, and remain so to this day."

At present, when a pile is driven into the bed of a river, it is shod with iron, and also has its upper end strengthened with bands of iron, to prevent its splitting. The stakes could hardly have been shod with so soft a metal as lead; but as iron was costly (*ejus exigua est copia*, B. G. v. 12), and lead was produced even at that early period in great abundance, the latter metal may have been used to wrap round the stakes, to give them greater tenacity. The uppermost plates of lead must have been removed when the stakes were sharpened, and the rest may have been stripped off in later times by the fishermen.

Hitherto there had been a pretty general agreement among our antiquaries as to the locality of Caesar's ford. But, soon after Gale's visit, Daines Barrington went to Coway, and thought he had discovered a "decisive proof" that the opinions prevalent on this subject were erroneous. A fisherman, who "had been employed by some gentlemen to take up the stakes at that place," told him that the stakes were ranged across the river, and, consequently, not in a position to oppose any impediment to Caesar's passage. He refused therefore to consider them to be the stakes referred to by Caesar, and suggested that they might be the remains of some fishing weir. At the beginning of the present century, Braye, the editor of Manning's 'History of Surrey,' paid a visit to Coway, and was told that the stakes were ranged across the river in two rows, some nine feet apart. The fisherman, his informant, had weighed several of the stakes, each as thick as his thigh and shod with iron, and sold them for half-a-guinea a-piece to a foolish antiquary. Only one stake was then remaining (Manning's 'Surrey,' ii. 759). Braye seems to have been half inclined to adopt the fisherman's notion, that the stakes were the remains of a bridge.

All this conflict of opinion appears to have arisen from a false assumption. Our antiquaries

assume that the stakes were fixed in the bed of the river merely to prevent Caesar's passage. I believe them to have been fixed there for a very different purpose, years before Caesar came into the island. I think the stakes formed part of what may be called a fortified ford, and were distributed so as to stop all transit over the river, save along a narrow passage, which would bring the passenger directly under the command of the watch, stationed on the northern bank to guard the ford and to receive the toll. The shallow at Coway was probably of considerable extent, and through its whole length must have extended the line of stakes which Caesar observed on the northern bank. But there must also have been two other lines of stakes across the river to mark out and define the passage. The remaining portion of the shallow was, no doubt, covered with the short stakes that were "concealed by the river." These contrivances agree with the means of defence which we know were adopted in other instances. There are ancient strongholds in Ireland, the front of which still bristles over with jagged pieces of rock fixed in the ground, evidently for the purpose of impeding the advance of an assailant.

That such was really the disposition of the stakes may, I think, be gathered, not only from the reports of the fishermen, but also from Caesar's narrative. When he saw the Britons ranged along the northern bank with the stakes in front of them, he ordered the cavalry to pass the river, and the legions to follow them. How could either cavalry or infantry cross the river if the stakes were ranged as our antiquaries assume them to have been? The passage could have been effected only by a miracle.

The Emperor of the French has seen the difficulty, and endeavours to meet it. He supposes that Caesar sent the cavalry across the river at some place, either above or below the ford, to take the Britons in flank, and that the soldiers then removed the stakes, when the legions hurried across the river in the way described by Caesar. As the river was fordable "only at one place," the cavalry, on this hypothesis, must have swum the river. But to swim cavalry over such a river as the Thames is not a military operation of every day's occurrence. Can we suppose, if it really took place, that Caesar would have made no allusion to it? Besides, what were the Britons doing while the Roman soldiers were removing the stakes in front of them? It is clear they did not break till the legions reached them. Caesar says not a word about taking the Britons in flank, nor about removing the stakes. The whole is mere hypothesis—hypothesis not only unsupported by Caesar's narrative, but, as it appears to me, inconsistent with it. When he had sent the cavalry across the river, he ordered the legions "*subsequi*." I submit that this means immediately after, or, in other words, in company with the cavalry. The employment of the two arms together seems to have been one of Caesar's favourite tactics, and, in describing it, he sometimes uses the very same phrases as on the present occasion, e.g. when describing his pursuit of the Belgæ (B. G. ii. 11). There can be little doubt that Caesar's was an attack in front, and that the enemy's position was carried by what, in modern military language, is called "a rush." It was a most daring attempt, and not without its peril; but Caesar well knew the men he commanded, and he was successful.

The Emperor sent over engineer officers to examine the present state of the river near Coway. They reported that there was no ford at Coway, but that there were several fords to the eastward, —a piece of information which had been long familiarly known to English antiquaries. The Emperor reasons thus: the tide ends at Teddington—the name of which he tells us means Tide-end-town—and as Caesar would hardly select a spot for crossing the river where he might be interrupted by the tide, he must have passed it west of Teddington. Of the various fords between Teddington and Coway, the Emperor selects the one at Sunbury as being, in his judgment, the most convenient.

The fallacy which runs through this reasoning is a patent one. The Emperor reasons from the

present to the past without taking any note of the changes that have occurred during 2,000 years. In the time of Caesar the river ran from the high levels of Gloucestershire and Oxfordshire to the sea—uninterruptedly. Now, from Teddington westward it is a canal, crossed every two or three miles by weirs and locks; in short, a string of pounded waters rising step above step till they reach the high levels of which we have been speaking. The tide comes up to Teddington Lock, and there, of course, it ends; but as the lock did not exist in the time of Caesar, any inference drawn from the fact that the tide now ends there, is beside the question. How can we argue from the present artificial state of the river to its state in the time of Caesar? Its scour must be different, its deposits must be different—to say nothing of the dredging-machine, which has been at work year by year from a period antecedent even to the construction of the locks. The river now falls over a weir in a cascade some six feet high, hurries along for a mile or so with a strong current, then gradually slackens its pace till half-a-mile or three quarters of a mile before the next weir it becomes a pond, with hardly a ripple on its surface. It then tumbles over the weir, and the process is repeated. The consequence is, that the silt and gravel beneath each weir is torn up and carried down and deposited by the current in the still water, so that before each weir there is a tendency to form a shallow, over which in one or more places a man may, in certain states of the river, wade across it. These are the fords which the French engineer officers have brought under the notice of the Emperor. The shallow at Sunbury is a mere consequence of Sunbury weir. Remove the weir, and Caesar's ford at Sunbury would be swept away in a twelvemonth by the natural scour of the river.

I have argued that the fords noticed by the French officers have been produced entirely by the present artificial conditions of the river. But there is one shallow which is due to an entirely different agency, to causes, indeed, which must have been in operation even as early as the time of Caesar. A spring tide when backed by an east wind comes up to Teddington Lock in great force, and sometimes rises above the weir and sweeps up the river to the next lock. The consequence is an accumulation of silt and gravel in front of Teddington Lock, which is a very serious impediment to the navigation, and on which barges may sometimes be seen aground for days together before they can enter the lock. I think it probable that when the river was in its natural state these spring tides ran up the river eight or nine miles further,—in other words, to Coway; and that the deposit which they now leave at Teddington then contributed to form the shallow over which Caesar passed. This is, of course, mere conjecture; but I submit it as a reasonable one.

There is one means of arriving at a conclusion on this much-vexed question which has hitherto been neglected,—I mean the topography of the Thames valley. When we find a village or hamlet on the banks of a stream bearing a name which ends in the word *ford*, we may infer with certainty that, at the time the name was given, there was a ford in the neighbourhood of such village or hamlet. Such names are frequent on the upper Thames, e.g., Oxford, Shillingford, Wallingford, Moulsoford, &c., and even in the forest-district round Marlow we have Hurlyford; but from Hurlyford to the sea, a distance of nearly 100 miles, taking into account the windings of the river, there is but one place on the banks of the Thames which bears a name ending in the word *ford*. This single solitary place is Halliford, at the Coway stakes. Caesar says there was but one ford on the Thames—meaning, of course, the lower Thames, with which alone he was acquainted; and we give the name of "ford" to only one place on its banks. Our topography is in perfect agreement with his statement; and, to my mind, this coincidence is almost decisive of the question.

I must now briefly call attention to the districts which Roman geographers recognized in this part of Britain, or rather, I should say, which Ptolemy recognized, for he is our great authority on the subject. Cantium may be said, speaking roughly,

to be represented by our modern Kent, and the country of the Trinobantes, which had for its capital Colchester (*Camulodunum*), by our modern Essex. West of the Trinobantes were a people whom our antiquaries call the Catyvelauni. I have no doubt this is a blundered name. It is only used by Ptolemy, and by him only on one occasion. Dion calls the people the Katovalanoi, and in a Cumberland inscription they are called the Catuvalauni. Catuvalauni is merely the Latin form of the Greek name Katovalanoi; and I shall henceforth give this very important tribe the name of Catuvalauni. Their principal town was Verulam. South of the river were the Atrebatas, with Silchester for their capital, and further west were two other tribes—the Dobuni, whose principal town was Cirencester, and the Belgæ proper, two of whose towns were Old Sarum and Winchester. I call the last tribe the Belgæ proper, to prevent any false inference. The Atrebatas were certainly a Belgic race, and almost as certainly the Catuvalauni, and also the different tribes who ruled in Kent. The people of Winchester and Old Sarum may have been called the Belgæ specially, because they were the earliest settlement of that race.

To trace the boundaries of these different tribes is a question of great difficulty, but of still greater interest. On the northern borders of Middlesex is an earthwork, called by the peasantry of the neighbourhood the Grimeditch. It runs for about two miles to the North-Western Railway, and fragments of it may be found west of the line. Its ditch is to the south, and it must, therefore, have been a boundary of the Catuvalauni. It appears to have marked the woodland which once seems to have shut in the Colne valley on the east, and in the other direction I have little doubt that it was connected with the earthworks which surrounded the British town of Sulloniace (Brookley Hill). But the whole face of the country in that neighbourhood has been long since torn up for brick-earth, and in this neighbourhood the monument disappears. Whether it was continued east of Sulloniace I cannot say. Possibly forest may have filled the whole space between the Lea and Sulloniace; at least, this is the only explanation I can give of the curious angle which the Roman road makes at Tyburn. I would then draw the boundary line of the Catuvalauni from Brookley Hill along the Grimeditch to the woodland, down the woodland to the Brent, and down the Brent to the Thames.

As the western boundary of the Trinobantes was undoubtedly the marshy valley of the Lea, the question naturally arises, what became of the district between the Lea and the Brent. Here we have the larger part of the metropolitan county unaccounted for. I believe this district, whose market value at the present time is greater than that of any other district of similar extent in the world, was, in the early times of which we are now speaking, merely a march of the Catuvalauni, a common through which ran a wide trackway, but in which was neither town, village, nor inhabited house. No doubt the Catuvalauni fed their cattle in the march, and there may have been shealings there to shelter their herdsmen; but house for the usual purposes of habitation I believe there was none. We have Caesar's authority for saying (B. G. iv. 3) that the imperfectly-civilised races of that period prided themselves in having a belt of desolate country around their settlements, and I have little doubt that between Brookley Hill and the Thames all was wilderness, from the Lea to the Brent.

The subject of these boundary lines is so important, that I make no apology for calling the reader's attention to two others, which belonged to the Atrebatas. The Roman road connecting their capital, Silchester, with Old Sarum, no doubt was preceded by a more ancient British trackway. This trackway ran between two masses of forest, remains of which still exist; and in the opening between the forests, a little to the north-east of Andover, there are the remains of a boundary line, which I have no doubt shut in the whole space between the woodlands. The ditch is to the west; so the boundary dyke must have been raised by the Atrebatas, and here the wayfarer from Old Sarum must have halted and paid the toll. The

other boundary-line has great historical significance attached to it, which bears directly upon the question we have already discussed at so much length. From the Coway stakes the ground rises gradually for about three miles, and then dips almost precipitously into the valley of the Wey. On the top of the hill (St. George's Hill) is an ancient British stronghold,† which commands the whole valley, and as the valley certainly belonged to the Atrebatas, I infer that it was this people that constructed the fortress. Aubrey tells us that "a trench" went from this fortress to Walton, and gave that village its name. Now a boundary dyke does run from the ramparts towards Walton. I have traced it for more than one-third of the distance, and I have no doubt that it once reached the village, and, as Aubrey conjectured, gave it its name. The ditch is towards the river. For what purpose could this dyke have been raised? The only object for which I can conceive it was made, was to bar progress along the trackway which led from the Coway stakes eastward to the maritime states. If such were its object, we have another strong proof that the great means of access to the country of Cassivelaunus was at the spot where Camden has placed it.

In the country of the Catuvalauni have been found numerous coins bearing the name of a prince called Tasciovanus, together with the name of Verulam. It has been inferred that Tasciovanus was King of the Catuvalauni, and that he minted money at Verulam. Some of his coins have on them the inscription "Sægo." It is supposed that this is an abbreviation of Segontium, which we know from Henry of Huntingdon was a name sometimes given to Silchester; and it has been conjectured that Tasciovanus conquered the country of the Atrebatas, and minted money in their capital, Silchester. Coins have also been found in that district, inscribed "EPATICUS, son of Tasciovanus"; and it would thence appear that Tasciovanus handed down his conquest to his son Epaticus. In Essex vast numbers of coins are found inscribed with the name of "CUNOBELINUS, son of Tasciovanus." These coins were minted at Colchester (*Camulodunum*). In the same district we find other coins inscribed with the name of "DUBNOVELLAUNUS." It has been inferred that Dubnovellaunus was a successor to, and perhaps a descendant of, Mandubratius, the prince whom Caesar made King of the Trinobantes, and that he was expelled by Tasciovanus, or by his son, Cunobelinus. On the south of the Thames also are found coins bearing the names of Commius, Epillus, son of Commius, Verica, son of Commius, and Tin or Tinc (the name has hitherto been found only in a fragmentary state), son of Commius. It has been supposed that Commius was the Atrebat whom Caesar sent over to Britain, where he was said to possess great influence. We know that he afterwards became a deadly enemy of the Romans, and that he fled to Britain to escape their vengeance. It is a reasonable conjecture that this Gaulish chief succeeded in establishing a principality among his countrymen, the British Atrebatas, and that he handed down his British dominions to his sons, Epillus, Verica, and that other son with a fragmentary name, Tin... or Tinc...

To Dr. Birch, who first succeeded in deciphering the legend, "CUNOBELINUS, son of Tasciovanus," we are mainly indebted for these historical inferences. They are, to some extent, supported by the celebrated 'Monumentum Ancyranum.' This monument mentions, among other kings who fled to Augustus as suppliants, two British princes, one named DOMNO. BELLAVNVS, and another with a mutilated name, of which only the initial "T" can be made out satisfactorily. It has been supposed that Domno Bellaunus represents the Dubnovellaunus of the Essex coins, and T..., the Tin...

† Sur la Colline de Saint-Georges (St. George's Hill), près de Walton sur la Tamise, il n'a jamais existé de camp. — *Histoire de Jules César*, II. 191, n. When I read this note, I began to fear that "Caesar's Camp," on St. George's Hill, like so many other of our national monuments, had been swept away in that name for "improvements" which has distinguished the last twenty years. But on a visit to Otland I was glad to find "Caesar's Camp" every whit as perfect as on the day when I first made its acquaintance years ago.

or Tinc..., who appears on the coins as the son of Commius. There would be no difficulty in identifying Dubnovellaunus with Domnovellaunus; but the division of the name DOMNO. BELLAVNVS presents a serious difficulty. Perhaps the copies of the inscription may be faulty. It is very important that this portion of it should be copied correctly, for it bears directly upon our British history.

There seems to be little doubt that the Divitiacus, King of the Sarmiones, mentioned by Caesar (B. G. ii. 4), first led into Britain the Belgic tribes which we find settled in the basin of the Thames. He flourished about 100 B.C. The Cassivelaunus who opposed Caesar must have been descended, if not from the Gaulish monarch himself, at least from one of his officers, and Cassivelaunus may have been an ancestor, perhaps the father, of Tasciovanus. The following scheme will bring at once under the reader's eye the families which exercised lordship in the Thames valley during the century preceding the invasion of Aulus Plautius:—

This scheme differs from the one I exhibited at Cambridge, twelve years back, only in the addition of the name of Epaticus. The name of this British prince was first made out by Mr. John Evans four or five years ago.

The invasion of Britain by Divitiacus probably took place about 100 years B.C. Forty-five years afterwards we find the Catuvalauni rapidly working their way to a supremacy in South Britain. The chief result of Caesar's invasion was the check it put upon their progress. We are told it was the defection of the tribes which mainly led Cassivelaunus to submit, and we know he was compelled to acknowledge, as King of the Trinobantes, Mandubratius, whom he had driven into exile, and whose father, Imanuentius, he had slain. If it effected nothing else, Caesar's invasion at least relieved the weaker British tribes from the domination of the Catuvalauni.

It was during the depression of the dominant tribe that Commius seems to have established his kingdom south of the Thames. When the Atrebatas made their boundary dyke from St. George's Hill to the river, it is clear they must have been in a condition to hold their own against their encroaching neighbours. But before half a century had passed the tide of conquest was flowing in its old channel, and we find the Catuvalauni driving the successor of Mandubratius from Essex and the descendants of Commius from the southern bank of the Thames. Everything seemed to intimate that they were about to found a great monarchy in Britain, when the Roman eagles again made their appearance, and the petty fortunes of an obscure British tribe yielded before a mightier destiny.

E. GRELL.

(To be continued.)

PALESTINE.

Mr. Cyril C. Graham wished to bring more prominently before the public the aims of the Palestine Exploration Fund, which has been established for the accurate and systematic investigation of the archaeology, topography, geology, and natural history of the Holy Land for Biblical illustration. The fund had now existed for one year only, but during that period considerable success had been achieved. In pursuance of the plan adopted by the committee in 1865, Capt. Wilson, of the Royal Engineers, and Lieut. Anderson, his able assistant, were sent out to Palestine with a view of making such a general survey of the country as would enable the promoters of the Fund to fix on particular points for further investigation. The expedition had been constantly employed in the country from December, 1865, to May, 1866, with eminently satisfactory results. Though we had long known the sites of Jerusalem and the

other larger cities of the Holy Land, now for the first time had an attempt been made to explore in a true scientific spirit the regions which lay between the more considerable towns. They had fixed with accuracy the scene of Samson's life, the tomb of Joseph, the well where Christ had spoken to the woman of Samaria, and the beautiful summer palace of Solomon. Two debated questions had been definitely settled—the confluence of the Jaddok with the Jordan, and the course of the Wady Surar. A series of detailed maps had been carefully formed from most accurate observations for time and latitude, representing the whole backbone of the country from north to south, including the Lake of Gennesareth and all the watercourses descending to its western shores. The nature of the country, especially in the south, was very unfavourable for rapid reconnaissance, and it was unsafe to trust the eye in places which had not been actually visited. Many errors had crept into existing maps in this way, and the maps now made had been constructed to remedy the defect. Though great difficulty arose in the exploration of the country, owing to the small number of travellers who could speak the language, and also to the fact that nearly all visitors to the Holy Land used to traverse the same route, yet much might be done by a judicious and careful examination of those traditions which were preserved by the Arabs in all their original completeness. Materials had been collected for making fifty plans, with detailed drawings of churches, synagogues, mosques, temples, and tombs existing in various parts of the Holy Land, while the Hebrew and Samaritan inscriptions which had been discovered had been referred to Mr. Deutch, of the British Museum. The most interesting ruins of Palestine were the remains of the synagogues. They all lay north and south, had their gateways in the southern end, the interior being divided into five aisles by four rows of columns, and the two northern corners formed by double engaged pillars. The position of Chorazin had been fixed with tolerable accuracy, and great light had been thrown on the site of Capernaum by tracing the ancient system of irrigating the plain of Gennesareth, while the valley where David and Goliath fought had been nearly ascertained. Excavations had been made, and most interesting remnants of synagogues and churches brought to light, and had been continued by Her Majesty's Consul at Damascus. A series of 160 photographs had been taken, comprising views of sites, details of architecture, inscriptions, &c., the Samaritan Pentateuch, and a few natural objects.

The Dean of Westminster said that there were some persons whose names had not been mentioned in connexion with the exploration of Palestine, and whom it would be unjust to pass over on such an occasion. Miss Burdett Coutts—whose name had become a synonym for munificence—had subscribed 500*l.*, with the intention of ascertaining the best means of providing Jerusalem with water, which it very much needed. This could be done only by a complete survey, which was undertaken by Capt. Wilson, and was the precursor of the great series of expeditions to promote which the Exploration Fund had been established. As it had been said, the discoveries in connexion with the synagogues had been extremely interesting, and had dissipated the opinion so commonly held that these structures were built rudely, and without any attention to beauty of form. Now, it had been ascertained that they possessed great architectural excellence. The gradual approach of the recognition of the site of Capernaum must possess very pleasurable anxiety for the student of Bible history, for there the Saviour spent the greater part of His life on earth. No care had been formerly spent in these expeditions; but now every instrument of discovery which science could devise or suggest was made available for the objects which the promoters of the Fund were endeavouring to advance. He cordially recommended it to the support of the public, and especially to that of the Members of the Archaeological Society.

Mr. Layard, M.P., Col. Fraser, late Commissioner in Syria, and Prof. Porter, another oriental traveller, addressed the Meeting.

MR. PARKER ON WINDSOR CASTLE.

The Castle stands on an outlying promontory of chalk, commanding the winding shores of that part of the Thames, with a rich valley, which seems to have pointed it out as a natural position for a fortress in primitive times, when the natives wished to protect their country against invasion. The wide and deep entrenchments and the high artificial mounds indicate an early date. There were also roads at the bottom of the fosses, with a wide bank between them, on which buildings were erected, first of wood and afterwards of stone. A subterranean passage, or postern, leading from the bottom of the outer fosse, at a depth of thirty feet, to the bottom of the inner fosse, at a depth of fifteen feet, had been excavated for the occasion by the express permission of Her Majesty; and the visitors were led into the Castle by Mr. Parker through this passage, which is cut in a very rude manner through the solid chalk, and has a vault of the time of Henry the Second, carried on chalk walls, built over a small part of it as far as the Norman buildings extended only. The doorways are of the same period, one of which is quite perfect and opens into the inner fosse.

After ascending the ladder and proceeding into the court of the Upper Ward, the visitors were received by the Dean and Mr. Beresford-Hope as chairman of the meeting, and then Mr. Parker gave in a concise form the outline of the early buildings of the Castle.

If Windsor Castle had been made in the fifth century by King Arthur, as was believed by Edward the Third and the chronicler Froissart, the roads would have been on the level. They are therefore more likely of the time of Caractacus or Julius Cæsar.

Edward the Confessor is believed to have resided chiefly at Old Windsor, and to have retained the Castle for use in case of need. Some of the ancient earthworks of Old Windsor certainly belong to a period before the Norman Conquest. William himself is said to have built a castle at Windsor, but there is no evidence of it. The Domesday Survey rather proves that there was one previously existing, which had been inhabited by Earl Harold in the time of the Confessor.

Henry the First is said by Stow, writing in the fifteenth century, to have built New Windsor. This building would, probably, have been chiefly of wood, but some of the fragments of stone carving found in the Castle may be of his time.

Stephen built nothing here; but Windsor is mentioned in the treaty of Wallingford as a fortress of importance. In the time of Henry the Second the first mention of the Castle is made in the Pipe Rolls. Of this period the outer wall of the south front of the Upper Ward remains, with the lower part of the King's Gate, its hinges and portcullis groove. The upper part was destroyed, and the whole concealed in other buildings. In the reigns of Richard the First and John necessary repairs only were made.

With Henry the Third the history of the existing Castle may be said to begin. The whole of the Lower Ward was then first built of stone, and many portions of the existing walls are found to be of that period. The Clewer Tower—now known as the Curfew Tower—remains almost unaltered, and exhibits in good condition a prison of that period.

The King's Hall is now the Chapter Library; but the chambers of the King and Queen have been destroyed. Plans and drawings of them have, however, been preserved. Fragments of the chambers of Henry the Third and his Queen were shown on the spot where they were found by Mr. Bachelder, when the remains of the buildings were removed a few years since. The measurements of this building agreed with the orders of the King, as recorded in the public Rolls.

Of the primitive Chapel the north wall is still preserved; the galilee being now the east end (behind the altar) of St. George's Chapel. The doorways of the galilee are one of Henry the Third, the other of Edward the Third; the west end of the Chapel has been rebuilt several times. The arcade in the cloisters was protected by a wooden roof only. This chapel was completed by Edward the Third, and made into a lady-chapel when the

great St. George's Chapel was built. It was partly rebuilt by Henry the Seventh for the tomb of Lady Margaret, his mother, and afterwards was proposed for that of Henry the Eighth. It was much altered by James the Second, and partly restored by George the Fourth. At the present time it is being made the object of most devoted care, under the direction of Mr. Gilbert Scott. The roof has been vaulted in stone the pattern of that of Henry the Seventh, and is being inlaid with mosaic work of exceedingly chaste pictorial design; the windows have been filled with superb stained glass, and the whole is being decorated and finished in a style of magnificence as a sepulchral chapel over the Royal vaults, befitting the intense affection of the Queen for her late beloved husband, the Prince Consort.

Mural paintings of kings' heads have been found of the date of Henry the Third and Edward the Third, and are preserved in the cloister and galilee. During the reign of Edward the First the accounts show that the great works begun by Henry the Third were carried on and completed, but no new works appear to have been undertaken. In the reign of Edward the Second there were considerable sums expended on repairs of the walls, towers, and bridges, chiefly for timber and carpenters' work.

The reign of Edward the Third is one of the most important in respect to the history of Windsor, a large part of the existing Castle having been built at that period. The extent or survey of the Castle in the first year of this reign is a very minute and important document, lately brought to light. Another equally important document is the builder's account for the Round Tower, which was entirely built from the ground in the eighteenth year of this reign, and still remains, though much altered in appearance, from the additional storey superposed by Sir J. Wyattville under George the Fourth.

This building is sometimes called the Round Tower and sometimes the Round Table; and from other peculiarities in the same accounts it is evident that the tower was built to hold the table. The galleries on which this round table was placed are still remaining, and the general disposition of the apartment where the knights dined on St. George's Day is well seen from the summit of the Round Tower. The tables of those days were seldom more than a few planks in width, and the guests sat round on one side, the other being open for the service of the attendants. The centre of this great round table, then, was designed for the latter purpose, and was open to the air, a passage communicating on a level from this central space to the kitchen on the top of the Middle Gate, which has thus acquired the title of the "Kitchen Tower." The tower and table were erected in ten months, the greatest haste being made in order that the new order of knights might dine at it on St. George's Day following its erection.

Holinshed in his Chronicle makes much of this round table as a great stroke of policy for attracting the free knights from all parts of Europe to take service under the English Crown; and the King of France, Philip de Valois, was so jealous of it that he would not allow the French knights to accept the invitation, and ordered another round table to be made in imitation of that of the King of England. Edward the Third did not build a chapel at Windsor, but only completed the one which had been begun by Henry the Third, adding to it or rebuilding a cloister, a vestry, and other adjuncts. The cloister and buildings surrounding them are closely connected with the chapel, and were evidently considered by Edward the Third as part of the works necessary for the completion of the chapel, which had been begun and left unfinished by his predecessors. The Deanery, the Vestry and the Treasury were built in the 24th, 25th and 26th years of this reign.

After the thirteenth year, when William of Wykeham was appointed clerk of the works, an entirely new hall, with a new suite of apartments and offices, was built in the Upper Bailey, where the Royal apartments now are, and the fine series of vaults under these apartments, forming ceilings to the servants' hall and other rooms and offices, still remain in perfect preservation, as built by Wykeham, who remained in this appointment only six

years. The summary of his accounts during that time shows an expenditure of 5,658*l.*—equivalent to 120,000*l.* of our money. After the great works in the Upper Bailey which had been begun under his direction were drawn to a close under his successor, William de Mulsto, we have numerous entries relating to the new chambers for the King and Queen.

The small tower at the south-west angle of the royal apartments near the Library, now called erroneously King John's Tower, is a small octagonal building, and the two chambers in it have very good vaults, with the ribs meeting in a central boss, which is in both cases carved into the form of a rose. This enables this Rose Tower and the Rose Vaults to be identified in a very remarkable manner. This tower was very richly painted, and the quantity of paint and other materials charged on the Roll misled the late Mr. Hudson Turner, who had only seen a portion of these accounts, and made him believe that they belonged to the great Round Tower, and that it was painted on the outside. The dates do not agree with this, and there is no evidence of external painting.

The works which had been carried on during the great part of the long reign of Edward the Third were not completed at the time of his death, and were continued under Richard the Second; but with the exception of necessary repairs, the accounts for this reign relate chiefly to the offices and dependencies of the Castle, especially the mews for the falcons, which was evidently a large and important establishment, not within the walls.

The celebrated Geoffrey Chaucer, "the father of English poetry," was appointed in the fourteenth year of this reign clerk of the works, but very little was done in his time. Further than this Mr. Parker did not bring down the history in his discourse, for want of time, although in conducting over the Castle and grounds he incidentally pointed out all the various dates of architecture and the circumstances under which additions and alterations had been made up to the present time. The State apartments were also thrown open, and collections of valuable and interesting objects displayed. St. George's Chapel was, of course, the climax of attraction, as, however often seen, it will always be.

MR. EMANUEL DEUTSCH ON SEMITIC PALÆOGRAPHY AND EPIGRAPHY.

Closely connected as the sciences of Palæography and Epigraphy are with almost every province of historical, chronological, linguistic, and archaeological studies, their Semitic branch was, Mr. Deutsch said, perhaps, of the greatest importance of all. It is only our own generation that seems to have become alive to the fact that our knowledge both of the East and the beginnings of the West must be sought, or at least complemented, in the East. Considering that most of those earliest Hellenic ornaments—vases and gems, vessels and garments, animals and vegetable substances, weights and measures, and even musical instruments, mentioned in the oldest remnants of Greek literature, the Homeric writings—were imported into Europe, together with their Semitic names, by Semites, it must indeed be evident at once how large must be the share of Semitism in the origin of modern civilization. Semite arts and sciences, gods and inhabitants, were grafted upon Indo-Germanic strata, and the peculiarly happy union of the two principal elements of culture produced the vast glory of the antique. He then traced the figures of our own alphabet, the very name of which but denotes the first two Semitic letters, through the dark stages of Etruscan, Old-Italic, Old-Hellenic, &c., back to the rude scrawls of pre-historic Phœnician stone-cutters; and further, our own mode of writing from left to right, through the boustrophedon, or writing both ways, as the ox ploughs, to the primitive manner of writing from right to left, in Semitic languages, and as those Eastern nations that have adopted the Arabic character still do. There was, Mr. Deutsch said, a strange kind of fascination connected with that peculiar study; it was, to a certain extent, like following the forms of the characters drawn by the hand of some great man, or some one peculiarly dear to us, from the stage of

their full development and vigour to the first childish scribbles, through all the phases of intervening years with their many events. We should, probably, find them always different, yet always alike in their broad outline. The wide vista displayed to us by a retrospective glance at all the tribes and idioms that made use of this alphabet, which suddenly, as it were, found itself called upon, poor and vowelless as it was, to serve them all to its best abilities, is amazing. No less the extraordinary adaptability it proved in this emergency, and the infinite variety of shapes it subsequently had to assume, according to time and clime. These and a crowd of other speculations lifted the discipline which led to them almost out of the humble sphere of a philological handmaiden to that of a mistress of an immense domain; not only yielding much solid, substantial produce in the way of scientific results, but also giving full sway to those larger and deeper thoughts of the universal solidarity of humanity, which almost touch the realms of poetry.

Semitism, in its earliest and most widespread influence upon Europe, is chiefly represented by the Phœnicians. To their insignificant country it was given to do what neither Egypt nor Assyria, with all their perfection of industry and arts, were able to do, viz., to supply the link between the East and the West. Communicating, by Arabia and the Persian Gulf, with India and the coast of Africa towards the Equator, and on the north, along the Euxine, with the borders of Scythia, beyond the Straits of Gibraltar, with Britannia, if not with the Baltic, they introduced the elements of culture to the remotest ends of the earth; everywhere planting colonies, erecting temples, and laying the foundation for a more humane life than the aborigines in most of those far-off lands had ever dreamt of. An outline of Phœnician commerce, which comprised almost every conceivable object of home or foreign growth or manufacture; further, of Phœnician Art,—“in gold and silver, in brass and iron, in purple and in blue, in stone and in timber, in fine linen and precious stones,”—of which so infinitely little has survived; and of Phœnician religion,—a symbolical worship of natural phenomena, of abstract ideas, and of allegories and special Numina,—followed; and the complete identity of many deities thus created with classical deities was dwelt upon. A sketch of Phœnician literature, which must have been most extensive, and completely in accordance with their high state of cultivation and refinement, was then given. This literature consisted, first, of a vast number of theological, or rather theogonical works, as whose authors are reputed the gods themselves, and which were only accessible to the priests or to those initiated in the mysteries. From the allegorical explanation of these writings sprang a vast cosmogony, insignificant fragments of which only have come down to us, mutilated and misinterpreted by their Greek reporters. Next to this sacred literature stands their didactic poetry, somewhat related to the Orphic. We further know of their erotic works, of works on history, geography, navigation, agriculture,—in short, of almost every modern branch of science and belles lettres.

But all this wealth of literature has perished, and the scanty extracts that may have survived in foreign literatures cannot be looked upon as really authentic. For genuine and unadulterated “literature” we must look to the original monuments themselves; to inscriptions on coins and weights, on votive tablets, on sacrificial stones, on tombstones, and on sarcophagi. Broken utterances, faintest echoes though they be, out of them there might once be re-constructed more of the life of that wonderful nation, that had so many things in common with the English, than has hitherto been dreamt of.

Before proceeding to speak of these monuments themselves, and principally of those most recently excavated, Mr. Deutsch alluded to a notion which seems to be still abroad, that the Phœnician, being a lost language, which is only now being recovered by degrees, offered the same amount of uncertainty in some of its decipherings as hieroglyphics, cuneiforms, &c. were supposed still to

offer. The only difficulties that present themselves to the Phœnician decipherer consist either in the newness of terms met, which do not offer any Semitic analogies; or in their peculiar orthographical or grammatical forms; or, finally, in the similar shapes some of the characters (B, D and R principally) exhibit. But here, again, the difficulty is soon solved by the context; almost with the same ease with which the vowels are supplied in any Semitic language, or the sometimes missing diacritical points in any of the idioms written in Arabic characters.

Mr. Deutsch next enumerated the most important recent discoveries on the soil of Phœnicia (Sidon) and her numerous colonies, first giving an outline of the history of Phœnician investigation in Europe. Phœnician finds have been very frequent of late years. While up to the middle of the last century hardly anything was known of the existence of Phœnician inscriptions, there is scarcely a museum in Europe now which does not boast of one or two lapidary or numismatic monuments, that have to tell some tale or other in the aboriginal tongue of Canaan. Since Pococke's discovery of thirty-one inscriptions on the site of ancient Citium, Malta, Sardinia, Carthage, Algiers, Tripoli, Athens, Marseilles, and a host of other places, have given up a number of these eloquent contributions to the history of the Semites who once dwelt upon these spots. The most extensive find lately made consists of nearly a hundred inscriptions, excavated on the site of ancient Carthage,—all votive tablets, with but two exceptions. One of these exceptions is a precious sacrificial tariff, which complements in the happiest way a similar sacred document, found some years ago at Marseilles. The other is probably a tombstone, erected by a father to his son. Another highly interesting monument was excavated about three years ago in Sardinia, and consists of the base of an altar, inscribed with a trilingual (Latin-Greek-Phœnician) legend. A comparison of these three translations, or rather paraphrases, among themselves, leads to most interesting results in many branches of Greek, Roman, and Phœnician antiquities, and chiefly in comparative hierology; while the Phœnician inscription itself, the largest of the three, is perhaps one of the most curious ever discovered, yielding a number of new linguistic, mythological and orthographical items. After dwelling upon other bilingual, Assyro-Phœnician, Græco-Phœnician, &c., remnants, and upon the excavations by recent French explorers and their results, Mr. Deutsch turned to the Himyaritic inscriptions, lately embodied in the collections of the British Museum, consisting of votive bronze tablets found in South Arabia, and couched in a long-lost idiom, the nearest approach to which is traced in the present Amharic: allied to Ethiopic and Hebrew. The numerous Hebrew inscriptions which have of late been brought to light, the tombstones from Aden (with several Himyaritic Alephs), the many hundreds of tombstones copied in various parts of the Crimea, some of which bore very remote dates indeed, the inscription on the “Tomb of the Kings,” with its double (Syria and Hebrew) characters, the family vault of the “Bene Chezir,” indicated by a Hebrew inscription in archaic square characters on the “Tomb of St. James,” with ligatures such as were only found on the so-called “Chaldeo-Egyptian” Papyri, and the other minor epigraphs discovered by Renan, De Saulcy, De Vogüé, and others, in their various exploratory tours in the Holy Land, were briefly explained. Finally, Mr. Deutsch described the photographs with Hebrew and Samaritan inscriptions (see *Athen.* No. 2018), consisting chiefly of representations of the famous Samaritan Scroll, inscriptions on synagogues in Galilee, and the probably most ancient Samaritan epigraph on a stone immured in a wall of a mosque near Nablus,—the reading of which he has been able fully to restore,—which were brought home by the first expedition set on foot by the Exploration Fund. From the future activity of this association Mr. Deutsch expected valuable results also for those sciences which had formed the theme of his paper.

Mr. Deutsch concluded by briefly recapitulating the various points of interest connected with the pursuit of these studies, and the large gain derived

from them for the varied disciplines of human knowledge. Semitic Palæography and Epigraphy supplied one of the strongest links in that chain which binds the remotest ages to our own, and visibly represent, as it were, the undying continuity and solidarity of civilized humanity.

MR. FOSS ON WESTMINSTER HALL.

As this will probably be the last occasion on which the Archaeological Institute, as a body, will have an opportunity of visiting Westminster Hall while it continues the theatre in which our civil judicature is administered, a few short notices of the legal uses to which it has been hitherto applied may not be uninteresting to the members.

At the time of the Conquest and long after there were three special periods at which the kings held their Courts, or, as it was called, "wore their crowns," with extraordinary solemnity, not only for the consideration of national affairs, but also for the transaction of legal business. These were at Christmas, Easter and Whitsuntide, answering to our present Law Terms of Hilary, Easter and Trinity, Michaelmas Term having been added at a subsequent period. It is a curious illustration of the antiquity of the Terms, that at the Court held at Christmas, 1096, a judgment was pronounced against William, Earl of Eu, for a treasonable conspiracy, on the very day on which Hilary Term, according to the constitutions of Edward the Confessor, confirmed by William the Conqueror, then began. There is no positive evidence of any of these trials taking place in Westminster Hall during the reign of its founder, William the Second, nor in those of his two successors; but in the records of the reigns of Henry the Second, Richard the First and John, the expressions "My Court at Westminster" and "My Barons and Justices" are of frequent occurrence.

A great change took place under the last-mentioned monarch. King John when in England was in the habit of making frequent progresses through the kingdom, and of holding his Court in a multiplicity of places, to the great inconvenience and expense of the suitors, who were obliged to follow him in order that their causes might be tried. By a clause in Magna Charta, dated the 15th of June, 1215, this intolerable grievance was abated. That clause declared that "Common Pleas shall not follow the Court, but shall be held in some certain place"; and though no place is mentioned in the Charter for their future holding, there is no doubt that Westminster Hall was the "certain place" intended. It has been the arena where common pleas have ever since been usually decided, though there are some instances in the reign of Edward the Third of this Court being held at York. So strict, however, was the interpretation put upon the words "certain place" by one of our Judges that he resisted the removal of the Court from the original place in Westminster Hall to a more convenient part of the same building. This innovation was, no doubt, the precursor of other changes, by which the Aula Regia was ultimately abolished, and the present arrangement of the Courts of Chancery, King's Bench, and Exchequer, as well as the Common Pleas, established, with separate Judges appointed to preside over each Court.

The precise time at which this division of the Courts was effected has been the subject of controversy, into which it is not my present purpose to enter. It is enough to say that at the end of the following reign of Henry the Third, the office of Chief Justiciary no longer existed, and that a Chief Justice and puisne Judges were appointed for the Courts of King's Bench and Common Pleas. In the Court of Exchequer, though there were regular Barons, the office of Chief Baron was not instituted till the reign of Edward the Second.

In recounting the legal incidents of Westminster Hall, it must not be forgotten that, besides the four Courts of Chancery, King's Bench, Common Pleas and Exchequer, which were held within its precincts, the Hall itself was occasionally used as a High Court of Criminal Justice for the solemn trials before the Peers of great delinquents, impeached by the House of Commons. One of the earliest, of which there is a particular account, is that against Michael de la Pole, Earl of Suffolk,

Chief Justice Tresilian and others, in the reign of Richard the Second, which king himself was deposed by the Parliament in this same Hall. In subsequent times these trials often took place before commissioners appointed from among the peers, assisted by some of the judges and other commoners. Sir Thomas More and Bishop Fisher were tried in this manner; but it is doubtful whether the great Hall was used on these occasions, or only the Court of King's Bench. Queen Anne Boleyn's trial took place in the Hall on a "scaffold" there erected. In every subsequent reign, until that of George the Fourth, many state offenders have there met their fate, whose names it is useless here to enumerate.

There is a print of Westminster Hall as it was prepared for the trial of the Earl of Strafford in 1640, in which the Queen is portrayed as looking out of her cupboard upon a scene in which her royal consort was a few years after to appear as a condemned prisoner. Some impeachments were tried before the Lords in their own House; but during the long reign of George the Third the Hall was fitted up four times for the trials of Lord Byron for the murder of Mr. Chaworth in 1765, of the Duchess of Kingston for bigamy in 1776, of Warren Hastings, which lasted seven years, from February, 1778, to April, 1795; and of Lord Melville, in 1806, both the latter being for high crimes and misdemeanors. These were the last occasions when the great Hall was converted to such a solemn use, and as sixty years have since elapsed without giving a necessity for a similar display, we may fairly attribute the absence of the occasion to the improvement of society and the general amelioration of the age.

By a curious conjunction one and the same person in the early reigns held the two offices of Warden of the Palace of Westminster and Warden of the Fleet Prison. Two records, of the 12th and 24th Edward III., show that there were then stalls for merchandise in, and stables under, Westminster Hall, and that the holder of those offices was allowed to take for his profit 8d. per annum for each stall and stable, and 4d. for each stall only.

The Hall was also ornamented with "images," and various payments on account of them are recorded in the earlier part of the reign of Richard the Second; but in the latter part the ruinous effects of time, and perhaps of a fire that destroyed one of the adjoining houses in 1386, had become so visible, that about 200 years after its construction it was considered necessary to undertake substantial repairs. The opportunity was taken to introduce various alterations, and greatly to enlarge the edifice. The contract for part of the works is preserved in Rymer; and the restoration was completed in 1399, the last year of Richard's reign, whose deposition was the first public act for which it was used in the Parliament there assembled. It is not improbable that at this time the old marble chair and table were covered over, and the two Courts of Chancery and King's Bench erected above them. Shops and hawkers were still allowed in the new Hall, as in the old, but with higher prices. By a "rental" of 88 Henry VI., the rents of shops varied from 2s. to 3s. 4d. a term; and the "goers in the Halle," as they were called, were charged from 4d. to 12d. for the same period, the larger sum being paid by "Robynet Frenchwoman."

In the reign of Henry the Sixth, we are informed by Fortescue, in his work 'De Laudibus Legum Angliæ,' that the sittings of the Judges did not exceed three hours, from eight to eleven; and it appears, from the Year-Book of 2 Henry VII., fo. 4, that they were not then more severely taxed, rising "because it was past eleven o'clock."

About this time there were certain places in Westminster Hall, designated Hell, Purgatory, and Paradise, names that seem to indicate that they were appropriated, as two of them certainly were, to the confinement of delinquents, according to the varied degrees of punishment for their respective offences. We see from the illuminations of the Courts lately published in the 89th volume of the 'Archæologia,' which are attributed to the reign of Henry the Sixth, that at the bars of the three

Courts of King's Bench, Common Pleas, and Exchequer, certain prisoners are represented, and their place of incarceration might probably be in one or the other of these cells. Some have thought that these extraordinary names were suggested by the titles of the three parts of Dante's 'Divina Commedia'; and if it could be shown that Dante's work was familiar to the English world before those names were given to these three repositories, it might fairly be contended, from their succession and order, that Dante was their godfather. The occurrence, however, of at least one of the names in the reign of Edward the Third, before Dante was born, tends to destroy the ingenious conceit. In the list of rooms and buildings in the palace of Westminster, extracted from the original accounts of the expenses of erecting St. Stephen's Chapel in that reign, the following entry occurs: "Door of Hell, in the Exchequer." This is followed by another, to which the former probably applies: "House called Holle under the Exchequer." A third place named in the list may perhaps be the same which afterwards went by the name of Paradise or Heaven: "Le Godehouse, in the receipt of the Exchequer."

Whatever were the uses to which these places were originally applied, it plainly appears that the custody of them was made a source of emolument, and was granted to the "squires of the king's body," and other favourites. Thus, in the Act of Resumption, passed in the first year of Henry the Seventh, the grant of these places (when I find them for the first time so named) to Pierce Carvanell, "gentleman usher of our chamber," is specially excepted. The same document mentions two other places in Westminster Hall of which this usher had a grant,—the house under the Exchequer called Le Puktans, or Potans House, and the Tower and House called Le Grene Lake. These houses were, in the reign of Edward the Sixth, appropriated to the Records and Rolls of the Exchequer, and an annuity of 12l. 13s. 4d. was paid to Sir Andrew Dudley (to whom they had been previously granted) as a compensation for his loss. Hell, Purgatory and Paradise, and another building called "Heaven," were subsequently converted from cells of confinement to places of recreation and refreshment, still possessing their graceful names, and were frequented by lawyers and other attending the courts; and many are the allusions made to them in that character by dramatic and other authors so early as the reign of James the First. In that of George the Second great alterations were made in the approaches to Westminster Hall and the Houses of Parliament, among which Heaven and Purgatory (in the latter of which was preserved the Ducking Stool for the punishment of scold) were pulled down. Hell suffered the same fate in the next reign, about 1793.

In addition to the trades which were carried within its precincts, the Hall was made the receptacle of the military banners taken in battle. We have no record of these triumphant ornaments; its walls before the reign of Charles the First when those taken at the battle of Naseby, in 1645, were displayed there, and were still hanging of the King's head when he was condemned in the same Hall, as if to remind him of his disaster and defeat. These banners were supplemented by the taken at Dunbar and Preston in 1650, and afterwards at the battle of Worcester in 1651, "crowning mercy" of Cromwell; the result of which was the expatriation of Charles the Second for 30 years. On the restoration of that prince, all the memorials of disaster were, it is to be presumed, removed; and we have no notice of their successors till nearly a century afterwards, when victories of Marlborough supplied a goodly shew. By the effects of natural decay, or of political causes, or perhaps by the influence of better taste all of them have been since removed; but that which remained there in the reign of George the Second has the testimony of a picture by Gravelot, painted during his thirteen years' residence in this country representing the interior of the Hall as it appeared. Ranged along the left side, as you enter are shops of booksellers, mathematical instrument makers, haberdashers and sempstresses. At further end of the Hall are the two Courts of King's

Bench on the left, and of the Chancery on the right, divided by a flight of steps which led to the entrances of both. In the print these Courts are inclosed to a certain height, but not covered, so that the noise in the Hall, and the flirtations of the barristers and attorneys with the sempstresses, must have occasionally disturbed the arguments of the counsel and disarranged the gravity of the Judges. On the right side is the same array of shops, except where it is interrupted by the Court of Common Pleas, which projects into the Hall and is similarly inclosed and uncovered. On both sides of the Hall, above the shops and the Court of Common Pleas, was a continuous display of banners, which at the date of the picture were probably those taken at the battle of Blenheim and the other victories of Marlborough. The Court of Common Pleas was subsequently removed to the outside of the Hall, and the inclosure of the two other Courts was completed and carried up to the roof, and thus divided from the exterior noise and racket.

I am not certain at what date the shopkeepers were ousted from the Hall; but in my own recollection, which extends beyond the beginning of the present century, they did not exist. The Courts of Chancery and King's Bench have since disappeared, and are removed, with the other courts, to more convenient sites on the western exterior of the Hall, with entrances into it. Thus, the edifice is now little more than a magnificent vestibule to them and to the two Houses of Parliament, and a place of congregation for lawyers and their clients when attending the Courts during term time. It may possibly be again called into requisition for coronation banquets, and for the trial of State delinquents, though none of the former have been celebrated there for between forty and fifty years; while no less than sixty years have elapsed since any of the latter have taken place.

For the preparation of the coronation banquets the Courts, when within the Hall, were obliged to be removed, and the shops and stalls to be boarded over. A petition of the shopkeepers in the reign of George the First prays that, as their shops are boarded up for the ceremony of the coronation, the eads and the outsides of the windows of the west side of the Hall may be granted for their use and advantage.

Besides the coronation banquets, we have record of many others from the earliest time. On New Year's Day, 1236, King Henry the Third feasted 1,000 poor men, women, and children. In 1241 he same King sumptuously entertained there the Pope's Legate and his nobility, and again in 1243 he celebrated there the nuptials of his brother, Richard, Earl of Cornwall, with a banquet, at which it is said there were no less than 30,000 dishes, though where room was found for them it is difficult to imagine. When the repairs of the hall were completed in 1399, King Richard the second is recorded to have plentifully entertained 10,000 in it, and, it is cautiously noted, "in other parts of the palace"; for it is clear that the guests could not otherwise have had elbow-room. Fabian states in his Chronicle that Henry the Seventh, in the ninth year of his reign, kept a royal feast there; and the same King used the Hall for certain entertainments under the name of "disguisings," which were exhibited to the people at Christmas; and we have the following proof that they were avoided or assisted by the Government. An entry runs in the Issue Roll of a payment of 28l. 3s. 5½d.

large sum in those days) to Richard Doland, for providing certain spectacles or theatres, commonly called scaffolds, for these performances. Neither, however, the royal ceremonies and entertainments nor the legal solemnities to which Westminster Hall was devoted exempted it or its cuplers from the calamities to which inferior buildings and ordinary mortals are liable. Many are the occasions when pestilence or plague or eating sickness necessitated the adjournment of the Terms, and even the entire desertion of the Hall. Instances of adjournment on that account run in 1434, in Henry the Sixth's reign, and again in 1482, in that of Edward the Fourth. On a account the Courts were held at St. Albans in the twenty-sixth year of Henry the Eighth, and at Alden in the thirty-fifth year of the same king.

In the reign of Elizabeth there were frequent resurrections of similar visitations, the Courts being sometimes held at Hertford, and sometimes at St. Albans. Beaumont and Fletcher allude to the latter fact when, in their play of 'Wit without Money,' they make Lance speak of

Taverns withered,
As though the Term lay at St. Alban's.

During the great plague of 1665 the Term was held at Oxford and at Windsor.

The Hall also was visited by the calamity of fire. Archbishop Laud, in his Diary, records that, on Sunday, February 20, 1630-1, the Hall was found on fire, "by the burning of the little shops or stalls kept therein. It was soon extinguished, and the damage quickly repaired."

Inundations of the Thames also occasionally flooded the Hall. Hofmiedel mentions two, in the reign of Henry the Third, in 1237, when he says boats might have been rowed up and down; and in 1242, when no one could get into the Hall except they were set on horseback. He records, another, 300 years after, in the reign of Queen Mary, when the Hall was flooded "unto the stair-foot, going to the Chancery and King's Bench, so that when the Lord Mayor of London should come to present the sheriffs to the Barons of the Exchequer, all Westminster Hall was full of water." These visitations were repeated in the last century, in 1735 and 1791, and even so lately as 1841. The rising of the tide on those occasions gave abundant opportunity for the utterance of legal witticisms. In reference to one of these, Henry Fielding, in his dramatic satire of 'Pasquin,' makes Law say:—

We have our omens too. The other day
A mighty deluge swam into our Hall;
As if it meant to wash away the Law:
Lawyers were forc'd to ride on porters' shoulders;
One, O prodigious omen! tumbled down,
And he and all his briefs were soused together.

The jocular poet, no doubt, did not seriously think that his watery "omen" really portended the "washing away of the law" from Westminster Hall; and we can fancy how his indignant verse would flow were he to witness the great clearance to which his favourite fane is doomed, by neither pestilence, fire, nor inundation. In a few short years the lawyers will be expelled from their ancient haunts, the *religio loci* must be abjured, and the worshippers must resort to another temple. However magnificent the new structure may be in its exterior, or however convenient in its internal arrangements, it will strike the present ministrants of the law with far less admiration than the venerable sanctuary in which they paid their earliest adorations; and it will afford them a perpetual subject of invidious comparison in their intercourse with the novices of the profession. Such feelings are natural, for who can look back to a period of nearly 800 years, during which Westminster Hall has been devoted to its present objects, without acknowledging a degree of veneration towards the eminent Judges who have presided there, and an affectionate reminiscence of the eloquent advocates who have pleaded before them.

But we need not fear that the connexion between Westminster Hall and the law will ever be forgotten. Memory will call to mind the sages who have adorned it, and tradition will still remain. Let us hope that when the new Palace of Justice, so long demanded by the necessities of the times, shall be erected, a succession of able Judges will emulate their venerable predecessors, and, with the learning, intelligence and integrity of future aspirants at the bar, will secure for the new fane as much respect and reverence in times to come, as in times past was attained by Westminster Hall.

OUR WEEKLY GOSSIP.

THE Keepership of Prints, British Museum, is not yet, we understand, filled up. It is hoped that the practice of Mr. Panizzi, in cases that were under his control, of selecting for promotion men with peculiar knowledge, will be adopted in this instance, and that no considerations but those of fitness on the part of the candidate will affect the choice of a successor to Mr. Carpenter.

The study of meteorology is making satisfactory progress under a steady increase in the number of competent observers, and Saxony is now co-operating in the great scheme of observation. Shortly before the occupation of that country by the Prussians there was distributed, among a few of our scientific societies, a thin quarto volume, published under the direction of Dr. C. Bruhns, chief of the Observatory at Leipzig, containing 'Results of Meteorological Observations made at numerous Places in the Kingdom of Saxony in the Years 1848 to 1863, and at Twenty-two Royal Saxon Stations in 1864.' The results obtained are clearly tabulated, the monthly means are given, the mean of the year is brought out for the different elements—temperature, moisture, winds and pressure of the atmosphere, storms, and character of the heavens; and, in addition to these essential particulars, we find observations on plants and animals, phenomena of plant and animal life, and the effect produced thereon by temperature. Judging from this first "Jahrgang," these Saxon observations, if not put a stop to by the war, will be an important contribution towards extending our knowledge of the meteorology of Europe.

The Leech and Thackeray prizes have been awarded at the Charterhouse, to Messrs. G. B. Raskleigh and R. W. Macan respectively. The former prize was for the best drawing of the College Chapel; the latter for the best essay on Pope's line, 'The proper study of mankind is man.'

There were five candidates for the essay. Mr. E. Walford acted as examiner.

The Atlantic expedition goes on bravely,—the Great Eastern having already passed the spot on which she last year parted from her cable. We begin to have hopes of a great success.

Dr. Barlow writes, on the subject of the British Institution:—

"Newington Butts, Surrey, July 25, 1866.

"The historian of the British Institution informs me that the question is not of the renewal of the lease of the premises in Pall Mall, but of the purchase of the freehold, the trustees in whose hands the property is now vested being bound, under the will of the former owner, to sell the estate and divide the proceeds among the parties specified by the testator. Perhaps you would kindly notice this in your next number.

"Yours, &c., H. C. BARLOW."

The late Mr. Horner once showed, at a meeting of the Geological Society, a scrap of ancient pottery obtained from a boring deep down in the Nile deposits, near Memphis, which he called the oldest document in the world. Though his views were not shared by all who saw the relic, it was regarded with interest as evidence of a fact in the history of man and of his antiquity. But Prof. Unger, in a paper communicated to the Imperial Academy of Sciences at Vienna, shows that Egyptian bricks are more interesting, for they contain a variety of evidence preserved, as it seems, in an imperishable form. In his latest researches he has examined a brick from the pyramid of Daabour, which dates from between 3400 and 3300 B.C., and found imbedded among the Nile mud or slime, chopped straw, and sand of which it is composed, remains of vegetable and animal forms, and of the manufacturing arts, entirely unchanged. So perfectly, indeed, have they been preserved in the compact substance of the brick, that he experienced but little or no difficulty in identifying them. By this discovery Prof. Unger makes us acquainted with wild and cultivated plants which were growing in the pyramid-building days; with freshwater shells, fishes, remains of insects, and so forth, and a swarm of organic bodies, which, for the most part, are represented without alteration in Egypt at the present time. Besides two sorts of grain—wheat and barley—he found the tef (Eragrostis habysinica), the field-pea (Pisum arvense), the common flax (Linum usitatissimum),—the latter having, in all probability, been cultivated as an article of food, as well as for spinning. The weeds are of the familiar kinds: wild radish (Raphanus Raphanistrum), corn chrysanthemum (Chrysanthemum segetum), wart-wort (Euphorbia helioscopia), nettle-leaved goosefoot (Chenopodium), &c., bearded

hare's ear (*Bupleurum aristatum*), and the common vetch (*Vicia sativa*). The relics of manufacturing art consist of fragments of burnt tiles, of pottery, and a small piece of twine, spun of flax and sheep's wool, significant of the advance which civilization had made more than five thousand years ago. The presence of the chopped straw confirms the account of brickmaking as given in Exodus and by Herodotus; and the whole subject is so interesting that we are glad to learn that Prof. Unger intends to follow it up. He is of opinion that, by careful examination of a large number of bricks, some light may be thrown on the origin of Egyptian civilization. We heartily wish him success in his further endeavours, trusting they may not be too long interrupted by the war; and we share his hope that the dumb bricks of Nile mud will impart to us much that we have hitherto sought in vain in the old buildings—the mummy-cases and the written traditions.

We publish the following notes as we receive them, though our own information had led us to believe that Mr. Martin's plans differed essentially from those adopted on the London and South-Western Railway:—

"July 24, 1866.

"I trust you will allow me to observe, in your columns of Weekly Gossip, that an electrical system of communication between passengers and guard, very similar to that which was experimented upon during the Queen's recent journey to the North, has been permanently attached to the royal train that travels over the South-Western, Great Western, and South-Eastern lines for more than twelve months past, and that some of the express trains on the Great Northern, Midland, and South-Western railways are similarly furnished. More than one case has occurred where the passengers have been relieved from a perilous position by aid of this apparatus; but while the public are ever ready to expose neglect, I fear they pay little regard to the publication of those efforts that are made to meet their requirements and supply their demands.—I am, &c., W. H. PRECE."

A number of Liverpool gentlemen (with Mr. A. Cariss as their secretary) are trying to inaugurate a series of first-class public lectures in that port and town. They propose to commence with a course of ten lectures by eminent writers and thinkers, for which the arrangements are now being made. These are to be delivered, on the Monday evenings of October, November, and December, at the Liverpool Institute.

After a long investigation by the Committee of the House of Commons, the Government regulations, intended for the governance of music-halls and theatres, have been reported, and have excited great attention in those who are interested in the present system of theatrical licences. A meeting of managers was held at the New Adelphi on Tuesday week, when Mr. Buckstone was appointed treasurer, and a Committee formed to watch proceedings in Parliament. The Committee of the House of Commons had examined many managers and persons connected with the drama; but the evidence was so perplexed with the prejudices of the witnesses in favour of the past, that it was calculated to throw but little light on what was expedient for the present and the future. Meanwhile, the wants and desires of the public are patent enough in favour of new kinds and places of entertainment. The Committee have decided that the wishes of the people are to be met as far as they can judiciously be so. They propose to abolish the present system of double jurisdiction, under which theatres are licensed by the Lord Chamberlain and music-halls and other places by the magistrates; an alteration certainly commended by its convenience. The power is now wholly to be vested in the Lord Chamberlain, who is to have the liberty of complete inspection and survey, and also to license music-halls for theatrical entertainments. They next propose that different licences should be given to different places: one sort permitting smoking and drinking in the auditorium, the other not. This arrangement, we think, work well, and at the same time, supposed evil, which experience has shown to be itself. That music-

halls have a tendency to develop themselves into theatres, and have done so, is now an historical fact; and wherever this change has taken effect, the Art-element has conquered, and the audience concurred with the management, either in suppressing the mere animal indulgence altogether, or relegating it to a separate part of the establishment. It would therefore appear that legislation which might be injurious, is as needless as it is certainly inexpedient, inasmuch as it would appear to sanction habits that it is desirable should be suffered to die out. According to the proposed plan, the Chamberlain will have control alike over all these places of entertainment, and exercise his right of censorship over music-halls as well as theatres. Facilities also are to be given for the establishment of new theatres, which will henceforth be licensed without reference to any question of competition with other establishments. The decisions of the Lord Chamberlain are, however, to be subject to an appeal to the Home Secretary. Country theatres will henceforth be licensed by the Lord Chamberlain, instead of the magistrates, whose other powers, however, will continue in force; his censorship of plays also will extend to the country. These arrangements appear to be on the whole satisfactory, and a just concession to the intelligence and wishes of the public.

According to recent accounts, an abundant supply of petroleum continues to be furnished by the oil-wells at Coalbrookdale, Coalport, Caughley, and Tarback-Dingle. The oil-well sunk at Leewood Green, in Flintshire, also continues in operation, and is increasing in produce.

The contemplated Ligne d'Italie Railway, over the Simplon, has been abandoned. All the works, &c. have been advertised for sale.

A curious book has just been published at Paris, in which, under the title, 'Manifeste du Magnétisme du Globe et de l'Humanité,' the author, Capt. Bruck, endeavours to prove that the destiny of the human race is influenced by the earth's magnetism. In like manner as the zodiacal light, shooting stars and other natural phenomena are referable to an effect of magnetism; so are great events in the history of nations and of individuals. For example, the 9th of November is the day of least magnetic circulation and of least physical and moral energy, while the 22nd of June is the day of most circulation and most energy. The 18th Brumaire (November 9) was a memorable day in the life of the First Consul,—the 22nd of June saw the finish of the Empire. Then, again, it is to magnetism that certain great moral movements are due—Teutonism in Prussia, Anglicanism in England, Gallicanism in France, and Catholicism in the Papal States. Moral philosophers will perhaps be amused at this mode of treating their special subject—whether science will be benefited thereby is another question. Capt. Bruck states that he is prepared for clamour, and to be treated as a dreamer.

The contents of a large cemetery—probably that belonging formerly to the Abbey of SS. Peter and Paul—at Shrewsbury have been discovered by the workmen engaged in constructing the new railway-station in the town named.

Our Naples Correspondent says:—"Naples is doing her great men honour. In the midst of the agitation and anxiety of war, time is yet found to do tardy justice to one who suffered for the cause of liberty. Not seven years have passed since the name of General Colletta was almost prohibited in the kingdom of the Bourbons, and his history of their times placed in the Index Expurgatorius. Now a statue has been raised to him in the Villa Nazionale, not far from that of another eminent Neapolitan, Vico. It was inaugurated a week or two since, in the presence of a large assembly; and though the artistic merit displayed in it is very slight, still, as the memorial of a great man, and as marking the change which has come over this country, it possesses a high interest. In this same month, too, the bust of Alessandro Manzoni has been placed in the Library of the University, at the expense of private individuals.—A project has been announced, under the sanction of the Préfet, of inscribing the names of those who fall in the

present war on the walls of the schools in which they were respectively educated.—To the literary world it will be interesting to hear that the Minister of Public Instruction has sent a circular to the directors of the public libraries of the kingdom, calling for a list of codices existing in each. Most valuable MSS. are, I believe, concealed under the dust and cobwebs in various parts of this province of which the world has been hitherto deprived.—Amongst the places of amusement open to the public may be mentioned the Fondo, where the 'Elisir d'Amore' has been recently in great favour. The Café Chantant, a new institution, and the first of its kind, was opened last week, and is likely to prove a great attraction. Occupying, as it does, the gardens of the old Royal Palace in Chiatanone, its very site is sure to lure to its refreshing shade the seekers after pleasure; whilst the amusements provided and the taste with which it is fitted up will serve as a pleasant *passetemps*. As in similar places of entertainment in London and Paris, a *buffet* is provided; refreshments and ices of all kinds, whilst a band of fifty musicians performs during the evening. H. W."

BRITISH INSTITUTION, Pall Mall.—The GALLERY, with a Collection of PICTURES by ANCIENT MASTERS and deceased BRITISH ARTISTS, is OPEN DAILY, from Ten to Six.—Admission, 1s.; Catalogue, 6d. GEORGE NICOL, Secretary.

FRENCH GALLERY, 120, Pall Mall.—The THIRTEENTH ANNUAL EXHIBITION OF PICTURES, the Contributions of Artists of French and Flemish School, is NOW OPEN, admitting also to HOLMAN HUNT'S PICTURE, 'The Finding of the Saviour in the Temple.'—Admission, 1s.; Catalogue, 6d.

THE NATIONAL PORTRAIT EXHIBITION, Exhibition Road, South Kensington, is NOW OPEN to the Public. Admission, on Mondays, Wednesdays, Thursdays, Fridays, and Saturdays, 1s. each person; Tuesdays, 2s. 6d. Hours from Ten A.M. till Six P.M. Season Tickets, 1l. each. Catalogue, 1s. and 1s. 6d.

MR. MORBY'S COLLECTION OF MODERN HIGH-CLASS PICTURES is ON VIEW at the Royal Exchange Fine Arts Gallery, 24, Cornhill. This Collection contains examples of Holman Hunt—J. Philip, R.A.—T. SCIENCE

Mind in Nature; or, the Origin of Life and the Mode of Development of Animals. By Henry James Clark, A.B. (New York, Appleton & Co.)

THE present phase of scientific opinion in this country on many debatable questions in abstract biology—the tendency which exists in the minds of a large number of the cultivators of those branches of natural knowledge—is such as to invest with a certain amount of interest the appearance of any new combatant in the field of scientific discussion, especially of one who takes his part against the challengers, and offers to do defensive battle against the impugners of long-established faith and dogma. The hypothetical absurdities, ingenious as they were, of Lamarck, their more consistent development by the still anonymous author of 'Vestiges of Creation,' and more recently the now popular "selection" theory of Darwin and his followers, have produced in the minds of many—not only of such as are content to run in the rut formed by the wheels of their leader, and to speak in the *ipsissima verba magistri*, but of some who might be expected to hold a more independent course of thought—a tone of defiant self-confidence which affects to condemn the arguments, however solid, of those who are less ready than themselves to renounce opinions sanctioned by the convictions of the wise of all ages, and supported by what they at least believe to be sound reasoning. It is not less true in the present day than it was in the time of the great founder of inductive philosophy, that "certainly there be that delight in giddiness, and count it a bondage, to fix a beleefe; affecting free-will in thinking as well

as acting. And though the sects of philosophers of that kind be gone, yet there remain certain discursing wits, which are of the same veins, though there be not so much bloud in them as was in those of the ancients." Granting even that the conclusions were fairly deducible from the facts, it is no light matter to shake the convictions of thousands, many of them of at least equal power of logical deduction as the impugnors themselves; and with every right-minded man such a result will not be adopted without a serious sense of the responsibility which it involves. It is impossible not to feel how utterly out of place are the triumphant chuckle, the rubbing of hands, the self-satisfied smile with which every fact or statement is received, which can by any possible contortion be forced into even a hypothetical contradiction of doctrines which constitute the ground of the hopes and comforts of a large proportion of the civilized world. The question here is not the truth or error of the doctrines or opinions opposed, but the feelings with which such momentous questions ought to be approached.

Whether the work before us can be considered as a valid refutation of the modern doctrines to which we have alluded, is more than doubtful. The author, a professor in one of the most distinguished Transatlantic universities, thus states his object: "It is my design to proceed in an argument to show that there is a power at work in the Universe which possesses foreknowledge; the design of a fore-casting, fore-ordaining mind,—a thinking, intelligent, animate being; such a combination of power that no form of physical law could possibly be conceived to represent." And this he undertakes in contravention of the doctrine that all material existences "originated through physical forces, which operate according to what are called physical laws." In considering this subject, and combating the theory that "the inorganic and organic affinities approximate each other, and may eventually turn out to be, among themselves, mere degrees of difference," he contends, with truth, that it is "in direct opposition to natural chemical affinity that organized beings exist,"—that, in fact, "between the natural chemical affinity on the one hand, and the vital affinity on the other, there is a constant struggle, the one to counteract the operations of the other,"—a view which was first fully developed by the late Prof. Barclay. He proceeds to state, that "all living beings are composed of four chemical elements, and that these are held together by the principle of life." He then considers this theory in connexion with, and as strongly supported by, the phenomena of "spontaneous generation," in which he professes himself a decided believer,—founding his belief on the results of the experiments of Prof. Wyman, of Harvard University, of which he gives an interesting and full account. They appear to have been as crucial as any of the numberless ones which have ever been made, and to have been so conducted as to eliminate, as far as possible, every source of error. Unless, therefore, there has been some unobserved inadvertence, they reduce us to the dilemma either of admitting the theory, or of believing that the spores or ova of vegetable or animal organisms can retain life when exposed for an hour or more to a temperature of 95° above the boiling-point of water. Understanding, therefore, that organization consists of the elements C. H. O. N. plus the *living principle*, and as C. H. O. N. are contained in the fluids employed in the experiments, the author appears to conclude, if we understand him correctly, that the element "life" is added by a distinct act of creation; and that, as the least organized of all organisms are thus brought

into being, they may by development originate such as are more highly organized. But do they become thus developed? This is about as logical as the author's reason for believing in the truth of spontaneous generation, because other facts now proved to be true, such as propagation by budding, or by spontaneous division, and the reproduction of lost limbs in reptiles and crustacea, &c., would formerly have been considered impossible (page 106). As an example of the mode in which the author conducts an argument, we select the following passage, which has reference to the position above stated: "Although it may be admitted that all animals, except such as arise by budding, reproduce themselves by eggs, yet it does not follow that the first created animal, like its successors, was an egg; for to assert that would be to assume that eggs are not, or have not always been, uniformly developed in a parent, since the first egg could not then have had a parent; but if it were true, then it would appear that some eggs have been altogether dependent upon physical causes for their origin, at least for their surroundings or matrix; and if so *once*, why not *again*?—why should there be a change in the process of the original creation?" But we need not proceed. We think that the believers in the doctrine of final causes and of design in the adaptation of structure to function, as the result of an unerring and divine intelligence, will be ready to exclaim, "Non tali auxilio." There is more in the following brief sentence of one of the most profound geologists of this country than in all the verbiage of the work before us: "No one who has advanced so far in philosophy as to have thought of one thing in relation to another, will ever be satisfied with laws which had no author, works which had no maker, co-ordinations which had no designer."

It is but justice, however, to Prof. Clark to say that the bulk of his book, considered as a treatise on animal development, is written in an interesting and satisfactory manner, and the details, especially of the structure of the lower forms of life, and of the development of the ova in the higher, are full, and in many parts original. The woodcuts, wholly consisting of white outlines on a black ground, are often confused and perplexing. Most of the subjects would be more clearly displayed by the ordinary and more natural method of black on white, and with some shading.

FINE ARTS

FINE-ART GOSSIP.

It is especially gratifying to notice that the Belgian authorities show themselves anxious to secure estimable pictures by some of the best-known English artists, as contributions to the forthcoming gathering at Brussels. The change in this respect is remarkable, on the Continent, since the days when this country was questioned as the possessor of a school of painting. We trust that the invitations which have been issued to many English artists will be worthily responded to, if it were only on account of the generous reception and magnificent hospitality of our neighbours to British painters and others a few years since. Among the numerous contributions to the gathering we can name Mr. E. M. Ward's 'Ante-chamber of Whitehall during the last Moments of Charles the Second,' upon which picture the artist has expended great care in revising and intensifying the design and effect, to a very fortunate result.

The National Gallery Enlargement Bill was read a second time in the House of Lords on Tuesday last week. Connected with this subject much has been urged in favour of retaining that architectural curiosity in *rococo* Burlington House, the

advocates for which seem to forget that, were it true that the building in question is one of the finest pieces of design for a palatial residence, it was not purchased with a view to its architectural merits, but to afford, by its removal, a site for much-needed public buildings. Lord Derby's remarks upon the unreasonableness of further delay in settling the National Gallery, Royal Academy, and University of London questions have been applauded by all who think of the matter.

It is announced that the National Portrait Exhibition will close on Saturday, the 18th prox., and that after the 6th of the same month the price of admission will be on every day 3d. Many persons join us in hoping that the gathering will be allowed to continue open until the end of August. At any rate, those who wish to see this unparalleled collection of portraits have no time to lose in doing so.

We are advised that our information that Miss Geddes, who married Mr. Carpenter, of the Print Room, was a daughter of the late A.R.A., was incorrect; no relationship existed between the two artists.

A new picture by Mr. Holman Hunt must interest all who will go to Messrs. Colnaghi's for the purpose of seeing it. There may be examined his latest work, one having a subject removed from those of his former pictures, but equalling them in brilliancy of execution, fidelity, and power in characterization. We do not regret that an able artist should give a minor portion of his time to themes less intense in feeling, and of humbler aim, than may be usual with him; accordingly, we commend this effort with such a subject as was afforded by pigeons gathered on a wet day about a dove-cote, and passing the time as well as they can. The painter's approaching departure for the East, and the promise it conveys of graver work, gives zest and interest to the present picture, which is styled 'The Festival of St. Swithin,'—pigeons moping about their elevated house, while the rain comes down, and the flying scud mocks their hopes of sunshine ere sunset. The birds cluster on the ledges of the cote; some have retreated to the interior; others, in various moods of restlessness, fidget without; one, with a dark-green and gleaming breast,—a mixture of bronze and gold,—is ensconced, and, with blinking eyes of scarlet fire, looks out of the dark. A dappled bird, of lovely cinnamon hue that is dashed with white and flecked with glancing metallic green, alights on the edge of the little gallery before the chamber of its mate, flutters, and with rosy claws clutches its edge. From the lower tier of pigeon-holes a tenant looks forth, and sulkily pulls at a straw. Under the leeward eave of the high-pitched roof of the tenement, a darkly-feathered bird huddles in a sort of desperate humour with the persistent rain that, gathering near his head, falls in heavy drops to gather in a stream below, and pour away in an exasperating manner: he waits the long-coming relief. On the other side, where the daylight falls, is perched a pair huddling under the eaves; the one, as his feathers are ruffled, looks like Humpty Dumpty, and glows in dun and green fires of feathers. The background is a landscape, a garden, thickly massed trees, a church-tower looking over them, while, nearer, modern houses of the "villa" sort appear. The truth with which Mr. Hunt has rendered the effect of daylight,—the breadth of brilliancy rather than of massed shadow, so often the recourse of painters,—the splendour as well as the softness of the chiaroscuro in this picture, deserve most attentive examination and the highest applause. Mr. Hunt seems bent upon refuting the common practical dogma that breadth is only obtainable in masses of shadow: he finds it in expanse of light.

The House of Commons, by what may be called a very peremptory majority of seventy-seven in a meeting of one hundred and thirteen, has again decided that the National Gallery should remain in Trafalgar Square, and not be removed even to so short a distance as the gardens of Burlington House, where Mr. Beresford-Hope desires to place it. Mr. Hope stated that a suitable building for the London University would be out of place at Bur-

lington House, although it might well be situated on the site of the workhouse now behind the National Gallery. How this can be we know not. As no one pretends that the Trafalgar Square site is not preferable to any other, and as the House of Commons has already sent a Bill to the Lords which provides for the enlargement of that site, the debate of Monday last was, to say the least of it, superfluous. The avowed preference of the Royal Academy, and the returns of visitors to the National Gallery, set at rest all discussion about the relative importance and convenience of Trafalgar Square and a site to the west of it.

MUSIC AND THE DRAMA

MR. MOSCHELES'S GRAND EVENING CONCERT ON MONDAY NEXT, July 30, in St. James's Hall, for the Benefit and Relief of the Sick, Wounded, and Sufferers of all Nations engaged in the present War, in conjunction with the Ladies' Association, established for that purpose. Vocalists: Madame Lind-Goldschmidt, Madame Parepa, Mdle. Artôt, and Dr. Gunz. Instrumentalists: Mr. Charles Halle, Mr. Goldschmidt, and Mr. Moscheles. Conductor, Mr. Benedict. To commence at Eight o'clock.—Sofa and Balcony Stalls, 10s. 6d.; Unreserved Seats in Area, Balcony, and Gallery, 5s. Tickets to be had of Chappell & Co., 40, New Bond Street; Austin, 23, Piccadilly; and of Mr. Moscheles, now at 5, Clarges Street, Piccadilly.

MR. ALFRED MELLON has the honour to announce that his ANNUAL SERIES OF CONCERTS will COMMENCE, at the Royal Italian Opera House, Covent Garden, on MONDAY, August 6th.

ST. JAMES'S.—The season is about to close, and Miss Herbert appears desirous of continuing to its conclusion the triumph which she has lately gained in legitimate comedy. The heroine of 'The Jealous Wife' is her last achievement; and in her performance of *Mrs. Oakley* she has shown a delicacy of perception, as well as a force of character, which does credit to her judgment. Without abatement of the vehemence that pertains to the suspicious woman, she has shown that the suspicion itself is grounded on sentiment, and that she loves the husband over whom she tyrannizes. This is a refinement which is scarcely required by comedy; but that it adds a charm to the impersonation cannot be denied. Mr. Creswick, as the timid husband, who is embarrassed in every action by the vigilant affection of his too-anxious partner, much assisted, by his judicious acting, the efforts of Miss Herbert. Mr. Walter Lacy was *Lord Trinket*, and acted with vivacity and point.

STRAND.—The burlesque of 'Kenilworth' was revived on Saturday, but with such alterations as make it almost a new drama. On its first production, the reader will recollect that its authorship was dual, Mr. Frederick Laurence claiming a share in it with Mr. Andrew Halliday; now, the latter gentleman assumes the exclusive responsibility. We think, on the whole, that it is improved; at any rate, it acts very closely, and there is scarcely a parody, a song, or a dance, that does not command an enthusiastic encore. The allusions in the text are worked up to the latest date, so that the dialogue bristles with telling points. The drama is admirably cast. Miss Raynham, as the *Earl of Leicester*, in her rich accoutrements, looks grandly, and *Amy Robsart*, in the person of Miss Ada Swanborough, is pert and charming, and sings and acts with fervour and determination. Miss Elise Holt is sufficiently affected as *Sir Walter Raleigh*. The most prominent figure, however, is that of *Queen Elizabeth*, by Mr. T. Thorne. The *Varney* of Mr. D. James was singularly effective. The scenery, painted by Mr. C. Fenton, is very beautiful, and all the accessories, including the costumes, are of the most costly description.

MUSICAL AND DRAMATIC GOSSIP.

Madame Vilda has appeared in 'Il Trovatore,' and the *Times* assures us to her utmost advantage. The same journal gives similar praise to Mdle. Tietjens in 'Ernani.' Of Mdle. Patti's benefit we shall speak on Saturday next, when taking leave of the Royal Italian Opera.

The concert to be given by Prof. Moscheles in aid of the sufferers by the war has been postponed till Monday next. Besides Madame and M. Goldschmidt, Madame Parepa, Mdle. Artôt, Dr. Gunz, Mr. Halle and Mr. Benedict will take part in the concert.

Our contemporaries praise a new *Cantata*, 'The Knights of the Cross,' by Mr. Frederic Clay, which was performed at the concert of the *Civil Service Musical Society* yesterday week.

Last Saturday's *Crystal Palace Concert* was mainly made up of music from 'Il Serraglio.' There is to be another Ballad Concert to-day.

Among the last concerts of the season, of which a detailed report has been impossible, we mention a *Matinée*, given by Mdle. Teresa Carreno, a pianist from Venezuela; also the second meeting of the *Schubert Society*, with which every one may desire a closer acquaintance, judging from the programme before us. This contained a tempting amount of novelties, among others, one which we can accredit as excellent, the *Suite* of pieces by Herr Gade, for pianoforte, violin and violoncello, Op. 29, entitled 'Noveletten.' The Society is directed by a relative of the greatest German *Lied*-composer, and this gives it some claim on the attention of all who value what is original.

Mr. Mellon's Promenade Concerts will begin on Monday week.

The *Choir*, we are glad to see, has taken up, though not in the best taste, the "royalty" question, otherwise the fact of singers being paid for singing feeble amateur music. Nothing can be more unwholesome, from whatever side of the question the matter is viewed.

Il Trovatore speaks in the high-flown Italian strain, which we have learnt to trust but sparingly, of some new music, by M. Gomez, a young Brazilian, who has been studying in the music-school of Milan. The name recalls that of Joseph Melchior Gomis, the Spaniard (born in 1793), who, in his day, was thought to be a genius of no ordinary promise, and whose operas, 'Le Diable à Seville,' 'Le Revenant' and 'Le Portefaix,' after years of that deferred hope which it makes the heart ache to read or think of, were produced at Paris, without good result. We have a recollection of some music from his hand which had a flavour of its own. There is decidedly such a thing as "a talent for success," and this does not seem to be given to composers of the Peninsula. Having by chance been lately led to run over the list of these, we have been reminded of the Portuguese artist Bontempo, who, for a while, lived in London, and some of whose music is, of its kind, as good as anything of its time (Beethoven apart) we know. A set of variations by him on Paisiello's "Nel cor più," though some half a century old, is bright, elegant, contrasted and vigorous, compared with similar pieces by such men as Gelinek, Pixis, Czerny. There is a rich mine for any one who can quarry in the works of forgotten musicians; and those who seem to be the most sweepingly forgotten are the musicians of the Peninsula. An intelligent monograph on the subject would be welcome.

L'Eco d'Italia in New York (quoted in *Il Trovatore*) announces that Signor Barilli, an Italian maestro resident there, is about to produce his opera, 'Una Notte in Siviglia,' in St. Petersburg. Signor Bottesini, the one *contra-basso* since the days of Dragonetti, who has been somewhat unaccountably lost sight of, and who, unlike Dragonetti, has claims above the average as a composer, is going to America.

A rain of patriotic hymns is falling over Italy at the time present. Should some of them be better than the *tea-garden* Garibaldi tune, or that flagrant concoction which Signor Verdi was desirous of forcing on the Committee of the last Exhibition, every one might well indeed be glad. But as regards modern Italian music, the case of those who stand by and listen is one of "hoping against hope."

M. Cohen's 'José Maria' is said to have pleased at the Opéra Comique.

Italian journals say that with the opera to be written for Palermo, by Signor Pacini—only his hundredth work—that veteran announces that he will close his musical career. Pity that the man who could strike out such a melody as "I tuoi frequenti palpiti," a *bravura* for all time, should be so willing to go on to the very last, and to "after the last," to borrow *Millamant's* saying.

A stately musical performance took place the other day at Nancy, on the occasion of the visit of the Empress of the French and the young Prince. Among other pieces executed was a *Cantata*, written for the occasion, by M. Gérolt, a musician of the town.—The progress of the King and Queen of Belgium through their country has also been marked by musical celebrations.

The theatre at St. Louis, America, has been destroyed by fire.

MISCELLANEA

Guide-Books.—In reply to your Correspondent, Mr. Arthur Brewin, who complains that his copy of 'Where shall we go?' 4th edition, 1866, is an old edition with a new title, and "substantially, if not identically, the same as a copy he has bearing a much earlier date," allow us to say, that from the first this work has undergone a constant correction and alteration. Writing from memory, we recollect that the earlier editions did not contain Aldborough (Suffolk), Gilland or Silloth, which were added by competent writers conversant with these places. Other minor corrections have been made from time to time, and in the 4th edition, 1866, we have added those now favourite watering-places in Yorkshire—Redcar (p. 148) and Saltburn-by-the-Sea (p. 145); also Penmaenmawr, in Wales (p. 208), and Oban, in Scotland (p. 245). Besides these, a new account of Cheltenham (pp. 40-46). Guide-books like this cannot be altogether free from inaccuracies; but if Mr. Brewin will again compare his old edition with that of 1866, we think he will moderate or withdraw his charge of our having put old wine into new bottles.

A. & C. BLACK.

John Bunyan.—A little more than two years ago—viz., on the 22nd of February, 1864—I communicated to you information of a remarkable discovery I had made relative to the time when one of Bunyan's works, viz., 'Christian Behaviour,' was published. I stated I had found a copy, unmistakably genuine, which proved the author published that work eleven years earlier than had been known, even from the days of Bunyan to this time. I also stated that the discovery threw new light on Bunyan's engagements when first cast into prison. And now having had the good fortune to procure another relic of our great divine, which sheds new light on some points connected with his works, that has not been known in our day, I thought I ought to communicate this circumstance also to you. It is (among other things) now known that the town of Newport Pagnell, in Buckinghamshire, has the honour of first making the celebrated author of 'The Pilgrim's Progress' known in the world as an author; his first work, 'Some Gospel Truths Opened,' was sold first in that town. The copy I have appears to be the only one known. All the rest of the first copies of his works that have been found appear to have been published in London. Bunyan's modesty when he first appeared in the world as an author is more strikingly manifest from this copy than appears in those subsequently published, the arrangement connected with it being different. I think it is a duty incumbent on every one that has a genuine copy of the first edition of any of Bunyan's works, that has not yet been discovered, that they should not keep the work in ignorance thereof, as much knowledge may be derived from making them known. The two great I possess the late George Offer, Esq. had not the honour of making his acquaintance with them great as his fame is in finding out first copies of our immortal dreamer's works. Yours, &c.,

W. TARBUTT.

Cranbrook, July 23, 1866.

TO CORRESPONDENTS.—F. J. B.—C. G. G.—G. E.—An Old Playgoer—received. Mr. Proctor misunderstands our meaning. When we say that the groups are broken, we refer chiefly to the *loss of lineation*. Stars which appear in a line in the heavens, do not appear in a line when some are in one *gnomonic* line and some in another.

Erratum.—P. 89, col. 1, line 32 from bottom, for "a road marble statue."

D. NUTT'S SELECTED EDUCATIONAL LIST:

Demy 8vo. cloth, 14s. Vol. I. (containing BOOKS I.—VI.),

HOMER'S ODYSSEY.

EDITED,

With Marginal References, Various Readings, Notes and Appendices,

By HENRY HAYMAN, B.D.,

Head-Master of the Cheltenham School, and late Fellow of St. John's College, Oxford.

"Manful grappling with difficulties, masterly handling of collateral subjects, and honest as well as successful elucidation of textual and grammatical questions."—*Saturday Rev.*
 "It must certainly become the text-book of the Odyssey."—*Westminster Review.*
 "A work of great critical scholarship."—*Edinburgh Review.*
 "Goes far to fill up the gap which the want of a worthy edition of the Odyssey has left open, and to earn its editor a name and a fame among English scholars."—*Christian Remembrancer.*

Now ready at all the Libraries,
MR. BAKER'S GREAT NILE BOOK.

**THE ALBERT N'YANZA,
 GREAT BASIN OF THE NILE.**
 And EXPLORATIONS of the NILE SOURCES.
 By SAMUEL WHITE BAKER, M.A. F.R.G.S.,
 And Gold Medallist of the Royal Geographical Society.

With Maps, numerous Illustrations engraved on Wood by J.
 Cooper, from Sketches by Mr. Baker, and a Chromo-lithograph
 Frontispiece of the Great Lake from which the Nile flows, and
 Portraits of Mr. and Mrs. Baker beautifully engraved on Steel by
 Jerns after Photographs, 2 vols. 8vo. cloth, 8s.

"This narrative of Mr. Baker's wanderings in the centre of
 Africa is the most picturesque description of the country and its
 inhabitants that has yet been presented to the world. It is written
 in excellent taste and in an animated and vigorous style. It
 abounds with striking incidents, remarkable situations, sporting
 adventures, and valuable geographical information. The best
 parts of the English character have rarely been more admirably
 exemplified than by Mr. Baker in his manifold trials, perplexities,
 and privations. His contributions to ethnology and natural
 history are also valuable and important."—*Quarterly Review*.
 "He has conferred additional lustre on English discovery,
 which had already contributed so largely in the present century
 to a more complete knowledge of the habitable and uninhabitable
 portions of the globe. He has approached nearer than any living
 man to the solution of that great mystery of the Nile, which has
 been the wonder of ages. He has accomplished these great objects
 by his own sole resources, alone and unaccompanied by any Euro-
 pean, except that intrepid lady, who is the worthy mate of such a
 husband; and the record of his travels will be read with interest
 wherever the English language is spoken."—*Edinburgh Review*.
 "We do not think that any dispute can arise as to the fact that
 Mr. Baker has discovered the actual source of the Nile, the great
 reservoir from which it flows onward continuously to the Medi-
 terranean."—*Daily News*.

Macmillan & Co. London.

Just published, 8vo. price 2s. 6d.
**THE IRISH EDUCATION QUESTION.—
 A VINDICATION of the Past Course and Present Position

DISCOURSES. By ALEXANDER J. SCOTT,
 M.A., Professor of Logic in Owens College, Manchester.
 "We think there is in them not merely the most solid worth,
 but just the kind of worth which men in all schools
 are looking for, and which they are not likely to obtain from any
 one who has not passed through the severe and very peculiar
 training to which Mr. Scott was subjected."—*Spectator*.
 Macmillan & Co. London.

Crown 8vo. cloth, price 10s. 6d.

**FRENCH CLASS-BOOKS by CHARLES
 HENRI SCHNEIDER, F.R.S. M.C.P., French Master
 in the High School, Edinburgh, &c.**

**EDINBURGH HIGH SCHOOL FRENCH
 CONVERSATION-GRAMMAR,** arranged on an entirely
 New Plan, with Questions and Answers in French. Fifteenth
 Edition. 3s. 6d.

THE KEY. 2s. 6d.
 The new feature in this Grammar is the questionnaire, which,
 along with the answers, will enable the master to converse with
 his pupils in French on the rules which they have already learned
 in English, and in this way to imprint these rules indelibly on
 the minds of his pupils. The Exercises are also arranged on the
 conversational system; in each lesson there are three: the first
 to be translated from French into English in the class; the
 second, from English into French; and third to be written at
 home.

**EDINBURGH HIGH SCHOOL NEW
 PRACTICAL FRENCH READER,** with Questions in
 French on the Subjects read. Fifteenth Edition. 2s. 6d.
 The plan is entirely new, and will be found thoroughly prac-
 tical.

**EDINBURGH HIGH SCHOOL FRENCH
 MANUAL of CONVERSATION and COMMERCIAL
 CORRESPONDENCE.** Sixth Edition. 3s. 6d.

* Printed opinions of distinguished Professors and Teachers,
 including Professor Max Müller, Professor Watts, of King's
 College, Dr. Schmitz, &c., will be sent free on application to the
 Author.
 Edinburgh: Oliver & Boyd. London: Simpkin, Marshall & Co.

SALOM'S NEW OPERA and FIELD GLASS,
and **THE RECONNOITERER GLASS**, price 10s. 10s. 6d. each.
—This "Tourist's Favourite," through extraordinary division of labour, distinctly shows small windows 10 miles off, landscape at 20 miles, Jupiter's moons, &c. —The **MARQUIS OF CAMARANTH**: "The Reconnoiterer is very good." —**EARL OF BRADSHAW**: "I find it all you say, and wonderfully powerful for so very small a glass." —**EARL OF CAITHNESS**: "It is a beautiful glass." —**Lord SCARSDALE**: "Approves of it." —**Lord GERRARD**: "Most useful." —**Lord GARYARD**: "Remarkably good." —**Sir DIOBY CAYLEY**: "It gives me complete satisfaction, and is wonderfully good." —**Capt. BRADY**, Royal Small Arms Factory, Enfield: "I have found it effective at the 1,000-yard range." —**P. H. HAWES**, of Farley, Esq.: "I never before met an article that so completely answered the recommendation of its maker, nor, although I have tried many, a Glass combining so much power for its size with so much clearness." —**The Field**: "We have carefully tried it at an 800-yard rifle range against all the Glasses possessed by members of the Corps, and found it fully equal to any of those present, although they had cost more than four times its price." —**Notes and Queries**: "What intending tourist will now start without such an indispensable companion to a pleasant trip?" —The celebrated "**HYTHE**" GLASS shows bullet-marks at 1,200 yards, and men at 2½ miles, price 31s. 6d. All the above Glasses, respectively bearing the registered trade-marks, "**Salom**," "**Reconnoiterer**," and "**Hythe**," are only to be had direct from **SALOM & CO.**, 59, Princess-street, EDINBURGH, and 127, Regent-street, LONDON.

WESTMINSTER BRIDGE-ROAD, LONDON.

BREAKFAST.—EPPS'S COCOA

More commonly called Epps's Homoeopathic Cocoa, as being
prepared and introduced by James Epps, the Homoeopathic Chem-
ist first established in England. The very agreeable character
of this preparation has rendered it a general favourite. For
breakfast no other beverage is equally invigorating and sustain-
ing. This Cocoa is used by thousands who never used Cocoa
before. "Cocoa stands far higher than tea or coffee," Dr. Haesall
says.—Sold in 1 lb., 1/2 lb., and 1 lb. packets.

COCKLE'S ANTIBILIOUS PILLS.—

To remove or avert the symptoms of Indigestion, conse-
quent on irregularity of diet, torpid liver from sedentary occu-
pation, or residence in tropical climates, COCKLE'S ANTI-
BILIOUS PILLS, which have stood the test of public opinion
for upwards of 65 years, are highly recommended for their mild
aperient, tonic and aromatic properties, and for the power they
possess in equalizing the secretion of the liver, and strengthening
the digestive organs.

HIGH SCHOOL OF EDINBURGH.

The LORD PROVOST, Magistrates, and Council of the City of Edinburgh, Patrons of the High School, have resolved to appoint an ENGLISH MASTER, qualified to teach the Higher Branches of English Language, Literature, and Composition.

The Office of GERMAN MASTER in the School is also VACANT.

Applications for these Offices, with Forty-three Copies of Testimonials, must be lodged with J. D. Maxwell, City Clerk, Edinburgh, on or before the 31st of August next.

City Chambers, Edinburgh, July 27, 1866.

TO BOOKBUYERS.—25,000 superior SECOND-HAND BOOKS, purchased from Private Libraries, and including many rare and curious, are on sale by HENRY SUGG, 22, Henriette-street, Covent-garden. A New List, or a Report of particular Books, sent for a stamp.

MR. MAYALL'S PHOTOGRAPHS.—CARTE-DE-VISITE, full-length, half-length, or vignettes, TAKEN DAILY.

Set of Twelve 41 1 0
Set of Thirty 2 3 0
Set of Fifty 3 3 0

Several positions taken, and proofs submitted; it being in the choice of the sitters to have all from one, or some from each, as may be preferred. Immediate sittings with or without appointments.—24, and 26, ROBERTS-STREET, corner of Argyll-place; and 90 and 91, King's-road, Brighton.

DISDERI, PHOTOGRAPHER, INVENTOR of the CARTE-DE-VISITE, Patent the 27th of November, 1854; 70, 71 and 72, BROOK-STREET, Hanover-square, and for Equestrian Portraits at Hereford Lodge, Gloucester-road, Old Brompton-road, and 8, Boulevard des Italiens, Paris. M. Disderi has on Sale 65,000 Celebrities of the day, and Panoramic Views.—ESTABLISHMENTS in LONDON, PARIS, MADRID, and TOULON, for enlargements up to life size.

DISDERI, PHOTOGRAPHIC ARTIST to H. I. Majesty the Emperor Napoleon III. and the Imperial Family—to H. I. Majesty the Emperor of all the Russias—also to H. I. Majesty the Queen of Spain and the Royal Family—to His Majesty the King of Italy—to His Majesty the King of Holland—to His Majesty the King of Portugal—to the Imperial Gallery of Music—Photographer of the Palace of the Universal Exhibition of 1855, &c.

DISDERI, PHOTO PAINTING.—In oil on canvas.

DISDERI, PHOTOGRAPHIE on SILK.—His own new process.

DISDERI, PHOTOGRAPHIE EMAIL.—New process.

DISDERI, NATURAL PHOTOGRAPHY, without retouching. Reproductions and Enlargements of every kind.

DISDERI.—The Excellent Situation of Mr. DISDERI'S Studios enables him to OPERATE REGARDLESS of the WEATHER.

DISDERI.—NOTICE.—By a NEW PROCESS of Mr. DISDERI'S the "PORTRAITS CARTE-DE-VISITE" are Enlarged on Canvas to any size. The Public can thus obtain a Photographic Drawing, by means of which skilful artists attached to the house can, on simple indications—such as the colour of the complexion, the eyes, and the hair—obtain a splendid and truthful oil painting.

Mr. Disderi's New Process is valuable in this respect, that it avoids the tediousness of long sittings, and also adds to the charms of oil painting the great advantage of the truthfulness and accuracy of Photography.

Saloons and Studios, 70, 71, 72, Brook-street, Hanover-square; and for Equestrian Portraits at Hereford Lodge, Gloucester-road, Old Brompton-road.

Mr. Newby's New Publications.
TRODDEN DOWN, a Novel,
by the Author of 'Common Sense,' 'Kate Kennedy,' &c., Second Edition, Now Ready.

"Mrs. Newby has written several tales of considerable merit;
 but nothing has come from her pen better than this narrative of
 a woman's trial, error, penitence, and atonement."—*Athenæum*.
 "'Common Sense' and 'Kate Kennedy' obtained great and
 deserved popularity, and 'Trodden Down' will firmly establish
 its author in the same rank as Miss Mulock and the Author of
 'Adam Bede.'"—*Globe*.
 "We have not, for a considerable time, read a tale of so much
 interest. The story is told in a most affecting manner, and can
 not fail to please the reader whose sympathies are deeply engaged
 on behalf of the 'trodden down' heroine."—*Observer*.
 "We have great pleasure in calling the attention of the reading
 public to the best novel of the year, 'Trodden Down.'"
Harrington Advertiser.
 "The characters are well drawn, the incidents graphically
 delineated, and the language powerful and graceful."
Brighton Examiner.

A NARRATIVE of a JOUR-
NEY to MOROCCO, by the late Thomas
Hodgkin, M.D. F.R.G.S., &c., in 1 vol. imperi-
al 8vo. price 21s. illustrated (from his Draw-
ings taken on the spot) with Chromo-Litho-
graphs in the best style of the Art, by Day
& Son, Limited, Early in September.

Dedicated, by permission, to Sir MOSES MONTEFIORE, Bart.
 "The Subscription List will be kept open until the 30th of
 August, so that the Names of Subscribers may be inserted in the
 Volume.

THE GAIN of a LOSS. By the Author
 of 'The Last of the Cavaliers.'
 "The book is pervaded by an excellent spirit."—*Athenæum*.

SHOT! By the Author of 'Oceil For-
rester.' [This day.
 "A deeply-interesting romance."—*Observer*.
 "The story is well narrated."—*Reader*.
 "We have seldom met with a story told so spiritedly."—*Press*.

 Poems. By H. J. VERLANDER, B.A., Author of 'The
 Vestal,' &c. 1 vol. price 1s. [This day.

IN THE PRESS.
THROWN on the WORLD: a Novel.
 2 vols.

THE STORY of NELLY DILLON. By
 the Author of 'Myself and my Relatives.' 2 vols.

Now ready at all the Libraries,
MR. BAKER'S GREAT NILE BOOK.
THE ALBERT N'YANZA,
GREAT BASIN of the NILE,
 And EXPLORATIONS of the NILE SOURCES.
 By SAMUEL WHITE BAKER, M.A. F.R.G.S.,
 And Gold Medalist of the Royal Geographical Society.

With Maps, numerous Illustrations engraved on Wood by J.
 Cooper, from Sketches by Mr. Baker, and a Chromo-lithograph
 Frontispiece of the Great Lake from which the Nile flows, and
 Portraits of Mr. and Mrs. Baker beautifully engraved on Steel by
 J. Jones after Photographs, 2 vols. 8vo. cloth, 25s.

"It is no use writing any more about Mr. Baker. He is a fine
 fellow, and he has written the most delightful book in the world.
 Our final advice to our readers is to bid them buy the book rather
 than get it from the Library, and take it to the country or seaside
 with them. They will finish it very quickly, after which they
 had better begin again."—*Full Mail Gazette*.

Macmillan & Co. London.
 This day is published, extra fcap. 8vo. cloth, price 6s.
A PAINTER'S CAMP. In Three Books.
 England—II. Scotland—III. France. By PHILIP
 GILBERT HARTON. Author of 'The Palace of Loth & Ave.'
 Second and Cheaper Edition, revised, with an Additional Part.
 (Also in 3 vols. crown 8vo. cloth, price 31s.)
 Macmillan & Co. London.

This day is published,
 The TWELFTH THOUSAND, with a NEW PREFACE, of
ECCE HOMO: a Survey of the Life and Work
 of Jesus Christ. 8vo. cloth, price 10s. 6d.

DISCOURSES. By ALEXANDER J. SCOTT,
 M.A., Professor of Logic in Owens College, Manchester.
 Crown 8vo. cloth, price 7s. 6d.

"Professor Scott's many friends and admirers will gladly re-
 ceive, as a memorial of his remarkable powers, these interesting
 literary remains. ... They are full of fine and high thoughts; cal-
 culated also to inspire like thoughts in all readers capable of such
 thinking."—*Spectator*.
 "We think there is in them not merely the most solid worth,
 but just the kind of worth which a number of men in all schools
 are looking for, and which they are not likely to obtain from any
 one who has not passed through the severe and very peculiar
 training to which Mr. Scott was subjected."—*Spectator*.
 Macmillan & Co. London.

Price 3s. 6d. 12mo. cloth, lettered,

 "The objects aimed at in this Grammar are Shortness,
 Clearness, Graduation, Practicality, and Cheapness."

"Will prove a great service to all engaged in education."
Westminster Review.
 "Has sufficiently established its claim to a favourable re-
 ception."—*Athenæum*.
 "Short, clear, and simple, and a step in the right direction."
Critic.

The head of a large educational establishment says: "It is
 unquestionably the most rational and useful work of the kind
 ever published."
 London: Simpkin, Marshall & Co.
 Manchester: A. Ireland & Co.

LOCKWOOD & CO.'S LIST OF EDUCATIONAL WORKS.

THE FRENCH LANGUAGE.

DR. DE FIVAS' WORKS FOR COLLEGES, SCHOOLS, AND PRIVATE STUDENTS.

* * * The attention of Schoolmasters and Heads of Colleges is respectfully requested to the following highly-popular Series of French Class-Books. A Detailed Prospectus on application.

DE FIVAS' NEW GRAMMAR of FRENCH GRAMMARS; comprising the substance of all the most approved French Grammars extant, but more especially of the standard work "La Grammaire des Grammaires," sanctioned by the French Academy and the University of Paris; with numerous Exercises and Examples Illustrative of every Rule. By Dr. V. DE FIVAS, M.A. F.R.S., Member of the Grammatical Society of Paris, &c. Twenty-seventh Edition. 12mo. 3s. 6d. handsomely bound.

"At once the simplest and most complete Grammar of the French language. To the pupil the effort is almost as if he looked into a map, so well defined is the course of study as explained by M. de Fivas."—*Literary Gazette*.

* * * A KEY to the above, price 2s. 6d. bound.

DE FIVAS' NEW GUIDE to MODERN FRENCH CONVERSATION. Fifteenth Edition. 12mo. 2s. 6d. strongly half bound.

DE FIVAS, BEAUTES des ECRIVAINS FRANÇAIS, ANCIENS et MODERNES. Ouvrage Classique, à l'usage des Collèges et des Institutions. Eleven Edition. 12mo. 3s. 6d. bound.

DE FIVAS, INTRODUCTION à la LANGUE FRANÇAISE; ou, Fables et Contes Choisis: Anecdotes Instructives, Faits Mémoires, &c. Eighteenth Edition. 12mo. 3s. 6d. bound.

DE FIVAS, Le TRESOR NATIONAL; or, Guide to the Translation of English into French at Sight. Third Edition. 12mo. 2s. 6d. bound.

* * * A KEY to the above, 12mo. 2s. cloth.

THE GERMAN LANGUAGE.

DR. FALCK LEBAHN'S POPULAR SERIES OF GERMAN SCHOOL-BOOKS.

"As an educational writer in the German tongue, Dr. Lebahn stands alone; none other has made even a distant approach to him."—*BRITISH STANDARD*.

LEBAHN'S GERMAN LANGUAGE, in One Volume. Seventh Edition, containing—*I.* A Practical Grammar—*II.* Undine: a Tale, with Explanatory Notes—*III.* A Vocabulary of 4,000 Words, synonymous in English and German. Crown 8vo. 3s. cloth. With KEY, 10s. 6d. KEY, separate, 2s. 6d.

"The best German Grammar that has yet been published."—*Morning Post*.

The HISTORICAL FINGER-POST:

A Handy-Book of Terms, Phrases, Epithets, Cognomens, Allusions, &c., in connexion with Universal History. By EDWARD SHELTON, Assistant-Editor of "The Dictionary of Daily Wants," one of the Contributors to "The Reason Why" Series, &c. Second and Cheaper Edition. 1 vol. crown 8vo. pp. 364. 2s. 6d. cloth.

"A handy little volume, which will supply the place of 'Haydn's Dictionary of Dates' to many persons who cannot afford that work. Moreover, it contains some things that Haydn's book does not."—*Bookseller*.

THE FABLES of BABRIUS. Trans-

lated into English Verse from the Text of Sir G. Cornewall Lewis. By the Rev. JAMES DAVIES, Lincoln College, Oxford. Fcap. cloth antique, 6s.

"Who was Babrius? The reply may not improbably startle the reader. Babrius was the real original *Aesop*."—*Daily News*. "A fable-book which is admirably adapted to take the place of the imperfect collections of *Aesopian* wisdom which have hitherto held the first place in our juvenile libraries."—*Hereford Times*.

VICTORIAN ENIGMAS; being a

Series of Enigmatical Acrostics on Historical, Biographical, Geographical, and Miscellaneous Subjects; combining Amusement with Exercise in the Attainment of Knowledge. By CHARLOTTE E. CAPEL. Royal 16mo. cloth, 3s. 6d.

"A game practised by Her Majesty and the royal children, if, indeed, it were not invented by the Queen herself."—*Critic*.

WHEN TO DOUBLE YOUR CON-

SONANTS. See the WRITER'S ENCHIRIDION, a List of all the Verbs that Double their Consonants on taking ED, EST, ING, &c., about sixty of which are exceptions to the rule, as *Caril, Marvel, &c.*, not being accented on the last Syllable. By J. B. SCARLETT. 16mo. 1s. cloth limp.

WHITE'S SCHOOL and COLLEGE LATIN DICTIONARIES.

Just published, in square 12mo. pp. 682, price 7s. 6d.

THE JUNIOR SCHOLAR'S LATIN-ENGLISH DICTIONARY. Abridged from the Dictionary of WHITE and RIDDLE, by JOHN T. WHITE, D.D. of C.C.C. Oxford, surviving Joint-Author.

"Whatever credit belongs to White and Riddle's larger dictionaries, their best qualities are in this Junior Abridgment brought into the school-boy's service in a way for which he has every reason to be thankful."—*Daily News*.

"A very useful abridgment. The Latin words have not only their English equivalents assigned, but a large amount of etymological information touching Sanskrit and the older forms of language as well as the modern European languages. The quantities are also carefully marked."—*Chambers*.

"We suppose that as White and Riddle's larger work is now generally held to be the Standard Latin Dictionary, no school-boy will consider that he has fair play unless he is provided with White's Junior Scholar's Abridgment." It certainly does strike us as better than anything of the kind that we have seen before, both in the arrange-

ment and abundance of the meanings, and in the etymological and grammatical explanations."—*Spectator*.

"This Latin Dictionary, though it only professes to be an abridgment, is a composition of a much higher stamp than the generality of school books. It is a book of the same character as the smaller Lexicon of Liddell and Scott, and will prove a liberal and intelligent study of Latin and a most useful introduction to the ordinary maxims of Greek. It is a body of well-selected information, from his distinguished history, and has attracted attention upon the paleography of the language. Altogether, Dr. White has produced a very excellent work, and extremely well adapted for the instruction of school-boys, but containing such an amount of information as to be of substantial utility even to the more advanced scholar."—*Press*.

WHITE'S LATIN-ENGLISH DICTIONARY (intermediate size). For the Use of University Students. In medium 8vo. pp. 1,045, price 18s. cloth.

WHITE and RIDDLE'S LARGER LATIN-ENGLISH DICTIONARY (the Parent Work). Royal 8vo. pp. 2,125, price 42s. cloth.

London: Longmans, Green, and Co. Paternoster-row.

London: LOCKWOOD & CO. 7, Stationers' Hall-court, E.C.

"NOT A PAGE TOO LONG."—*Pall Mall Gazette*.

A SECOND EDITION OF UP THE COUNTRY.

By the Hon. EMILY EDEN,
Author of

'The Semi-Attached Couple' and 'The Semi-Detached House.'

"One of the most seducing books one can get hold of."
Reader.

"A capital book for the close of the London season. Miss Eden has a delicate feeling of fun,—and her touch is very light. She never takes the bloom off her jokes by much handling."—*Pall Mall Gazette*.

"A brighter book of travel we have not seen for many a day."—*Athenæum*.

"Anything more refreshing, genial and laughter-provoking than these letters, it would be difficult to find."
Spectator.

"We can promise our readers that they will find 'no end' of amusing reading in these volumes."—*Globe*.

18, Great Marlborough-street.

HURST & BLACKETT'S NEW WORKS.

TRAVELS in FRANCE and GER-
MANY in 1865 and 1866; including a Steam Voyage down the Danube, and a Ride across the Mountains of European Turkey, from Belgrade to Montenegro. By Capt. SPENCER, Author of 'Travels in Circassia,' &c. 3 vols. 21s.

FIELD-MARSHAL VISCONTI
COMBERMERÉ'S MEMOIRS and CORRESPONDENCE. From his Family Papers. By the RIGHT HON. MARY VISCONTI COMBERMERÉ, and Capt. W. W. KNOLLIS. 3 vols. 8vo. with Portraits, &c. 30s. bound.

"A welcome and gracefully-written memorial of one of the greatest of England's soldiers and worthiest of her sons."—*Post*.
"Apart from the biographical and professional details, the volumes are full of sketches of persons of importance or interest who came into connexion with Lord Combermere."—*Athenæum*.

The SPORTSMAN and NATURAL-
IST in CANADA; or, Notes on the Natural History of the Game, Game-Birds, and Fish of that Country. By MAJOR W. ROSS KING, F.R.G.S., F.S.A.M. Royal 8vo. Illustrated with beautiful Coloured Plates and Woodcuts. 30s. bound.

"A very handsome volume, fairly written and beautifully illustrated, scientific enough to be helpful to the professed naturalist, and popular enough to instruct and amuse all who care about natural history."—*Examiner*.

PRISON CHARACTERS DRAWN
from LIFE. By a PRISON MATRON, Author of 'Female Life in Prison.' 3 vols. 21s.

"This is a book of the most striking interest. It ought to be widely read."—*Post*.

THE BEAUTIFUL in NATURE and
ART. By Mrs. ELLIS, Author of 'The Women of England,' &c. 1 vol. with Portrait, 10s. 6d. bound.

"This volume is written with great skill and beauty. It should be in the hands of every teacher and in the library of every young person."—*British Quarterly Review*.

THE NEW NOVELS.

LORDS and LADIES. By the Author
of 'MARGARET and HER BRIDESMAIDS,' &c. 3 vols.

THE WILD FLOWER of RAVENS-
WORTH. By the AUTHOR of 'JOHN and I,' 'DR. JACOB,' &c. 3 vols.

"A charming story, of great originality, full of pathos and grand nobility of thought and action."—*Observer*.
"A novel of unusual excellence. It is a story of deep interest. The characters are superbly drawn."—*Star*.

THE WIFE'S ERROR. By Lady
BLAKE. 3 vols.

"Lady Blake is a polished and elegant writer."—*Post*.
"A pleasant, well-told story."—*United Service Magazine*.

FELICIA'S DOWRY. By Mrs. Fitz-
MAURICE OKEDEN. 3 vols.

"This novel is capital, and deserves wide popularity. The characters are all well sketched."—*Star*.

A NOBLE LIFE. By the Author of
'JOHN HALIFAX,' 'CHRISTIAN'S MISTAKE,' &c.

"A beautifully-written and touching tale."—*Post*.

THE MOTHER'S FAVOURITE. By
S. RUSSELL WHITNEY. 3 vols. [Just ready.]

CHEAP EDITIONS.

DR. OGILVIE'S ENGLISH DICTIONARIES.

I.

Imperial 16mo. 886 pp. cloth, red edges, 10s. 6d.; half morocco, 12s.

THE STUDENT'S ENGLISH DICTIONARY,

ETYMOLOGICAL, PRONOUNCING and EXPLANATORY. Prepared specially for the Use of Colleges and Advanced Schools. By JOHN OGILVIE, LL.D. With about 300 Engravings on Wood.

"This is the best etymological dictionary we have yet seen at all within moderate compass. We have examined a good many etymologies, taken at hazard, and believe them all to be such as the best philologists, both of Germany and England, have deliberately accepted."—*Spectator*.

"A very valuable work, and one which, though chiefly intended for the young student, will not seldom aid the mature scholar."—*Educational Times*.

II.

Large 8vo. cloth, 25s.

THE COMPREHENSIVE ENGLISH DICTIONARY,

EXPLANATORY, PRONOUNCING, and ETYMOLOGICAL. By JOHN OGILVIE, LL.D. The Pronunciation adapted to the best Modern Usage, by RICHARD CULL, F.R.S. Above 800 Engravings on Wood.

"We do not hesitate to recommend this Dictionary as, next to the more costly and cumbersome 'Imperial,' the very best that has yet been compiled."—*London Review*.

III.

2 large vols. imperial 8vo. cloth, 4l.

THE IMPERIAL DICTIONARY,

ENGLISH, TECHNOLOGICAL and SCIENTIFIC. Adapted to the present state of Literature, Science, and Art; and containing an Extensive Collection of Words, Terms, and Phrases not included in previous English Dictionaries. By JOHN OGILVIE, LL.D. Illustrated by above 1,500 Engravings on Wood.

"Dr. Ogilvie has not only produced the best English Dictionary that exists, but, so far as the actual state of knowledge permitted, has made some approach towards perfection."—*British Quarterly Review*.

BLACKIE & SON, 44, Paternoster-row.

SCHOOL BOOKS.

TYTLER'S ELEMENTS OF GENERAL HISTORY,

ANCIENT AND MODERN.

With considerable additions, numerous Notes, and a Continuation to the reign of Queen Victoria. Edited by the Rev. BRANDON TURNER, M.A. Sixth Edition. Cloth, 5s. 6d.

Sold also in separate Parts:—

ANCIENT HISTORY, 2s. 6d. MODERN HISTORY, 2s. 6d.

"The edition before us is superior to its predecessors, since it is not only more accurate, but it contains nearly double the quantity of matter."—*Athenæum*.

COMSTOCK'S NATURAL PHILOSOPHY.

Edited and largely augmented by R. D. HOBLYN, M.A. Oxon. With Questions for Examination, and an Appendix of Problems. Nearly Three Hundred Engravings on Wood. Fifth Edition. Fcap. 8vo. cloth, 3s. 6d.

THE COMPREHENSIVE GERMAN DICTIONARY.

GERMAN and ENGLISH, and ENGLISH and GERMAN.

By J. J. GERLACH, LL.D.

Bound, 5s. 6d.

This Dictionary is more copious in the number of its words and meanings than any portable German Dictionary hitherto published.

BLACKIE & SON, 44, Paternoster-row.

LONDON, SATURDAY, AUGUST 4, 1886.

LITERATURE

The History of Signboards, from the Earliest Times to the Present Day. By Jacob Larwood and John Camden Hotten. With One Hundred Illustrations in Fac-simile, by J. Larwood. (Hotten.)

ON the singular and by no means unimportant subject of this book there has been successfully expended a great amount of labour and research. A volume which extends beyond 500 pages, and which could not have been compiled without as much wide walking as deep reading, cannot, of course, be exempt from some errors both of omission and commission. This the authors acknowledge at starting, and we may add the expression of our own surprise that so few signs have been overlooked, and so few mistakes made in connexion with those which are here put on record.

With the general origin of signs we need not trouble the reader. In one shape or another they have existed in England since the Druids raised a symbol to the skies, and warriors wore the images of things in or beyond nature, on their helmets or their bucklers. In later times the badges of nobles were assumed as marks of distinction for houses of entertainment. Private houses, in days when numbering was not thought of, put out some signal by which each, with its inmates, was more readily identified. Before surnames were in common use, a substitute for them was found in adding to the baptismal appellation the name of the house-sign. Cheapside was full of them; and we have no doubt in our own minds as to what was on the face of one of them in 1118, when a child was born there who afterwards became famous:—Thomas à Beckett was "Thomas at the Snipe."

The name of this great churchman reminds us that men "of his cloth," as the phrase used to go, have been liberal patrons of taverns, and have rendered famous some of their signs. Walter Mapes and Archbishop Leighton, very different men, expressed in very different ways their desire to die in a tavern or inn. Mapes, indeed, expressed his intention, Leighton his hope, thus to make an end, and there to shuffle off this mortal coil. "Mihi est propositum in tabernâ mori"—"I design to end my days in a tavern drinking!" said the Archdeacon of Oxford. Leighton hoped to die in an inn in another fashion. He thought it a suitable place for a world-wanderer about taking his last journey. He strangely fancied that "the officious tenderness and care of friends was an entanglement to a dying man; and that the unconcerned attendance of those that could be procured in such a place would give less disturbance." This is Burnet's testimony. Leighton had his wish. Of the bits of old London remaining to us, few are more interesting than the inn in which Leighton died. The house—the Bell Inn, Warwick Lane—still exists, a genuine fragment of a picturesque period, and they who would look on it and into it would do well, when old London is disappearing so swiftly and so silently, not to defer the present opportunity.

In connexion with the pseudo-history of the Church, the Nag's Head in Cheapside is the most famous of houses, for there did *not* take place the alleged consecration of Protestant prelates in the reign of Elizabeth, which, in spite of the utter groundlessness of the absurd story, still figures as a fact in books for the instruction of young Roman Catholics. Not far from the spot where the Nag's Head stood

was the well-known old tavern and coffee-house called the Chapter. It was there that might once be hired the "threepenny curates"—clerical journeymen who were willing, for twopence and a penny cup of coffee, to "perform divine service" anywhere within the bills of mortality.

When Sterne gave out the text of one of his sermons—"It is better to go to the house of mourning than the house of feasting," he immediately commenced his discourse with the words, "That I deny!"—and although he modified the denial, his dissent was genuine. He belonged, too, to times when clergymen generally resorted to an evening to some favourite tavern, where their club was held. Dr. Dodd, who used to sing comic songs at the Adam and Eve, and Dr. Parr smoking his pipe under some favourite sign were varieties of the species. The custom was of remote origin. Bishop Still, in the sixteenth century, doubtless drank the ale he made to sparkle in song, in very good tavern company. In the seventeenth century congregations complained to the Commonwealth Parliament of some of their ministers who resorted more than became them to taverns. The Kentish parsons were said to be the greatest offenders in this way; but they seem to have been controversial in their cups; and quiet men wanted to peaceably sip their ale, and not to be excommunicated for differing from either Vicar or Moses, who was too full of it.

However it may have been in old times with regard to the Church, we are not accustomed, except in the case (and that is a very apocryphal one) of Prince Hal and the Boar's Head in Eastcheap, to associate royalty with tavern-life. The tradition, of which Shakspeare has made an almost obstinate fact, probably led to the inscription which long surmounted the door of both the old and new taverns in Eastcheap: "This is the chief tavern in London." Perhaps the most highly honoured of inns was one which is not enumerated in this volume, namely, the Lion at Brentford. In the best room of that house, one night of the year 1445, there was a notable company assembled, with Henry the Sixth at the head of it. After supper the King created Alonzo d'Almada Earl of Avranches. On the "next morning," following a joyous festival, Henry, in the same inn, held a Chapter of the Garter, created a couple of knights, gave a gold cup to one of them, and then rode soberly away from the door, to Windsor. We can recall no other instance of a Chapter of the Garter being held under a signboard. The nearest parallel to the case is that connected with Grillion's Hotel, Albemarle Street, where the Prince Regent (according to a house tradition) invested with the insignia of this supreme order of chivalry the French King, Louis the Eighteenth, when the latter was on his way from exile to the throne of France.

Many of our kings have occasionally slept, or taken other refreshment than sleep, in country hostleries. Provincial inns preserve strange legends of sovereigns who have slumbered beneath their roofs; and sceptics are silenced, if not convinced, by the sight of the identical beds in which the monarchs, probably, did not sleep. There used to be a great variety of this article on which Richard the Third is said to have sought, and not found, repose. More certain is the tradition (not noticed by the historians of signboards) of Henry the Eighth, in his rides from town to Windsor, pulling rein at Cranford, and taking a draught of good liquor, as he sat in his saddle, at the door of the St. Catherine's Wheel,—a

common sign, which is said to have been converted by the Puritans into the Cat and Fiddle.

This entertainment of kings at hostleries is not, however, altogether lost sight of by our industrious signboard chroniclers. We have alluded to the madcap Prince and the Boar's Head. When that Prince, as Henry the Fifth, was returning to London from his triumph at Agincourt, he "put up" at the Red Lion at Sittingbourne, in Kent. This incident of 1415 was referred to in the advertisement of the landlord, who was master of the hostelry, in 1820, wherein it is stated that the Red Lion was "remarkable for an entertainment made by Mr. John Norwood, for King Henry the Fifth, as he returned from the battle of Agincourt, in France, in 1415, the whole amounting to no more than 9s. 9d., wine being at that time only a penny a pint, and all other things being proportionably cheap. The same character, in a like proportionate degree, Wm. Whitaker hopes to obtain by his moderate charges at the present time." In these words, mine host of the Red Lion granted no boon to the public; he only intimated that a pint of wine would be charged at its full market value!

Some of those hosts of the olden time were not nice in the treatment of their royal patrons. He was a bold Boniface of the White Horse who charged George the Second a guinea for an egg, and who, on being asked by His Majesty himself if eggs were scarce, drily replied, "No, Sir; but kings are." Landlords neither charged so highly, nor addressed so boldly, George the Third, when that sovereign ate his boiled mutton and turnips under the shadow of their signboards, on his road from London to Weymouth. Louis Philippe, when he entered the inn at Newhaven as William Smith, was civilly received, even by a Newhaven barmaid!

George the Fourth, when Prince of Wales, was probably much more of a tavern-haunter than his predecessor, Henry of Monmouth. There used to be tales told of him at the St. Alban's Head, in St. James's Market, and another is narrated in this volume, showing how the Prince, with a congenial friend, forcibly entered a room at the Feathers, in Grosvenor Street, while a lodge of Odd Fellows were celebrating their most secret mysteries—or, at least, the nonsense that passed for mystery. As none but the initiated could witness such solemnities, the Odd Fellows took possession of the Prince and his friend, and made them members of the craft, put them through various degrees, and elected the royal brother as their chairman for the remainder of the evening. A much more pleasant story connected with inns and royalty is one that has escaped the research of these zealous chroniclers. Some years ago the whole of a little Highland inn, the sign of which we do not remember, was engaged by a very respectable person for a party of ladies and gentlemen who were to come early, on a stated day, and leave on the following morning. The party arrived, enjoyed themselves like happy children on a rarely happy holiday, and departed at the stated time, leaving their agent to settle the account. There had been something so unusual in the visitors that the good woman of the house importuned the agent to inform her of the real names of the persons for whom he was acting; and this he did without hesitation, having, as he said, permission to do so. The hostess then heard, not without surprise, that she had been entertaining no less exalted guests than Queen Victoria, Prince Albert, and a few of their most intimate and trusty friends! For another incident illustrating this part of

the subject we must have recourse to the volume itself:—

"On Highgate Hill there is an old roadside inn, the Fox and Crown, which displays on its front a fine gilt coat of arms with the following inscription underneath:—

6th July 1837. This Coat of Arms is a Grant from Queen Victoria, for Services rendered to Her Majesty when in Danger Travelling down this Hill.

The carriage conveying Her Majesty was proceeding down the hill without a skid on the wheel, when something startled the horses, and the occurrence above narrated took place. The late landlord died in distressed circumstances, and he stoutly asserted to the last, that although he made repeated applications to the Government for recompense, he having imperilled his own life to save that of Her Majesty, all he ever received for his pains was permission to display the royal arms on his house front."

In earlier days, whatever honour there may have been in carrying on business under a royal sign, there might be danger in it if the trader lacked discretion. When Walter Walters, who kept the Crown in Cheapside, in 1467, merrily remarked that his son was heir to the Crown, he was informed against as an utterer of treason; and in the days of Edward the Fourth, who loved a joke as well as any man, Walters was hanged for a jest, in which the law saw no joke at all.

This mention of the Crown enables us to pass to a new phase of the subject, from royalty to wit. At the old Crown, in Duck Lane, in the seventeenth century, there was a room to which that clever, if not eminent, painter, Isaac Fuller, contributed some finely-executed figures of the Muses, Pallas, Mars, Ajax, Ulysses, &c. We are told that these "dead figures appeared with such lively majesty that they begat reverence in the spectators towards the awful shadows." This pleasant means of attraction was of very early application in London. There was a Painted Tavern in Walbrook as early as the reign of Richard the Second. The same attraction has been resorted to in later times. Ward, the publican, in Swallow Street, had a very creditable collection of pictures of his own painting, in his chief room; and recently, when a Mr. Bacchus occupied the Clarendon Arms, Broadway, Hammersmith, he had a few pictures by old masters, which he highly esteemed, and loved to show to all who resorted to his tavern with a desire to see them. Artists themselves have made the fortune of some of these houses. At the Sol's Arms, in the Hampstead Road, a club of artists used to meet nightly for relaxation. Another was held for many previous years at the Feathers, near Leicester Square. The artists, however, did not contribute to the ornamentation of the house. In later days this was done by Stanfield and David Roberts, who so decorated the little tavern department at the back of the pit in the Coburg Theatre, that thirsty souls who went to drink forgot their thirst, shut their mouths, and opened their eyes in rapt admiration.

A long list might be formed of artists who, from generous impulse, caprice, or necessity, have executed signboards for town or country taverns. When the painting of these was a recognized branch of the profession, Harp Alley, Shoe Lane, was the locality in which the artists of such works had their studios. In the time of Charles the Second, these artists surpassed those of all other nations engaged in the same branch of Art. It was said that there was no need to put under an English sign, "This is the Lion," or whatever the animal there represented might be. A hundred years later, if the *Tatler* is to be trusted, English signs were ill painted, and their inscriptions ill spelt. There were, however, some notable

exceptions. The *Spectator* notices a Queen Elizabeth, in Ludgate Street, "which by far exceeded all the other signs in the street, the painter having shown a masterly judgment, and the carver and gilder much pomp and splendour. It looked rather like a capital picture in a gallery than a sign in the street." Such signs, indeed, realized prices that were not then to be got by alleged Titians. Clarkson's picture of Shakspeare, which once hung as a sign in Little Russell Street, is said to have cost the purchaser 500*l*. Wale, the Royal Academician, painted another for a public-house in the same street; his Falstaffs and other theatrical signs were numerous, and excellently painted. Baker, and his pupil Catton (both Academicians), executed similar work; a Lion, by the latter, was, till very recently, in front of a coachmaker's in Wells Street. Cipriani, another R.A., who had been (in Florence) a painter of pictures on coaches and sedans, painted signboards in England before he was patronized by the Duke of Richmond. This was no derogation. Many of our chief herald-painters, who also decorated the panels of coaches and of rooms in noble mansions with choice figures, flowers, and graceful scroll-work, rank among distinguished signboard artists. Later, Hogarth painted a sign "for a freak." Dick Wilson, R.A., furnished a North Wales alehouse with the Three Loggerheads, and David Cox enriched another with a Royal Oak. Morland painted various signs under pressure of thirst and lack of money; clever old Crome did the same, but not through similar causes. Sir William Ross's Magpie was long an attraction at Sudbury; and among living R.A.s, Mr. Millais at least may be cited for having "painted a St. George and the Dragon, with grapes round it, for the Vidler's Inn, Hayes, Kent." There is a story, too, of Harlow, who not having wherewith to pay his bill, painted a back and front view of Queen Charlotte for an alehouse in Greek Street. The rogue painted it in Lawrence's style, and signed the work "T. L." When the latter was told of this freak, he said in his wrath that "if Harlow were not a scoundrel, he (Lawrence) would kick him from one street's end to another." Harlow was no scoundrel however, and the painter of 'The Trial of Queen Katharine' only remarked, "When Lawrence makes up his mind to it, I hope he will choose the shortest street he can find."

It would not have been foreign to the manners of those days if Lawrence had thrashed Harlow in the house for which he had executed the sign to which he had appended Lawrence's initials. At that time, indeed, there were taverns where only the sons of violence resorted, but whither victims were often decoyed. Messrs. Larwood and Hotten have noted most of the signs of taverns which were houses of call for thieves and murderers. For their account of one of these ("Stunning Joe Banks's," the Hare and Hounds, in St. Giles's) they are indebted to a strange source, the 'Recollections of the Rev. J. Richardson,' a clergyman who was for many years on the staff of the *Times* and a visitor at "Stunning Joe's." But one of the most remarkable of these tavern resorts of brigands and assassins is not registered in this book. The house in question was in James Street (now Gilbert Street), Grosvenor Square. Its sign was the badge of Lord Montacute—the Roebuck. There were two entrances to this house, one from the street, the other from a dark and filthy passage, mis-called St. George's Market. This was for the accommodation of customers who were playing at dodge with the gallows, and who were partly the terror and partly the pride of the neighbouring inhabitants. From this wretched den, the flash

Jack Henley, his highlows tightly laced and brightly polished, his snow-white stockings clinging tightly to his muscular calves, his knee-breeches of the very finest of the "dark cords" then worn by thieves, his coat and waistcoat of the strictest professional cut, his "neckerchief" a bandana worth half a guinea, and his beaver hat so placed as to show to advantage the flat black curl close to his left ear,—thus attired, from that horrible Roebuck, Henley led the band of ruffians who, some fifty years ago, went down to West End Fair, possessed themselves of all the outlets, and then brutally assailed and plundered all who attempted to pass, and who seemed to these savages worth stripping, beating and leaving for dead. A night at the Roebuck followed unutterable atrocities; but the gallows awaited the chief miscreants. Henley was hanged, and his respected parents turned the little incident to account by exhibiting his body for a couple of days in the cellar which they inhabited, at the moderate admission tariff of one penny! Such was life in the first half of this century! But this affair not only closed the career of Henley and his gang, but caused the suppression of the fair, and also of the Roebuck, which was, perhaps, the last of those houses of old which looked like places of refreshment for honest men, but which were dens in which honest men, if they ventured, were sure to be robbed, and where they ran a great chance of being also murdered.

When men wore swords, the deeds of violence accomplished in tavern rooms, or at tavern doors, were so continual that scarcely a night passed without some wretch being murdered or mutilated, and the assassin being seized and prepared for the gallows in consequence. Wine, the sword and opportunity were not, however, the only things that led to bad consequences beneath some of our old tavern roofs. There is a rare volume in the City Library which the historians of signboards have overlooked. It refers entirely to the most noted taverns of the day, between three and four centuries ago, and it gives pictures in words of the haunting Kates, and Marjories, and Cicelys, and Dorothys, who attended on and attracted customers. Some of the signs of these old taverns are significant of more mischief than comes by drinking. At a much later period a very general business was transacted under signs, all of which did not belong to taverns. The students of the newspapers of 1712, for instance, will not forget this. "At the Golden Sugar Loaf, right against the Horse at Charing Cross," readers of the *Spectator* advertisements were informed that "morning gowns for men and women" were to be procured, and "the newest-fashioned quilted petticoats." Loss of memory was cured at the Angel and Crown, St. Paul's Church Yard. Every sort of disease had its purchasable and infallible specific at the Cross Keys and Bible, in Cornhill. At the Golden Head, in Covent Garden, "ancient pictures by the most excellent masters" (who probably lived close by) were to be had to order; and, at the Old Man's Coffee House, Charing Cross, a physician professed to cure all who would come to him who were afflicted with small-pox. This may have been comforting to all who had taken variola, but it was not cheering to the patrons who resorted to the Old Man to take their coffee.

The impudence of some of the advertisements in the non-literary part of the *Spectator* is alluded to in various essays in the paper itself. Our authors cite a passage from one of these, in which a surgeon "in Russell Court, over against the Cannon Ball," "by the blessing, cures the Yellow Jaundice, Green Sickness, Scurvy, Dropsy, Surfeits, Long Sea Voyages,

Campaigns," and various ills to which female humanity is subjected, "as some people," says the surgeon's handbill, "who has been lame these thirty years can testify!" The value of such testimony in support of the afflictions named, "Long Sea Voyages" included, is not apparent; but the warrant implied is closely imitated from the illogical handbills of so-called surgeons and physicians who "cured all diseases incident on men, women, or children," under various signboards, from Tower Royal to Covent Garden.

When Mrs. Siddons's father was barber to a strolling company, that lady was born in a public-house in Brecknock, called the Shoulder of Mutton. In subsequent days, but whether in consequence or not of such an event, the same sign became a very common one in rural districts. In Yorkshire alone there are upwards of sixty such signs at the present moment. In another way players have been connected with public-houses as proprietors, from Lowen, an actor born in Shakspeare's days, who kept the Three Pigeons at Brentford, down to these present times, when a few similar instances might be cited. If the birth of such an artist as Sarah Kemble dignified a country inn, the death of such a divine as Archbishop Leighton, at the Bell, may be said to have almost consecrated the inn in which he died. Less noble prey to death than this prelate was the sixth Baron Grey of Ruthyn, who died, a ruined gambler, on the bench of a Cheapside tavern.

It is time, however, that we should leave the subject, and commit this curious book to its world of curious readers. We have shown its merits, and alluded to its very few shortcomings; and we have only to counsel the authors to look through the Post Office Directories for the various counties, as sources whence they may draw many new samples of the most singular tavern-signs, wherewith to enrich their next edition. Meanwhile, the present volume is a valuable addition to our antiquarian and gossiping literature.

Poems and Ballads. By Algernon Charles Swinburne. (Moxon & Co.)

Mr. Swinburne commenced his literary career with considerable brilliance. His 'Atalanta in Calydon' evinced noticeable gifts of word-painting and of music; and his 'Chastelard,' though written in a monotone, contained several passages of dramatic force and power. In the latter work, however, there was too open a proclivity to that garish land beyond the region of pure thinking, whither so many inferior writers have been lured for their destruction,—the land where Atys became a raving and sexless maniac, and where Catullus himself would have perished had he not been drawn back to the shadier border-region by the sincerity of his one grand passion. The glory of our modern poetry is its transcendent purity—no less noticeable in the passionate sweetness of Keats and Shelley than in the cold severity of Wordsworth; a purity owing much to the splendid truth of its sensuous colouring. More or less unavailing have been all the efforts of insincere writers to stain the current of our literature with impure thought; and those who have made the attempt have invariably done so with a view to conceal their own literary inferiority. Very rarely indeed a mighty physical nature has found utterance in warmer, less measured terms than are commonly employed in life or art; but it would be difficult, on fair critical grounds, to decide such utterance to be immoral—it is so genuine. The genuineness of the work as Art, we would suggest, can be the only absolute test of immorality in a story or poem.

Truly sincere writing, no matter how forcible, seldom really offends us. When, however, we find a writer like the author of these 'Poems and Ballads,' who is deliberately and impertinently insincere as an artist,—who has no splendid individual emotions to reveal, and is unclean for the mere sake of uncleanness,—we may safely affirm, in the face of many pages of brilliant writing, that such a man is either no poet at all, or a poet degraded from his high estate, and utterly and miserably lost to the Muses. How old is this young gentleman, whose bosom, it appears, is a flaming fire, whose face is as the fiery foam of flowers, and whose words are as the honeyed kisses of the Shunamite? He is quite the Absalom of modern bards,—long-ringed, flippant-lipped, down-cheeked, amorously-lidded. He seems, moreover, to have prematurely attained to the fate of his old prototype; for we now find him fixed very fast indeed up a tree, and it will be a miracle if one breath of poetic life remain in him when he is cut down. Meantime, he tosses to us this charming book of verses, which bears some evidence of having been inspired in Holywell Street, composed on the Parade at Brighton, and touched up in the Jardin Mabille. Very sweet things in puerility, as a literary linen-draper might express it,—fine glaring patterns after Alfred de Musset and Georges Sand,—grand bits in the manner of Hugo, with here and there a notable piece of insertion from Ovid and Boccaccio. Yet ere we go further, let us at once disappoint Mr. Swinburne, who would doubtless be charmed if we averred that his poems were capable of having an absolutely immoral influence. They are too juvenile and unreal for that. The strong pulse of true passion beats in no one of them. They are unclean, with little power; and mere uncleanness repulses. Here, in fact, we have Gito, seated in the tub of Diogenes, conscious of the filth and whining at the stars.

The very first verse in the book, though harmless enough in meaning, is a sample of the utter worthlessness in form of most of the poems:—

I found in dreams a place of wind and flowers,
Full of sweet trees and colour of glad grass,
In midst whereof there was
A lady clothed like summer with sweet hours.
Her beauty, fervent as a fiery moon,
Made my blood burn and my moon
Like a flame rained upon.
Sorrow had filled her shaken eyelids' blue,
And her mouth's sad red heavy rose all through
Seemed sad with glad things gone.

Here all the images are false and distracted,—mere dabs of colour distributed carelessly and without art. The following sonnet goes further:—

Lying asleep between the strokes of night
I saw my love lean over my sad bed,
Pale as the duskiest lily's leaf or head,
Smooth-skinned and dark, with bare throat made to bite,
Too wan for blushing and too warm for white,
But perfect-coloured without white or red.
And her lips opened amorously, and said—
I wist not what, saving one word—Delight.
And all her face was honey to my mouth,
And all her body pasture to mine eyes;
The long lithe arms and hotter hands than fire,
The quivering flanks, hair smelling of the south,
The bright light feet, the splendid supple thighs
And glittering eyelids of my soul's desire.

It would be idle to quote such prurient trash as that,—save for the purpose of observing that Mr. Swinburne's thought is on a fair level with his style of expression:—both are untrue, insincere, and therefore unpoetical. Absolute passion there is none; elaborate attempts at thick colouring supply the place of passion. Now, it may be fairly assumed that a writer so hopelessly blind to the simplest decencies of style, so regardless of the first principles of Art, can scarcely fail to offend if he attempt to discuss topics of importance to his fellow creatures, or deal with themes which demand the slightest exercise of thought

properly so called. When, therefore, Mr. Swinburne touches on religious questions, he writes such verses as the subjoined which, though put into the mouth of a Roman, are purely personal, implying precisely the same conditions of thought as we find expressed in the lyrical poems elsewhere:—

Wilt thou yet take all, Galilean? but these thou shalt not take,
The laurel, the palms and the pean, the breasts of the nymphs in the brake;
Breasts more soft than a dove's, that tremble with tenderer breath;
And all the wings of the Loves, and all the joy before death;
All the feet of the Hours, that sound as a single lyre,
Dropped and deep in the flowers, with strings that flicker like fire.
More than these wilt thou give, things fairer than all these things?
Nay, for a little we live, and life hath mutable wings.
A little while and we die; shall life not thrive as it may?
For no man under the sky lives twice, outliving his day.
And grief is a grievous thing, and a man hath enough of his tears:
Why should he labour, and bring fresh grief to blacken his years?
Thou hast conquered, O pale Galilean; the world has grown grey from thy breath;
We have drunken of things Lethean, and fed on the fumes of death.

Here, as in the other poems, we find no token of sincerity. It is quite obvious that Mr. Swinburne has never thought at all on religious questions, but imagines that rank blasphemy will be esteemed very clever. He describes the Almighty as *throwing dice* with the Devil for the soul of Faustine; and in the 'Laus Veneris,' inserts the following lines, which he himself, doubtless, considers very grand:—

Lo, she was thus when her clear limbs enticed
All lips that now grow sad with kissing Christ,
Stained with blood fallen from the feet of God,
The feet and hands whereto our souls were priced.
Alas, Lord, surely thou art great and fair.
But lo, her wonderfully woven hair!
And thou didst heal us with thy piteous kiss:
But see now, Lord; her mouth is lovelier.
She is right fair; what hath she done to thee?
Nay, fair Lord Christ, lift up thine eyes and see:
Had now thy mother such a lip—like this?

Impertinence like the above can only be the work either of a misdirected and most disagreeable youth or of a very silly man. It is writing of which no true poet, fairly cultured, could have been guilty.

Gross insincerity in dealing with simple subjects, and rank raving on serious themes, make one suspicious of a writer's quality in all things; and a very little examination enables us to perceive that these poems are essentially imitative. Indeed, Mr. Swinburne's knack of parody is very remarkable, though it weighs heavily against his literary quality. Nothing could be cleverer than his imitation, here printed, of an old miracle-play; or than his numerous copies of the French lyric writers; or than his ingenious parrottings of the way of Mr. Browning. In no single instance does he free himself from the style of the copyist. His skill in transferring an old or modern master would be an enviable gift for any writer but one who hoped to prove himself a poet. Then again, though clever and whimsical to the last degree, he is satisfied with most simple effects. After a little while we find out there is a trick in his very versification, that it owes its music to the most extraordinary style of alliteration:—

It will grow not again, this fruit of my heart,
Smitten with sunbeams, ruined with rain.
The singing seasons divide and depart,
Winter and summer depart in twain.

It will grow not again, it is ruined at root,
The bloodlike blossom, the dull red fruit;
Though the heart yet sickens, the lips yet smart,
With sullen savour of poisonous pain.

This kind of writing, abounding in adjectives chosen merely because they alliterate, soon cloy and sickens; and we find

out the trick our pleasure departs. We soon perceive also that Mr. Swinburne's pictures are bright and worthless. We detect no real taste for colour; the skies are all Prussian blue, the flesh-tints all vermillion, the sunlights all gamboge. The writer, who has no meditative faculty, evinces total ignorance of nature; his eye rolls like that of a drunkard, whose vision is clouded with fumes.

But we fear we have lingered too long over this book; criticism is thriftless here. We have hinted very slightly at the tone of the poems,—in all of which pure thinking is treated with scorn, and sensuality paraded as the end of life. The impure thought finds its natural expression in insincere verses, without real music, without true colour. One word with Mr. Swinburne before we conclude; perhaps it is not too late for him to turn back from ruin; perhaps, being young, he has evil advisers. Let him, then, seek wisdom, and cast evil advisers aside. Some few years hence he will feel that the only sure hold on the public is the reputation of earnestness in life, and of sincerity in thought; yet, after publishing these poems, he will find it hard, very hard, to convince his readers that he is an earnest man or a sincere thinker. His very parasites will abandon him, and the purer light, pouring in his sick eyes, will agonize and perhaps end him. Let him seek out Nature, let him humble himself, let him try to think seriously on life and art. He it was who, in a recent preface to Byron, described Wordsworth as slicing up Nature for culinary purposes. If that description be true, a sound course of discipline in the kitchen will do Mr. Swinburne a great deal of good; for he will, at least, learn to distinguish the ingredients of things, what will or will not harmonize together, and what kind of dishes form wholesome food for grown-up men.

Chambers's Useful Hand-Books. — Yachting and Rowing. By the Hon. Secretary of the Royal Eastern Yacht Club. (Chambers.)

YACHTING has been the amusement of at least nine successive generations of English gentlemen, and it has steadily grown in favour amongst our wealthier classes since 1604, in which year Phineas Pett built a yacht for Henry, Prince of Wales. Rowing, as a sport generally popular with our youth, is, on the other hand, an affair of the present century; the first of the rowing-matches between Oxford and Cambridge having taken place in 1829, when the Tories were fully satisfied that there was neither need nor strong desire for a Reform Bill on the part of the country. But though the two amusements date from very different periods, they are so closely allied that we thank the Honorary Secretary of the Royal Eastern Yacht Club for noticing the younger pastime in the manual which chiefly concerns the older and more important diversion. Moreover, now that the season is at its last gasp, we are grateful to the author for putting us in mind of the fresh breezes of the deep, the music of white canvas and the luxurious tranquillity of the well-furnished yacht. At a time when Robert Stephenson was at the height of his fame he had only one means of escape from the persecutions of clients and projectors,—from the embarrassing importunities of admirers bent on making his acquaintance, and beggars hungry for his help. If he went to a country-house for a fortnight's seclusion, he found some of his most exacting acquaintances in the immediate neighbourhood; and for the Highlands afforded him no shelter, wherever he went, the end of his journey was to find himself with a housemaid who would have a house without a roof, and a man who would be pelted, after a

morning wasted on unprofitable callers. "Better have a house upon the sea," replied a judicious friend. Acting upon this seasonable advice, the engineer provided himself with his *first* *Titania*; and when that excellent craft was burnt to the water off Cowes, in the spring of 1852, he lost no time in ordering Mr. Scott Russell to build him without delay that better and more capacious sea-house, the *second* *Titania*, in which the happiest moments of his closing years were passed. Whilst this second vessel was in course of construction, he wrote to Admiral Moorsom, "I find I can get no peace on land. I am, therefore, preparing another sea lodging-house. I find it no easy matter to get rid of a multitude of questions which follow on a tolerably long professional life. Indeed, I find that nothing gives me actual freedom from attack but getting out of the way of the postman. The sea, therefore, is my only alternative. Ships have no knockers, happily." Like Robert Stephenson fourteen years since, there are many hard-worked gentlemen amongst us at the present time who are longing to escape from the bustle and vexations of London, and go down to the sea in ships, not that they may do their business on great waters, but that they may be altogether quit of business, and for a while be at peace with themselves and the world.

The list for 1865 of yachts registered on the books of our different yacht-clubs numbers more than a thousand vessels of various magnitudes, from the little *Alma* of 3 tons to the *Brilliant* of 420. Some of these yachts have won considerable amounts of money in sailing-matches. "The *Clarence*, 18 tons, built on the Clyde, had won 26 prizes at the close of the racing season of 1836. The famous *Vision*, 45 tons, built in 1846 by Wanhill of Poole, sailed in 34 matches and won 1,800*l.* The *Audax*, 62 tons, built by Harvey of Ipswich, in three years gained 897*l.* In a single year, 1863, the *Phryne*, built by Hatcher of Southampton, won 760*l.*,—the largest sum ever gained in one season by any yacht. In 1863-64, the *Vindex* won 942*l.* In six years, the celebrated *Mosquito*, built in 1848 by Ditchburne & Mare, won 2,300*l.*; and the *Glace*, 35 tons, built by Hatcher in 1855, in six years gained upwards of 1,800*l.* One of the most distinguished yachts is the *Pet*, of 8 tons burthen,—smaller by 2 tons than the *Golden Hind*, in which brave Sir Humphrey Gilbert went to the bottom of the Atlantic on his homeward voyage in the reign of Elizabeth. The adventures of this marvellous little toy—her brilliant exploits and hair-breadth escapes—have won a permanent place in nautical annals. Described by her owner as "about as long as a moderate-sized drawing-room, and scarcely so wide as a four-post bed," she has circumnavigated Britain, and made two voyages to the Baltic.

Of existing yacht-clubs the Royal Cork Club—originally called the Cork Harbour Water Club—is the oldest; but its exact age is unknown. Certain passages in a duodecimo manual, 'Rules and Orders of the Water Club of Cork,' published in 1765, indicate that the club was established before 1720; and some of the regulations preserved in this record illustrate the manners of a time more given to indulgence than the present ascetic age. For instance, by Rule 2 it is ordered, "That no admiral presume to bring more than two dozen of wine to his treat, for it has always been deemed a breach of the ancient rules and constitutions of this club, except when my Lords the Judges are invited"; and by a special resolution of April, 1737, it is decided "That, for the future, except the company exceed the number of fifteen, no man shall be allowed more than one bottle to his share, and a peremptory."

Hence it is to be inferred that when sixteen members of the club dined together they made it a point of honour to raise themselves to that degree of inebriety which a familiar saying represents as the normal condition of "lords." But what is a "peremptory"? Is it Irish for a tumbler of toddy? Next in seniority to the Royal Cork is "the Royal Yacht Squadron"—the most aristocratic yacht-club in the world—founded in 1815, in the month and year of the battle of Waterloo. It is the oldest yacht-club in Great Britain, and the only one entitled to carry the white ensign of Her Majesty's fleet. Its original title was the Yacht Club, and it was not until 1833 that it became known as the Royal Yacht Squadron. The headquarters and club-house are at Cowes, Isle of Wight. To become a member of the club it is necessary to be the owner of a yacht of or above 30 tons—a rule of exclusion not existing in any other club. The club which maintains the honour of London in the world of yachtmen is the "Royal Thames Yacht Club," which was founded in 1823, and has its club-house in Albemarle Street.

The difference between the yachts of to-day and the fastest yachts of the last generation is not greater than the difference between the eight-oared outriggers of our rowing clubs, and the heavy boats in which the oarsmen of Oxford and Cambridge used to contend, before the Claspers of Newcastle introduced their famous and universally adopted boats. "The first eight-oar," says the author, "brought to Cambridge, about forty years since, was 38 feet long, 5 feet wide, and 26 inches deep; whereas the average dimensions of an eight of the present day are 60 feet in length, 2 feet 2 inches in width, and 7 inches in depth." Reviewing the aquatic contests of the two universities, the writer says, "Of the twenty-three university matches that have taken place, Oxford has won thirteen and Cambridge ten; so that success has been, upon the whole, pretty evenly balanced. Of late years, however, the Oxonians have had it too much their own way. In March, 1866, they achieved their sixth consecutive victory; and since March, 1849, Cambridge has only won three times. But if we take the nine matches rowed previously to that won by Oxford on the 15th of December, 1849, we find Cambridge victorious in no fewer than seven of them." Before he lays down the pen, the author makes a brief but complimentary mention of Mr. Macgregor's canoe and paddle.

Observations on the Origin of several Manuscripts in the Collection of M. Barrois—[Observations sur l'Origine de plusieurs Manuscrits de la Collection de M. Barrois, par Léopold Delisle]. (Paris.)

UNDER the modest title of "Observations" M. Léopold Delisle gives the literary world a chapter in the history of a great crime. His proofs are minute, and occasionally somewhat difficult to explain to the world at large; but the story itself lies in a nutshell. Unfortunately, also, it has an English interest, and it is therefore our duty to explain the circumstances to our readers.

In the celebrated library at Ashburnham Place, in the county of Sussex, where repose the manuscripts formerly at Stowe, and many other similar treasures, there is incorporated a collection of 702 manuscripts formed by M. J. Barrois. This Barrois collection was purchased by Lord Ashburnham in 1842: a catalogue of it was compiled in great part by the late Mr. Holmes, of the British Museum; and that catalogue has been printed, or perhaps only adopted (and not, we believe,

published), as forming "Part the second of the manuscripts at Ashburnham Place." M. Barrois, the former owner of these manuscripts, died on the 21st of July, 1855, and M. Delisle refers to the *Bulletin* of the Société de l'Histoire de France, for the year 1856, for a notice of his tastes and labours written by M. Desnoyers.

Ashburnham Place lies somewhat out of the way, and the library of the noble owner is not, we believe, much visited by literary inquirers; but, within the last twelve months, at least two foreign literary men have been admitted to inspect its contents, and have been treated by Lord Ashburnham with most becoming courtesy. On the return to France of the latter of these gentlemen, he bore with him, as the gift of the owner of these treasures, two copies of the catalogue of the manuscripts at Ashburnham Place, one copy presented to himself, and the other to the Manuscript Department of the Bibliothèque Impériale, with which M. Paul Meyer, the gentleman alluded to, is connected. Very shortly after his arrival in Paris, M. Meyer lent his own copy of this catalogue to M. Delisle, and hence the present pamphlet.

It is scarcely necessary to remind our readers that, some years ago, it was discovered that a considerable number of manuscripts were missing, and were stated to have been stolen, from the Library now called the Bibliothèque Impériale. The time during which this abstraction took place cannot, we believe, be fixed with absolute certainty; but it appears from the present pamphlet of M. Léopold Delisle, with which alone we are dealing on this occasion, that most of the books which are now in question were removed from their places in the Bibliothèque between the years 1837 and 1848.

M. Delisle informs us that he had no sooner run through the earliest pages of the Catalogue of the Barrois collection than he was struck with the resemblance which several of the volumes bore to some of the volumes missing from the Bibliothèque Impériale. Pursuing his investigations, and availing himself of all the information and assistance that could be brought to bear on the circumstances by which his suspicions had been excited, he has ultimately arrived at the conclusion that no less than thirty-three of the most valuable volumes of which the Bibliothèque had been plundered, were picked up by M. Barrois, and are now in the possession of Lord Ashburnham. Some volumes still remain unaltered, others have been cut into pieces, "whether," M. Delisle remarks, "the plunderers desired in that manner to conceal their roguery, or whether they found it more advantageous for their traffic, to multiply the apparent number of the manuscripts."

The pamphlet before us contains an account of each one of these thirty-three volumes, as they once stood "upon the modest shelves" of the Department of Manuscripts in the Bibliothèque, with a detailed statement of the evidence by which it is said to be established that they are identical, either in the whole or in part, with certain volumes which "have found an intelligent hospitality in the splendid gallery of Lord Ashburnham." For all these particulars we refer to the pamphlet itself. If its statements are accurate, the conclusions of the writer seem in most cases to be irresistible.

Nor is it our desire or intention to enter into any consideration of personal blame with reference to the transaction as it is explained by M. Delisle. There is no hint from the beginning to the end of his pamphlet of any want of caution attributed to or insinuated against Lord Ashburnham, nor have we one

word to say upon that subject. It would have been far more agreeable to us if the volumes had still remained on the shelves of the Bibliothèque; but as it is, we rejoice that they have so far been recovered, and are found to be in safe hands. It is a pleasant thing, for example,—to give an instance or two relating to manuscripts specially interesting to Englishmen,—to know that the MSS. of Créton's 'Metrical History of Richard II.,' described by the late John Allen and Mr. Petrie for Mr. Webb, and the Chronicle of Jean Le Baud, sought for in vain by the late Mr. Benjamin Williams, are still within the reach of historical inquirers; but the points which we feel to be most especially pressed home upon literary persons and keepers of manuscripts by this pamphlet are those which affect the safety of similar manuscripts in the same and in other collections. It is customary to sneer at the tardy carefulness which shuts the stable-door when the steed has been stolen; but it must be borne in mind that in this case there are many other steeds, all equally liable to attract the plunderer,—and M. Delisle's "Observations" should be accepted as a call to the exercise of all proper acts of intelligent and watchful care on their behalf.

Let it not be supposed that we are inclined to advocate anything like a jealous or suspicious restriction. Far from it. Mere restriction puts roguery upon its mettle, excites a contest in cunning between the knave and the keeper, and too often defeats its own object. Liberal use of impressed stamps, numeration of pages, frequent collation, orderly keeping and accurate description in catalogues and calendars—these are invaluable, and should be practised perseveringly; but besides and beyond all these, there is nothing so effectual as unrestricted openness and publication. Whenever a case of loss occurs it should be made known, not merely be investigated by a board of trustees, or in a private chamber, and so be hushed up. It should be brought to the light—for light, in this matter, as in everything else, is the great protector of right, and the best defender against wrong.

Again, there ought to be a courteous intercommunication upon such subjects between the chief libraries and record offices in Europe and America. Each should communicate to the others its marks and systems of check, and, as soon as they occur, its losses. Such friendly interchange of information would deprive roguery of one of its chief temptations,—a market for its stolen wares.

There is one other point which this subject brings before us,—the practice, which we are told is not uncommon, of purchasing miscellaneous volumes of manuscripts, separating the articles which they contain, rebinding them, each article by itself, and then selling them as so many single manuscripts. We do not say that this is always wrong, or that it can be put a stop to: we do not think it can. But that such a practice presents

A means to do ill deeds,

and therefore

Makes ill deeds done,

is obvious; and society, enlightened as to the evil which is thus generated, ought to pronounce strongly against those who be they who they may—who customarily resort to this expedient without good reason, and merely as a way of making money.

The Sportsman and Naturalist in Canada. By Major W. Ross King. (Hurst & Blackett.)

It is not often that a sportsman and naturalist, who has been occupied in pursuits so agreeable and exciting for the space of three years, in a climate so abounding in every requisite for their thorough enjoyment, can bring himself to

describe the results of his sport and observation in a tone and style so unpretentious, and so evidently free from the slightest exaggeration, as characterize and give a charm to the work before us. Truthful, simple and extremely observant, Major King has been able to throw much light upon the habits as well as the zoological relations of the animals with which he came in collision; and as his descriptions of the country as well as of the creatures inhabiting it are as bright and graphic as they are evidently correct, his book is calculated to induce many who have hitherto confined themselves to European fields of sporting adventure to cross the Atlantic, and to follow him amidst "the forests, lakes and rivers of British North America"; for, as he assures us, "whether to the sportsman, the naturalist, or the traveller, nothing can be more alluring than its vast tracks of primeval forest, inhabited by moose and caribou,—its game-stocked prairies of boundless extent,—and its broad rivers, filled with silvery salmon and spotted trout, flowing through grand and picturesque solitudes, little known and less frequented. Taking the St. Lawrence route," he proceeds, "the traveller from our own country is landed at Quebec in about ten or eleven days. He may revel among the salmon rivers below that city; strike up country in pursuit of large game; make a pilgrimage to the Falls of Niagara; float over the great lakes; fill his sketch-book with the glorious views that everywhere attract the artist; may kill his grouse on the broad prairies; and be back again before winter, relating his adventures by his own fireside."

The author has critically and successfully employed the very favourable opportunities which his journeyings afforded him of correcting, by repeated observations, the errors which have been handed down from one naturalist to another, without either the means or the care necessary to test their fallacy. Where the habits of animals are peculiarly interesting, either from the relation which they hold to mankind, or from the perfection and variety of their instincts, there is a natural tendency to exaggerate, or at least an indisposition to eliminate any portion of the marvels which have been attributed to them; and in proportion to the degree of the wonderful which the truth itself exhibits, is the proneness to exaggeration. Hence it arises that the evidences of intelligence in the dog, the elephant and the beaver have, perhaps, been more elaborately overstated than in other animals of inferior instincts; and in the last of these examples there is so much that is really wonderful in their daily life, that we feel obliged to Major King for the very interesting history which, from his own observation, he gives of their true habits, and the clear manner in which he has refuted the fables of former writers. We therefore quote a considerable portion of the account he gives of this animal, which at the same time affords a fair example of his style:—

"The skill and sagacity of these animals in the erection of their dwellings can hardly be over-rated; for the ingenuity shown in the prosecution of their labours appears to be rather the result of thought and reflection than of mere instinct. But many plans and devices have been attributed to them of which they are perfectly innocent. For instance, it is a fallacy to suppose, as many do, that the beaver drives in stakes, or that it first forms a framework of wood, and then plasters it; neither is it a fact that its hut is made with back and front doors, or that in finishing its house it uses its tail as a trowel, constantly dipping it into the water, and smoothing the clay surface like a plasterer. The flapping of the tail, which has given rise to this vulgar error, is a habit which the beaver indulges in as much on the dry ground or tree-trunk as on

its own house-top. The exterior of the hut is certainly most neatly plastered over, and the wonderful sagacity of the animal teaches it annually to re-plaster the structure before the setting in of winter; but the original building is all made at one time, and is done entirely by the paws, which are also used in carrying both mud and stones. Wood is usually brought in the teeth, unless large logs are required, in which case they are floated down stream to the desired position. Beavers are popularly supposed to fell large forest trees, but they never attempt one above two feet in circumference at the utmost; and this is sufficiently wonderful, especially considering the extraordinary neatness and celerity with which the work is done. It is a curious fact that they thus fell and prepare the wood for new huts early in summer, though they do not use it till the autumn. * * * Traces of their former habitations are still visible in many of the more cultivated and populous parts of Canada. In one of these interesting remains near Niagara, called 'Beaver Town,' the dam—which they invariably erect across streams in which the supply of water is liable to be cut off—is of such large dimensions and regular workmanship that at first I could hardly be persuaded it was not the work of human hands."

We are tempted to offer one more extract as an example of the author's descriptive style:—

"As the mountain scenery of our Highlands forms so great a portion of the enjoyment of grouse-shooting, so does the majesty of these ocean-like plains add to the fascination of prairie-hen shooting. There is something even supernaturally impressive in their vastness, everlasting silence and solitude, and in no other situation, perhaps, does man feel more strikingly what an atom he is on the face of the earth, than when fairly launched on the prairie. With a glorious feeling, however, of unbounded freedom, he wanders on over the grassy surface, which, dotted with bright flowers and brighter butterflies, gently rolls in the undying breeze that ever fans the plain. Here and there is a clump of stunted trees, or a patch of brushwood, but these can hardly be said to break the uniformity of the surface, for they are completely lost in the immense space, and are rarely noticed at all till close at hand. Indeed, so utterly destitute of any landmark is the face of the plain, that a person unused to move alone in these regions would quickly lose his way, and might wander on with a hundred miles of prairie before him, in vain search of the point he had started from, each moment serving only to increase his distance from it, and every weary step leading him further away from human aid, fainting with fatigue and parched with thirst. No one should venture alone for any distance on the prairie until thoroughly able to trust himself to steer his own way by the aid of the sun."

That so intelligent and keen a follower of such sports as are afforded by the game animals of Canada must often have met with adventures of the greatest interest and excitement cannot be doubted; and we look upon it as a deficiency much to be regretted, that there is so little of "personal narrative" throughout the book. The evident truthfulness of Major King's statements renders this deficiency the more to be lamented, since it often happens that the exciting histories of hairbreadth escapes, of daring escapades, or of appalling hardships recorded by sporting travellers, carry with them such an air of exaggeration as greatly to lessen, in the minds of sober readers, the interest which they would otherwise produce.

Whitney's "Choice of Emblems." A Fac-simile Reprint. Edited by Henry Green, M.A. (Reeve & Co.)

THE industry and exuberant affection of Mr. Green for the almost forgotten work of Whitney are altogether creditable to him. If these qualities remained at their old price, he would do an honour to his age,—admired as one who has picked from the very edge of Time's

encroaching sea a large and worthy work of another age. We call this book worthy because it would be a pity it should be wholly lost; forgotten, notwithstanding Mr. Green, it is sure to be. In truth, it deserves a place upon our shelves, not in our memories.

Who was Whitney? what are his "Emblems"? most readers will inquire. Mr. Green's elaborate introductory dissertation to this book will help us to answer both queries. He was a man of a family of old date in Herefordshire and Cheshire, born in the middle of the sixteenth century, at Coole Pilate, Acton, in the last-named county; and in 1586 he published this book,—an admirable reprint of which is now before us. The reprint is in fac-simile, by means of photo-lithography of the version published at Leyden in the above-named year,—so carefully made that the very imperfections of the copy employed for the purpose, the faint impression of the blunt but often picturesque type, due to bad inking and coarse paper, and other characteristics much beloved by bibliomaniacs—are reproduced; so that the copy before us needs no more than the fusty smell of decaying leather and paste, the devious tunnels of the book-worm and his many brethren, to be as venerable as that which Francis Raphelengius imprinted in the house of Christopher Plantyn, at "Leyden of the Batavians," while Sir Francis Drake was coming home with the spoils of Hispaniola, and with tobacco and potatoes, while Mary Queen of Scots was thinking of death, and Robert Dudley, to whom this book is dedicated, was Stadtholder of the Low Countries, just at the date Sir Philip Sydney died and the Spanish Armada began to be whispered about. To this all-sufficient work Mr. Green has added essays, literary and bibliographical, illustrating Whitney's "Emblems,"—a labour of the most recondite kind, apt to the occasion, and enriched with notes of great interest to the student. The Addenda comprises a series of illustrations to the text itself, and the sources from which Whitney—who plagiarized freely—drew his materials, when he did not invent them. This section comprises fragments from many books, titles, engravings on wood of portraits, views and the like. To this portion of the book the student, especially if he be an artist, and not a simple Whitneyan fanatic, will turn with the greatest pleasure. Some of the examples have much beauty. Many are, however, so blurred as to be scarcely worth looking at,—for example, Plate 26: this was due, no doubt, to the defective originals employed in that case. Others are trivial, and not worth the trouble of copying,—see pages 29, 30, 31, &c. The portraits are among the best of these illustrations; one of Sebastian Brant, the great emblemist, author of the 'Ship of Fools,' to which Coke alluded in that spiteful epigram of his, written on the title of a presentation copy of Bacon's 'Organon.'

Mr. Green's contribution in honour of his author and the subject comprises, primarily, an excellent essay on the nature and form, as well as the application, of emblem-books, beginning from the period of the Cebes, 400 B.C.,—to say nothing of Scripture and Homer. With regard to the latter, we submit that the description of the shield of Achilles comprises rather a series of pictures, or bas-reliefs proper, than of mere emblems in the common meaning of the term. Mr. Green, in the summary, neglects, to our surprise, all mention of three of the great schools of emblematic design; these are the Christian ones, the Byzantine, Romanesque and Gothic series; so that, while he breaks off his account with Decius, it is not resumed until paganism reigned in Art again, in the

latter part of the sixteenth century. This omission is most extraordinary in such a summary, and is so complete that one fancies it must be wilful; whereas classic and later sculptures come in for reference, even to the emblem on a medal.

The long-enduring and extraordinarily interesting, withal peculiarly Christian works produced by the three great schools, which spread from Ireland to the utmost non-pagan East, are overlooked. To say nothing of what may be found in the depths of Georgia, the mosaics and sculptures of Byzantium, Thessalonica and Ravenna, the carvings of deepest import, purely emblematic as they are, that decorate every Romanesque church from Tarascon and St. Gilles to Tournay, and eastwards of these, loaded the portal sides and pillars of the ecclesiastical buildings and palaces with wealth of emblems that are uncountable. If Christian Art alone is excluded from the scheme of this book, why not say at least a word for the Indian symbolic sculptures and those of Norse origin? The great school of Gothic design furnished of these matters not only the most extensive but the most profound and diversified treasures; but none is richer, if any so rich, in thought, invention and fancy, as this. From the cock of the vane, to the devices of the monumental brasses that lie on the pavement, the Christian churches—in their misere seats, their carved capitals, corbels, bosses and tympana—are literally inexhaustible of emblem and symbol.

We observe this remarkable omission, not so much in the way of complaint, as in that of surprise that an author, who has shown himself so eager and industrious with regard to his one pursuit, should forget even to mention the branches connected with his subject. Again, heraldry is all emblems. Had the subject been confined to book-illustrations it would have been well to say something about the illuminations of France, Flanders, Germany and England. The Bestiaries of the Middle Ages are truly early emblem-books long anterior to the 'Ship of Fools.' The works of MM. Martin, Cahier and Hippeau would have guided Mr. Green to this curious, little-studied branch of Christian Archaeology, which is far richer in mind, and, apart from its religious aspect, better worth examining, than the rude, cumbrous and intricate symbolism of the sixteenth and seventeenth centuries. Mr. Green says on the decay of the latter:—"What are the causes, we may ask with some misgiving as to the exact reason, that a literature has almost become forgotten, which only three centuries ago was thus popular and flourishing throughout Europe? It seems to have passed away from man's knowledge; it is studied as a branch of antiquities rather than of learning,—as inscriptions disinterred from the catacombs of bygone ages, and not as the memorials of the wit and wisdom of some of the foremost scholars of Italy, France, Spain, Germany, and the Netherlands. We have here a perplexity which at first we shall find it difficult to unravel. The early emblem-books delighted the literati of their age; they were patronized by popes, emperors, and kings; they were illustrated with a superabundance of artistic skill, and remain unsurpassed even in modern times for beauty of execution."

To this we demur that, except the emblematic artists themselves, who are surely not to be quoted in this case, we believe few men who were otherwise great gave any deep attention to such works, unless as casual parts of the literature of their time. Hence it is that, frequent as are the references to the matter of these books in still existing books, those references are

out of all proportion small in relation to the vast bulk and space occupied in that then current literature by the emblem-books. Fifty editions of a single work of this class have left scarcely a trace, not only of its own body proper in actual copies of the book, but on the mind of the next age. Their nature was, as the editor states, saturated with Latin; but this was not their only objectionable quality. Æsop and Phædrus, whom we may call emblem-writers, prove that classic works can become popular in a language far removed from their own. If Spenser imitated Whitney, it is also true that he imitated better models. Spenser himself is more talked about than read. The truth is, we fear, that the writers of the class in question were cumbrous, artificial, and, to a great extent, false and shallow in thought as in manner. There was not enough to bear the wear of two generations in Whitney, the best Englishman of his kind.

As to the "beauty of execution," in the engravings, we may observe that, from the artists of 'Der Weyss Koneg' to Bewick, or even more recent and inferior men, there are scores of illustrators whom we should be ashamed to compare with Whitney and his Low Dutch wood-engraver, as reproduced here. This is the truth, not only with regard to a comparison made between the respective artists as draughtsmen, but as inventors.

Why emblem literature has died out of use, as well as of knowledge, may be answered by any one who will candidly examine a book of the class, say the one before us. He will find there are wonderfully few traces of life in it; that the gist of the reader's occupation consists in comparing the illustrations with the text, to see whether or not the former exactly coincides in its details with the allusions of the latter; that is, if the figure of Fortune does indeed hold a wheel; those of the abstract virtues, vices, or other personifications, are duly equipped, as the versifier at foot of their pictures in the most straightforward manner declares they should appear. "Emblems" of the kind and period in question were the mere dregs of allegory as then enjoyed. They were forgotten, that is, they found their level sooner than allegory, and have long been sunk out of sight. Their nature is so remote from the best literature of the present time that it is not hard to believe they were at first the exercise of the most ponderous among the slowest minds of their day, whose tardy wits were disturbed rather than warmed by the great Latin flood of the sixteenth century. In fact, they seem to us to possess but rarely any fair proportion of thought or vitality to the hugeness of their mass. Human nature, never very tolerant of "old-fashioned" things, set the load down in the second generation after its ripening, or as soon after as possible. We are bound to say that the intense dullness of the greater portion of emblematic literature and art was now and then redeemed by sparks of splendid wit; but the occurrence of such was so rare as hardly to be worth looking for. This wit—we use that term in its strictest sense, as the distinctive quality of mental vitality—was not brighter than that which supplanted it in the next generation of writers and artists; hence it seems to have fallen into disuse.

It would never do for us to cite examples of dullness. The reader will, therefore, readily forgive us for not proving what we say by quoting from this text; suffice it, that those who care to do so can read what is said on page 194, "To the Honourable Sir John Norris, Knight," &c.,—where the ludicrous nature of the anti-climax that is made between the subject and its treatment will almost repay perusal. On pp. 196 and 197 is a long piece

of prose in verse, interspersed by doggerel, which is one of the best items of this text; in this there are one or two points, the echo of a stronger, sweeter song, as if the man who had been accustomed to good singing might, in a few notes only, do not badly himself. It is a very poor thing at best, and but meanly praises "Edwarde Dier, Esquire." Take the last four lines:—

— Your worthe workes when you in peace shall sleepe,
Shall make reporte of your desertes, and Diers name shall
keepe,
Whom I doe reverence still, as one of Pallas peeres;
And pray the Lorde, with joyfull dayes for to prolonge your
yeares.

If there is anything valuable in a work of this sort, one would expect to find it at the end or climax to which the poet strove. There is not much in the above. This "poem" is headed by a figure, very badly drawn and engraved,—as we must say, with all deference to Mr. Green's knowledge,—which is puerile in conception, representing a naked boy blowing a trumpet as he flies through the sky, girt only by a laurel-bound pen. Whitney, with exquisite simplicity, says that he had offered this precious "Embleme" to Sir P. Sydney, who refused it (one guesses why), and it belonged or was due to "Dier," who probably was not so magnanimous as Sir Philip.

We have written the above in all respect for the industry and single-mindedness of Mr. Green: for those qualities we have the greatest admiration; although it is obvious that he might have gone deeper into literature than the 'Pictorial History of England' for some of his matter, yet he is undeniably an ardent student. Our regret is that what he undertook to do was barely worth doing at so great a cost; it could not have been done at all without much labour.

Chronica Monasterii S. Albani.—*Johannis de Trokelowe et Henrici de Blansforde, Monachorum S. Albani; necnon quorundam anonymorum Chronica et Annales, regnantibus Henrico Tertio, Eduardo Primo, Eduardo Secundo, Ricardo Secundo, et Henrico Quarto.* Edited by Henry T. Riley. A.D. 1259—1406. (Longmans & Co.)

THE history of England—of its politics, manners, and morals—is beginning to be rendered amusing to all readers who choose to study the new sources opened up by the chroniclers, and rendered accessible by Mr. Riley and his brother editors. In an elaborate Preface, Mr. Riley gives some account of the writers of the above-named works, and he exhibits his well-known care, industry, and learning in illustrating the works themselves, and in comparing them with chronicles, by other authors, which refer to the same times and to the incidents that made them lively. Some of Mr. Riley's best editorial qualities are also shown in the annotations to the text.

In the old days there must have been much enjoyment in the compilation of these old chronicles, and as much in listening to the reading of them in the Scriptorium, while the limners were busy at the artistic work by which they rendered the black-letter manuscripts of the "pulchri Scriptores" all ablaze with golden initial letters, and glowing with miniature pictures, and graceful with marginal ornaments of the daintiest fancy and execution.

The historian of those days was not very nice as to facts; he copied what he found in other chronicles, added what he heard from fellow-monks of his own convent, or who were visitors to it from distant monasteries. He had a capacity for swallowing all things, no matter how great or how trivial; he noted the fall of kingdoms with as much unconcern as the fall

of a leaf; in one page he almost approaches to being a philosopher, in the next he is a mere penny-a-liner, or of that quality. State events bearing the weightiest consequences are put down side by side with the merest gossip about monstrosities that could never have happened or existed. In some of these stories it is easy to see how an indifferent matter told in one monastery grew portentous as it passed through others, and came to most astounding conclusions as the chronicler, half fearful, half exultant, and wholly credulous, made record of the story in the work of which he was the compiler. Then—if ever—might be truly said of each story,—religious, social, or political,—

And they who told it added something new,
And they who heard it made enlargement too,
In ev'ry ear it spread, on every tongue it grew.

Out of some such process must have grown that Dragon of Sudbury which, in 1405, is said to have devoured not only the flocks but their shepherds. This beast was said to have an enormous body, crested head, serrated teeth, and a tail altogether unreasonably long, "cauda protensa nimia longitudine." There is no evidence, however, that any one ever saw the monster. The whole country was summoned to go forth and destroy it; and hundreds of arrows were let fly at something, but nothing was killed. The arrows fell harmless, and fresh supplies were brought up. When the new assailants went to closer quarters, no beast was to be found; and the conclusion that he had been alarmed at the new attack, and had consequently slipped away into the marsh, was immediately made, and unanimously adopted. The narrator, however, tells the whole as a simple fact, and appears to have no suspicion of sheep-stealers who might have knocked the brains out of the shepherds who defended their flocks. If dragons could complain, they would have a very respectable grievance.

Not unfrequently there is really some powerfully descriptive painting in these sketches. "Bushey, Bagot, Green," are names more familiar to us, perhaps, through Shakspeare than the historians; but more may be learnt of them, especially of the first, through these St. Albans monks. That villain Bushey is hit off with a vigour which indicates a writer who loved to draw the hideous figure of a consummate rascal.

Occasionally, too, haste rather than ignorance perhaps misled these chroniclers. Here, when the writer is narrating the incidents of the escape of Roger Mortimer from the Tower, where that nobleman and others who had surrendered on promise of good treatment, were used less civilly than they had a right to expect, "minus civiliter quam decuit" the writer tells us that Roger was divinely helped to escape, as the blessed Peter was from the bonds of Nero!—"vinculis Neronis." Mr. Riley notices this slip of Nero for Herod; but it is well that the monk did not make it in the days of publishing and reviewing.

There is one very interesting feature in these Chronicles. When dealing with the character of Richard the Second, they show how closely he imitated his father, the Black Prince, in everything but his virtues. Our readers may remember that at the Council of 1374, at Westminster, Prince Edward called Whittlesey, Archbishop of Canterbury, an ass, and bade him hold his tongue. So here, we find, when that villain Bushey was maligning the good Duke of Gloucester, Archbishop Arundel rose to defend the Duke, and indeed himself also. King Richard, however, would not allow the prelate to utter a word; with outstretched hand he signed to him to be silent, rudely ordered him to sit down, and hinted that it would be

more to his advantage if, on this occasion, he kept his own counsel. The Chancellor-Archbishop was doubtless of the same opinion, for he soon after withdrew from the kingdom, whither he did not return till the halcyon days of Henry the Fourth.

Richard seems to have cordially hated all the Arundels, whether they were Earls or Archbishops. Three years previous to this scene with the prelate, a singular incident occurred (at a solemn moment, too), which is among the most singular of the traits of character of Richard the Second, and which will, probably, be new to many. Other chroniclers have told us that at the funeral of the King's consort Anne, at Westminster (1394), the Abbey was polluted by blood; but the details have not hitherto been generally known. Richard's grief for the loss of his well-loved queen was so uncontrollable that he utterly destroyed the palace at Shene, where he had passed happily and decently some few years of his otherwise unhappy and indecent life. The loss of his queen seems to have shaken his reason, if we may judge by what occurred at the royal obsequies.

These had only just commenced when Richard Fitz-Allan, Earl of Arundel (he who was afterwards beheaded in Cheapside, while his nephew, the Earl of Kent, guarded the scaffold), entered the Abbey. He had not been present in the procession which escorted the body from St. Paul's to Westminster, and he now, on entering the Abbey, sought the King's permission to retire, "propter certas causas quæ eum urgebant." The King was offended and full of wrath, though the chronicler thinks it was for little or no cause. Richard thought otherwise; he snatched a staff from one of the beadles, and dealt a blow therewith on the skull of the astonished Earl, that laid him on the pavement, senseless and bleeding. The King would have slain the Earl as he lay mutilated and helpless but for the intervention of the bystanders. One consequence was that the royal funeral rites had to be deferred. The holy edifice had been defiled by blood, and it must be purified by prayers and ceremonies and almsgiving before any office could be celebrated therein. Universal disturbance and confusion prevailed; but after a certain interval the expiatory services were gone through, after which the funeral rites were celebrated, and the mourners at length departed in the very depths of the night.

As it has been reported that the publication of this important historical series is drawing to a close, we may as well gratify those who are interested therein, by informing them that twenty-one new volumes are now passing through the press; and that several other works are in progress, among which latter is a continuation of the *Chronicles of St. Alban's*, including that of Matthew Paris, which is entrusted to the efficient editorship of Mr. Riley.

Prison Life of Jefferson Davis. Embracing Details and Incidents in his Captivity, with Conversations on Topics of Public Interest. By Lieut.-Col. John J. Craven, M.D., late Surgeon U.S. Vols., and Physician of the President during his Confinement in Fortress Monroe, from May 25, 1865, up to December 25, 1865. (Low & Co.)

ON May 19, 1865, just five days after the assassination of Abraham Lincoln, the propeller William P. Clyde dropped anchor in Hampton Roads, and it was announced on shore that the vessel contained, together with other captives, state-prisoners, for whose safe custody the

commander of Fortress Monroe was making special preparations. Three days later,—whilst the body of the murdered President was awaiting interment, and whilst the American people were profoundly moved by the calamity which had befallen them as well as by reasonable fears that desperate men were ready to renew the assassin's abominable endeavour to upset the Federal Government, and plunge society in the horrors of anarchy,—these two prisoners were moved from the Clyde to the fortress, and there consigned to narrow quarters and vigilant guards. On their way from the Engineer's Landing to the Water Battery Postern they were watched by eager observers, who, after a hasty survey of both captives, concentrated their attention on the more notorious of the two—a tall, emaciated, cadaverous man, exhibiting various signs of physical exhaustion and nervous irritability in his wan face, twitching lips and uncertain gait. His slender frame could never have been robust; but acute suffering, constant labour, and long-continued sleeplessness had combined with advancing years to deprive it of the dignified erectness which had formerly been one of its characteristics. Disease had deprived him of sight in one eye; and as he walked unsteadily before the curious crowd,—his military gaiter at his side, and a strong guard of soldiers marching in the rear,—the vision of his other eye was disturbed by the floating specks and other forms of optical delusion that frequently trouble nervous invalids. Soon he had passed within the walls of the fort, had entered his appointed cell, had shuddered as the heavy doors of his prison closed upon him with a clang, and had glanced through the embrasure which commanded a view of the moat. The prisoner was not alone. Within the casemate were two soldiers, who had received orders to keep unintermitted watch and strict silence. "After surveying the premises for some moments, and looking through the embrasure with such thoughts passing over his lined and expressive face as may be imagined," the feeble and careworn captive "suddenly seated himself in a chair, placing both hands on his knees, and asked one of the soldiers pacing up and down within his cell this significant question, 'Which way does the embrasure face?' The soldier was silent. The prisoner, raising his voice a little, repeated the inquiry. But again dead silence, or only the measured footfalls of the two pacing sentries within, and the fainter echoes of the four without. Addressing the other soldier, as if the first had been deaf and had not heard him, the prisoner again repeated his inquiry. But the second soldier remained silent as the first, a slight twitching of his eyes only intimating that he had heard the question, but was forbidden to speak. 'Well,' said the captive, throwing his hands up and breaking into a bitter laugh, 'I wish my men could have been taught your discipline.' Unable to draw so much as a monosyllable from either of the sentries, he thought with silent sadness of times when, as Secretary of War for the United States, he had been received with military honours by the authorities of that same gloomy stronghold in which he was now a dishonoured prisoner. Thus had the fierce struggle of five years ended. The clever, resolute, unscrupulous politician, who had plotted the destruction of the Union whilst bound by oath to further her interests and frustrate her enemies,—the fearless chieftain who had maintained the unequal struggle long after success was possible,—the first mover and foremost captain of the great insurrection, was at the mercy of the power whom he had betrayed, defied, and humiliated. At length the lion was caged. The hunters had

caught the terrible Jeff. Davis, whom hundreds of thousands of Northern soldiers had so often vowed to hang on a sour-apple-tree. And now that he was caged and caught, the shrewdest directors of American politics were beginning to realize the embarrassing consequences of the capture, and to wish that Col. Prichard had failed to apprehend the prisoner, or that President Johnson had a good excuse for letting him go free.

Further humiliation was in store for the late President of the Confederate States. On the morning after his incarceration he was manacled, in accordance with orders sent to Fortress Monroe from the seat of government; and though subsequent events incline us to think that there was no actual necessity for this extreme measure, few persons will censure President Johnson for taking every precaution against his prisoner's escape. With Abraham Lincoln still unburied, with Mr. Seward still in a condition of imminent danger from wounds inflicted by a murderous assailant, with hourly increasing evidence of a hideous conspiracy to assassinate the members of his Cabinet, with good grounds, moreover, for suspecting that Mr. Davis had connived at the diabolical project of the conspirators,—the American President would have deserved censure had he been influenced, by commiseration for the fallen leader, to omit any step that might contribute to the safety of the State. Lieut.-Col. Craven seems to think that in putting Mr. Davis under the restraint of fetters, the Washington Government offered an unprovoked indignity to a fallen hero, and put a stain on the honour of their nation. In this estimate of an unpleasant, but certainly not reprehensible, incident of the prisoner's captivity we cannot concur. The occasion was not a suitable time for exhibitions of philosophic moderation or christian leniency, but a crisis that demanded prudence and severity. Moreover, as soon as the reasonable alarm of the country had subsided, and President Johnson could form a just opinion of the nature and dimensions of the sanguinary plot which had deprived the republic of its chief magistrate whilst it threatened the nation with still greater calamities, he directed the irons to be removed from the captive. On May 28 Mr. Davis was released from the fetters, which he was compelled to wear for no more than five days. When due consideration has been given to the state of the country and the excitement of the public mind against the man who was believed to have signified approval of Wilkes Booth's hideous purpose, most readers will agree in thinking that Andrew Johnson's treatment of Mr. Davis cannot be described as vindictively cruel or unjustifiably rigorous. In other respects the prisoner experienced from the authorities a measure of mercy for which many a Northern officer, languishing in a Southern prison, had sued in vain. He had not been in Fortress Monroe five weeks before he was permitted to take daily exercise on the ramparts, and was supplied with books, newspapers and writing materials. Instead of limiting his diet to prison fare or the food provided for common soldiers, the Government allowed him sustenance suited to an invalid whose constitution had been undermined by dyspepsia, and whose health had been irreparably injured by the toils and misfortunes of miserable years. Col. Craven was permitted to supply from his own table rations for his patient, and was directed to pay careful attention to his bodily ailments. Before his incarceration had extended to five months, state-prisoner Davis was removed to Carroll Hall, in order that his detention might be rendered less wearing to his spirits, and through

them to his physical powers. To say that he has found the last fourteen months of his existence wearisome, monotonous, and abounding with irritations, is merely to say that he has been kept under personal restraint. To remark that during the same period he has given way alternately to peevishness, despondency, petulance, and violent dissatisfaction with the American Government, is but to record that he has behaved very much as a prisoner and an invalid might be expected to behave. Upon the whole, Col. Craven's account is calculated to rouse sympathy and respect for the captive, whose demeanour in adversity appears, upon the whole, to have been decorous and manly, although it often lacked the dignity and philosophic composure which romance delights to attribute to heroes in misfortune.

So far as the author's part in the events of his narrative is concerned, we do not see much that calls for disapproval; but in several places the tone of his book—inviting us to regard Mr. Davis as a victim rather than an offender, as a defeated patriot rather than a baffled traitor—ill becomes a servant of the Federal Government. In laying aside all sentiments of personal animosity for his patient, and in using every legitimate means to lessen the discomforts of his position, Col. Craven merely proved himself a humane and generous physician; but by thrusting himself forward as the apologist and defender of a state-prisoner whose actions are about to become an affair of inquiry in a court of justice, he has certainly exposed himself to a charge of disrespect to constituted authority. When he claims credit, as Mr. Davis's self-appointed advocate, for having published "absolutely the first statement in his favour," he seems to have too completely lost sight of the public enemy in the private friend. The course taken by the American Government and country with regard to the Confederate President makes it sufficiently clear that the medical colonel is not alone in his wish that the fallen chief should experience merciful treatment; but though there is a very general desire amongst Northern politicians to deal leniently with the man who, beyond all other persons, was the originator of their late troubles, a decent regard for the dignity of their nation has hitherto restrained them from untimely expressions of pity for his personal sufferings. Partisans often fall into the blunder of thinking themselves very generous when they commit the culpable indiscretions of enthusiasm; and we are of opinion that Col. Craven would have been at the same time more discreet and more generous to those who have the highest claim upon his consideration had he been less ready to censure the Government of the United States for their conduct under circumstances of peculiar difficulty.

But though the author does not command our approval, we can commend his book for its entertaining pictures of a man who has engrossed a large share of the world's attention during these later years, and whose right to a place amongst remarkable political adventurers is admitted by those who most warmly refuse to give him rank amongst the heroes of history. Some of the ex-President's criticisms upon his ministers and generals are worthy of especial notice. The failure of the rebellion he assigns to the failure of the Confederate finance, for which collapse Mr. Memminger is held accountable. "Had Mr. Memminger," the ex-President remarked to his physician, "acted promptly on the proposition of depositing cotton in Europe, and holding it there for two years as a basis for their currency, their circulating medium might have maintained itself at par to the closing day of the struggle; and that in itself

would have ensured victory." Explaining more exactly the proposal which the South Carolinian financier declined to carry out, Mr. Davis added, to his physician:—

"At the time of secession there were not less than three million bales of cotton in the South—plantation bales of 400 pounds weight each. These the Secretary of the Treasury recommended to buy from the planters, who were then willing, and even eager, to sell to the Government, at ten cents per pound of Confederate currency. These three million bales were to be rushed off to Europe before the blockade was of any efficiency, and there held for one or two years, until the price reached not less than seventy or eighty cents per pound—and we all know it reached much higher during the war. This would have given a cash basis in Europe of not less than a thousand million dollars in gold, and all securities drawn against this balance in bank would maintain par value. Such a sum would have more than sufficed all the needs of the Confederacy during the war; would have sufficed, with economic management, for a war of twice the actual duration; and this evidence of Southern prosperity and stability could not but have acted powerfully on the minds, the securities, and the avarice of the New England rulers of the North. He was far from reproaching Mr. Memminger. The situation was new. No one could have foreseen the course of events. When too late the wisdom of the proposed measure was realized; but the inevitable 'too late' was interposed. The blockade had become too stringent, for one reason, and the planters had lost their pristine confidence in Confederate currency. When we might have put silver in the purse, we did not put it there. When we had only silver on the tongue, our promises were forced to become excessive."

Again and again, with every sign of sincerity, Mr. Davis indignantly declared his innocence of complicity with Wilkes Booth; and on one occasion he expressed his abhorrence at and regret for Mr. Lincoln's assassination in words which are thus condensed by his medical reporter:

"Of Mr. Lincoln he then spoke, not in affected terms of regard or admiration, but paying a simple and sincere tribute to his goodness of character, honesty of purpose, and Christian desire to be faithful to his duties according to such light as was given him. Also to his official purity and freedom from avarice. The Southern press laboured, in the early part of the war, to render Mr. Lincoln abhorred and contemptible; but such efforts were against his judgment, and met such opposition as his multiplied cares and labours would permit. Behind Mr. Lincoln, during his first term, stood an infinitely more objectionable and less scrupulous successor (Mr. Hamlin); and the blow that struck down the President of the United States would place that successor in power. When Mr. Lincoln was re-inaugurated, the cause of his people was hopeless, or very nearly so—the struggle only justifiable in continuance by its better attitude for obtaining terms; and from no ruler the United States could have might terms so generous have been expected. Mr. Lincoln was kind of heart, naturally longing for the repose and glory of a second term to be spent in peace. Mr. Johnson, being from the South, dare not offer such liberal treatment; his motives would be impugned. In every embittered national struggle proposals to assassinate the rival representatives were common, emanating from different classes of men, with different motives; from spies of the enemy, wishing to obtain evidence how such proposals would be received; from fanatics, religious or patriotic, believing the act would prove acceptable to Heaven; from lunatics, driven mad by sufferings connected with the struggle; and from base and often cowardly desperadoes, seeking gold and notoriety by attempting, or promising to attempt, the crime. At the time it occurred, Mr. Lincoln's death, even by natural causes, would have been a serious injury to the prospects of the South; but the manner of his taking-off, frenzied by the Northern mind, was the last crowning calamity of a despairing and defeated, though righteous cause."

Readers of the foregoing passage should notice the vanquished President's admission that his cause was hopeless at the time of Mr. Lincoln's re-inauguration; after which date the struggle was continued by the South for the sake of terms. Who would have derived the greater benefit, the people or their score of military chieftains, from the better terms for which the ghastly contest was thus ineffectually protracted, Mr. Davis omitted to state. By those who remember the carnage and cost of the concluding weeks of the struggle it may be thought that the Southern President and Generals would have displayed greater heroism in desisting from the contest, without regard to their personal prestige, when it was clear to them that the object of the war was no longer attainable.

OUR LIBRARY TABLE

Electricity. By Robert M. Ferguson, Ph.D. (Chambers.)

THIS book forms one of "Chambers's Educational Course," and is quite equal in merit to any of those manuals by which it has been preceded. It is intended for the senior pupils at school and junior students at college. By a simple and—as it appears to us—a natural course, they are advanced from the consideration of magnetism to mechanical, and then to chemical, electricity, after which the applications of the power are concisely, but very carefully, described. The earth and its surrounding atmosphere being the reservoir of this pervading energy,—to use the language of to-day,—and magnetism being the most simple and natural manifestation of its phenomena, it forms the introduction to the study of electricity. The electricity of the machine, and then that which is developed by chemical change, or voltaic electricity, follows in regular order, and by the well-considered divisions of the subjects a clear idea of the connexion of the main branches of the science, and of the various phenomena included under each, is imparted to the attentive student. We are disposed to doubt the propriety of starting the student, in the present state of the science, with an hypothesis, "Throughout the work, electricity is looked upon as a peculiar action, which the molecules of matter, under certain conditions, exert on each other," and, "it is assumed that electric action is one of contiguous molecules, and that nothing but molecular action travels in a current." This may be a refined expression of deductive philosophy; but as the untaught pupil will be apt to be puzzled with molecular motion without a mover, we think it would have been wise to have avoided the difficulty.

Our Common Fruits: a Descriptive Account of those ordinarily cultivated or consumed in Great Britain. With Coloured Frontispiece and with Illustrations. By Mrs. Bayle Bernard. (Warne & Co.)

Throughout this volume there are references to as many as five plates; but the binder seems to have omitted from the copy sent us all of them, except the frontispiece. For the sake of purchasers of the book, with whose copies this trick may be played, it seems right to notice the fact publicly, and call to it the attention of the publishers. Mrs. Bayle Bernard has a good deal of information to convey to her readers on pip, stone, berry, aggregate, shell and drupe fruit. She does not address botanists and gardeners, but the general public, which includes a great number of persons to whom her compilation will be welcome as containing things they did not know, or had forgotten. Such persons, moreover, may not be displeased with the wordy way in which she says her say. Critics, nevertheless, must be excused for remarking that it is with styles as with strawberries, when swollen beyond their natural dimensions,—what they gain in size they lose in flavour.

Mr. Van Nostrand, Broadway, New York, publishes *Designs for Gateways of the Southern Entrances to the Central Park*, in that city, the work of Mr. R. M. Hunt, and adopted for execution by the Commissioners of the Park in question. The Commissioners sought designs by competition

among architects, and were in a difficulty about the character of the park entrances,—whether, on the one hand, a purely rustic, or, more truly to write, arboreal manner should be adopted, and the works restricted to trees with iron railings to match, and, may be, a gatekeeper's lodge to secure the charms of a sylvan air for the public pleasure-ground; or, on the other hand, if taste should succumb to necessity, and a formal architectural character be imparted to the place which already exhibited something of the kind. For the park arrangements, which include the design of the gateways, the authorities consulted Mr. Hunt, and adopted his designs, now before us, which practically solve the difficulty by accepting the latter alternative of the proposition. Hence arose abundant censures and much criticism, the latter reaching to what we suppose is meant for "chaff," if the example here republished truly characterizes the mass by statements it endeavours to refute. It is stated that Central Park is half a mile wide and two miles and a half long, say about the size of Hyde Park, Kensington Gardens and a "bittock." The objection most strongly urged to the much-desired rural aspect of the inclosure is, that it could not be maintained,—that ere long the place will be surrounded by houses, opened on by streets and resonant of the roar of multitudes of men and vehicles. No end of statues, columns, monuments and busts will, it is alleged, fill up the "solitudes" of the place; to say nothing—here we are not quite sure we understand the text—of "restaurants, summer-houses, music-halls and conservatories, winter-gardens and museums." If these structures are to be admitted to the Park, which seems incredible, what can it matter what is done with it? Yet we must understand the text before us to mean so much. If, however, these things are to be exterior to it, why cannot something of rural, or at least unarchitectural, character be retained? Meanwhile, why waste money on destroying the most valuable quality of a city park, i.e. its intense contrast with brick-lined streets, by introducing architectural works of any kind? It is not brought to this pass at present; a good deal of arboreal, if not rustic character may be retained for years to come. As to the gates, which seem most in question here, it is certainly desirable to give an architectural aspect to them. Judging by the rude lithographs now before us, it appears that Mr. Hunt's works are perfectly harmless and trivial; that of the Seventh Avenue Entrance comprises two *termes*, or piers, surmounted by busts, something like those in the front of the Theatre at Oxford, much larger and less vigorously designed. A poor Ionic column with a statue on the top stands in the rear of this precious "architectural" composition; groups of statues do the rest. So much for the gates, which are not gates. Far better than these is the design for a terrace with fountains, cascades, a basin; from each grade of the cascades spring two fountains, real plumes of water of some importance, not treated as our wretched follies of Trafalgar Square are, so that a series of little squirts surround and seem to aim at suppressing the central jet,—a conceit only surpassable in puerility by the cockney fountain in the Temple, where a contemptible piece of New Road sculpture in sham has supplanted the tall old jet we used to love as it sprang in the shade of the trees, a pretty thing in winter or in summer; no toy as now, and having many old memories about it that will never gather round the "tea-garden" gimcrack of recent days. In New York they propose to do better than this. There is real dignity in the semicircle of cascades and fountains, recognizable in spite of the wretched lithograph to which we are referred, and is so bad that a semicircular niche where the cascades converge, which is probably intended to contain a group of statues, looks like the opening to a sewer, while the lower tank more resembles a dinner-plate standing askant than a surface of water. Even this design is not worthy of a great city; it is better than the gates, about which the architect, his admirers and his censurers seem to have made an unnecessary fuss.

We have on our library table New Editions of *Panacea Britannica*: a Series of Papers mainly devoted to a Vindication of Catholicism against

Objections founded on Scripture, History, Policy, Civilization, Social Condition, and Secular Progress; more especially with reference to the necessities and prejudices of Englishmen, by E. W. Attwood, B.A. (Burns, Lambert & Oates).—*Concise Historical Proofs respecting the Gael of Alban*; or, *Highlanders of Scotland*, with short Notices of the Highland Clans, and a Dissertation on the Gaelic Topography of Scotland; also Explanatory Notes, Map, Illustrations, and Descriptions of the Country of the Gael, by James A. Robertson (Edinburgh, Nimmo).—*Uncle Crotty's Relations*, by Herbert Glyn (Smith & Elder).—*Silvermere Annals*, by C. E. B. (Morgan).—*Oxford to John O'Groats: What we Saw and what we Paid* (Simpkin & Marshall).—*Winters Abroad*; or, *Advice to Invalids who propose visiting the South of Europe*, by an M.D.,—*A Visit to Sherwood Forest, including the Abbeys of Newstead, Rufford, and Welbeck; Clumber, Annesley, Thoresby, and Hardwick Halls, Bolsover Castle, and other interesting Places within Ten Miles of Mansfield*, by James Carter (Longmans).—*Johnston's Road and Railway Map of Perthshire* (Dundee, Shaw).—*University Education in Ireland: a Letter to J. S. Mill, M.P.*, by J. E. Cairnes, M.A. (Macmillan).—*The Curriculum of Modern Education, and the Respective Claims of Classics and Science to be Represented in it considered*: being the Substance of Two Lectures delivered at the Monthly Evening Meetings of the College of Preceptors, April 11 and May 9, 1866, by Joseph Payne (Virtue Brothers).—*Facts and Figures relative to Submarine Telegraphy as a Branch of Commercial Enterprise*, by John Macintosh (Stanford).—*Speech of H. Hussey Vivian, Esq., M.P., on the Coal Question*: delivered in the House of Commons, Tuesday, June 12, 1866 (Ridgway).—*Transactions of the Manchester Statistical Society, Session 1865-66* (Manchester, Simms).—*Letters on Financial Subjects*, by Brutus Britannicus (Spon).—*and The Indian Empire and our Financial Relations therewith*: a Paper read before the London Indian Society, May 25, 1866, by Robert Knight (Trübner).

BOOKS ON RELIGIOUS SUBJECTS.

The Prophet Jonah: his Character and Mission to Nineveh. By the Rev. Hugh Martin. (Strahan.) Mr. Martin, a minister of the Free Church of Scotland, acknowledges two different kinds of aid he has received in his composition of this volume. The one is from Calvin's 'Commentaries on the Minor Prophets,' the other is from Principal Fairbairn's book on Jonah. Traces of Mr. Martin having read the last may, he suspects, be found in his own work; but as he only recollects having read it about seventeen years ago, with much pleasure, he is unable, he quaintly tells us, to specify his obligations. An intelligent friend, to whom he submitted his work, has criticized it briefly and well in the opinion he has given that the writer has "taken Jonah's part too much." Mr. Martin's reply is, of course, "I can scarcely think that I have," and he adds, "I cannot help thinking that the memory of Jonah deserves more of esteem and affectionate regard than has fallen to his lot." Indeed, the author's esteem and regard go so far as to make him believe that Jonah's silence as to the effects of the Lord's remonstrance in the way of his edification is a proof of the prophet's modesty! Mr. Martin wishes that his book "had been a great deal better than it is." It could hardly have been more charitable, for he has a good word for everybody, and especially for the sailors by whom Jonah was cast into the sea.

The Shadow of Christianity; or, the Genesis of the Christian State: a Treatise for the Times. By the Author of 'The Apocatastasis.' (New York, Hurd & Houghton; London, Stevens Brothers.)

It is the opinion of the author of this book that, although by God's grace the Christianity of the United States has stood the test of the severest trial to which the religion of a nation has ever been subjected, something—not much indeed, yet something—remains to be done to keep the State in strict harmony with Christianity. At all events, America is in advance of all other nations. "If there is still, even in New England, some ignorance

in regard to the most elementary learning, this is almost wholly the product of European aristocracies"; and, moreover, "the clergy... even that class which, like other aristocracies, has hitherto inclined to be conservative of evil, even they, with the exception, now and then, of a pugnacious bishop, are preaching more fully... the true principles and doctrine of the New Testament." With these good things to help it, the author is confident, despite European malevolence, and "the filthy stream ever inevitably flowing in upon us from the aristocratic fountains of Europe," that the American Republic will attain to "the utmost perfection of which it is capable according to its rank and kind." The author neither lacks faith nor wants hope; but he has no part at all in what is greater than these—the divine spirit of charity.

The Papal Drama: a Historical Essay. By Thomas H. Gill. (Longmans & Co.)

Mr. Gill reminds us, in some degree, of Goldsmith's Mr. Croker, who first made up his mind on a matter, in order that his convictions might not afterwards be disturbed by argument or proof. Laying no claim to "the impartiality of religious indifference," Mr. Gill looks upon "the Popedom as the supreme corruption of Christianity"—as much in early times as now; "and as such," says the author, "I deal with it throughout this volume." Such is the spirit in which Mr. Gill devoted himself to write a work the studies for which have been the employment and delight of his life. It is unnecessary to add, that he does not speak as an impartial judge, but as a fiercely partisan advocate. He has great vigour, is pleasantly lucid, and, often hitting upon great truths, hits hard with them again as very efficient weapons. The book has qualities which will recommend it to many readers. As a small sample, however, of its manner, we may notice the author's assertion, that in the fifteenth century "the English language was far more nobly wielded in Scotland than in England;" and Mr. Gill cites, in proof, the case of James the First; but he does not add that James was, for a long period, a prisoner at Windsor, where he probably learned the language which he used with skill and gracefulness.

LIST OF NEW BOOKS.

Elvin's Synopsis of Heraldry, 12mo. 3/6.
Free's Biography of Anne of Austria, 2 vols. 8vo. 20/6.
Lamb (Charles), Memoir, by Barry Cornwall, 8vo. 12/6.
Murray (Eliza), of Peterborough, Memoir of, 18mo. 1/6.
Newman's Dictionary of British Birds, 8vo. 18/6.
Pastor (The), Life of a Clergyman, cr. 8vo. 1/4.
Trollope's Mademoiselle de Ballucorran, 18mo. 2/6.
Twice his a Tale, 2 vols. post 8vo. 31/6.
Walcott's Memorial Cities, Oxford, 8vo. 1/6.

THE ATLANTIC CABLE.

ENGLAND TO AMERICA.

I bid thee hail! dear Jonathan,
Thou younger brother mine,
And drop, as erst I promis'd thee,
A true and friendly line;
And with it send a fervent wish,
That Britain long may be
In league with thee for truth and right,
And holy liberty.

The quarrels in thy family,
Thank God, are now pass'd o'er,
And men once slaves to fellow-men
Shall be thus slaves no more;
And I with thee will ever strive
To keep this flag unfurl'd—
"Commerce and peace between the States,
And freedom for the world!"

O, may there never, never flash
Along these magic lines,
The words that dash a nation's hope
With lurid war's dread signs;
But as the pow'r of science binds
Our land so close with thine,
So may our hearts, friend Jonathan,
In peace for aye entwine.

GEORGE SMITH.

HAMPSHIRE AND ISLE OF WIGHT EXHIBITION OF INDUSTRIAL AND FINE ART.

THIS Exhibition, whether regarded as an exhibition, or as the permanent establishment of a building to be entirely devoted to a school of Art in conjunction with the Hartley Institution at

Southampton, reflects great credit on all who have taken part in its organization. Apart from the space provided by the Hartley Institution itself, which is extremely large, the ground in the rear of the building has been almost entirely covered by an annexe containing 8,000 square feet of floor, and 11,000 square feet of wall-space. This annexe is 93 feet long and 64 feet wide, and around the upper portion runs a picture-gallery entirely devoted to oil-paintings, and constructed in accordance with the conditions prescribed by the Department of Science and Art as essential to a picture-gallery.

Under the head of Industrial Art are a great variety of extremely interesting articles produced and manufactured in Hampshire. Specimens of all the Hampshire woods; cereals grown in the county; silk produced at Yately, excellent in quality; paper made from mallows; leather and leather goods from Portsmouth; wools; carriages; musical instruments, including some very sweet organs; steam-engines; and a great variety of decorative art.

Under the head of Glass and Ceramic Manufactures is an immense number of contributions from the houses of residents in Hampshire; the Queen having sent some of the treasures from Osborne, which have never been publicly exhibited before.

Among Artistic and Archaeological Objects are an admirable collection of oil and water-colour pictures, including works by the majority of ancient and modern masters, and a variety of curiosities, appertaining, for the most part, to the Middle Ages. Among these are various corporation insignia; old volunteer corps flags; silver bowls won at the Basingstoke races in 1688; fragments of glass vessels found, in 1864, at Buckland Rings, near Lyndhurst; painted glass and encaustic tiles from Netley Abbey; various relics from Basing, famous for its siege during the Civil Wars, when it was defended by John, fifth Marquis of Winchester, of whom Dryden wrote—

He, who in impious times undaunted stood,
And midst rebellion stood be just and good;

several specimens of flint celts, dug up in Hampshire, similar to those found in the "kitchen-middens," in Denmark; curious oak carvings and furniture, among which is Sir Martin Frobieher's arm-chair, presented to the naval hero by Queen Elizabeth; miniature busts, in silver, of the sovereigns of the House of Hapsburg, contributed by the Queen; medieval rings; armour; ancient tankards, salvers, tazze, &c. from Winchester; and many other articles of great interest.

The Natural History of the county is admirably represented; many Hampshire animals, and especially birds now very rare in the county being among the objects in this class.

Lastly, the Ordnance Survey Department, under the direction of Sir Henry James, contributes various philosophical instruments of great interest. Among these are the celebrated compensation bars used in measuring the base lines for the triangulation survey of the United Kingdom on Salisbury Plain and at Lough Foyle, with many other instruments used in the survey. Sir Henry James also sends a most interesting series of photo-zinco-graphs from the national records of England, to illustrate the progress of handwriting from William the Conqueror to Queen Elizabeth.

To this interesting Exhibition, the price of admission daily, according to advertisements, is, up to five o'clock, one shilling; after that hour, sixpence.

DOTTINGS ON THE ROADSIDE.

Panama, June, 1866.

SINCE writing to you last, I have made a long journey through the Republic of Nicaragua, and have just returned to this place in the Guatemala, one of the smart steamers belonging to the Panama Railroad Company, and keeping up a communication with the principal Central American ports. In this region of calms and light winds these steamers are a great boon, which would be extended to all the minor ports if the natives would only appreciate it. But several attempts made in that direction have proved failures. The objections of the natives to steam-navigation are truly characteristic of a race to whom time is not

money. "How can you expect us, Spanish Americans, to support such an imposition!" said a man from Chiriqui. "A sailing vessel takes a week from our place to Panama. During the whole of that time we are supplied with meat and drink, and pay only twenty-eight dollars; whilst the steamer goes in less than a day, gives us but two meals at most, and charges thirty dollars. If your own countrymen are silly enough to submit to such charges, they may do so; we certainly shall not."

After leaving Panama we called at Punta Arenas, the principal port of Costa Rica, where one finds a rather dangerous entrance to the inner harbour, a good lighthouse, an abundance of oysters, a large supply of coffee for exportation, and, as the name of the place indicates, plenty of sand. Landing with the mails, I availed myself of the opportunity to see the post-office and get some Costa Rica stamps, which a stamp-collecting maniac told me were the prettiest things out. The mails were delivered in due form; but, after that, the bags were emptied on the floor, and every one had his pick, and a pick for the persons he said he represented. I saw a similar scramble at Corinto, our next port, where the principal postman, who was going to take the mail to the interior, could not even read, and had to get others to spell out the directions for him. People may well complain about letters being lost in places like this, where newspapers seem to be regarded as public property, and illustrated journals scarcely ever reach their rightful owners. I heard with regret that the expedition up the Rio Frio, organized by two young Englishmen for the purpose of gaining some knowledge of a hostile tribe of Indians, could not start, owing to their companions, fearing a repetition of the sad fate that had befallen previous visitors, refusing to go.

Disembarking at Corinto, the principal port of Nicaragua on the Pacific, I made the best of my way to Leon, one of the thousands of fine cities built by the Spaniards in tropical America. Leon has suffered severely in the civil wars which have devastated the country; and there are whole acres of houses in ruins. The cathedral is a fine old building, in the Italian style, which, though it has to forego the most necessary repairs, will yet stand for ages to come. From the top you have, especially at sunset, a most beautiful view of the plain of Leon and the mountain ranges and volcanoes encircling it.

At the European Hotel, kept by an Englishman, I found Capt. Holman, who was to accompany me, and who went out by the previous mail to get things ready for an early start. It being the fog end of the dry season, we had but little time to spare. Our chief object was to explore the little-known districts of New Segovia and Matagalpa. We started soon after my arrival, a troop of mules carrying us and our luggage. The first few days we had to pass wooded plains, where we suffered much from want of water and from excessive heat, all the trees, with the exception of a few wild figs, being as leafless as most of ours are in the depth of winter. Animal life was represented principally by the lizard tribe, both species and individuals being numerous, and by monkeys, parrots, macaws and deer, not to mention any smaller forms. The district traversed was but thinly peopled. One whole day we did not meet with a single human being; and even when we did get to any habitations, we found provisions of any kind scarce. There always ensued the same interrogatory between us and the natives. "Have you got any eggs for sale?" we asked. "No hay" was the reply.—"Plantains?"—"No hay."—"Fowls?"—"No hay."—"Indian corn?"—"No hay."—"Milk?"—"No hay."—"Beans?"—"No hay." And so on through the whole catalogue of things they were likely to have. "Then what on earth do you have?"—"Nada, señor, absolutamente nada."—"But you must live on something," we began to argue.—"We have a little of this and a little of that," was the invariable reply; "but not enough to spare you any." It was a hard case to find one's stock of provisions getting lower and lower without a chance of replenishing it. Want of regular and sufficient food and so much active exercise soon began to tell upon us; and until the

end of our journey, there was no danger of our assuming any aldermanic proportions.

After the first five days the mountains were higher, the temperature became cooler, and the leafless woods were exchanged for forests of pine and evergreen oak. A week's hard riding, from twelve to twenty leagues a day, brought us to Ocotol, the capital of New Segovia, which derives its name from the pine, or ocote, formerly plentiful in the neighbourhood. Ocote, or rather Ocotol, is a name of Aztec derivation, brought here, with many others, by Mexican immigrants, during the time of Montezuma; for the Mexican Empire tried to extend its sway even further south than Nicaragua. I fancy that a delicious and very wholesome fruit, as large as a good-sized apple, and much cultivated here, was introduced by the same agency. It is called by the people Matasana, and by botanists *Casimiroa edulis*; and it would doubtless thrive in Australia and southern England, as I found it also in the higher mountains of northern Mexico. Seeds of it were sent to Mr. Bull's Nursery, at Chelsea, where, if anywhere, they will have a fair trial.

The neighbourhood of Ocotol is famous for its silver-mines, and we did not fail to visit them, including those of Maquelia, Depilto, and Limon. About Limon we found some curious Indian sculptures, with the image of the sun in bas-relief, and some extensive tracts of grass-land, suitable for sheep-farming. The wool might be exported by way of the river Coco, which empties itself into the Atlantic at Cap Gracias á Dios, and has recently been opened to trade by English mahogany-cutters and India-rubber collectors. This route was well known to the buccaneers, who once or twice came up to these mountains to clear them of any spare cash or useless trinkets. They would not find much at present, even in the capital of the department; for Ocotol is little better than a village with a church of some pretension commenced years ago, but, as yet, unfinished; a town-hall and prison in the course of construction, and some elementary schools, where the discipline, however, is not enforced by a row of stocks, as in some of the country villages through which we passed.

From Ocotol we struck in a south-easterly direction for Matagalpa, passing over frightfully stony roads and high mountains. The scenery was truly grand in some parts. Remarkable in that respect was the Montaña de Yale, which would answer well for coffee cultivation, and which is covered, in the most elevated parts, with liquid-amber trees of gigantic dimensions—150 feet high, and 30 feet in circumference. At Matagalpa we examined the gold and other mines, and then passed, by way of Jinotega and Santa Rosa, to Leon. At Jinotega, to which hedges of yucca trees impart a singular look, we found a colony of North-Americans. They were not getting on well, and I advised them to go to parts of Nicaragua where they could sell their produce for ready money. Immigration is now fast setting in. Quite recently a good many American and German families arrived, and the Government readily supplied them with sufficient land, free of all taxes or charges. Foreigners have already done a great deal for these countries; and, if they should but arrive in sufficient numbers, will, doubtless, regenerate them. All improvements are due to their efforts or direct influence; the natives, unaided, seeming to be incapable of emerging from the abject state in which they are plunged.

The heat was so excessive that I arrived at Leon with a slight sunstroke, and was laid up for more than a week; but, by constant application of cold water, my head at last got better, and I was able to start for Managua, passing Nagarote, where I measured a famous genisaro tree (a *Mimosa*), of which the villagers are justly proud, and for which 200 dollars have been offered—a high price in a country where timber abounds; and yet they had the public spirit—the rarest of virtues in a Spanish American—to refuse the offer (others say the Government made them refuse). The tree is but 90 feet high; but some of the lower branches, which are quite horizontal, are 92 feet long and 5 feet in diameter. The stem, 4 feet above the base, is 21 feet in circumference; and the crown

of the tree describes a circle of 348 feet. A whole regiment of soldiers may seek repose in its dense shade.

Managua has become, but a few years ago, the capital of Nicaragua, and may be described as a large village of native huts, to which a few European houses have been added. The largest of these houses is the Palacio Nacional, with verandahs and balconies in which the public offices and the residence of the President of the republic are situated. It overlooks the great square and the beautiful lake of Managua, across which there always blows a fresh breeze, and on the shores of which a kind of whitebait and another small fish of delicate flavour, called "sardine," are caught in great numbers. There is here absolutely nothing we associate with the idea of a capital of a country—no public libraries, museums, theatres, places of amusement, &c. About eight o'clock at night all is as quiet as in a city of the dead. By that time, the lamps which householders are compelled to light at sunset have consumed their allotted quantity of oil, and are expiring one after the other. Perhaps, here and there a gambling party may prolong its unholy occupation; but the generality of the inhabitants have gone to sleep—I was almost going to say, bed; but that would be a misstatement, as there is no such thing as a bed in the whole country. You may see roughly-made wooden bedsteads, over which cow-hides are stretched; but there is no bedding. Even the best families have no linen sheets in their possession. The upper classes lie down with most of their clothes on; and, in the morning, get up, shake, but do not wash themselves, light a cigarette and drink a cup of coffee. The so-called lower classes take off nearly every rag of clothing when they go to sleep, and lie down around the houses, often in the middle of the yard. They do not seem to mind either the dew or the moon, and the blanket, which every one carries, is scarcely ever used, except just before dawn. All classes are dreadfully afraid of water, especially early in the morning; and whenever they see a European wash, they never fail to tell him of the danger to which he is exposing himself. I watched some of the dons, in whose company I was thrown for a week, and found they never touched water during the whole of that time. To my broad hints, they replied that they had a slight attack of fever, or a cold just approaching. Their houses, with a few exceptions, are in a disgusting state of filth and full of vermin. This remark applies with full force to New Segovia and Matagalpa, where a broom is a curiosity made of palm-leaves when, on some festive occasion, the house is to be swept. I strongly advise future travellers to provide themselves with a tent, and thus escape the necessity of entering any native houses. I could not help comparing the neat houses and clean persons of the so-called Polynesian savages with those of the Nicaraguans. After profiting for more than three centuries by Christianity and European civilization, the Central Americans compare unfavourably—socially, politically, intellectually, and morally—with the South Sea Islanders. It is the infusion of negro blood that has counteracted the benefits arising from contact with enlightened ideas, and neutralized the efforts of those who made Progress their watchword.

Nicaraguans, though generally ignorant of the most elementary knowledge, for instance, talking of Great Britain and the United States as one country, and of their inhabitants as heathens who have never had the benefit of Christian sacraments, believe their republic to be in the van of civilization; and they are never tired of asking foreigners to confirm that delusion. I tried to escape telling such an untruth by dwelling on the vast resources and great natural beauties of Nicaragua, and avoiding the point they wished me to be eloquent upon; because, like all Spanish-Americans, they are extremely thin-skinned, and regard every unfavourable opinion as an ill-natured depreciation. One who desires to stand well with them should therefore be careful of what he says and writes. Travellers like Mr. Squier, who have been simple-minded enough to speak out, have had their books burnt in the public square, as such things ought to be in countries the history of which has not yet passed the period of the dark ages.

With the exception of several Indian tribes, the Nicaraguans are a mixed race, negro and Indian blood predominating, and purely white men being almost as rare as black are in London. Although they call themselves republicans and talk much about social equality, they are divided into two distinct classes—the barefooted and the shoe-wearing. The former are the lower class, and though some of them are very well off they always go barefoot, or at the utmost wear sandals only. Nothing can induce them to put on shoes. They say that their friends would laugh at them and banter them about wishing to pass off as gentlefolks. The shoe class—though they may be as poor as church mice and as black as coal—regard themselves as the upper ten thousand, and look down upon the shoeless multitude with patronizing contempt. It is this class which here, as in all Central America, furnishes the political agitators and revolutionists. If the country was rid of them real progress would be possible, as the lower classes are peaceably inclined, and, considering that they eat nothing but maize cakes, a few beans and dried meat, and live in a warm climate, work as hard as can reasonably be expected.

I had several interviews with the president of the republic, General Martinez, to whom the country is indebted for ten years of uninterrupted peace, and whom, as well as the Ministers of State, I found to be men of intelligence and fully impressed with the high responsibilities they had undertaken. A ride of three days from Managua, by way of Tipitapa and Juigalpa, brought me to Chontales, the finest and most fertile district of Nicaragua. Approaching it from the west, as I did, you find yourself amongst rich undulating grass lands, which even at the end of the dry season retain their verdure and afford pasture to thousands of heads of cattle. On nearing Libertad, the ground becomes more elevated, the climate considerably cooler, and you get occasional glimpses of the Lake of Granada with its islands and majestic volcanoes. Libertad is rapidly rising to the dignity of a town, and is now full of people from all parts. House-room is very limited, and I had difficulty in finding even a place for my hammock.

Close to Libertad commences a dense virgin forest, which extends for many miles; and it is in this part—a second California—where the now famous gold and silver mines are situated, and where several English companies have established themselves. A singular feature of these Chontales forests is that the stems of the trees are of a very light grey. Mr. Chambers has well indicated this in some of his clever sketches; but I was inclined to doubt its correctness until now. The gold of Nicaragua is very different in character from that of Australia and California. There are no so-called "nuggets"; the metal is as fine as flour, and in many instances cannot be seen in the matrix even with a magnifying glass. But the ore is nevertheless rich, and by washing a handful in a horn spoon the presence of the precious metal becomes apparent. The distance from Libertad to the principal mines belonging to the Chontales Company and the Central American Association is about four leagues, and there is now, thanks to English capital, a tolerably good road. The most famous of the mines working are the Javali and the Consuelo, and other rich mines are almost daily discovered in this new gold-field, a list of more than one hundred having recently been published in the official gazette of Nicaragua. Some time ago a heavy gale uprooted an old tree on the top of the Consuelo, making good the proverb, "It is an ill wind that blows nobody good," for underneath the roots more than one thousand ounces of gold were found. Immense efforts are now making by the Chontales Company to get their machinery up, which the American steamer pitches on the shores of the Lake of Granada.

A ride of three days from Libertad brought me to Granada, the real capital of the republic, though at present, by the jealousy of local political parties, not enjoying its natural advantages. It is charmingly situated on the shores of the lake of the same name, and maintains a direct steam communication with the Atlantic Ocean by way of the San Juan River. Almost entirely destroyed by the American

filibusters, as Walker's party was called ultimately, or "Saviours of the Country," as it was termed when first called in, the town is now fast recovering, and new houses are being built on the ruins of the old. Even the churches, which suffered severely from being used as fortresses during the siege, are being repaired. There had been rather heavy and continuous earthquakes a short time previous to my arrival, and light temporary sheds had been built in the public squares and other open places in which the inhabitants took refuge. The priests did not allow this occasion to slip by without obtaining considerable contributions from the frightened and repenting multitude. The longer the earthquakes continued the faster money was coming in. There were three slight shocks on the day after my arrival, interpreted by the inhabitants as the harbinger of the wet season; and sure enough, in the evening of the same day, the rain came down in torrents, rapidly converting the dusty streets into foaming rivers.

From Granada my way led once more to Managua, passing Masaya, with its curious crater lake, out of which all the water used in the town is carried on the heads of women. It was late in the day when I left Granada, and stepping some time in Masaya to let a heavy shower of rain pass, I entered about sunset a virgin forest. My cargo, mules, and servants had been left far behind, not being able to keep up with my pace. The rain was coming down in regular bucketfuls; I trotted on as fast as the nature of the ground would admit. But ere long I found myself in utter darkness. When the rain abated, innumerable fireflies appeared, and their brilliant flutter completely blinded me. Allowing the mule to have his own way, he went along at a very slow pace; but my confidence in his sagacity was not disappointed; he carried me safely to Managua, just as everybody was going to bed, and earned high praise from the people at the inn, who could hardly believe that man and beast had passed over a dark and difficult road previously unknown to both. The inn was a fair specimen of those institutions throughout the country, and is known by the name of "Hôtel de Hambre," from travellers having the privilege of paying pretty highly for being kept just above starvation point on sun-dried beef, brown beans, a few eggs, and some maize-cakes. In conjuring up such an inn, dismiss from your mind all notion of comfort or coyness. If taken in, which in one sense you always are, you may have to share your room with half-a-dozen fellows. There may, perhaps, be a few empty bedsteads; but unless you bring your own bedding or hammock, you have a most miserable time of it. On the night of my arrival the inn kept up its reputation. There was not a handful of grass or corn for my poor mule, and he had to content himself with a pailful of water for the night. I myself fared little better. The landlord informed me that there was nothing to eat on the premises except one egg and a couple of maize cakes, which with a cup of coffee—milk I should have in the morning—might be sufficient to keep body and soul together till breakfast-time.

From Managua I returned to Corinto, and there embarked for Panama. After roughing it for several months, I was glad to find myself once more in the "Bridal Chamber" (without the bride though) of the steamer Guatemala, and in company with my friend Capt. Dow, who takes a real delight in all branches of science, and is an enthusiastic collector and observer of marine animals. To many of the singular creatures swimming and crawling about these coasts, naturalists have gratefully appended his name as discoverer, and it is mainly due to his representation that the Panama Railroad Company, with praiseworthy liberality, offers a free pass to any distinguished man of science who may have occasion to avail himself of their railway or their steamers, or send his collections by them. Show me a European commercial company that would do as much to assist scientific research as these Americans, whom we always taunt with their worship of the almighty dollar!

My time at Panama was filled up by making an excursion up the Bayano, one of the largest rivers of the Isthmus, and regarded as the most feasible point for establishing an inter-oceanic canal. The

Americans obligingly lent me the steamer *Panama*, and all the leading foreign residents (including consuls) were invited to accompany me. The steamer went up twenty-eight miles from the mouth, and might have gone ten miles further without any danger of grounding, even at low water, for up to that point there is more than six feet of rise and fall of the tides. The nomenclature of the Admiralty chart I found to be altogether wrong. The Bayano Indians were friendly, and were much amused with a piece of ice which was handed to them. They thought it was a kind of hot transparent iron. The land of both banks was extremely fertile, and is well suited for cocoa and sugar cultivation. We were away three days, and the excursion was a most pleasant one. I am fully aware that a scientific man has no business to make a pleasant excursion, and I ought to know better than say anything about it; but unfortunately the *Panama* papers had reporters on board, who, after partaking of all the good things, the ice, the wines, the champagne and the French cookery, the accumulation of presents from all sides, must needs go and publish the whole proceedings. It was certainly too bad of them.

BERTHOLD SEEMANN.

ARCHÆOLOGICAL CONGRESS.

DR. GUEST ON THE ORIGIN OF LONDON.

(Concluded from page 115.)

THE campaign of Aulus Plautius, though in its results, perhaps, the most important that has taken place in Britain, has seldom engaged the attention of our historians. For our knowledge of its incidents we must chiefly rely on Dion Cassius. "One Bericus," we are told, induced Claudius to undertake the enterprise; and it has been conjectured that this Bericus was the "Verica, son of Commius," whose name appears on coins that are occasionally picked up in Surrey. If this were really so, Bericus must have been an aged man when he fled to Claudius. Plautius was the general selected to conduct the expedition, and a great force was brought together in Gaul to invade the island. But when the troops were assembled for embarkation, they declared that Britain lay beyond the limits of the known world, and refused to proceed. Narcissus, the Emperor's favourite freedman, was sent from Rome to pacify them, and on his arrival was grossly insulted by the soldiery. With the caprice, however, which sometimes seizes on large bodies of men, they at the same time declared their readiness to follow their general, embarked on board the vessels, and sailed for Britain.

This expedition sailed in the year 43, and Caractacus was captured in the year 50. As to these dates there can be no doubt. But Tacitus tells us (*Ann. xii. 36*) that Caractacus was captured "in the ninth year after the war began in Britain." It is probable that the troops had assembled and all friendly relations between Britain and the Continent had ceased some time in the year 42, and that Tacitus considered the war to have commenced in that year, though this hypothesis will not account for the words "in Britain." The mutiny of the soldiers may have delayed the expedition till after winter, and it probably sailed early in the following spring. From incidental notices that occur in Tacitus, it would seem that four legions were engaged in the early operations of the war, namely, the 2nd, the 9th, the 14th and the 20th. They came with their auxiliaries (*Agric. 10*) and their cavalry, so that the force which Plautius led into Britain could not be much less than 50,000 men. He had under him, in subordinate commands, Vespasian, his brother Flavius Sabinus, a man of almost equal merit, and a veteran officer named Cæsius Osidius Geta. The fleet, no doubt, sailed from Boulogne, from which we know that Claudius sailed a few months later. Boulogne was the terminus of the celebrated highway which, half a century before, Agrippa had carried across Gaul, and this circumstance alone would be sufficient to establish it as the "Portus Britannicus," i. e. as the principal means of communication with the island. Having in mind, probably, Cæsar's disappointment at Dover, Plautius divided his force into three bodies, to prevent the mischief which might result from a check, if all passed over together. There can be little

doubt that the three points to which the fleet directed its course were the three little ports on the Kentish coast, which we know the Romans chiefly used in their journeys to the Continent, namely, Hythe, Dover and Richborough. The first and last of these are now silted up, but Dover still maintains its place as one of our chief ports of embarkation for the Continent. The Romans met with no opposition on their landing. Britain had been often threatened since the days of Cæsar, but never attacked. Augustus, it is well known, entertained thoughts of invading it, and Caligula assembled an army for the purpose, but the Britons received damage from neither. When, therefore, they heard that the army of Plautius had refused to obey its officers, they seem to have considered the danger as past, and to have discontinued their preparations for defence. When the storm at last burst upon them, the petty chiefs of Kent seem to have sought refuge in their woods and marshes, and Plautius had to penetrate deeply into the country before he could find the opponents he was in search of. The following is Dion's account of his movements:—

"Plautius had much trouble in searching for them; but when at last he found them—they were not independent, but subject to different kings—he defeated first Karatakos and afterwards Togodumnos, the sons of Kunobelinos, who himself was dead. When they took to flight, he won over by agreement a certain portion of the Bodounoi, whom they that are called the Katsouellanoi had under their dominion; and from thence, having left a garrison behind them, they advanced further. When they had come to a certain river, which the barbarians did not think the Romans could pass without a bridge, and on that account were encamped on the opposite bank somewhat carelessly, he sends forward the Keltoi, whose custom it is to swim, with their arms even, over the most rapid rivers; and as they fell on their opponents unexpectedly, though they hit none of the men, and only wounded the horses that drew the chariots, yet as these were thus thrown into confusion, the riders could no longer be sure of their safety. He sent over also Flavius Vespasianus, the same who afterwards obtained the supreme power, and his brother Sabinus, who served under him as lieutenant, and so they also, having somewhere passed the river, slew many of the barbarians, who were not expecting them. The rest, however, did not fly; but on the following day, having again come to an engagement, they contended on almost equal terms, till Cæsius Osidius Geta, after running the risk of being captured, so thoroughly defeated them that he obtained triumphal honours, though he had never been Consul. The Britons having withdrawn themselves thence to the river Thames where it empties itself into the ocean, and at flow of tide forms a lake, and having easily passed it, as being well acquainted with such parts as were firm and easy of passage, the Romans followed them, but on this occasion failed in their object. The Keltoi, however, having again swum over, and certain others having passed over by a bridge a little higher up, engaged them on several sides at once, and cut off many of them, but following the rest heedlessly, they fell into difficult marshes, and lost many of their men. On this account, therefore, and because the Britons did not give in, even though Togodumnos had perished, but the rather conspired together to revenge him, Plautius became alarmed and advanced no further. But his present acquisitions he made secure with a guard, and sent for Claudius, for so it was ordered him if any particular difficulty arose, and great provision had been made for the expedition, of other things as well as of elephants. When the news arrived, Claudius . . . crossed over into Britain, joined the army that was awaiting him on the Thames, and having taken the command, passed over it, and coming to blows with the barbarians, who were concentrated to oppose his advance, he conquered them in a battle, and took Kamoulodunum, the royal residence of Kunobelinos. Afterwards he brought many over, some by agreement, others by force, &c., and taking from them their arms, he placed them under Plautius, and ordered him to bring the

remainder under subjection. He himself hurried to Rome, having first sent news of his victory by the hands of his sons-in-law, Magnus and Silanus."

Camden supposes that the term Bodounoi, or, to give the Latin equivalent, Boduni, was another name for the people called Dobuni, and he endeavours to shew etymologically that the two phrases, Boduni and Dobuni, have the same signification. Other antiquaries consider the phrase Boduni, which only occurs in this passage of Dion, to be a clerical blunder for Dobuni; and I confess I think their view of the subject to be the more reasonable one. In either case the same people are meant, and the general direction of the Roman march is clearly indicated. Where the two battles took place which were fought before the Romans reached the Dobuni we do not know. The Britons seem to have abandoned Kent without a struggle; but we may conjecture that they would not yield up the district of the Atrebatæ without a battle, and that they would risk a second to save the countless herds of cattle which must have been pasturing along the upper Thames, in the country of the Dobuni. The Romans, on leaving Silchester, may have marched over the Marlborough Downs towards Cirencester—under the names of these Roman stations I wish to indicate the British towns they supplanted; and on the chalk hills leading down into the valley, Togodumnus may have met them. After his defeat, the Dobuni were not unwilling to exchange the yoke of the Catuvellauni for that of the Romans, and entered into an alliance with Plautius. The Roman general was 160 miles distant from his ships, and the advantages he derived from making the rich country round Cirencester a new base of operations are sufficiently obvious. From Cirencester he seems to have marched in search of his enemy down the valley of the Thames, and probably along the Icknield Way. This British trackway would lead him to Wallingford; and here, I believe, was fought the great battle of the campaign.

After losing the districts inhabited by the Atrebatæ and the Dobuni, the British princes would naturally do their utmost to save from invasion the land which gave rise to their family, and which must have constituted the main element of their power. The country of the Catuvellauni lay, as it were, astride on the woodlands which stretch north of the Thames within the Chilterns. His three principal thoroughfares were those known in later times as the Watling Street, the Akeman Street and the Icknield Way. The Watling Street ran from the fords over the Severn near Wroter to the fords over the Lea at Stratford, and connected western Britain with the country of the Trinobantes, our modern Essex. Akeman Street came from Bath, and, passing into the London basin by the gap at Tring, joined the Watling Street at Verulam. The Icknield Way came from Suffolk, and, running along the chalk hills of the Chilterns across the other two trackways, coasted the vales of Buckingham and Aylesbury, which were, no doubt, the richest portions of the district. It seems to have crossed the river at Wallingford and to have run into the vale of the White Horse, for a road in that neighbourhood is expressly called the *Icenhilde Way* in a charter of the tenth century. For more than a thousand years the ford at Wallingford was recognized as the chief pass on the river. It was at this place that the Conqueror crossed the Thames, and following the Icknield Way to Tring, turned his steps thence to St. Albans (Verulam), and so descended upon his prey—London. At this pass, therefore, barring access to the rich country in their rear, the Britons took their stand. The fords in front of them were probably fortified, for it is said that when Shillingford Bridge was built beams and piles were taken from the bed of the river. With guards to watch these fords, the Britons might not unreasonably consider themselves secure.

The daring act of the auxiliaries in swimming the river must first have shown Caractacus—for he, no doubt, was the British commander—how much he had miscalculated. In the confusion that followed Vespasian seems to have forced his way over the ford at Wallingford. Here a passage must have been left to accommodate the traffic that passed

along the Icknield Way, though the fords at Shillingford and Moulford may have been rendered altogether impassable. The Romans made good their passage of the Thames; but the Britons did not fly, and how desperate was the next day's engagement appears from the account which Dion has handed down to us. The Britons withdrew their shattered forces along the same route that was followed by William a thousand years afterwards. They were too disheartened to make an attempt to save Verulam, but continued their retreat till they had crossed the Lea and placed the Essex marshes between them and their pursuers.

I have relied for these results chiefly on critical inference. But they are so obvious that they have been partially adopted, though not critically worked out, by other antiquaries; for instance, by Gough (Gough's 'Camden,' i. 30), and by Sir Richard C. Hoare (Vide Intr. to Gir. Cambr.). I think, however, there is something like authority for the sketch I have given, though it may require some little introduction to lay the authority on which I rely clearly before the reader.

Welsh legends, as handed down to us in the Triads, altogether ignore the conquests of Plautius. He disappears amid the glory which encircles the name of Cæsar, and to the latter alone is attributed the Roman conquest of Britain. This tendency to melt into one the two invasions of Britain arose, I believe, from the loose, confused, and what may be even termed the blundered statements which are met with in the classical writers. Orosius never mentions the name of Plautius; and though he refers to the expedition of Claudius, it is done in such a way that the reader might suppose he went to Britain merely to repress some casual disturbances in the island. When Polyænus tells us that Cæsar employed elephants to force his way over the Thames, every critical reader feels there must be some mistake; and when we find that Claudius did actually employ elephants in his advance upon Colchester, we cannot help suspecting that Polyænus has assigned to the first invasion an event which really took place in the second. Again, when Orosius states that Cæsar sailed to Britain in early spring (*primo vere*), we see at once there is a blunder. We know that Cæsar sailed in the height of summer; but as we have reason to believe that Plautius did really sail *primo vere*, we may reasonably conclude that the careless compiler somewhere found the statement that "the British expedition" sailed *primo vere*, and concluded that Cæsar's expedition was referred to.

Alfred translated Orosius, and it is curious to see how he deals with the statements of his author. He abridges, enlarges and alters them at pleasure, not under the guidance of any critical discrimination, but merely in the exercise of that freedom which the usage of the time allowed to a translator. It is well he took this view of his duty, for it enables us to form some estimate of the knowledge he had acquired on the various subjects he deals with. The following is his account of the Conquest of Britain:—

"After that he (Cæsar) had conquered them (the Galli), he went to the island Bryttanie and fought with the Brits, and was put to flight in the land that was called Kentland. Soon afterwards he fought with the Brits again in Kentland, and they were put to flight. Their third fight was nigh the river that is called Temese, nigh the ford which is called Welinga Ford. After that fight there submitted to him the king and burgh-men that were in Cynr-cester, and afterwards all that were in the island."

Cæsar we know never approached either Wallingford or Cirencester, and Orosius makes not the slightest reference either to the one or to the other. I can only account for their appearance in Alfred's work on the supposition that he found them mentioned in some Welsh chronicle, or in some Welsh compilation, like that of Nennius. The Welsh writer he was copying may have confounded the events of the second invasion with those of the first, and so led Cæsar along a route which was really traversed a century later by Aulus Plautius. The fact that Alfred makes the battle of Wallingford precede instead of follow the capture of Ciren-

cester need not disturb us. The entry in the Welsh chronicle was probably much in the following form: "Anno—Cæsar Ceren taken, Fight at Wallingford," some Welsh name, of course, taking the place of Wallingford. Alfred, or the Welsh compiler he was copying, would naturally suppose that the surrender of the fortress was a consequence of the battle, and hence the blunder.

We are now brought face to face with the question which is the great difficulty that meets us in the present inquiry. The conditions of the problem we have to solve may be stated as follows. The Britons in their retreat crossed the Thames by a well-known and accustomed ford, and the Romans "a little higher up," by means of a bridge. When the Romans got entangled in the marshes, they retreated, and awaited the arrival of Claudius. Claudius joined the army "that was awaiting him on the Thames," passed over it and marched to Colchester. The puzzling question is, where were situated the ford and the bridge here referred to? My own solution of the difficulty is the following. When the Romans came down the Watling Street to the neighbourhood of London, they saw before them a wide expanse of marsh and mudbank, which twice every day assumed the character of an estuary, sufficiently large to excuse, if not to justify, the statement of Dion, that the river there emptied itself into the ocean. No dykes then retained the water within certain limits. One arm of the great wash stretched northwards, up the valley of the Lea, and the other westward, down the valley of the Thames. The individual character of the rivers was lost; the Romans saw only one sheet of water before them, and they gave it the name of the river which mainly contributed to form it. When they stated that they crossed the Thames, they merely meant they crossed the northern arm of the great lake which spread out its waters before them, and on either hand.

That such is the true interpretation of Dion's language is clear, I think, from the circumstances of the case. I am not one of those who consider the Britons of this period to have been "barbarians"; but that they were able to construct a bridge near London, over the proper Thames,—a tidal river, some 300 yards wide, with a difference of level at high and low water of nearly 20 feet,—I cannot believe. The construction of a bridge over the marshy valley of the Lea may have been within reach of their ability. The existence, also, of a ford over the proper Thames, at a place which can by any licence of language be represented as lying near the mouth of the river, is beset with insuperable difficulties. At Higham, east of Gravesend, are the remains of a causeway that no doubt led to the ferry which we know once existed between Higham and East Tilbury, in Essex. Hasted suggests that it may have led to the ford with respect to which we are now speculating. Other antiquaries have repeated his statement without the hesitation that accompanied and qualified it. It is a sufficient answer to say, that the river in this neighbourhood is six fathoms deep at low water. The notion of there having once been a ford near London has been more widely entertained, and even by men of ability; but it appears to me to be almost as untenable as the one we have been discussing. There is no river in the world, the history of which, for the last thousand years, is so well known as that of the Thames near London. We are told that, in the reign of Henry the First, there was so great a scarcity of water in the river, that men waded across it westward of the Tower; and a similar dearth of water is recorded in the reign of Elizabeth. But these are exceptional cases, and are noticed by the chroniclers just as they hand down to us accounts of the Plague, or of the Great Fire. If it be said that the condition of the river may have been very different before the embankment was constructed on the Surrey side from what it has been since, I must appeal to the authority of Cæsar. He knew the river in its natural state, and had within reach adequate means of acquiring knowledge on this subject. To say nothing of other refugees and deserters, he had in his camp Mandubratius, who had lived all his life in Essex, and must have been acquainted with every circumstance connected with the river.

Better authority than a statement of Cæsar we can hardly look for, and he tells us distinctly that the Thames was passable on foot *only in one place*. I indulge a hope that I have advanced reasons sufficient to justify Camden's decision in this matter, and which may induce the reader to fix the place at the Coway Stakes; at any rate it is certain that it cannot be fixed in the neighbourhood of London. If neither Dion's bridge nor his ford can be located on the Thames proper, it seems to me that we are necessarily driven to place them in the neighbourhood of Stratford.

When Plautius withdrew his soldiers from the marshes they had vainly attempted to cross, he, no doubt, encamped them somewhere in the neighbourhood: I believe the place was London. The name of London refers directly to the marshes, though I cannot here enter into a philological argument to prove the fact. At London the Roman general was able both to watch his enemy and to secure the conquests he had made, while his ships could supply him with all the necessaries he required. When, in the autumn of the year 43, he drew the lines of circumvallation round his camp, he founded the present metropolis of Britain. The spot he selected has been—perhaps with one small interval—the habitation of civilized man for 1,833 years. May we not venture to hope that its influence for good has been not altogether unworthy of the position it has occupied among the cities of the world?

EDWIN GUEST.

PROF. WILLIS ON THE ARCHITECTURAL HISTORY OF THE COLLEGE AT ETON.

The Professor prefaced his account with some introductory remarks on the general history of colleges and their growth. The universities were at first corporations of educated men, the teachers or doctors in which instructed by lectures in the public schools, the students being obliged to find lodgings for themselves. Soon, however, generous persons gave funds to assist poor students. After a time a more definite shape was assumed by these institutions; and lodgings were also provided, that the morals and manners of these students might be brought under superintendence and control. The next step was to purchase houses, endow them and provide them with statutes. Thus arose the communities termed colleges, residing in buildings called the *Domus* or *Aula*, which at first contained little else than chambers to lodge in, with a dining-hall, kitchens, &c., like the ordinary dwelling-house of the period. The first of these colleges was that at Oxford, by Walter de Merton, in 1264; one was founded at Cambridge soon after; and others followed at intervals up to 1379, when in the so-called New College at Oxford William de Wykeham erected the first architectural building, complete in all its details, and so well organized in its statutes, as well as in its structures, as to serve as a basis for all subsequent erections. His plans also included the then new feature of a preparatory school, at Winchester, for young boys, from whom the members of his Oxford College were to be selected.—The Professor next proceeded to the consideration of King's College, Cambridge, and its appendage Eton. He gave a touching account of the effect of the misfortunes of Henry the Sixth in retarding and finally suspending these works, followed by a just parallel between the continual devising of plans for the education and elevation of his people by that monarch and the constant efforts in the same directions by the late Prince Consort.—Prof. Willis then detailed the original plans for Eton College as set forth in that monarch's "will"—this will being, however, not a "last will and testament," but in reality a building specification for his colleges, in which so clearly has he laid down his plans that the lecturer was able to transfer them to paper, and to exhibit diagrams of the ground-plans to his audience as a basis for comparison with a plan prepared by himself of the actual buildings subsequently erected, and showing the condition of Eton in 1866. Henry, however, did not mature his plans at once, but modified them very considerably at a shortly subsequent period. He first founded a collegiate grammar-school at Eton and a small college at Cambridge, dedicated to St.

Nicholas, that saint's day having been his birthday. A site was purchased at Eton, north of the cemetery of the old parish church (now no more), and the King came down and laid the first stone, over which was to be the high altar of the new collegiate church. The King soon enlarged his plans, increasing the number of his beneficiaries and connecting, by statutes copied from Wykeham's, Eton School with King's College at Cambridge.

The contemporary building accounts and documents, containing the King's projects and instructions, long mislaid, and believed to have been stolen, were by a fortunate accident discovered in a forgotten recess of the Library at Eton, about two months since, and liberally submitted to the Professor's inspection. They contain abundant proofs of the personal interest which the King took in the details of the college buildings, and of changes and improvements introduced by him as time went on. They show that the works at Eton were of two kinds, carried on simultaneously. First, the enlarging, refitting, and altering of buildings that already stood on the site purchased by the King, including the parish church, of which he obtained the advowson, and its conversion into a collegiate church. These buildings were so treated as to make them serve as temporary dwellings for the accommodation of the provost, fellows, and students of his new College, which enabled the school to be brought into active existence from the beginning, without waiting for the erection of the magnificent architectural pile described in his will and other documents, and which was commenced simultaneously with these temporary operations; but which, even if carried on in prosperous times, would necessarily have occupied many years in completion. The chancel of the old parish church was rebuilt on a larger scale, and fitted with stalls and other appurtenances for the daily choral service. A hall in one of the old houses was enlarged; a school-room and other buildings constructed of wood. The almshouse for poor men, described in the will, was also built.

The permanent College was also begun; the first buildings attacked being the great chapel, which now exists, and the hall and kitchens. This chapel was placed in the old parish church-yard, to the north of the old parish church, and was planned as the chancel of a large collegiate church, to be provided with a nave or body for the parishioners, as described in the well-known will of Henry the Sixth, dated 1448. But, after the signature of this will, the King enlarged and altered his plans. He sent persons to Sarum and Winton, and other parts, to measure the choirs and naves of churches there, and had improved designs made for the college buildings.

The Professor found among the documents two specifications relating to the chapel, the one exactly corresponding to that of the will, but in which every dimension is struck through with a pen, and an increased dimension written above it. The other specification describes the chapel or church, as it is called, in different phraseology from that of the will, and more completely. The dimensions in this latter paper are still greater than those of the corrected document, and, what is more curious still, they correspond exactly with the chapel as it exists. The paper concludes with minute directions that the foundations of the chapel, which had already been laid (of course in accordance with the will, for the works had been in progress for seven years before that will was signed), should not be disturbed, but the new foundations (i.e. for the enlarged dimensions) be laid round the outside of them, and be constructed with the greatest care, and with "mighty mortar." The first stone under the high altar to remain undisturbed. This stone was protected by a small chapel built over it in the first years of the works.

The deposition of the King, in 1461, put an abrupt stop to the buildings, which had languished during his increasing misfortunes. That they were resumed, after a long interval of time, by his confidential friend and executor Bishop Waynflete, is stated by Leland, and also shown by an indenture, in 1475, between him and a carver, who engaged to make a roodloft and stalls for the new chapel, and to take down the roodloft and stalls in the

choir of the old parish church. This proves that the great chapel was only then brought into a condition to receive its fittings. It must have been just roofed in. The Professor pointed out to his audience evidences of the haste in which the upper part of the chapel had been completed. The arch heads of the windows are abruptly depressed, in a way which shows that the walls of the chapel were intended to have been carried much higher by the masons who built the jambs and springing of the window-arches. It is probable that the work had been carried up exactly to this level when the defeat of the King stopped the operations. When resumed by Waynflete, with insufficient funds, expedients were adopted to enable the buildings to be rapidly finished and roofed-in for use. The hall exhibits similar evidences to show that its walls and windows were designed to have been carried up to a much greater elevation than they now present; and that after a sudden interruption it had been hastily put into a condition to receive the roof, which is of a very plain construction. The magnificent body of the collegiate church designed by the founder was never even commenced. The choir, or present chapel, is now terminated westward by a low transverse ante-chapel of slight construction, probably the work of Waynflete.

The old parish church appears to have been pulled down after the present chapel was prepared for service, as above stated. The parishioners retained the right of employing this chapel as their parish church. But the increase in the numbers of the students and of the population, and other causes, creating great inconvenience, both to the college and the parish, a new church or chapel-of-ease was erected in the town of Eton for the use of the parishioners, in the last century.

The arrangement of the college buildings differs entirely from that described in the will of the founder in 1448. The Professor concluded from this, and from the mention of a plan or "Portitura" exhibited to the King, in the following year, "for the finishing of the buildings of the college," that he, when adopting an enlarged design for the chapel, had also determined upon a new disposition for the other buildings.

The college in the will is limited from Wykeham's colleges, consisting of a quadrangle containing hall, library and chambers, and of a cloister. But in the existing college the quadrangle of chambers contains not only the hall and library, but is also cloistered. The site of the cloister first proposed, but never commenced, is that now occupied by the school-yard. The cloister quadrangle is arranged upon a plan unusual in colleges. It was built in two stories, having chambers on the north and east sides, and the hall on the south, the dimensions of which agree exactly with the founder's will. The upper chambers are not reached in the usual manner, by assigning one staircase to each contiguous pair; but a gallery is carried round the upper floor, exactly over the cloister of the ground floor, to give access to the doors of the chambers. At each internal angle of the quadrangle, or *quadrant*, as the will terms it, is a square turret containing a spiral stone stair, or *vice*, with a door below and above, by which the upper gallery is conveniently reached.

The chamber buildings were carried round the east and north sides in one style, and probably in the founder's time; but the west side, which contains the great gateway called Lupton Tower, was built, after a considerable pause in the works, in a totally different manner during the provostship of Lupton, and probably in the reign of Henry the Eighth.

The cloister-arcade and chamber-doors on the ground floor on this side appear, however, to belong to the earlier building, and to have been suddenly stopped in an unfinished state. This western side of the quadrant is wholly devoted to the provost, and contains a large dining-hall, termed "Election Hall," with a withdrawing-room behind it, over Lupton's entrance-arch, and large bedchambers beyond, joining the hall. In the will of the founder a much smaller provost's lodging is placed in this position in two stories. The present extension is accounted for by the bountiful hospitality which,

at and after the period of Henry the Eighth, was exercised by the masters of colleges in favour of the nobility and gentry. This compelled the building of chambers and reception-rooms. After the Reformation the marriage of masters of colleges created a new demand for space, and made it necessary to supply these officers with a family residence.

The subsequent works carried out in this college were enumerated as follows: The lower school, or north side of the entrance quadrangle or "school-yard," was built before 1581, and has the long dormitory above it. The library in the cloister quadrangle was built by Sir Christopher Wren. The new upper school, which is the western boundary of the school-yard, was rebuilt in 1689. In 1758 an attic was raised upon the east and north sides of the cloister court, and the entire group of chambers altered so as to convert them into a row of private houses of three stories each for the fellows of the college. Lastly, the interior of the chapel, which had been refitted and "beautified" in the Italian style in 1699, by Mr. Banks, was well restored to its ancient aspect, with rich stalls and canopies, in 1850, from the designs of Mr. Deason.

OUR WEEKLY GOSSIP.

THE *conversation* which, on Wednesday evening, may be said to have closed the Exhibition of the Royal Academy, is likely to be the last of a long annual series. It is proposed to hold two, earlier in the season, instead of one at its close. That of Wednesday was crowded with celebrities of every class; but perhaps few attracted more notice than two ladies—the Dowager Countess of Essex, and Lady Becher—the former, the queen of English warblers of her day, as Miss Stephens; the latter, the queen of tragedy, Miss O'Neil, who has had no royal successor since she left the stage, now nearly half a century ago. The public took longing, farewell looks of their favourite pictures, which no chance can ever again bring together. Among these were Landseer's *Mare and Foal*, MacLise's *Death of Nelson*, Mrs. Ward's *Palissy the Potter*, Faed's transcripts of north-country life, and numerous others.

Col. Alfred B. Richards has a volume of verse in the press, entitled 'Religio Animæ, and other Poems.'

The most important of the papers read before the Archaeological Institute at the last Congress will be collected and published in a volume by Mr. Murray.

We understand that the Vice-Mastership of King's College School has been conferred on the Rev. John Twentyman, M.A., late Fellow of Christ's College, Cambridge. Mr. Twentyman was a Senior Optime in the year 1861, and stood seventh in the first class of the Classical Tripos, and has held a Mastership at Cheltenham College during the last three years. The Head Mastership, we believe, will be undertaken during the next term by the Rev. G. F. Maclear, M.A., late scholar of Trinity College, Cambridge, till lately Master of the Lower Sixth Form in King's College School, and now Assistant Preacher at the Temple Church. Mr. Maclear obtained a second class in the Classical Tripos in the year 1855, and a first class in the Theological Tripos in 1857, as also the Caius, Buncy, Hulsean, Maitland and Norrisian University prizes, and is the author of several educational and theological works.

The Congress of the British Archaeological Association will be held at Hastings, beginning on the 20th inst. The programme is as follows:—Monday, Hastings, reception by the mayor and inspection of the local antiquities; Tuesday, Rye and Winchelsea, Brede and Camber; Wednesday, Bayham Priory and Mayfield Palace; Thursday, Bodiam Castle, Etchingham Church, Battle Abbey and Church; Friday, Hurstmonceux Castle and Church, Pevensey; Saturday, Lewes, reception by the Sussex Archaeological Society, inspection of Lewes Castle, Priory, &c.

The recent decision of the House of Commons, by which it was affirmed—we believe, for the fifth time, and by ninety-four against seventeen votes—

that the National Gallery should remain on the most convenient site in London, was, on the same evening, emphasized by the passage of the National Gallery Enlargement Bill through the Committee of the House of Lords; and, on the 26th ult., by the third reading of that Bill in the latter assembly. It now waits but the royal assent—which, in this case, is a matter of course—to become effectual, and put at rest for ever the hopes and expectations of those who preferred another site for the public collection. What is next to be done is to decide upon the design for the building that must be erected in Trafalgar Square for the reception of our admirable, but comparatively small number of pictures. The youngest gallery in Europe is ours; but, owing to the wisdom and tact of successive managers, it is by far the most remarkable for the quality of its contents. We have not so many as may be found elsewhere of the supreme glories in Art: we have, however, several, among them, 'Bacchus and Ariadne,' which may rank with the cream of other collections, and we are increasing the number of our treasures; so that the character of the mass stands very high indeed in comparison. We trust the nation, which is thus enriched, will not grudge cost or pains in providing a worthy structure to contain its acquisitions. The money expended not longer than twenty-eight years ago on the present edifice, although little more than the cost of the Marble Arch, might, with equal wisdom, have been thrown into the river, so far as the production of a fine or useful building was concerned. After one generation, the thing has to be done again. Let us trust this will not be the case a second time, and that we cease to be so unwise as to sacrifice the greater for the less, and spoil a National Gallery in order to have passages through its body,—conveniences that might equally have been obtained by tunnelling; so that the openings should appear in the retaining wall of the terrace in Trafalgar Square, between the steps under the road in front, or in order to use again certain columns and "old materials." The nation, which annually spends prodigious sums in the maintenance and repairs of royal palaces that are not occupied, or are but occasionally in use, can better afford to divert those sums to the building of a Palace of Art than to have the latter spoilt by pinching and cheeseparing. The forty odd annual thousands thus expended would go far to make the National Gallery what it ought to be. Of course, nobody grudges the money for royal palaces. One of the objections to the enlargement of the National Gallery on its present site was, that the removal of the barracks behind it would leave the building without military protection. Mr. Layard, who knows his own constituents best, expressed fears for its safety in such a case whenever anything like an *émoué* takes place.

The drawing for the prizes in the Ceramic Crystal Palace Art-Union last week was presided over by Mr. E. M. Ward, R.A. The average attendance during the week exceeded fourteen thousand daily.

Of the coming theatrical season, to commence in the autumn, there are already indications. Drury Lane will open about Michaelmas, under the sole management of Mr. Frederick B. Chaterton. Mr. Slous's "T. P. Cooke Prize Drama" will appear at the Surrey. Of the Holborn Theatre, which is approaching completion, we will only express a hope that the "authorities," if such things exist, will look to the protection of the audience from fire, and to ample means of egress. The panic at the Princess's (on a late occasion of serious alarm) has renewed public anxiety on this matter, and should be answered by a due inquiry into the condition of all our theatres. If audiences were aware of the risks they now incur in some of them, they would never have the courage to face the peril. The Lord Chamberlain has new powers; we hope they will be applied to the protection of the lives of both players and people. One of the oddest of dramatic incidents of the past week is the wonderful success at the Haymarket of the revival of Colman's comedy of 'The Poor Gentleman,' with a second-rate cast only, excepting Mr.

Compton, who is one of the few sterling actors left to adorn the stage.

We have from time to time recorded the names of ladies, in America, who, after affording proofs of their competency, have been admitted to practise as physicians in the United States. We have now to notice that at the "St. Mary's Dispensary for Women and Children," in Marylebone, the office of General Medical Attendant is exercised by Miss Elizabeth Garrett. This lady is the first legally qualified female medical practitioner that England has produced. She holds the licence of the Society of Apothecaries, but the College of Physicians, it is said, has refused to admit Miss Garrett to be examined for the degree of M.D. At present, however, she occupies a post (for which she has shown herself qualified) which a woman may very fittingly occupy for the benefit of women and children.

Attention has been called to the fact of a titled personage openly carrying on a retail business. Lord James Butler, of the house of Ormond of Llanthony, is not only State Steward in Dublin Castle, but a retail dairyman. His Lordship's carts, with the owner's name inscribed according to law, traverse Dublin, supplying all who will take at least four quarts of my lord's milk daily! This is only one of many examples of trading by noblemen. The eccentric Lord Stanhope apprenticed two of his sons to handicraft business. There was once a Lord Teynham who, in partnership with a tailor, made money by selling, or pretending to sell, government appointments. Recently, Lord Thomas Gordon was in the Bankruptcy Court, as a tobacconist; and Lord Henry Loftus is now before the same Court, his vocation being that of Steward to the Marquis of Ely, his master being also his nephew. Many other examples might be adduced, wherein the calling and the title of the individual seem to be out of harmony.

Charlotte Florentia Clive, the elder of two Dowager Duchesses of Northumberland, who died last week, in her seventy-ninth year, claims a word of notice as belonging to literature. This noble lady was the author of a history of Alnwick Castle, which includes also histories of Alnwick and Hulse Abbeys. The illustrations to this quarto volume were from the pencil, as the text was from the pen, of the Duchess, who exhibited rare ability both as artist and as author. This lady's second name was in memory of the place of her birth, Florence. She was a Clive (granddaughter of the great Lord Clive) by her father, and a Herbert by her mother. The Duchess was "governess" to the Princess Victoria. The office was not that of instructress, but of supervisor of those who gave instruction, the Duchess being present when the lessons were given.

A memorial of the late John Keble is in course of preparation by Mr. Savage, of Winchester. It consists of a series of photographs, "tracing the path of the reverend poet step by step from his birth-place in the little town of Fairford to his grave in the churchyard of Hursley." The photographs (thirty-two in number, chiefly of churches and personages) will be accompanied by a memoir of Mr. Keble, and descriptive notes, by the Rev. J. F. Moor, one of his executors.

The Rev. Julian Young, and one or two others, are the only clergymen left among us whose fathers were connected with the stage. One has recently passed away in the person of the late Rev. W. H. Charlton, incumbent of old Marylebone Church. This gentleman, who was the son of Mr. Charlton, manager of the old Bath Theatre, was the author of a very creditable volume of poems, published by Rivingtons, in 1834. Professional duties, however, left no further time for the late worthy parish priest to devote to literature.

Underground travelling increases at a surprising rate. In the first six months of 1863, the number of passengers conveyed on the Metropolitan line was 4,823,437; in 1864, for the same period, it was 5,207,335; in 1865, it was 7,462,823; but in the first half of the present year it rose to 10,303,395. The revenue has correspondingly increased; in the first of the four periods it was 53,058*l.*; in the last, the sum amounted to 102,947*l.*,

a prodigious sum to make up of sixpences, threepennies, and pence. The overground traffic, however, along the same route remains much the same as it was before the Underground Railway was opened. The result is one of good augury for the other underground lines now in process of construction.

The first stone of the embanking works on the south side of the Thames, Westminster to Vauxhall, was laid by Mr. Tite, M.P., on the 28th ult. Six acres of land will be redeemed by this work. The retaining-wall will be about four feet above the level of high water. Within this there will be a terrace, approached from the bridge by a flight of steps, twenty feet in width, of an easy gradient. This terrace will be open to public use, and, above it, a second terrace will supply a site for St. Thomas's Hospital. In two years the whole embanking work will be finished; in three years, it is hoped, the hospital will be ready for use.

The literature of Joint-Stock Companies is becoming an important portion of the history of finance. The last work of this class speaks of a company whose "share register is a fraud. Out of the 40,000 shares not more than 12,000 are held by *bond fide* holders who pay their calls." Among these non-payers are reckoned the solicitor to the company and his clerks, who are said to hold nearly 3,000 shares among them. The pamphlet which furnishes this statement is one of the many which will be valuable to those who are making collections of works having reference to the history of money-panics.

Objection is made by the *Builder* to the term "Dead Meat Market," as "an unpleasant expression, wholly unnecessary. *Meat Market*," adds our contemporary, "is surely all that is required to distinguish it from the Cattle Market." The suggestion is worthy of being adopted. The subject reminds us that near Kensal Green a house of entertainment strangely seeks to allure customers by calling itself the "Cemetery Eating House,"—a term very suggestive indeed of a "dead meat market" and a company of ghouls.

Mr. Bohn (and it must positively be the *last* word in this controversy) states, in reply to Mr. Otley, as follows:—

"York Street, Covent Garden.

"Mr. Otley asserts, first, that he did not agree to write what I have called on the title, 'A Biographical and Critical Dictionary of Recent and Living Painters, forming a Supplement to Bryan's Dictionary of Painters and Engravers as edited by George Stanley'; and, secondly, that I did not, as he requested, add my initials to the articles for which I am alone responsible. In refutation of assertion No. 1, I have to say that the verbal agreement to which Mr. Otley alludes as made in May, 1862, was that he should write a dictionary of living and recent painters and engravers, as a supplement to Stanley's edition of Bryan, and on the plan of it, of upwards of 200 pages, but not less, for a given sum. At the end of September Mr. Otley wrote to say that the work was not unlikely to extend to 300 pages; and alluding to the money part of our agreement as being somewhat more in his favour than I had understood it, suggested a *pro rata* payment for the surplus, to which I consented. Late in the autumn I received the MS. (or rather the material, for a great part of it consisted of printed cuttings), and upon examining it found it so different to what I had contemplated, and so imperfect, that I deemed it necessary to draw up a written agreement, and while this was under discussion returned the whole material with an elaborate letter, which I should much like to publish. Mr. Otley declined to sign my proposed agreement, but adopted such parts of it as suited him, entirely in his own handwriting, and duly signed with his name, which, in contradiction to Mr. Otley's assertion, is a good and legal agreement. In it he agrees 'to write and compile a biographical-critical Dictionary of Painters and Engravers, which is to contain the principal artists who have died since Stanley's time, or are now flourishing, especially those whose works have been exhibited at the Royal Academy, the British Institution, the Society of Water

Colours, and the International and other public Exhibitions, or who have attained celebrity in any other way, so far as available materials will allow. Particulars of known pictures, with the prices at which they have been sold, either by the painter, or by auction, where they have been ascertained, to be occasionally given. The words in italics are his own additions. I think this will show that Mr. Ottley agreed to write exactly what I have stated on my title-page, and not the something else which he pretends, although his distinction is without a difference. No. 2 asserts that I ought to have placed my initials against each article of my writing, instead of announcing them in my preface. I took licence in one of the clauses of my agreement, adopted by Mr. Ottley, that I should contribute whatever I deemed necessary, without allowing it to be accredited to Mr. Ottley's account, and the book was all printed off and in his hands before he requested my initials; indeed, had I not returned the proof of his preface to have my contributions in some way acknowledged, we should have heard nothing about initials. It is true that I corrected the blunder of making Mr. A. Cooper the father of Sidney Cooper, but this caused the cancelling of two pages; and if I had been obliged to add my initials to the seventy articles I have contributed, I must have cancelled nearly the whole book.

"HENRY G. BOHN."

BRITISH INSTITUTION, Pall Mall.—THE GALLERY, with a Collection of PICTURES by ANCIENT MASTERS and decorated BRITISH ARTISTS, is OPEN DAILY, from Ten to Six. —Admission, 1s.; Catalogue, 6d.

GEORGE NICOL, Secretary.

THE NATIONAL PORTRAIT EXHIBITION, Exhibition Road, South Kensington, is NOW OPEN to the Public. Admission, on Mondays, Wednesdays, Thursdays, Fridays, and Saturdays, 1s. each person; Tuesdays, 2s. 6d. Hours from Ten A.M. till Six P.M. Season Tickets, 1l. each. Catalogue, 1s. and 1s. 6d.

MR. MORBY'S COLLECTION OF MODERN HIGH-CLASS PICTURES is ON VIEW at the Royal Exchange Fine Arts Gallery, 24, Cornhill. This Collection contains examples of Holman Hunt, J. Phillip, R.A.—T. Ford, R.A.—J. Lewis, R.A.—Eger, R.A.—Firth, R.A.—Rosa Bonheur—Goodall, R.A.—Cooke, R.A.—Creswick, R.A.—Pickersill, R.A.—Calderson, A.R.A.—Sant, A.R.A.—Le Jeune, A.R.A.—Andell, A.R.A.—Frost, A.R.A.—Nicol, A.R.A.—Pettie, A.R.A.—Yeames, A.R.A.—P. Nasmyth—Linnell, em.—Dobson, A.R.A.—Cooper, R.A.—Gale—Marks—P. Hardy—John Ford—Frère—Ruipert—Brillouin—Liddellale—Geo. Smith—Duverger, &c.—Admission on presentation of address card.

Mr. and Mrs. GERMAN REED, with Mr. JOHN PARRY, in A YACHTING CRUISE, by F. G. Burnard, Esq. Secrecy by Messrs. T. and W. Griere, with THE WEDDING BREAKFAST, at Mrs. ROSELEAF'S, by Mr. John Parry. Every Evening (except Saturday), at Eight; Thursday and Saturday Mornings, at Three. —Royal Gallery of Illustration, 14, Regent Street.—Admission, 1s., 2s., 3s. and 5s. WILL SHORTLY CLOSE.

PINE ARTS

ART IN GLASS.

LOVERS of old art in glass, and those who wish to see beautiful things brought, at a very moderate price, into common use, will thank us for recommending an examination of the many elegant, quaint, and pretty specimens of modern Venetian manufacture now in Dr. Salvati's shop, near the east end of Oxford Street. The artistic aim of the maker has been to revive the craft of glass-blowing, as practised for centuries at Murano. This has been accomplished; so that it is a real treat to examine the results. These are so like the old patterns in form and colour that, although the new are probably not quite so clear as the best of ancient specimens, it is, in many cases, impossible to distinguish the one from the other.

Mere reproduction of old models, however beautiful, interests us far less than the successful execution of new designs, for which those of old have supplied only the style and the proper treatment of the material. These new designs are mainly due to Mr. Norman Shaw, who has wrought admirably and with perfect knowledge in the formation of objects of ornament and of service. Among the old and new patterns and utensils are the tall wine-glasses, with open-work stems, marvellously entwined and grotesquely wrought, enriched with delicate and brilliant colours, tazze, salvers, finger-glasses, wine-glasses for ordinary use, white, coloured, and combined, in great variety of forms,—from the quaint, stumpy little vessels with in-turned, bell-shaped bowls and

broad, circular, hollow stems of dark green, purple, carnation, blue, self-coloured or half-and-half, banded with opaque white rings, plain, and studded in many colours, to the lofty and large bowls that, as they rise on the slenderest of stems and broadest of feet, seem like flowers in bloom, and hardly weigh more than flowers. In the latter order of productions, the colours are as various as in the shapes. Broad glasses, shallow glasses, narrow glasses, tall glasses, chandeliers, flagons, cups, bowls, cruets, jugs, oddly intertwined and convolved things, are here, and many forms which are pleasant to the eye in that soft horny tint so prized by men who love to recognize the true nature of glass in its application to use, and hate the vulgar taste for cutting into hard, stony, and glittering surfaces that substance which is singly one of the most ductile and most rigid of materials. Of the fashions in which the glass has been made decorative, it will suffice to name among the kinds now attainable, capital reproductions of the "fligree with bubbles"—that very curious manufacture of interlacing opaque white threads in a body of clear glass, every diamond-shaped interspace of which contains a tiny, airy bubble; the "ritorti," or twisted patterns of many-coloured rods fused with clear glass; and, as the deft workman makes the substance spin on the forming-rod, so it curves inwards or outwards to an infinity of forms. The well-known "fiamma" is here, also opalized glass, "arventurina," the decorative and beautiful colour of aquamarina, as applied in studs, incrustations, and handles.

The English housewife is rapidly losing her attachment to the "cut glass" that twinkled, flashed, and glittered with prismatic sparks, and, until of late, caught the eye in every angle, and tortured that rest-loving organ of the well-educated taste, so that, by long process of sophistication, it had almost ceased to recognize the true beauty of glass in its soft, mellow aspect of ductility. Where flowing lines show its once flexible state, firm and rigid contours its fixed condition, and exquisitely tender interfusing tints its peculiar felicity with colour, there we find good Art in glass. We rejoice to see how "cut glass" is rarer in the gin-palace than on the gentleman's table, and are not without hope that even the theatres will get rid of their dazzling chandeliers, whose once-boasted "ten thousand drops" may, in course of commerce, bedizen the ears, necks, or noses of many an African tribe, or be obstructively inserted in Polynesian flesh. May the Theatres Royal everywhere part with their gewgaws, may the flashy lustre go the way of the curtailed four-post bedsteads, nightcaps, crinolines, stocks, tight coats and shoes, stays, bustles, high-heeled boots! Dr. Salvati is doing the best for the first-named result, in making cheaply good art-works in glass.

KITTY FISHER PORTRAIT.

18, Clarendon Road, Kensington.

As the person who first wrote to the *Times* on the subject of the so-called "Kitty Fisher Portrait," perhaps you will not refuse me space for a few remarks on the letter of "F. G. S." Let me endeavour briefly to state the question at issue.

On the one hand we have the Ledger of Sir Joshua, which mentions the sale of a picture of Kitty Fisher to Mr. Crewe in April, 1774; and we have the painting which, for at least a quarter of a century (*vide Athen.*, July 17, 1841), has been believed by Lord Crewe to be the work which was so purchased. We have also two other versions of the same subject, slightly varied, belonging severally to Mr. Munro and to Col. Lenox, which for some ten years past have been recognized as portraits of Kitty Fisher by Reynolds.

On the other hand we have a large mezzotint, with the name of R. Cosway to the left and of P. Dawe to the right, published a *twelvemonth* before the entry in the Ledger, and differing less from Lord Crewe's picture than the Munro version differs. We have this mezzotint recorded by the paintstaker Bromley as the work of Cosway, and the likeness of Miss Woolls; and on the mooted of the question in the *Times*, we have the representative of Miss Woolls coming forward to assert

unhesitatingly that the engraving, both as to artist and subject, was unquestionably what it pretended to be; that Cosway was an intimate friend of his family; and that the fact of the remarkable likeness which existed between Miss Woolls and Miss Fisher had been handed down as a tradition among the relations of the former.

The question now becomes, which is the less improbable of the two following probabilities?—That in the course of ninety years, in a large old rambling mansion, generally left in the charge of a housekeeper, a particular picture should have been lost or destroyed, and its name transferred to another canvas, representing a lady, whose striking resemblance to the subject of the first picture was, as we now learn, a matter of remark in their lifetime; or that an eminent member of the Royal Academy should have allowed his name to be publicly attached to a painting which he knew to be the work of his friend and fellow-countryman and President; that an engraver of repute should have been induced to lend his name to the deceit; and, lastly, that a publisher should be found foolish enough to imagine that the name of Cosway would make the print more saleable than that of Reynolds. Such a probability as the first may be supposed to be of frequent occurrence. I have never heard of an instance resembling the second.

F. G. S. pronounces, *ex cathedra*, that Cosway was incapable of painting this picture; but even if his acquisitions justify this self-confidence, a mere matter of opinion will still continue open to dispute. I am not myself acquainted with Cosway's style in oil-painting; but Stanley tells us that he worked in close imitation of Correggio, and speaks very highly of his performances. With regard to his works in water-colours, I suppose that everybody now-a-days will agree with Mr. Redgrave that in finish, grace, colour, and, above all, in expression, he never failed to charm, and that he invested the commonest sitter with a beauty and elegance all his own. Every artist, like every poet, has produced some one example that is better than any other of his works; and this may happen to be the *chef-d'œuvre* of Cosway in oils. I will also observe, though with unfeigned diffidence, that the *fading* of this picture appears to me different from the *fading* of a Reynolds. The face has become corpse-like in hue, not delicately pale, as a Sir Joshua does, from the vanishing of the carnations. Besides, we all know that, however erroneous in some instances may have been the *drawing* of the President, he never failed to give the appearance of supreme ease of attitude. Will F. G. S. examine the picture at the British Institution, and tell me what the lady is sitting upon? She appears to me so driven forward as to be almost perched upon the frame.

I have not seen the Munro version of this picture, but am told that it is very inferior to Lord Crewe's. The inscription on the plate in that quarry of blunders, Tom Taylor's 'Life and Times of Reynolds,' tells us that it is taken from *both*! How this unusual operation was performed I do not pretend to understand; but it has certainly produced a miniature round the neck, which has no place in the Crewe picture, and converted an ermine tippet into one of ordinary fur. Oddly enough, the old engraving agrees with the Crewe painting as regards the tippet, and with the Taylor print as regards the miniature, although it alters the sex of the person represented upon it. I am inclined to think that if a photograph of the Lenox picture could be procured it would be found to be the original of Dawe's mezzotint. At any rate some one of the *Athenæum's* many readers in New York could tell us, first, whether there is a miniature round the neck; secondly, the sex of the person represented on the miniature; thirdly, whether the right hand holds a paper, and has a ring upon the forefinger.

An impression of the old mezzotint is in the possession of your neighbour, Mr. Nosada, the printseller of Wellington Street, who would be happy to show it to F. G. S., or to any gentleman from your office.

F. C.

FINE-ART GOSSIP.

THE receipts at the doors of the Royal Academy Exhibition, now closed for the year, turn out, notwithstanding the remarkable amount to which they rose in the earlier half of the period of opening, to have been not so great as was the case last season. The influence of universally-expressed public opinion on the inferior selection of the works for display has apparently made itself felt in the pockets of the Academy. The bad, or rather careless hanging of pictures has provoked many remonstrances, applicable to the ill taste which suspended close to the ceiling the glorious 'Moonrise,' by M. Daubigny, one of the most honoured of French landscape-painters, as well as to the elevation, above five doors, of so many admirable pictures, while the line was crowded with those of inferior quality, and the space above it sacrificed to bad portraits in unusually large numbers. The sale of pictures at the Academy has been greater than on former occasions, considering the panic and other drawbacks.

Students in the Print Room, British Museum, will be glad to learn that Mr. Reid, many years chief assistant there, has been appointed to succeed Mr. Carpenter.

Two of the lions by Sir E. Landseer for the Nelson Monument have been cast in bronze; a third is nearly finished. These are now in Baron Marochetti's studio at Brompton, whence they will soon be removed, we trust, to their long destined positions in Trafalgar Square. The public would be gratified by the immediate exhibition of these works on their proper pedestals.

The Report from the Select Committee on Art-Union Laws, the proceedings and evidence, have been published.

The National Gallery Enlargement Bill was read a third time in the House of Lords on the 26th ult., and passed.

The monument to the late Duke of Wellington by Baron Marochetti has been placed near Strathfieldsaye.

If any of our readers are bound northwards this summer, they will find a good collection of pictures and some other valuables in the quiet old city of York. The Exhibition, which was opened on Tuesday, July 24, by the Archbishop of York, calls itself industrial; and the centre of the building is filled with stalls of industrial manufactures, the arrangement of which reminds us forcibly of shop-windows. But however gratifying this show of grocers, drapers, confectioners, habit-makers, bookbinders, hairdressers, and sewing-machinists may be to their respective customers, strangers are not likely to be attracted by it; whereas the collections of pictures, old china, old armour, old furniture, coming out of the great Yorkshire houses, are really worthy of inspection. Lord Londesborough's armour is famous throughout Yorkshire, and ought to be known throughout England. The city of York itself sends many shelves-full of old china, which is marvellously ugly and beautiful. In the way of pictures there are fine old masters from Lord Feversham's seat, from Lord Wenlock's, from Sir George Wombwell's, and moderns and water-colours from various houses. A replica of Domenichino's 'Communion of St. Jerome,' a magnificent Vandyke, an Andrea del Sarto, a small Cuyp, a supposed Parmigiano, a reputed Leonardo da Vinci, two by Velasquez, a copy of Titian's 'Noli me Tangere,' by Etty, are, perhaps, the most worth notice in the ancient gallery. Among more modern painters Etty is largely represented, and, to some extent, worthily. York is proud of him as a native, and Yorkshire has a right to be proud of some of his pictures. There is a little bit of his flesh colour, 'A Nymph Bathing,' which is really admirable, far superior to his 'Three Graces,' hung just above it. Frith's 'Coming of Age in the Olden Time' and 'Village Pastor' have been lent by Mr. Agnew, of Manchester. Two or three Linnells can be easily identified, and some small Wilkies are not to be passed over. Mr. Faed's portrait of the Rev. Isaac Spencer is capital, and not far from it hangs Mr. Marks's 'Franciscan Sculptor and his Model,'

of a very late year. A landscape by Nasmyth, a Morland, Cuyp-like cows by Sidney Cooper, may detain us before we pass on to water colours of not very great variety, though of various merit. Take it for all in all, the Exhibition at York is highly creditable both to town and county, and if it does not attract strangers from a distance, it may well occupy visitors to the minster city.

MUSIC AND THE DRAMA

NEW PUBLICATIONS.

BOOKS ON MUSIC.

THOSE who believe, as we do not, in the contemporaneous connexion of the Fine Arts, and who are reluctant to admit that Music, as we enjoy it, is a creation of the fancy of comparatively modern date, are perpetually turning their eyes back to Greece and Rome, and endeavouring to persuade themselves that our art could not have been left in a state of semi-savage rudeness among a people who could relish the exquisite perfections of a Phidias, the passion of Euripides, the pregnant satire of Aristophanes, or those who could execute such stupendous monuments as the Flavian Amphitheatre. One of the most ingenious and earnest of these inquirers is M. Alix Thiron, whose *Etudes sur la Musique Grecque, le Plain-Chant, et la Tonalité Moderne*—[*Studies of Greek Music, Plain Chant, and Modern Tonality*] (Paris, Imprimerie Impériale) display a liberal amount of reading, research, and enlightened speculation. Owing this, as we do, with thanks for a thoughtfully-wrought addition to the library of antique musical history, we confess that M. Thiron's essay confirms every conclusion to which the studies of former writers had conducted us—namely, the rudeness and unloveliness of the art as it existed at the time when

— burning Sappho loved and sung.

We fail to find any new light thrown on the "tones" and "modes," or any indication that their notation (or, rather say, tradition of the same) has been misinterpreted. To us there is an unspeakable grimness and ineffable colour in the Greek music so far as it can be made out—strange to think of as belonging to a land which produced an Anacreon, and where a Niobe (how beautiful in her agony!) could be born into marble. It is idle to have recourse to preconceived conclusions on subjects like these, and to endeavour to force facts for their establishment. The Etruscan urns are not more graceful in form nor more perfect in finish than the Japanese bronzes; both have that beauty which is "of all time." But where is the Etrurian lute or melody? and where the Japanese 'Home, sweet Home'? We must not be thought to discourage antiquarian research if we say that the fruits thereof in the peculiar parish of Music so frequently remind us of the immortal Spanish fleet—not to be seen because it was not yet in sight. M. Thiron's treatise is among the best of the kind which has appeared, one not to be overlooked by any future writer who shall deal with the question; even if, like ourselves, he has a mistrust of analogies betwixt sounds and colours and a conviction that Music is an art with conditions of its own, which escape from the trammels of historical theorists.

The Statics of Harmony; with an Appendix, on Anticipations, Suspensions and Transitions, illustrated by Examples from the Great Masters, by James Barnhill, jun., M.A. (Metzler & Co.), are a series of papers republished from the *Choir*, surcharged with definitions and discriminations which can address only those who have made an elaborate study of the science. There is "a confusion worse confounded," which looks like this represent or mis-represent. We cannot admit that they are needed.

Mr. Emanuel Aguilar's *Little Book about learning the Pianoforte* (Groombridge & Sons) is, at best, merely a scissors-book, made out of 'Rules and Remarks' by Emanuel Bach, Mozart, Clementi, J. B. Cramer, Hummel, Moscheles, Kalkbrenner, Czerny and Thalberg. Has Mr. Aguilar paid for the use of his scissors? We can find in it nothing true or new which has not been told again and again.

—Mr. Richard Manns offers yet one more *Manual of Singing for the use of Choir Trainers and Schoolmasters* (Novello & Co.).—The Rev. W. W. Cazalet, M.A., who has testified ere this on the question, as one having experience, a pamphlet on *The Art of Singing* (Cramer & Co.). We have yet to know the name of a pupil trained by it who has succeeded.

OPERAS IN ITALIAN.—It would be difficult to sing better than Mdle. Adelina Patti does at present. Her voice has gained a consistency which it had not in her first days of success, and is literally younger than it was when the world was admiring its freshness. Her value as an artist was first really displayed by her simplicity, quietness and expression in the part of "the little maid" in Mr. Costa's 'Naaman.' Many a young lady has been "got up" in 'La Sonnambula,' or 'Lucia,' by the aid of roulades and cadences, and an adroit stage-manager, so as to make a creditable show; but none among the troop of such butterfly-singers, unless they happen to be sound musicians, and to have the serious principles of their art under command, can venture in a part which has no small executive display, relying alone on expression, with any hope of success,—least of all when the same has not to be copied, but to be "invented." Of this we were anew convinced on Wednesday week, when, after the first act of 'L'Etoile,'—most taxing and taxing in its difficulty,—Mdle. Patti appeared, at her benefit performance, in the garden-act of 'Faust.' While we hold that the honours of the part of *Margherita* in that fascinating opera belong to its first representative, Madame Miolan-Carvalho, in point of musical accent, simplicity, pathos, in short, the thorough working out of every detail of a character as difficult as delicate (for how hard is it on the stage to be innocent and modest, without trenching on the inanity of Molière's *Agnes*), it is not easy to over-estimate the sweetness, the elegance, the dramatic abandonment, yet artistic self-control, of Mdle. Patti in the garden-scene. Especially is she to be thanked for having renounced all "making up," such as has been thought necessary by those of her predecessors who were *brunette*, not *blonde*. It is pitiful work when, not "the wisdom," but the physiognomy of the character is thought to lie in "the wig." Who knows that Goethe's *Gretchen* was a girl with bamboo-coloured hair? A "type" can only befit the dramatic character which has no character, and the stage-person who relies on colours and postures, and (as we too often see now-a-days) legs: how distinct from the artist such a one! Better sung, or played, than by Mdle. Patti, that exquisite act of 'Faust' could not be. After it there was no enduring platitudes of 'Crispino,' however merrily the same were rendered by the *bénéficiaire* and Signor Ronconi. As to Signor Mario, we may not hope ever to see or hear his equal in the part of *Faust*.

We have now to speak of the last and one of the two most important revivals of the opera-season (Gluck's 'Iphigenia' being the other). The idolaters of Mozart (in this country a boundless number) think it nothing short of sacrilege if any study is made of his operas, such as shall involve anything save wholesale admiration. And among these 'Le Nozze'—rich in melody almost beyond compare, excellent in its orchestral treatment, admirable in point of constructive science—stands with them, as being a sacred work, to be bowed down to—not criticized. This unfortunately cannot be done without that abnegation of the right to compare, which is the best part of the power of enjoyment, and without which the latter is only so much fetishism.

With an intimate knowledge of Mozart's setting of the Italian version of Beaumarchais' brilliant and intricate comedy, with an intimate delight in the treasures of melody and of constructive science contained therein, it is not possible for us to hear or to read 'Le Nozze' without feeling that, as an opera for the stage, its music is not thoroughly dramatic. It is the apotheosis not of intrigue but of sentimental expression. With an exception or two, to be presently named, the colour given to the parts of *Cherubino* the impudent, of *Susanna* the arch, of the *Countess* who plays with fancies such as the *ex-Rosina* should never have played

with,—is throughout in the same tone. "Porgi amor" might be exchanged for "Deh vieni," or either for "Voi che sapete," without any displacement or dislocation of emotions, as the respective characters stand. There are only three bits of real comedy in the opera—*Figaro's* "Si vuol ballare," his camp-tune, "Non più andrai," and *Susanna's* "Venite," when she ties the cap on the Page; all the rest of the composition, however musically delicious, might illustrate some graver, deeper story of passion. And thus, seeing that comedy in music, and not music without comedy, is the question before us, we cannot help thinking that, in spite of its long-drawn airs of parade, "Il Serraglio" is truer to the theatre than "Le Nozze." The above judgment will be thought so much "flat blasphemy"; but it is sincere, and, as such, may have its hearing, to stand or fall among other heresies.

In any event it is obvious that "Le Nozze" as of late been avoided as a work to be represented, in place of its being courted. And then it demands singers; and singers, as the times go, are "few and far between." Further, it has no tenor part against three *soprani*; for to transpose *Cherubino* into a *contralto*, because of his "doublet and hose," is to pass a change on Mozart which cannot be sanctioned (no scandal against Mesdames Alboni and Trebelli Bettini). Lastly, it requires two acting as well as singing basses, of rare accomplishments. But, allowing all this, why "Le Nozze" should have been reserved, both by Mr. Mapleson and Mr. Gye, for the *fig-end* of the opera-season, is one of the mysteries of management difficult to understand.

There can be no question that Mr. Gye's cast is the stronger of the two. Mdlle. Artôt is a far more accomplished singer than Mdlle. Tietjens. Madame Lemmens-Sherrington has a better voice than the useful Mdlle. Sinico, and Mdlle. Lucca seems to have been "cut out" to play what may be called *Cherubino* parts. Then Mr. Gye's *Figaro*, M. Faure, is one of the most brilliant actors who can sing left on any opera-stage. Signor Graziani, on the other hand, who is *Il Conte*, in no respect outweighs Mr. Santley; though the latter has still something of subtle refinement to acquire in the matter of stage demeanour, entirely within his reach; his noble voice, his true method of singing, most of all, his proved knowledge of every school of music, make him infinitely surer, more satisfying, and more interesting than the original *Conte de Lena*, who sailed into public success on "Il balen," and who has never gone further or backward, "for better, for worse," since he appeared in "Il Trovatore."

The performance of "Le Nozze," at the Royal Italian Opera, yesterday week, was most satisfactory. Mdlle. Artôt, as the *Countess*, was thoroughly the great lady—parcel stately, parcel sentimental. She sings Mozart's music exceedingly well. The changes made by her were perfectly in style, and Mozart's music not only sanctions some liberty, but invites it on the part of the singer. We cannot bring ourselves to abuse a judicious *cadenza* on the closing pauses of "Sull'aria" and "Deh vieni," nor to anathematize a note or two added on the repetition of the simple theme of "Dove sono." The singers for whom Mozart wrote were not bound in the slavery which modern pedantry sets forth as reverence for "the text." If any one ever had the true Mozart tradition, it was Sontag; yet who that heard her can forget the judicious elegance of her ornaments! Great praise is due to Madame Lemmens-Sherrington; she makes progress as an actress in every part she presents. Her *Susanna* might be lighter, it is true; but it was not without its idea of liveliness. The *Cherubino* of Mdlle. Lucca was more admired by the audience and our contemporaries than ourselves. She looks and dresses the part to perfection; she acts it saucily, but does not, apparently, remember that, though the Page in the French comedy has a certain precocious lasciviousness calculated to stir the haughty jealousy of *Count Almaviva* (howsoever being himself anything but impeccable), the Page in Mozart's opera has it not. The impassioned music of the part came somewhat vulgarized from her lips. A better *Figaro* than that of M. Faure can hardly be imagined. Signor

Graziani has small idea of demeanour or character, and, as the *Count*, was the least successful of the five artists named; but his voice has a charm which never fails to tell. The music had been prepared with the utmost care, and went smoothly, expressively, and without exaggeration—as Mozart's music should go. Here, as at the other house, "Le Nozze" was thoroughly enjoyed. Let us hope it will be given, and with an unimpaired cast, early next season. If it be too good for the subscribers, it is a delight for the general public.

Thus closed Mr. Gye's season, one of many apparent managerial caprices, of many broken promises, and of many excellent performances. We shall be spared specification of the former by those who have followed our remarks on the artists who have appeared and the works produced week by week. It is understood to have been most successful.

We are glad to see that Mdlle. Tietjens announces Cherubini's "Medea" for her benefit.

MUSICAL AND DRAMATIC GOSSIP.

WHEN noticing the music produced at Windsor for the Princess Helena's marriage, we should have mentioned the fairly good Hymn by Mr. Cousins, composed for the occasion. He must have written under difficulties, so sickly are the words and so ill fitted to the situation. The Laureate cannot have been called out on the occasion.

Among other rumours floating in the air is that a new opera is to be written expressly for Mdlle. Adelina Patti, and, if so, possibly by Mr. Costa.

The first Report of the Musical Committee of the Society of Arts, touching the Royal Academy of Music, is now before us. This we intend to comment on in detail at no distant period.

The examination of the pupils of the Conservatoire is just over, under the presidency of M. Auber. The veteran, we are assured, held out wonderfully; the service is one of no common fatigue and tedium. The Academy of Sacred Music, founded by M. Niedermeyer, has also held its annual meeting for a similar purpose.

A festival was announced at Paris for the 29th of last month, in memory of M. Émile Chévé, the apostle of the Galin-Chévé method of teaching part-singing, which answers to that so vigorously promoted by our teachers of the Tonic Sol-Fa system. In this 300 of the pupils trained according to its precepts were to sing a *Cantata*, and a medal struck in M. Chévé's honour was to be circulated.

A large concourse of part-singers was held a few days since at Boulogne. The taste for this form of music grows everywhere.

Blind Tom, the negro prodigy spoken of in the *Athenæum* some months ago, is exhibiting his singular musical capacity at the Egyptian Hall.

The first prize carried off at the competition for the promotion of sacred music just held at Malines (announced here some weeks ago) fell to the lot of Mynheer E. Silas, our townsman; the second to Herr Preyer, organist of St. Stephen's, at Vienna; the third to Herr Habert, organist of Gmunden, on the lovely Austrian lake hard by Linz.

We quote a judgment, registered by a contemporary, on the chorus, "Behold, the Lord passed by," in "Elijah," as one of the curiosities of criticism which bear their own comment, but are worth retaining. "Certes," says the writer, "the chorus of Mendelssohn is the worst he ever made—random in shape, bitter from weakness!"

It is said that, owing to repairs and alterations in the Gallery of Illustration, there will probably be no *Opera di Camera* there this autumn.

Last week's *Orchestra* reports on a Gregorian choral festival of village choirs, the first of a series, held in the parish-church of Sturminster-Marshall. The singers were eighty in number. We cannot but think that their time might have been better employed than in attempting to keep interest alive in this rude old music, which has not even the merit of Christian origin, being merely a confiscation of one of the least worthy possessions of Pagan art, if it deserve the name of Art.

"La Mort des Mousquetaires," a drama, which may be described as "the last words" (it is to be hoped) concerning the marvellous four heroes of M. A. Dumas' series of novels, has been produced at the Porte St.-Martin.—M. A. Dumas, jun. is at work, it is said, on a new drama.

The Haymarket season closed, on Wednesday evening, with Mr. Buckstone's benefit, on which occasion Dr. Marston's comedy of "The Favourite of Fortune" was announced for performance; but, owing to the indisposition of Mr. Sothorn, Goldsmith's amusing comedy of "She Stoops to Conquer" was substituted. Mr. Buckstone sustained the part of *Tony Lumpkin* with abundant humour. A brief concert followed, in which Mr. Sims Reeves, Mr. Weiss and Mrs. Weiss were the singers. Mr. Buckstone then delivered his "Usual Address," in which he was smart on music-halls, and speculated on what he called a "dramatic millennium," in which a mild cigar might be allowed both on and off the stage to actor and audience. The season has been profitable. On re-opening the theatre, a new drama, by Mr. Tom Taylor, will be produced, wherein Mr. Sothorn will enact the leading character. Meanwhile, Miss Amy Sedgwick will open the theatre for a series of farewell nights.

MISCELLANEA

John Bunyan.—I lose no time in responding to your correspondent Mr. Tarbutt's suggestion. I possess three of Bunyan's works: 1. "Instruction for the Ignorant," consisting of sixty-four pages. The title-page is torn, and all that remains is this fragment: "In ign Being a salve of knowledge both in you Prepared and plain and easie the capacity of By John B Hos. 4. 6, My Peopl knowledge London, Printed for Francis Smith, at the Ele Castle in Cornhil near the Ro change 1675." Bunyan died in 1688, thirteen years after this tract was published, and there can be no doubt about its being the first edition. 2. A small tract, the title-page gone, but the heading at the commencement is entitled "Peaceable Principles, &c.," forty-eight pages. It is in the form of a letter, in reply to a "short reply to my difference in judgment about water-baptism no bar to communion," and it ends thus: "Farewel, I am thine to serve thee Christian so long as I can look out at those eyes that have had so much dirt thrown at them by many. J. Bunyan." 3. "Mr. John Bunyan's last sermon, preached at Mr. Gammon's Meeting-house, near Whitechappel, Aug. 19, 1688. Printed by George Larkin at the Two Swans without Bishopsgate, 1689." Bunyan died eleven days after he preached this sermon. ROBERT COLLE.

24, Colville Square, Baywater, July 31, 1866.

Fords on the Thames.—A. Z., referring to Dr. Guest's dissertation on the point where Cæsar passed the Thames, and to his statement that there is no place on the banks of the Thames lower than Halliford which bears a name ending in the word *ford*, remarks: "Dr. Guest must be oblivious of Brentford, and also of the passage in the Saxon Chronicle which states that King Edmund, with his army, passed the Thames at Brentford twice in the year 1016. Bishop Gibson, in his edition of Camden's 'Britannia' (p. 327), tells us that the Thames, at Old Brentford, was anciently forded with great ease, and was so still in Bishop Gibson's time, there being then at low ebb not above three feet of water."

Book-Collectors.—There are men to whom it is a law of their nature to collect books about them; but sometimes they are obliged to part with their libraries; no matter, their stock grows again. The late Dr. Hawtrey, when he became Provost of Eton, was in this distressing condition: accordingly, July, 1853, there was a six days' sale, in 1,329 lots. At the beginning of the catalogue Dr. Hawtrey put the following note—"To collect the books which are now offered for sale has been to me the most interesting recreation of the last forty years. My change of residence gives me the nearest access to a library of much greater extent, but does

not allow me room for more than a small reserved portion of my own treasures. I am thus induced to part with them—*ἔκω ἀκροῦ γι θυμῷ*. E. C. HAWTREY."—Who would not pity such a case, even though the College library was always at hand? Every one who happens to know that in less than a quarter of the former time, and in spite of want of room, the Doctor left behind him more than twice as large a library as he had thought himself obliged to abandon. His final sale, June, 1862, consisted of 3,304 lots, and occupied ten days. A spider whose web is under the broom, and a book-collector whose library is under the hammer, are to be congratulated, not commiserated; they are sure to begin again, and sure to succeed.

Whiskers and Moustaches.—The assertions that "whiskers, in the English of all centuries preceding the present, are what we now call moustaches," and that "the dictionaries have never admitted the modern meaning," (*Athen.* No. 2020, p. 58) are not quite correct. In Bailey's Dictionary (Scott's edit. 1764) I find *whisker* defined as "little tufts of hair at the corners of the mouth on the upper lip; the moustachio." Eleven years later (see Ash's Dictionary, 1775) the *whiskers* had receded to their present position, namely, on the cheek: "Whisker, the hair growing on the cheek unshaven." The same Dictionary gives Spenser (sixteenth century) as an authority for *moustaches*, but no reference. The following extract from the tragedy of 'Arden of Feversham,' first printed in 1592, may, however, suffice for an early use of the word; the spelling is, I think, unique:

What manner of man was he?
A leane faced writhen knave,
Hauke nosed, and very hollow eled,
With mightye furrowes in his stormye browes;
Long haire downe his shoulders curled,
His chinne was bare, but on his vpper lippe,
A mutchado, which he wound about his eare.

Jacob's edit. p. 25.

J. M. COWPER.

—A second Correspondent, D, states on the same subject: "When Cowper in 1785 ('The Task') spoke of our forefathers as a 'grave, whiskered race,' he was evidently thinking of their hairy lips. At one time all facial hair seems to have been included under the general term *beard*: witness Shakespeare's soldier, 'bearded like the pard.' During the latter half of the seventeenth century the custom of allowing hair to grow on the face gave way gradually in Western Europe; and although we now and then meet with a portrait of the period 1680–80 showing a small growth of hair on the upper lip, during the whole of the eighteenth century even this vestige disappears. The custom of allowing hair to grow on the cheeks began, by slow degrees, to prevail about the beginning of the present century; and it was to this novel appendage that the old term 'whisker' was applied. In the army, and, I believe, in the navy also, the rule for shaving enjoined that the razor should be carried along a line from the corner of the mouth to the bottom of the ear. This fashion of wearing hair on the lip re-appeared in this country among the cavalry regiments, in imitation of foreign soldiers, after the peace of 1815. The following passage from 'Robinson Crusoe' (1719) shows how the word *whisker* was used about the beginning of the eighteenth century. 'My beard I had once suffered to grow till it was about a quarter of a yard long; but as I had both scissors and razors sufficient, I had cut it pretty short, except what grew on my upper lip, which I had trimmed into a large pair of Mohammedan whiskers, such as I had seen worn by some Turks whom I saw at Sallee; for the Moors did not wear such, though the Turks did. Of these moustachios, or whiskers, I will not say they were long enough to hang my hat upon them, but they were of a length and shape monstrous enough, and such as in England would have passed for frightful.' How strangely this last sentence illustrates the changes of opinion! No amount of facial hairiness would be considered frightful in England at the present day.

D."

To CORRESPONDENT D.—J. M.—J. T.—E. H.—received.

EDUCATION AND CLASS BOOKS.

The GREAT SCHOOLS of ENGLAND.

A History of the Foundation, Endowments and Discipline of the Chief Seminaries of Learning in England, including Eton, Winchester, Westminster, St. Paul's, Charterhouse, Merchant Taylors', Harrow, Rugby, Shrewsbury, &c.; with Notices of Distinguished Scholars. By HOWARD STAUNTON, Esq. With numerous Illustrations. 1 vol. 8vo. handsomely bound in cloth, price 12s.

"The book is as full of solid matter as of gossiping narrative and pleasant anecdote. As a handbook to our great schools, Mr. Staunton's volume will have a wide class of readers."—*Athenæum*.

The Best Book of English Quotation.

FAMILIAR WORDS: an Index Verborum, or Quotation Handbook. Affording immediate Reference to 10,000 Phrases and Sentences that have become embedded in the English Language. By J. HAIN FRISWELL. Second Edition, revised and extended. Post 8vo. cloth, 6s.

"The most extensive dictionary of quotation we have met with."—*Notes and Queries*.

Also now ready in the same Series.

THE GENTLE LIFE. Seventh Edition.

THE GENTLE LIFE. Second Series. Second Edition.

NEW MAGAZINE.

CHRISTIAN SOCIETY.

A MONTHLY MAGAZINE

OF

RELIGIOUS LITERATURE, INFORMATION, and BIOGRAPHY.

At first it was proposed to let this be a Magazine without a Prospectus, for the title pretty clearly indicates what the Public may expect. But a very few words may be useful as to the spirit in which the labourers associated with this new Monthly set about their work—the scope of the Magazine, and the distinctive features which will mark it out and give it, as the Projectors hope, a definite place amongst Religious Periodicals.

To do this in the shortest possible way, it may be said that the aim will be to present a quiet, pleasant *Literature of Christian Fellowship*, which, at the same time, shall be elevating and instructive.

"CHRISTIAN SOCIETY" will strive to become to its readers, as far as a book can, a *Christian friend*—calm and true, open and fearless, but always hopeful and comforting. It will be a Miscellany for the quiet hours of earnest, educated thinking men and women—for such hours as Sunday afternoon and Sunday evening, or for those week-day hours in which the wisely active retreat for a little time, for mental refreshment, from the glare and hurry of the world.

"CHRISTIAN SOCIETY" will seek to be both reflective and practical—sedulous in cultivating that higher literature which breathes the free air of the spiritual heights, and aids the nurture of the inner life; at the same time it will be attentive to whatever is most interesting and instructive, either in the records or the present aspects of practical Christianity. In particular, it will examine the nature and force of the social influences which surround us,—the opportunities which they present, and the hindrances which they offer to religious growth.

It will seek the *common ground* of all Christians—eschewing questions of Church government and such topics as those upon which there may be a difference of opinion without injury to the sound faith and sound doctrine which are the anchors of the soul. In a day like this, of mental unrest, of eager and often arrogant speculation, coupled with a tendency, in some quarters, to demolish the old spiritual landmarks, and to relax immoderately the ancient standards, "CHRISTIAN SOCIETY" will be, emphatically, a Magazine for those who, after calm thought, honest inquiry, and ripened experience, desire to tread in the "old paths":—for those who feel assured that all the cardinal elements of the Christian faith are matters untouched by criticism, historical investigation, or the gradual extension of knowledge in any department of science.

Holding such plain principles and keeping them always clearly in view, "CHRISTIAN SOCIETY" will from time to time bring before its readers the best and highest results of that Biblical criticism which, within its own proper domain, was never so actively useful as in the present day; and also all those historical investigations and advances in scientific knowledge which may illustrate the Word of God, and prove aids to the religious mind. An endeavour will be made to grapple with those subjects of speculative thought, which are constantly occupying the attention of Christian men in Religion, Philosophy, and Life.

It may be guessed, therefore, that the intention is to mingle the gentler influence of soothing Christian thought and experience with a recognition of all practical forms of Christian effort, which may be useful as lessons of Energy, of Patience, of Hope, or of Charity.

Christian Biography will thus hold no mean place in the Contents. That great department can furnish much which, when truly studied and tenderly handled, yields not only most attractive reading, but reading of the kind which brings peace to the mind and gives fibre to the character.

The readers will be left to judge the contributions according to intrinsic worth—free from the accidents of reputation or any latent prejudice of party distinction, for the *Authors' names will not be given*. But it may be stated that the list of those who rally round this enterprise to aid it by their pen, includes many whose voices are familiar in the pulpits of the land; of laymen who have won distinction in the more earnest literature of the day; and some of those whose devotion to specific forms of Christian work entitle them to speak with the authority of hard-won experience.

In a word, those who enter on this work will try to make "CHRISTIAN SOCIETY" a pleasant and profitable book,—one worthy of a place in God-fearing English homes.

Published Monthly, price ONE SHILLING.

The First Number will appear on October 1, 1866.

Intending Subscribers are requested to give early notice to the Booksellers.

All Communications from those who may desire to contribute should be addressed to the Editor, and Books for Review sent to the care of the Publishers.

MR. BUCHANAN'S NEW WORK.

Just published, small 8vo. price 5s.

LONDON POEMS.

BY

ROBERT BUCHANAN.

From the *ATHENÆUM*, July 21st, 1866.

"The interest aroused by these domestic dramas is never local and narrow, but rather human and broad. What appears to have struck Mr. Buchanan in the tragedy of London life is the sin into which poor men and women fall from habit, from necessity, from affection, not from vicious desire; and to this error in the passions, which is seldom or never a misleading of the passions, he gives a singularly intense and tragic utterance. It surely is a gain for human nature when genius puts a new interpretation on the things which seem amiss. This service of humanity against itself (so to say) is one of the highest ministries on earth. . . . The story of Jane Lewson is another of these trials of courage which have scarcely yet ever found a voice. This story is told in strong and tender words, simple as rocks and musical as tides. We scarcely know of any narrative poetry greater than is found in some of these sad and mourning lines. The tale of how the mother and daughter come to know each other, to forget the past, and to fill the present with unutterable love, is one to bring tears into the eyes of the strongest men and the gentlest women. . . . About a third of this volume is filled by four poems which have no relation to the title: 'The Death of Roland,' 'The Scath o' Bartle,' 'The Glamour,' 'The Gift of Eos,' each a notable work, tempting us into separate analyses. 'The Scath o' Bartle' is a narrative of extraordinary force and pathos; and here, again, we have the epical grief arising from the lapse in the affections. . . . These 'London Poems' make good the promise of 'Undertones.' They are true and genuine work, the result of real observation and personal emotion. Nothing is here derived from the moral consciousness—no make-believes, no dreams, and no composing. These verses have been lived before they were written down."

From the *SPECTATOR*, July 28th, 1866.

"What Wordsworth called 'the power of hills' is on him. He combines many of the beauties of Wordsworth with something of the dramatic vivacity and realism of Mr. Browning; and the glory of nature gives a sweetness, a melody, and melancholy to his verses which is seldom or never to be found in Browning's shrewd, loquacious 'apologies' for all sorts of characters. The lyrical poet is far deeper and sweeter in Mr. Buchanan than in Mr. Browning. He manages to combine the definite, determinate, sharply-drawn dramatic delineation with a sweet, sad note of yearning and of love that permits the introduction of an exquisite thread of lyrical beauty. . . . There is nothing finer, as we have intimated, in these poems than the strength with which Mr. Buchanan combines what Wordsworth calls 'the power of hills' with 'the power of cities.' Those who feel the one often feel the other. Wordsworth himself did so, as he showed in the exquisite sonnet written on Westminster Bridge, but rarely, indeed, has the same man the faculty of giving voice to both. . . . The poem from which this is taken was first published months ago in the pages of the *Fortnightly Review*, and it has grown upon us so much in memory that we are able to apply to it a severer test—the test of time—than to any quite new poem. For often that which takes hold of us most at first sight relaxes its hold gradually, as we become more and more familiar with it, till at last it becomes poor: while that which but half impresses us at first grows like a seed in the imagination till it becomes one of the permanent shelters and beauties of our inner world. Both the poems which we recognize here as formerly published elsewhere have taken this hold upon us; and hence we feel less doubt in asserting their poetic strength and value. 'The Starling' is a poem of less imaginative body altogether; yet it is singularly fine of its kind. . . . On the whole, those (poems) which are most penetrated with London impressions, like those we have mentioned, and also 'The Little Milliner' and 'Artist and Model,' seem to us the finest. The poem on John Clare, though beautiful, has a far less intense life, a far more straggling life, like its subject. . . . 'The Death of Roland,' widely different in style and subject as it is from the others, has a singular grandeur of its own—grandeur of a weird, romantic sort. . . . Mr. Buchanan takes as his motto Goethe's fine lines,

Greift nur hinein in's volle Menschenleben!
Ein jeder lebt's, nicht vielen ist's bekannt,
Und wo ihr's packt, da ist's interessant,

and nobly, on the whole, does he work out the idea so often reiterated in our generation, so seldom successfully applied—at least, in poetry. No volume has appeared for many years in London which so certainly announces a true poetic fame."

London: ALEXANDER STRAHAN.

HURST & BLACKETT, Publishers, 13, Great Marlborough-street.

Just published,

THE OPERATIONS OF WAR EXPLAINED AND ILLUSTRATED.

By EDWARD BRUCE HAMLEY,

Colonel in the Army, and Lieut.-Colonel Royal Artillery; formerly Professor of Military History, Strategy, and Tactics at the Staff College; Member of the Council of Military Education.

Quarto, with numerous Illustrations, price 28s.

"It is instructive here, from the midst of the theatre of practical operations, to observe the success which in this campaign has attended the carrying out of the principal theories which that distinguished military writer has laid down as necessary to insure the happy issue of large strategical operations. . . . The great results of the victory of Königgrätz are a tremendous practical illustration of Colonel Hamley's deductions."

The Times Military Correspondent with the Prussian Army.

CHARLES LAMB: a Memoir.

By BARRY CORNWALL.

"Finely does Mr. Procter draw the moral of the tale he has written; would we could anticipate other such Lives of the Poets and Men of Letters of our century!"—*Edinburgh Review*, July, 1866.

London: EDWARD MOXON & Co. Dover-street, W.

CHEAP, ENLARGED, and REVISED EDITION.**EPHEMERA.**

By LADY WOOD and Mrs. STEELE.

CHARMINGLY ILLUSTRATED BY LADY WOOD.

Third Edition, fcap. 8vo. elegant cloth, 5s.

"Marked by a peculiarly chastened tone of taste and feeling."—*Athenæum*, July 29, 1865.

"Both ladies write with grace, feeling, and address: not a few of the verses have the true poetical ring."

London Review, July 29, 1865.

"Awaken respect for their quality, learning, and engaging melody."—*Public Opinion*, July 29, 1865."Under the above *noms de plume* two most talented ladies have published a series of Poems which will be read with pleasure by all who can appreciate imagery flowing out of a fine and original fancy."Lord W. Lennox in the *Sporting Magazine*, July 29, 1865.

"One of the prettiest of the Christmas books. Mrs. Steele's poems have the defects of youth—impatience, crudity, carelessness, but they have also the riches of youth—its graceful ease, its rush of spirits, and its force of expression."

Times, Dec. 14, 1865.

London: EDWARD MOXON & Co. Dover-street, W.

BREAKFAST.—EPSS'S COCOA
(more commonly called Eppe's Homoeopathic Cocoa, as being
prepared and introduced by James Eppe, the Homoeopathic Che-
mist first established in England). The very agreeable character
of this preparation has rendered it a general favourite. For
breakfast no other beverage is equally invigorating and sustain-
ing. This Cocoa is used by thousands who never used Cocoa
before. (Cocoa stands far higher than tea or coffee, Dr. Hasall
says.—Sold in 1 lb., 4 lb., and 1 lb. packets.

THE CULTIVATION of TEA in the East
Indies is an important feature, and the EAST INDIA TEA
COMPANY have, on account of its great strength and exquisite
flavour, promoted its sale by every means. The Company are now

CALEY BROTHERS,

SILK MERCERS to THE QUEEN, WINDSOR.

. Patterns forwarded by post, free.

**MR. HOWARD, SURGEON-DENTIST, 52,
FLEET-STREET**, has introduced an ENTIRELY NEW
DESCRIPTION OF ARTIFICIAL TEETH, fixed without
springs, wires, or ligatures. They so perfectly resemble the natu-
ral teeth, as not to be distinguished from the originals by the
closest observer; they will never change colour or decay, and will
be found superior to any teeth ever before used. This method does
not require the extraction of roots, or any painful operation, and
will support and preserve teeth that are loose, and is guaranteed
to restore articulation and mastication. Decayed teeth stopped
and rendered sound and useful in mastication.—55, Fleet-street.

TONIC BITTERS.—WATERS' QUININE
WINE, the most palatable and wholesome Bitter in existence,
AN EFFICIENT TONIC.

An unequalled stomachic, and a gentle stimulant.

BRITISH ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

NOTTINGHAM MEETING.

22nd AUGUST, 1866.

President—W. R. GROVE, Esq. M.A. Q.C. F.R.S. &c.

GENERAL ARRANGEMENTS.

Wednesday, 22nd August—President's Address, at 8 p.m., in the Theatre.

Sectional Meetings as usual, from the 23rd to the 28th, inclusive.

Thursday, 23rd August—Séance in Exhibition Building.
Friday, 24th August—Lecture at 8.30 p.m., in the Theatre, by W. Huggins, Esq. F.R.S. F.R.A.S. On the Results of Spectrum Analysis applied to the Heavenly Bodies.

Monday, 27th August—Lecture by J. D. Hooker, Esq. M.D. D.C.L. F.R.S. &c. On Insular Flora.

Tuesday, 28th August—Séance in the Exhibition Building.

Saturday, 25th August—Excursions to the Midland Railway Works at Derby, Eastwood, Riddings, Cinder Hill, Annesley, and Newstead Abbey.

Thursday, 30th August—Excursions to the Derwent and Wye Valleys, Charnwood Forest, and Belvoir Castle.

On and after July 30th, until August 17th, Life Members, who intend to be present at the Meeting, may receive their Tickets by applying to the General Treasurer, and returning to them their Life Member Invitation Circular; Annual Subscribers, who wish to receive their Tickets, must return their Invitation Circular, with 11. 10s. to the General Treasurer, W. Spottiswoode, Esq., 50, Grosvenor-place, London, S.W.

The Executive Committee at Nottingham will elect New Members and Associates on the following conditions:—
New Life Members, for a composition of 10*l.*, which entitles them to receive gratuitously the Reports of the Association, which may be published after the date of payment.

New Annual Subscribers, for a payment of 2*l.* for the first year. These receive gratuitously the Reports for the year of their admission, and for every following year in which they continue to pay a subscription of 1*l.* without intermission.

Associates for this Meeting only, for a payment of 1*l.* They are entitled to receive the Report of the Meeting at two-thirds of the publication price.

Ladies may become Members on the same terms as Gentlemen, and Ladies' Tickets (admissible to Ladies only) may be obtained by Members on payment of 1*l.*

After August 17th personal application for Tickets must be made at the Reception Room, Corn Exchange, Nottingham, which will be opened on Monday, August 20th.

In order to facilitate arrangements for the Meeting it is desirable that application for Tickets should be made as early as possible.

Gentlemen who have in any former year been admitted Members of the Association may, on this occasion, renew their Membership, without being called upon for arrears, on payment of 1*l.*

Without a proper Ticket, obtained as above, no person will be admitted to any of the meetings.

Notices of Papers proposed to be read, should be sent to the Assistant General Secretary, G. GARFINKL, M.A., 5, Park Villas, Oxford, before August 1st.

Members and Associates intending to be present at the Meeting are requested to apply to the Local Secretaries, who will assist them in procuring lodgings, and will forward a railway pass, entitling the holder to obtain from the principal Railway Companies a return ticket at single fare, available from Monday, August 20th, to Saturday, September 1st, inclusive.

ST. BARTHOLOMEW'S HOSPITAL and MEDICAL COLLEGE.

JANE MARTINEAU, Hon. Sec.

RAWDON HOUSE, FORTIS-GREEN, TAYLOR, PINCHLEY.—The Pupils under the care of Miss HELEN TAYLOR, late of Huddersfield, will assemble at her NEW RESIDENCE, as above, on MONDAY, September 3rd.

THE COMMERCIAL ENGINEERING AND SCIENTIFIC COLLEGE, CHESTER. offers a thoroughly sound English Education, together with instruction in the Modern Languages and Classics.

In the Upper Classes particular attention is given to Mathematics, Mechanics, Chemistry, Physical Science, and Drawing.

The College has been recognized by the Secretary of State for India, "as possessing efficient classes for Civil Engineering, Chemistry, and Physics."

Apply to the Rev. ARTHUR RIGG, College, Chester.

HURST COURT, ORE, HASTINGS.—MR. MARTIN REED prepares the SONS OF GENTLEMEN, between the ages of six and eighteen, for the Public Schools and Universities, or for Mercantile Pursuits. The situation is one of the finest and healthiest possible. The arrangements are those of a first-class Private School.

The CLASSES RE-ASSEMBLED on WEDNESDAY, August 1.

PUBLIC SCHOOLS.—A Married Clergyman, for many years engaged in Tuition, would be glad to hear of Companions to two little Boys, whom he now has preparing for a Public School. By the terms of his will, he has—Address Rev. M. E., care of Mr. G. Street, 30, Cornhill, London.

A GRADUATE, in High Honours, of Cambridge, whose Pupils have been very successful, gives DAILY INSTRUCTION in Classics, Mathematics, Physics, and Chemistry.—Address, M.A., Post-Office, Grove-terrace, Bayswater.

COMPETITIVE EXAMINATIONS for the ARMY, the NAVY, and the CIVIL SERVICE.—A Gentleman, of high standing and great experience in TUITION, has VACANCIES for TWO Pupils. The highest references given.—Address F.R.S., 9, Arundel gardens, Nottingham, W.

CIVIL SERVICE EXAMINATIONS.—CANDIDATES are PREPARED by a Gentleman in H.M. Civil Service, who obtained his appointment by competition, and who is assisted by thoroughly qualified Tutors.—References to former Pupils in all Departments of the Service.—Address E. W. JONES, 4, Gordon-street, Gordon-square, W.C.

QUEENWOOD COLLEGE, near STOCKBRIDGE, HANTS.

The Course of Study embraces the ordinary English branches, Drawing, Land-Surveying, Languages, and Modern Law. Head-Master. The Natural Sciences and Practical Chemistry form a prominent feature, and instruction in them is very efficiently provided for.

For terms and further particulars, apply to
CHARLES WILLMORE, Principal.

**EDUCATION.—OAKLEY HOUSE, WEL-
LINGTON-PLACE, READING.**
The next Session will commence on Thursday, September 20th. Mr. WATSON will be happy to forward references, &c. on application.

UNIVERSITY OF LONDON.—Mr. WILLIAM WATSON, B.A., formerly of Oakley-square, London, will be able to RECEIVE, on or after September 20th, TWO additional PUPILS, to prepare for Matriculation or for Degrees in Arts. Terms, 12*l.* a month.—For particulars apply to Mr. Watson, Oakley House, Wellington-place, Reading.

UNIVERSITY COLLEGE SCHOOL,
London.—The Rev. J. PANTON HAM, Minister of Essex-street Chapel, Strand, receives and assists in their studies, a LIMITED NUMBER of PUPILS attending the Classes of the above School. The next Session begins on the 27th of September.—Rokeby House, Avenue-road, Regent's Park, N.W.

SOMERSETSHIRE COLLEGE, BATH.
Head-Master—The Rev. HANS ESCOTT, M.A.,
Balliol College, Oxford.

Secretary—P. C. SHEPPARD, Esq., Bathampton, Bath.

This College was founded in 1863, with the view of providing a course of education similar to that of our best public schools, with more attention to individual boys than the large forms of those schools render possible.

The effective character of the education actually given is sufficiently attested, both by the Reports of the Examiners, the Rev. J. Percival, late Fellow of Queen's College, Oxford, now Head-Master of Clifton College; the Rev. J. R. Magrath, Fellow, Dean, and Tutor of Queen's College, Oxford; W. A. Pearson, Esq., Fellow and Tutor of New College, Oxford; and also by the fact that out of eleven pupils who have, up to this time, proceeded direct from the college to the University, commencing with October, 1861, six have gained open Scholarships, and subsequent honours in the schools; two have gained further Scholarships since residence; and one, who did not stand for a scholarship, has obtained honours in both the Public Examinations. Thus, in less than five years, out of eleven pupils, only eight of whom have as yet been in the Public Examinations, this College has obtained seventeen University distinctions.

**LONDON UNIVERSITY EXAMINA-
TIONS.**—A Wrangler and Classical Scholar, Graduate of Cambridge University, experienced in tuition, prepares EVENING PUPILS for the above Examinations.—Address E. R., 9, Regent's Park-terrace, N.W.

EDUCATION.—WANTED IMMEDIATELY, an English LADY, well-instructed in her own language, and experienced in the art of teaching and training both elder and younger pupils, in a First-class school. Salary 35*l.* Age not under twenty-five. Address L. Y., care of Messrs. Hatchard, 187, Piccadilly. No Agent need apply.

**GEOLOGY OF WEYMOUTH
AND THE ISLAND OF PORTLAND;**
Containing a Map of the District, Geological Sections, Coast Views, Figures of the characteristic Fossils, and other Illustrations, with much information on the Natural History of the Coast. By ROBERT DAMON, F.G.S. Price 3*s.*
London: E. Stanford, Charing Cross.

**GEOLOGY.—ELEMENTARY COLLEC-
TIONS.**—To illustrate the New Edition of 'Lyll's Elements of Geology' and facilitate the important study of Mineralogy and Geology, can be had at 2*s.* 5*d.*, 10*s.* 6*d.* to 5*s.* 6*d.* guineas; also, single Specimens of Minerals, Rocks, Fossils, and Recent shells. Geological Maps, Hammer, all the recent Publications, &c. of J. TENNANT, Mineralogist to Her Majesty, 149, Strand, London.

Private Instruction is given in Mineralogy and Geology by Mr. TENNANT, F.G.S., 149, Strand, W.C.

SCHOOL BOOKS.

London: Longmans, Green, and Co. Paternoster-row.

WHITE'S SCHOOL and COLLEGE LATIN DICTIONARIES.

Just published, in square 12mo. pp. 682, price 7s. 6d.

THE JUNIOR SCHOLAR'S LATIN-ENGLISH DICTIONARY. Abridged from the Dictionaries of WHITE and RIDDLE, by JOHN T. WHITE, D.D. of C.C.C. Oxford, surviving Joint-Author."Whatever credit belongs to White and Riddle's larger dictionaries, their best qualities are in this Junior Abridgment brought into the school-boy's service in a way for which he has every reason to be thankful."—*Daily News*."A very useful abridgment. The Latin words have not only their English equivalents assigned, but a large amount of etymological information touching Sanskrit and the older forms of language as well as the modern European languages. The quantities are also carefully marked."—*Churchman*.

"We suppose that as White and Riddle's larger work is now generally held to be the Standard Latin Dictionary, no school-boy will consider that he has fair play unless he is provided with White's 'Junior Scholar's Abridgment.' It certainly does strike us as better than anything of the kind that we have seen before, both in the arrange-

ment and abundance of the meanings, and in the etymological and grammatical explanations."—*Spectator*."This Latin Dictionary, though it only professes to be an abridgment, is a composition of a much higher stamp than the generality of school books. It is a book of the same character as the smaller Lexicon of Liddell and Scott, and will promote a liberal and intelligent study of Latin as that has done of Greek. Dr. White has substituted for the ordinary meagre rudiments a body of well-composed information, and has distinguished himself from his predecessors by bestowing special attention upon the philology of the language.... Altogether, Dr. White has produced a very excellent work, extremely well adapted for the instruction of school-boys, but containing such an amount of information as to be of substantial utility even to the more advanced scholar."—*Press*.**WHITE'S LATIN-ENGLISH DICTIONARY** (Intermediate size). For the Use of University Students. In medium 8vo. pp. 1,045, price 13s. cloth.**WHITE and RIDDLE'S LARGER LATIN-ENGLISH DICTIONARY** (the Parent Work). Royal 8vo. pp. 2,136, price 42s. cloth.

London: Longmans, Green, and Co. Paternoster-row.

LITERATURE

History of France in the Eighteenth Century. Louis the Fifteenth, 1724-1757—[*Histoire de France au Dix-huitième Siècle, &c.*, par J. Michelet]. (Paris, Chameroi & Laureyns; London, Hachette & Co.)

THE reigns of Louis the Fourteenth and Louis the Fifteenth extended over one hundred and thirty-one years. The reign of the latter king occupied fifty-nine of these years. Within the whole period is comprised the era of the greatest glory and the profoundest shame. The glory helped to beggar the kingdom. The people avenged the shame by ultimately overthrowing royalty.

M. Michelet, in the terse, epigrammatic, hard-hitting and laconic volume now before us, after sketching the minority of the King, enters on the record of thirty-three out of the fifty-nine years of the reign of Louis the Fifteenth. It began with a handsome little boy of five years old, and a regent to look to his affairs. People called the boy "an angel," styled him their "well-beloved," and out of their affectionate idolatry they would almost have suffered death, to satisfy one of his caprices. Before the book concludes, when Louis was at a period of life when true manhood is in full vigour and purity, he was a shattered debauchee, a miserable coward, and a pitiless tyrant. Men called him "unclean beast," and the knife of Damiens, held by the enthusiast whom his country's sufferings had rendered mad, was directed by the popular instinct and illustrated the popular sentiment.

Whatever may have been the defects of the regency and the vices of the regent, the Duke of Orleans governed with almost absolute authority, and established a friendly intercourse with England to an extent that had never previously existed. Whether Fleury was as much the friend or dupe of England as M. Michelet seems to think, may admit of some doubt. Certain it is that our intervention policy, founded on a keen sense of our interests, set us on the Continent in antagonism with France, where the hardly-snatched victory of Fontenoy is still the subject of song, but the selfish cowardice of the King is illustrated only in old epigrams.

Besides the wars, in which the French Government sacrificed their own soldiers with as much readiness as if they formed part of the enemy's forces, the leading historical features of the early part of the reign were two. The first was Law's Mississippi scheme, by which he undertook to pay the national debt by issuing negotiable notes, for which cash was to be found in the promised produce of supposed mines which were circumstantially laid down as being on the Mississippi. The scheme collapsed in wide and irretrievable ruin. The second feature was the struggle between King and Parliament. The latter was not a legislative body, but one to which was confided the registration of royal edicts. Without registration no edict had the force of law. The Parliament became a deliberative assembly when it discussed the question of registration. It ran great personal perils, and, indeed, underwent great personal suffering by refusing to register edicts which it considered illegal or contrary to the interests of the French people. The King on such occasions avenged himself by banishing the Parliament. The members were reduced to misery by being compelled to travel great distances at their own expense, and to live where all their resources vanished. They were judges

and magistrates, and by their forced absence the law courts were closed, justice was suspended, and a multitude of innocent persons were plunged into severe distress.

The fiercest quarrel between Louis the Fifteenth and his Parliaments was one of long standing between the Crown and these bodies. The bull *Unigenitus* had denounced Jansenism and gratified the Jesuits. The Parliaments looked on this bull as a violation of the rights of the Gallican Catholic Church, and refused to register decrees in support of the bull. Ultimately the Parliaments were silenced; but the discussion evoked a spirit of liberty, which spirit passed, with increase of fervour, from the Parliaments to the people.

But it was not so much what was said or done at the tribunals or in private houses that is of such great interest as the sayings and the doings at court, in defiance of the tribunals, in derision of the public, in outrages on God, and in daily violation of nature. When Voltaire produced his tragedy of 'Œdipe,' all the world of France trembled, and the author himself trembled, at the idea of what might befall a man who dared to illustrate a subject so awful as that involved in the story of Œdipus, before an incestuous King, and an aristocracy which, in imitation of the King's vices, did not shrink at the commission of the worst crimes that revolt common human nature.

It must be confessed that few kings have thrown so many chances away as Louis the Fifteenth. Universally loved in his childhood, he was as universally adored when he first assumed the uncontrolled power of sovereignty. At that time he was indisputably handsome, and looked innocent; but he had then a strange aversion for the whole sisterhood of women, who were not only in love with him, but frankly owned their passion. And this was not confined to France. "In England," says M. Michelet, "the country of beauty, this was as much felt as it was in France. His portrait, sent over there, very much disturbed the tender bosoms of Englishwomen." Louis cared nothing for the homage here implied, and as for his position in presence of the law and the people, he had been taught to repeat from his earliest childhood a variation of the tune, "L'Etat c'est moi!" in the words, "Si veut le Roi, si veut la Loi!"

He was as vicious as he was good-looking. There were troops of as vicious young nobles round him, "the Nonconformist Church," as the author calls them, because they conformed to nothing that was enjoined by the Christian Church. It became necessary to burn one or two of these wretches, but they were scarcely nobles; and a compliment was paid to the Church in letting a couple of bishops off with a slight censure and an injunction to withdraw into privacy. Meanwhile, Fleury, who looks so reverend in history, but who had maintained a household in partnership with a brother ecclesiastic, and with one young lady at the head of it, held the King,—and Walpole boasted that, through Fleury, England held France.

It was a groundless boast. France was drifting through a sea of misery towards the great cataclysm. The only thought of the Government was to extract money from a hungry and moneyless people. The monopoly of salt belonged to the State, and in the rural districts the sale was forced at a government tariff. They who declined to buy were fined. They who refused to pay were sent to the galleys. The poor of Paris were even worse off, and they were crowded within limits where disease and death for ever reigned. Any enlargement of the city was forbidden. All over the kingdom there were two imperative cries: the State had

one word, "Pay!" the Church had one word, "Believe!" Men were unable to pay, and were unwilling to believe in such instructors. Defaulters were condemned to slavery, and French Protestants professed their faith on peril of their lives. Freedom of opinion was as great an offence in secular as in religious matters. "The great critic Fréret, having meddled with the History of France, got a taste of the Bastille. He took the hint and wandered far away into Chinese Chronology." With few exceptions, literary men shared the general misery. Allainvel, the popular dramatist, a man received everywhere, was at the same time in such distress that he had no place to sleep in but the sedan-chairs which he found at the corner of the street. Amid the universal misery there was a cry of patriotic indignation when the King degraded the crown of France by saying that a papal bull had power of itself in France, and that such power was not derived from the King. The Ultramontane clergy blessed his piety. The people cursed his lack of patriotism. The arrogance of the former went beyond all limits. They were not even gentlemanlike in their vices. Their victims occasionally appealed to justice, and justice severely punished the victims.

Except at Court, all France was victimized in this reign. Even the army was little cared for, and thousands of men were sent to certain death, reaping no glory, but much notoriety in unfeeling epigrams. At Court, too, death glided among the in-dwellers. Before Madame La Nesle died so suddenly that there was not time to administer the sacrament, she had whispered to her confessor a secret for her sister's ear. Before the priest could convey it to the lady, also the king's mistress, for whom it was intended, he died suddenly also. The French friends of Austria and Maria Theresa saw "the hand of God" in this catastrophe, for La Nesle was an anti-Austrian and anything but a good Catholic. In such cases the *hand of God* was a profane synonym for the *hand of the assassin*. There were not wanting people, however, who were disgusted by the wickedness of the times. Louis was told that such wickedness was a result of the impious books that were printed. The King happened to be a little sick, at which time, like his cousin, he was always ready to be a bit of a saint. He forthwith established a censorship of sixty-nine members, so carefully chosen, that at the head of them was the younger Cr billon, the most licentious writer of the day.

The wretched selfishness of the King was never more marked than at the battle of Fontenoy. Out of all danger, covered by his household troops and cannon, with a safe retreat secured to him, he sang unseemly songs as he looked over the field where his soldiers were falling by hundreds. Not a cannon nor a man of the thousands in his guard was sent to take the victory from the English, till the King was sensible that without the sacrifice he might be taken prisoner. The tardy consent, yielded to the bold importunity of Richelieu, snatched the triumph from the foe, and at Fontenoy we straightway lost everything but honour.

A sketch of the Court of Louis the Fifteenth, without any reference to the ladies who figured at it, would be a very imperfect picture. They are, however, "kittle cattle" to deal with. In their rouge and their powder, their silks and their satins, their lace and their jewelry, they are eminently repulsive! They are not without a certain amount of delicacy. If they are impudent enough to object to the Queen riding at the royal hunts in a blue "*am n e*," because she then looked attractive, there was one, at least, who was less selfish, and who only con-

sented to become the King's mistress on condition that it should make no difference whatever in His Majesty's conduct towards his wife! These considerate and inconsiderate creatures, sisters in infamy, sometimes own sisters by blood, were installed in their places of bad eminence with as much publicity as a minister. To sanctify the honour, Louis would now and then confer the appointment on some day of great religious solemnity; and when the promoted hussey was presented to the Queen she would put on an air of touching humility, mixed with a tender grace which was sometimes highly admired by the legitimate wife herself! Maria Leczinska supped alone. The King supped with a troop of painted syrens, drank deep on all such occasions, and was remorseless for the atrocities of such orgies, because, on his awaking, the memory of them did not remain to oppress him.

That company of heartless women will intrude at every moment. As they once shamed honest spectators, they now shame even the readers of their history. They float by in soft indifference, or they dance past tipsy as bacchanals, or they thrust themselves, unwelcome, into every room and company. Some few are there a little against their will at first; some have sold themselves, some have been sold by their husbands. "Is it not enough," cries a royal duke to his pious mother, "Is it not enough that you have sold your daughters?—and do you now want to sell my wife?" The hints of M. Michelet on this unpleasant subject are often more terrible than the details, and the blood curdles when the King's own daughters, whose own ladies furnished them with unseemly reading, cross their father's threshold. It is a relief to get away from the palace to the *petite maison* at Choisy, where "le règlement cynique était celui-ci: Six lits de femmes en tout: point de maris. Les dames étaient invitées seules."

There was only one circumstance in which the King's mistresses were not also their own: they must not die at Versailles. The King hated death. If one of these ladies *did* really die in the palace, the corpse was ejected from it with as much indignity as if it had been that of a patriotic actress. Thus the body of a shameless lady of rank, whom Louis had loved for awhile, "was thrust into the coach-house of a neighbouring hotel. It was remarked by two men who were about to take a cast of her face that the mouth remained open—the effect of a convulsion. These two strong fellows were not too many to seize the head, press it, and by main force shut that gaping mouth. The 'rascality' who looked on were amused by what was to them mere drollery. They thought it was through her that the King was kept from Versailles. They committed all sorts of indignities on the body, which they pelted with squibs and crackers, outraging to their very utmost the Queen of Choisy."

Alive, nothing was denied to these Queens of the left hand. Dead, nothing was granted them. To-day, created duchesses by sound of trumpet and public ceremony; to-morrow, dead and the object of the grossest insults from the lowest *canaille*. Living, they accompanied Louis, like queens, even to the army. His confessor was also with him, to be used as occasion might require. When the King, with "two sisters of his household," was at Metz, he fell ill; his life was in danger. The confessor was summoned; on such occasions the priest insisted upon the dismissal of the "ladies," with more or less symptoms of disgrace, according to the case. The King himself might have made with them. He dismissed the tempters without ceremony. He took them back again as soon

as he was well. The manners and habits of the King served as a model to be followed in "good society," where loyal husbands and honest wives were seldom found, and when found, besieged by epigrams,—so ridiculous a thing seemed virtue in the eyes of the "aristocracy."

The Cities of the Plain were abodes of cleanliness compared with the France of Louis the Fifteenth—that is, wherever King and Court resided, and royal and courtly examples were followed. Some forecast of evil occasionally overcame the King himself. Impressions from the city, or suspicions founded at court, fear of his people, or jealousy of the Dauphin, perhaps all these together, influenced him, for he was heard to say, "I, too, shall have my Ravallac one of these days!" and, to obviate that end, no Abbé was allowed to approach his person. Perhaps he had heard echoes of the loud murmurs that circulated in Paris. "This sort of thing may very well end in Revolution," said D'Argenson. The word had never before been uttered. The King passes from one scene of wickedness to another, and the starving and plundered people as he goes by whisper scarcely above their breath the word "tyrant." The word had not been heard in the street for years. Neither word was unheeded. A protection was devised for the King in the establishment of an *École Militaire*, by which he should be supplied with soldiers of none but noble birth. Meanwhile, when credit was sinking, ruin spreading, famine and death abounding, the Prince of Darkness reigned more unshackled every day. Projects were invented for the increase of the King's enjoyments that could have been inspired by none but the devil, and by him in his most diabolical humour. When parents missed their daughters from their houses, and learned that they were stolen by the King's agents, and were irrecoverable, the passion of the public pulse throbbed more wildly. As these tales were told abroad, listeners remarked by way of comment, "They will surely kill him some day!" Parisians began to be less shocked than at first at the idea that the wicked King might one day be killed. A "little bleeding might be necessary," said others; and others again, in whom the monarchical love of the French was not extinct, said to one another, "If he could only be touched, he might be frightened, and amend!" The *if* was not thrown on the air in vain. It was taken up, not by an Abbé, but a serving-man, one Damiens, who had grown frantic at beholding the sufferings of the people, the wickedness of the King, the uncleanness of all around him, the indifference of the great, and the utter hopelessness of a reformation. Alone, without suggestion or aid from another, Damiens scratched rather than pierced the King with the end of a penknife. He does not appear to have contemplated anything more than "touching" or "frightening" Louis; but he had touched and had frightened the Lord's Anointed, and partly because he would not serve any party by laying the suggestion of the crime to one antagonistic to that party, Damiens suffered death under circumstances of the most horrible cruelty. The agony—rack, pincers, burning oil, horses to pull him limb from limb, all were employed in increasing that agony—lasted throughout a long day; and ladies and fine gentlemen lolled at windows to enjoy the spectacle, drank their wine, sipped their coffee, even played at cards when the victim only gasped and did not shriek under torture; and they could have gone on in enjoyment of the sight had not the chief executioner, in sheer disgust, asked and received permission to kill the poor remnant

of a man which lay yet palpitating on the scaffold on the Place de Grève.

The "warning" given by Damiens—the poor wretch meant nothing more—made a coward and quasi-saint of the King, for a day or two. Although only scratched, he kept a priest at his side, to give him absolution in case of his coming to that extreme necessity. Then this meanest, most crapulous, and most unnaturally wicked of all the kings of France, plunged again into his uncleanness; and although Paris once almost shouted, "Let us go up and burn Versailles!" he and Pompadour still thought that the flames would not lap up the palace, nor the deluge sweep down the throne, till after their time. In the fullness of time the necessary end came; and how inevitable and necessary that end was will be well understood by those who peruse the brilliant contribution towards a history of Louis the Fifteenth here furnished by M. Michelet.

Great Yarmouth and Lowestoft, a Handbook for Visitors and Residents; with Chapters on the Archaeology, Natural History, &c. of the District; a History, with Statistics, of the East Coast Herring Fishery; and an Etymological and Comparative Glossary of the Dialect of East Anglia. By John Greaves Nall. (Longmans & Co.)

This bulky and too-closely printed volume about one of our most interesting sea-ports and its immediate neighbourhood will meet with a more cordial and general acceptance amongst the residents of the locality than amongst visitors, who do not require a tedious history of the rise and progress of the Yarmouth blotter, or an essay on the peculiarities of East-Anglian dialect, but do really stand in need of a readable and amusing guide-book from which they may learn the names of the towns, houses, churches and ruins which a tourist in the Yarmouth country should visit, and the reasons why he should take an interest in them. So far as such local information is concerned, Mr. Nall is by no means an exhaustive or amusing writer; but in place of the quaint anecdotes and racy gossip with which his pages might have been illustrated to good purpose, he presents us with nearly five hundred pages of sound, though not very original, writing about the fish and words of his district. Both these subjects are treated carefully and in a manner which shows that the writer is familiar with the best sources of information, and can use efficiently the researches of earlier inquirers. Constituting the portion of the work that will be held in esteem by bookish residents, these rather prolix papers deserve a word of cordial commendation; but notwithstanding the help of previous philologists, such as Forby, Sharpe, Turner, Moor and others, Mr. Nall has failed to note some of the more characteristic specimens of Suffolk provincialism. In vain we look in his dictionary for "to cop, i.e. throw," and "to border, Fr. *baunder*, i.e. to gossip lightly jest, prattle like lovers, and hence make love." He gives "Woosh, the teamster's call to his horses to go to the left," but says nothing of Woo-ree, or Cummarther, i.e. come hither. Several of his collected words are vulgarisms that may be found amongst the ill-educated altogether untaught in other parts of the country as well as East Anglia. For instance, he gives "Paupusses, paupers—Suffolk," a corrupt expression, which might be mentioned as an illustration of the way in which our labourers make double plurals, but cannot be fairly called a Suffolk provincialism. The workmen of any district of the eastern counties are wont thus to give a two-fold plural form to prop-

names, and speak of the members of any family named Johnson, considered collectively, as the Johnsonses. With equal justice, Mr. Nall might have printed as a distinct East-Anglian word, "pootweinde,"—the name by which the inferior Suffolk farmers distinguish Methuen drink from all other wines. Here and there Mr. Nall sins intentionally. His attempt to deprive Aldborough of the glory of her poet, by claiming Crabbe as a Yarmouth worthy, and suggesting that Yarmouth was "the borough" of the poet's verse, is simply ridiculous; and all East Anglians who do not reside within the parish of Yarmouth will reply to it with laughter. Upon the whole, we think the author would have achieved greater success had he confined himself to topography or philology, and refrained from doing too much within the narrow limits of a handbook. As a philological writer he has produced a treatise on the East Anglian dialect which deserves the respect of scholarly readers; as a local annalist he might have given us a satisfactory book about his pleasant old town; but by forcing together topics which he should have handled separately, his labours result in a work that will not altogether please tourists who want a guide-book, or philologists delighting in treatises on language.

A Treatise on Martial Law as allowed by the Law of England in Time of Rebellion; with Practical Illustrations drawn from the Official Documents in the Jamaica Case, and the Evidence taken by the Royal Commission of Enquiry, with Comments, Constitutional and Legal, by W. F. Finlason, Esq., Barrister-at-Law. (Stevens & Sons.)

THE lawyers in the House of Commons, during the late debate on the Jamaica case, exercised a wise discretion in saying very little as to the liabilities incurred by those who declare or who execute martial law. The fact that the unnecessary and cruel punishments which were inflicted during the rebellion may possibly give rise to legal proceedings, furnished the learned gentlemen with at least a specious excuse for their prudent reticence. We are inclined to think, however, that another reason existed, which was not less forcible, in the fact that neither they nor any other English lawyers of the present day can boast of any great knowledge on the subject of the legal effect of the proclamation of martial law.

The subject is in itself one of great difficulty, and happily it has received no elucidation in the modern history of our country. The proclamation of martial law has been illegal in England during a time of peace, ever since the Petition of Right, and no rebellion amounting to a war has since occurred in this country. In Ireland, on the other hand, where a state of rebellion is unfortunately well-nigh chronic, and where therefore the lawyer might have expected to be able to study the operation of martial law in all its details, the evil has been met by special legislation.

Few who are acquainted with our common law, and the formal, dilatory, and often uncertain process which, in its extreme jealousy for the liberty of the subject, it prescribes in a criminal prosecution, will deny that it is totally unfit to deal with any widespread rebellion. It is in the present day highly improbable that a state of things should ever arise from rebellion in England which should call for the exercise of the extreme power of the Crown to proclaim martial law. Our mobs break a few windows, and throw a few stones at the policemen when their backs are turned, and those who are not captured return home well satisfied

with a day's work which, besides the gain of a few trinkets or purses, which will prove useful to the rioters, has afforded them an opportunity of enjoying some of that rough play in which they delight. The less fortunate rioters appear at the police court the next morning, and their cases are quickly despatched. The Riot Act and special constables must always be able to deal with such rioters as these. But improbable as it is that the power to declare martial law will ever have to be exercised here, there are not many persons who will deny that the right exists, or who will desire to see it abolished.

On the other hand, the right to proclaim martial law is one which, if it can be exercised at the mere will of the sovereign, or of her representative in the colonies, is utterly inconsistent with the liberty of the subject. In rebellion there is no neutrality; every person who does not actively aid the Government is assumed to favour the rebels, so that as to all such persons the presumption of innocence which prevails in our common law is changed for a presumption of guilt. In the opinion of the late Duke of Wellington, "Martial law is neither more nor less than the will of the general who commands the army; in fact, martial law is no law at all." And Earl Grey concurred in that opinion, stating that he had, on the advice of Lord Cottenham, Lord Campbell, and Sir John Jervis, explained to Lord Torrington, with reference to the transactions in Ceylon in 1849, that martial law is no law at all, but merely, "for the sake of public safety in circumstances of great emergency, setting aside all law, and acting under the military power."

It requires stronger testimony on a point of law than that of the Duke of Wellington, or the opinions of the judges above named, merely stated by Lord Grey, to satisfy us that martial law is no law, but the mere will of the general. The declaration of martial law supersedes the operation of the well-defined rules of the common law, and substitutes the ill-defined and uncertain usages of martial law; and where the rules of that law can be proved to have been transgressed, we apprehend the perpetrator of the outrage will be held criminally responsible. The distinction may, however, be practically of little moment, as undoubtedly during the reign of martial law the will of the general or senior officer on the spot, however arbitrary, must prevail. Practically, therefore, the declaration of martial law may be for the time the setting aside of all law.

And how is the exercise of this awful power controlled? It can indeed only be legally exercised in time of war. But then rebellion is war, and the question, what amount of turbulence in the people amounts to a levying of war against the Crown, is a question of fact, to be decided by the Crown, by its ministers or representatives; and, according to Mr. Finlason, if they decide this question wrongly, they cannot be criminally liable, because it is a question of judgment and an act of state. Surely this view of the question leaves Her Majesty's subjects in a very lamentable position. An irresponsible minister hands the country over to martial law, and martial law is no law at all, but the arbitrary will of any choleric old martinet who happens to be in command of the troops. This wholesale dispensing power would be somewhat alarming if we believed in it. We conceive, however, that the operation of martial law forms no exception to the rule, that there is no wrong without a remedy—that the minister or representative wrongly declaring martial law will be criminally responsible, though that responsibility may only be capable of being enforced by the cumbrous machinery of an impeachment, and that those who execute the

martial law will be answerable to the law when the common law is re-established, wherever it can be proved that they have gone beyond what the usages of that law prescribe.

We do not, of course, mean to convey the impression that the author of this book states broadly that the executive power can at its will lawfully set aside or suspend the common law. Different minds will always view this subject in different lights, some being more impressed with the necessity of putting down rebellion with a strong hand, while others think more of the possible abuse of this prodigious power. Mr. Finlason appears to us to be one of those who are very much more zealous in the cause of order and strong government than in that of the liberty of the subject, which consists in the undisturbed enjoyment of all those rights which are given by the law of the country. Few persons could treat this subject with a fair appreciation both of the danger of anarchy and that of tyranny.

While, however, we cannot recommend the adoption of all Mr. Finlason's opinions, we can safely advise the perusal of his book, which contains an amount of information on this subject which will be most valuable to those who desire to form an opinion on a matter which is likely to attract much of the public attention, and which, we believe (notwithstanding its magnitude and importance), has not hitherto been the subject of any separate legal treatise.

The Higher Education of Women. By Emily Davies. (Strahan.)

Thoughts relative to the Education of Women on the Principles of Modern Science. (Macintosh.)

Prof. De Morgan tells us of an old lady of his acquaintance who used candidly to declare she hated girls from the age of sixteen to five-and-twenty, because they were "so full of femaleities." She would have been shocked, says he, "to know that she was a follower of Mary Wollstonecroft, and had packed half her book into one sentence." The chief of the "Rights of Women," for which Mary Wollstonecroft pleaded, was that women should be treated like rational beings, and receive a rational education to enable them to become so. But unfortunately Mary Wollstonecroft did not herself offer an example to be followed; she made a failure of her own life. The real truths into which she had an insight were accused as the main cause of her faults, and the inference popularly drawn from both was, that if women were substantially educated they would take the earliest opportunity to go wrong, and be overbearing, eccentric, and disagreeable in the mean time. This prejudice has pretty well subsided: women are at liberty to learn anything they like, and as thoroughly as they like; but it remains to be seen what they are going to do with their education.

The sneer at "learned women," which formerly met all who wished to learn more on any subject than was taught at the best boarding-schools, was owing to women themselves; they have always been their own bitterest enemies both in word and deed. It is not men who have been their hinderers, but the women, who, by their foolish spitefulness and dull ill-nature, tried to heap discredit on those women who wished to cultivate their intellect and improve their talents. These women, on their part, returned scorn for scorn, and made themselves exceedingly disagreeable, whilst the virtues and graces suffered on both sides. As a rule, women do not strengthen each other's hands; they seldom hold together

except to run some other woman down,—not in great struggles for the prizes of life, as men bear down their opponents, but from a blind jealousy, the result not of malignity, but of a half-starved, ill-developed nature, which finds excitement in making disparaging observations—it is the cry of their hungry faculties for "more life and fuller."

The two works at the head of this notice attempt to deal with the present condition of women, and they are noticeable as marking the stand-point at which the subject has arrived. Looking at them we can see the direction in which the aspirations of women are tending, for extreme opinions are like straws which show the way the wind blows. The solid gain that has been made is, we think, indicated in the very decided wish expressed, that women should be taught thoroughly, and have their attainments tested severely, so that whatever they learn, whether it be little or whether it be much, shall at least be real and solid. They resent compliments to their sex, and desire that what they learn shall have the same intrinsic value as what is taught to men, and not be superficial. This is a great step in the right direction; but what some of the extreme advocates of modern rights of women want them to do with their education is altogether wrong, and to be earnestly deprecated by friends, lovers, and countrymen. Miss Emily Davies, in her chapter on "Things as they might be," makes many excellent observations; but when she comes to the practical application of them she makes assertions against which we protest. She says, "Among those (avocations) which have been mentioned, that of Medicine appears peculiarly desirable as affording scope for the exercise of the highest gifts. The medical profession is now accessible to any competent woman who is able to defray the cost of instruction. There is no difficulty in the way of apprenticeship, and lectures and hospital practice are attainable, though at a higher cost than to individual students." Women do not know what they are saying when they talk thus. If the objection were merely the money cost, it would not be worth speaking of. Money could always be found for a daughter as easily as for a son. The objection lies at the root of the proposal. A medical course of study is entirely unfit for women, and could only be carried out at the cost of all that makes womanhood good and lovely. The few exceptional cases in which women have succeeded in overcoming the obstacles to such a course, and have passed their medical examination like other students, have been redeemed from much of the evil by the strong tenacity of purpose which was wanted to meet the difficulties of their undertaking, and the concentration of energy requisite to obtain the necessary instruction. They take rank amongst those who have been martyrs for an idea. Their intellect and energy have done all that was possible to justify their own case, but it has not made their example one jot more desirable to be followed as a precedent. If those who talk so freely about "opening the medical profession to women" could realize all that it means, they would recoil from their aspirations. To take young girls of seventeen or eighteen, to turn them into medical students, to put them into the dissecting-room, to require them to walk the hospitals, to see and hear all the unutterable details of medical experience, to expose them to the influences which wreck the lives of so many promising young men,—and for what purpose? It is not pretended that there is any overwhelming impulse to study the science of medicine, but merely that these young women may some of them prove qualified to earn a modest

livelihood as average medical practitioners. It would be a thousand times better that girls should be left to do crochet-work all their days, if there were no other alternative.

The author of the little green and gold brochure 'On the Education of Women on the Principles of Moral Science' takes a more poetical view of female destiny. She writes a melodious rhapsody on the noble soul of woman; and, although she has presented us with a great deal of nonsense, she has some insight into the truth of things. She exhorts women to be true to themselves, and tells them that their one great duty is to hold fast to all that is pure and noble,—to respect themselves, and to make men reverence whatsoever things are true, pure, lovely and excellent,—to keep up a high standard of all Christian graces; and by thus living up to an ideal, they can alone raise their own sex from all the degradation to which it has been subjected. She says that it is themselves they must make noble: no legislation can do it for them. We also indorse the following passage, upon the genius of womanhood: "Hers is not so much a teaching capacity as a forming power. It is a power without observation. Leaving the outward movements of life, or the nearer contact with its material elements, to the genius of Manhood being in these he is capable of more, and subject to risk less. Womanhood should be enshrined in its spiritual work, because that is higher; and retired in its material work, because this is delicate and secondary. We would only suggest that the work of woman, be it elevated or humble, should, as a general proposition, be a work that retires." There are a few bright sparks of personal suggestion, which any woman would do well to lay to heart; but the author throws an air of absurdity over her whole case by what she considers practical observations. Her chief remedy for existing evils seems to be the establishment of a transcendental class of governesses, who are to be sought out and considered as "Parents of the Soul," and invited "to take their seats beside the noblest ladies in the land"; the Queen herself is implored to aid in this "movement." In spite of absurdities, the author shows more insight into the question of what it behoves women to be than Miss Emily Davies, and all who, like her, would wish to throw women into the strife and struggle of professional and political life.

Meanwhile, until some "career" is opened for women, we would offer as our own little "suggestion," that women who want a "mission" should enter on the field of domestic service. We have often wished that a few angels might be sent as maids-of-all-work, and in other domestic capacities, to set a standard example and to redeem the condition from the contempt into which it has fallen, since the class out of which the ranks of domestic servants were formerly filled have been possessed with an ambition to become governesses and ladies' maids,—with very limited qualifications if we may trust the complaints which come on all sides.

Erasmus: sive Thucydidis cum Tacito Comparatio. Auctore Joanne Wordsworth, A.B. (Rivingtons.)

Autobiography. By Arthur Octavius Prickard, B.A. (Rivingtons.)

The Reign of Richard the Second. By Thomas Pitt Taswell-Langmead. (Rivingtons.)

Gaisford Prize. By George Nutt. (Rivingtons.) HERE is a batch of Oxford prize compositions for 1866. Such productions are not often reviewed; but it is well that they should be noticed occasionally, even when they do not

happen to be particularly memorable. They represent a portion of the intellectual life of the younger part of the University; and it is interesting to know from time to time whether the energies that produce them are flourishing or declining.

The first two compositions on our list gained the Chancellor's prizes for the best Latin and English essays. It is noticeable that they are by members of the same college,—New College. The third prize given by the Chancellor is for a Latin poem, and this was also gained this year by a member of New College, Mr. Cremer, whose composition does not happen to be before us. This threefold distinction has never been gained in the same year by any college before; and that it should have fallen to the lot of New College is remarkable on more accounts than one. That college was in former days absolutely confined to Winchester scholars, in days when Winchester College was itself filled by nomination. From forty to fifty years ago, New College men were frequently distinguished as University prizemen. There was a reason for this independently of their superior merit; they could obtain a degree in those days without submitting to the University examination, so that the ablest of them could devote their energies entirely to literary competition of another kind. At last the college consented to surrender its privilege, and its members were submitted to a public examination like others. A slack time, however, had already set in, and for some years the college obtained few honours of any sort. Fifteen years ago, just before the general movement for university reform was crowned with success, an improvement began to be visible. About the same time the authorities of Winchester College determined to abandon their nomination system, and substitute for it an open entrance examination. New College passed under the hands of the University Commissioners, who threw open half its fellowships, while all who had been educated at Winchester, whether on the foundation or not, were made eligible for its scholarships. Other improvements have been made, which it would be tedious to particularize. The result has been such as to gratify all who had confidence in the principles of university and college reforms which were established by the struggle of twelve years ago. The College is now second to scarcely any in the University; and the particular combination of honours of which we are now speaking happens, as we have said, to be unique. We must not forget to mention that one of the two Gaisford prizemen, Mr. Nutt, whose composition is last on our list, is also a New College man.

The author of the Latin essay is, we understand, a son of Archdeacon Wordsworth, and so possesses an hereditary title to classical distinction. He has chosen to treat the subject,—a comparison between Thucydides and Tacitus,—in the form of a dialogue, which he supposes to have been held between Archbishop Warham, Dean Colet, Erasmus, and Sir Thomas More, in the garden of Lambeth Palace, in the year 1513, the date of the completion of More's 'History of Richard the Third,' and to have been recorded by More himself in 1535, the last year of his life. Such an elaborate plan of course exposes the writer to the chance of historical inaccuracy; and this Mr. Wordsworth has not quite escaped. The early books of the *Annals* of Tacitus, though published before More's death, had not appeared at the time when the dialogue is supposed to have been written; yet reference is made to them more than once, as if they were quite familiar to the speakers. This, however, is, we need not say, of no real moment. On the

other hand, it is clear that the subject gains considerably in liveliness and interest from the historical setting; the supposition that Sir Thomas More, while expecting his own dismissal from life, would recall a conversation with such men and on such a subject (for we must not estimate the fresh interest felt in the classics at the period of the Renaissance by the more languid feelings which they excite even among their most devoted students at the present time) is graceful and natural; and the introduction of a personage like Erasmus gives an opportunity for various characteristic touches, which would not be equally appropriate in the case of one less classical or less witty. Here is a clever imitation of the by-play of Cicero's dialogues:—

"Hæc tamen omnia frustra in Thucydide requiris, qui perturbatas ordine res, omnes fere uno armonia eodemque sono, tragico certe et expresso narrat. Tum Erasmus hac voce excitatus, Non tereor, inquit, ne leonem subula excipere videar; ave autem potius ne tridentis meo secutorem te, Zoete, conficiam. Cui ille subritans, Quo tu cum roverbis istis et imaginibus? In Tacitum tu imetum facies, qui Batavorum tuorum gentem prius ex latebrarum paludumque obscuritate exepile voluit? At quem tu istum tridentem nomines? Fria scilicet crimina, respondet, que in illum inferenda magnopere habeo, quorum pene omnino immunem esse nostrum intelligo, iniquitatem nempe, abhumanitatem, et superstitionem."

There is nothing very novel in Mr. Prickard's treatment of the subject of autobiography; but here is much sensible and just thought expressed in a graceful, pleasing manner, and here is a noticeable absence of the extravagance which generally characterizes the compositions of immature writers. The following remarks are well put, and interesting in themselves:—

"The autobiographer is at this special disadvantage compared to one who writes about another man, that he has not to guide him that love and reverence which may be felt towards a hero. Self-respect, even if it rise to enthusiasm, is still selfish. The author will not find in it a substitute for generous admiration for another. Whether he write originally in self-vindication, or to exhibit the workings of a mind which he knows to be remarkable, the same taint of egotism qualifies our pleasure in his work. But there are some who have been so carried away by love for something outside themselves, that they have seen in their own lives only the workings of a higher law. He who can, on looking back on his life, find such a unity for it, and trace in his parentage, infancy, and growth, in his troubles and successes, the fact that he was gravitating towards something greater than himself, passes through the mass of memories which beset him, like an ancient hero speeded by the liveliness of his goddess-mother through the crowds which impede his path across the battle-field. Such thoughts are forced upon us when we look at the characteristics of autobiographies in general, the minuteness with which the writers dwell on their ancestry, the rank in life and ways of thinking of their parents, the companions or solitude of their childhood, its pleasures or wrongs, and the places and people to which they were early accustomed. We are often surprised by the importance gravely attached by writers to the faults or disappointments of their early years, and the smallness of the incidents upon which great changes of character are made to turn. Undoubtedly these little things are of a real importance in the sensitive minds of children, which is not always appreciated by older people. But the autobiographer often dwells on his infancy and childhood at a length which, if not really disproportionate, appears so to most readers. He seems surprised at having traced himself back to such a simple state of being. 'I myself also am a mortal man, like to all,' is a text upon which he loves to dwell."

The Stanhope Essay, by Mr. Taswell-Langnead, really assumes something of the pretension

of an historical monograph on the period of which it treats, the reign of Richard the Second. The prize was founded about ten years ago by Lord Stanhope, as a graceful commemoration of his having himself acted as examiner in the School of Law and Modern History, then recently established at Oxford. We believe that the competition for it each year is very considerable, greater than for any prize except the Newdigate (the English poem), and that the average merit of the essays sent in is really high. Being written by undergraduates, they are of course much less elaborate than those which compete for the Arnold historical prize, which is open to B.A.s, and even to M.A.s in their first year. This latter prize has produced several essays of really distinguished excellence, and among them one which has recently been expanded into a valuable work, Mr. Bryce's 'Holy Roman Empire.' Mr. Taswell-Langnead, however, appears to be already Tancred Student in Common Law at Lincoln's Inn, so that he is presumably older than the generality of undergraduates; at any rate his essay is of considerably greater pretension than most of those which have obtained the Stanhope prize. Its actual historical merits we do not venture to estimate; but it is undoubtedly an interesting and thoughtful *résumé* of the period, abounding in information which may edify a reader who is not a professed historical student. The writing is sufficiently good, but cannot be called striking. Perhaps the following may serve as a specimen:—

"The formal deposition of Richard by the two Houses of Parliament, on the 30th of September, 1399, though supported by the precedent of Edward the Second, seventy-two years previously, and involving a principle subsequently acted upon with regard to the Stuarts, can hardly be recognized as a constitutional act. It must rather be referred to that ultimate right of a nation, only to be exercised in cases of extreme necessity, to resume that power which was originally placed in the hands of one supreme ruler for its own good. The doctrine of divine right which Shakespeare has put into the mouth of Richard when he says, 'Not all the water in the rough, rude sea can wash the balm from an anointed king,' was evidently unknown to our constitution throughout the Saxon, Norman, and Plantagenet periods, and only grew into partial acceptance under the haughty Tudors and the no less haughty, but more unfortunate Stuarts. The Revolution of 1688 and the Act of Settlement have now set the question at rest, it is to be hoped, for ever."

Mr. Nutt's is a translation into Greek comic iambs of part of the dialogue between the Chief Justice and Falstaff in Part II. of Henry IV., act i. scene 2. We do not profess to be specially skilled in the laws of Aristophanic language and metre, but we have not detected any violation of them in the lines before us; while the spirit and accuracy with which the force of the English is brought out certainly deserve much praise. For example:

"My lord, I was born about three of the clock in the afternoon, with a white head, and something a round belly. For my voice,—I have lost it with hollaing, and singing of anthems. To approve my youth further, I will not: the truth is, I am only old in judgment and understanding; and he that will caper with me for a thousand marks, let him lend me the money, and have at him. For the box o' the ear that the prince gave you,—he gave it like a rude prince, and you took it like a sensible lord. I have check'd him for it; and the young lion repents; marry, not in ashes, and sackcloth; but in new silk, and old sack."

ἐγὼ μὲν, ὡγὰρ, ἐγενόμην μεσημβρινός·
λευκὸν τε κεφαλὴν καὶ τι καὶ γαστρίστερον
μήτηρ μ' ἔτικτεν· ἦν δ' ὀνειδίζεις ἐμοί
φωτὴν ἀλαλάων κάποιον θοῖς ἐγὼ
ἐθαιρεῖ· εἰταί εἰ' ἄλλ' ἔχων πόλλ', οὐ θέλω·

σοφία γὰρ ὄντως φρεσὶ τε γηράσκω μόνον.
καὶ τις ποῦκεῖς με νικήσειν δοκεῖ,
ἦν περιείσομαι μὲν θύλῃ περὶ χιλίων,
παρθεῖς ἐμοὶ τάργυριον εὐθὺς εἰσίστω
τῶν κονύλων μὲν οὐνεχ', οὐκ ἔδωκέ σοι
ὁ κοίρανος μου, ἔδωκε σοὶ κατὰ κοίρανον
ὕβριστικὸν κείνος μὲν, ἡνίσχου εἰ σὺ
φρόνιμον κατ' ἄρχοντ'· ἀλλὰ κείνον ἐκόλασα,
ὁ δ' αὖ μεγαλγεί, τὴν στολὴν οὐ εἰς πίνων,
πίνων δ' ἀκρατον ἐυστιάδω τ' ἡνιμνίος.

Probably it may be some time before Oxford prize compositions are again submitted to us. When we next have to examine them, we trust the sample may be as meritorious as that which we now dismiss.

Matthæi Parisiensis, Monachi Sancti Albani, Historia Anglorum, sive, ut vulgo dicitur, Historia Minor. Item, ejusdem Abbreviatio Chronicorum Angliæ. Edited by Sir Frederic Madden, K.H. Vols. I. and II. A.D. 1067—1245. (Longmans & Co.)

THE preservation of the materials for the history of our country, if not a national work, seems from distant times to have been recognized as a kingly one. It is fortunately not now necessary to enter upon the doubtful question, so long mooted among the learned, whether or not it was the custom with our early Plantagenet kings to appoint special "chronographers," or chroniclers, in the various monasteries of royal foundation; or whether or not Matthew Paris and William Rishanger, monks of St. Alban's, filled that office in the reigns of Henry the Third and Edward the First; though certainly we have abundant proof that in cases of emergency, where the law or history of this country, at a remote period, was in question, it was the usage for the sovereign—Edward the First and Richard the Second, for example—to lose no time in sending a despatch to the larger and more important monasteries, commanding researches to be made upon the point in issue without loss of time, the matter to be reported upon in due course.

Coming down to the comparatively recent times of Henry the Eighth, we find that, by a Commission bearing date some time in the year 1533, the industrious and enthusiastic John Leland, already Keeper of the Royal Library, was dignified with the title of "King's Antiquary," and ordered to make search after England's antiquities, and peruse the libraries of all cathedrals, abbeys, colleges, and other places, "where records and the secrets of antiquity were deposited." The worthy antiquary seems to have made good use of his time and opportunities. The monasteries of England were then in the throes of impending dissolution, and Leland, to all appearance, interpreted the terms of his commission in the widest sense. In his 'Laborious Journey,' addressed to King Henry the Eighth in 1546, after duly reminding His Majesty of the object of his commission, to enable him "to peruse and diligently to searche all the libraries of monasteries and colleges of thys your noble realme," he significantly adds (as quoted by Sir F. Madden, Preface, p. xvii.) that he had "conserved many good authors, of the whiche parte remayne in the most magnificent libraries of your royall palaces, part also remayne in my custodye."

As the result of Leland's industry and foresight, we now have at least a good part of the old Royal Collection of manuscripts, which, descending from sovereign to sovereign, was finally presented to the nation by George the Second, in 1757, and deposited in the British Museum. As to the constituent parts of this collection, so far as Leland and the

abbeys are concerned, we have the following interesting facts presented to us by Sir Frederic Madden:—

"In the Old Royal Collection of Manuscripts in the British Museum, presented by George the Second in 1757, there are above 270 volumes bearing internal evidence of the locality from which they were taken, and, no doubt, most, if not all, of these were acquired by Leland. Fifty-seven monasteries, and five colleges at Oxford, furnished these *spolia opima*, and among them are 78 volumes from Rochester, 27 from St. Alban's, 15 from St. Augustine's, Canterbury, and the same number from St. Edmund's Bury, 13 from St. Mary's, Reading, 10 from St. Mary's, Worcester, and 9 from St. Mary's, Merton; Ramsey only supplied four; St. Peter's, Westminster, two, and Battle Abbey only one. The colleges at Oxford produced five."

To this we may add, that the three other greatest collections probably of Abbey history and literature that we now possess, are, the Cotton Collection in the British Museum, the Bodleian Manuscripts at Oxford, and the Collection of Archbishop Parker, in the Library of Corpus Christi College, Cambridge; the latter having been empowered, by order of Privy Council, July, 1568, by himself or his deputies, "to borrow all the ancient records and monuments belonging to the late dissolved monasteries" that were in the hands of private persons. Whether the volumes thus *borrowed* were ever returned to the private persons, the shelves of Corpus Christi Library must indicate.

The next, apparently, to demand public attention to the value of these materials for our early history, to lament the ubiquitous dispersion of many of them, and the absolute destruction (through the agency of apothecaries and cooks, as Archbishop Parker says) of perhaps many more, was the learned, zealous, and withal eccentric, John Bale, for a time Bishop of Ossory. Sensible of the advantage of perpetuating matter thus precious and inestimable, by the agency of the press, he was the first, Sir Frederic Madden tells us,

"to point out the value of the early English historians, and to urge, in the most strenuous language, their publication. His words are so remarkable, and breathe so strongly the spirit which, in more recent times, has awakened a taste for historical inquiry, and contributed to produce, as the result, the successive editions of our early historians, and the present series of writers issued under the authority of the Master of the Rolls, that I am tempted to quote the passage at length. He says,—'Let one noble man bring fourth one noble author, and an other empreinte an other, to the conservation of Englandes antiquities. In lyke case lete one ryche merchaunte brynge one worthy worke of an aunceyent writer to lyght, and an other put fourth an other. Besides the Bryttyshe authors, whome I oft named afore, let one brynge fourth Beda's 'De Gestis Anglorum,' an other 'Willyam of Malmesbery de Gestis Pontificum et Regum.' Lete an other brynge fourth 'Simeon of Durham,' wyth 'Rycharde and Johan of Haugustalde (Hexham), an other 'Aldrede and Wyllyam of Rievall,' wyth 'Marianus the Scott.' An other 'Giraldus Cambrensis,' an other 'Henry of Huntingdon,' an other 'Alfred of Beverley,' an other 'Florence of Worcester,' and an other 'Walter of Excestre.' An other 'Roger Hoveden,' an other 'Mathew Parys,' an other 'John Bever,' an other 'Radulphus Niger,' an other 'Radulphus de Diceto,' an other 'William Newburg of Bridlington,' an other 'John of Oxforde.' An other 'Scala Temporum,' an other 'Flores Historiarum,' Asserius, Osbernus, Gervasius, Stephanides,' and 'Ricardus Divinis of Wynchestre,' wyth a wonderfull nombre besyde."

To the remarks of Bale it is not improbable, that we owe the publications of several of the early historians by Archbishop Parker and by others of a like

nature, either published by or under the immediate auspices of Sir Henry Savile and William Camden; the whole of them, however, mainly distinguished by marvellous carelessness both in printer and editor, and errors even to puerility in singular profusion. The chroniclers edited by Wats and Twysden in the succeeding century fared but very little better at their hands. Selden's edition of Eadmer, on the other hand, is of superior merit; and the folios, known indifferently as Gale and Fell's 'Scriptores,' showed some little improvement; while Hearne again, with all his large learning and untiring application, trusted too much to what he somewhere calls "somnolent scribes," and consequently many of his editions are anything but what they should be, so far as accuracy is concerned. After Hearne, the eighteenth century was little less than barren of any labours expended upon the editing of our early writers.

The editions of the English Historical Society (A.D. 1835-48), mostly republications of chronicles which had been previously printed in the sixteenth and seventeenth centuries, only to be disfigured, mark the commencement of an entirely new era, being recommended alike by scrupulous correctness and editorial acumen. The same, too, with the Government publication, the 'Monumenta Historica Britannica,' the sole volume of which, commenced by the late Mr. Petrie, was published in 1848 under the care of Mr. Duffus Hardy, the present Deputy-Keeper of the Public Records, the hardest worker, probably, upon our historical materials and our national records that has appeared during the last two centuries, not even Hearne and Madox excepted. The 'Monumenta,' again, has been succeeded by the series of the Rolls publications, all of them, with hardly an exception, vast improvements upon the labours of our early editors, and distinguished by that amount of editorial ability which, in a national undertaking, the public has a right to demand.

The present volumes (to be succeeded in due course by a third) may rank in editorial merit with the best of these publications. Of the absolute historical value of the text we shall probably have an opportunity of speaking on a future occasion; suffice it for the present for us to say, that the Editor's Preface bears marks of that extensive learning and research, and the text of that care and strictness in the way of collation, which we might reasonably have expected from a scholar possessed of so high a reputation for medieval knowledge, and who has for so many years enjoyed the singular advantages that must result from holding the office of Keeper of the Manuscripts in the British Museum.

Prolific as the royal Monastery of St. Alban's subsequently became in her chroniclers of English history, Wendover, Paris, Rishanger, Walsingham, and others whose names are now lost, probably beyond recovery, it is somewhat singular, perhaps, that, as Sir F. Madden remarks, we meet with no indication, until we come to the reign of King John (A.D. 1199-1216), of any work having been undertaken there, of a strictly historical character. It is true that Paul, abbot from A.D. 1077 to 1093, had already established the "Scriptorium," or copying-room, there, which culminated in its greatest vigour probably, under Thomas Walsingham, at the close of the fourteenth century, and only declined to be superseded a century later by the printing-press established within the abbey walls. Abbot Simon also (A.D. 1167-88), "a special lover of books," as we are told by Matthew Paris in his 'Lives of the Abbots,' had already not only ordered a number of

excellent books—of a religious complexion, probably—to be copied, but had caused the Scriptorium to be thoroughly repaired, and the volumes thus copied to be placed in a painted ambry, or book-press (*almario picto*), near the tomb of Roger the Hermit, within the church. We advisedly construe "*contra*" here as "near" (a sense which it often has in mediæval writings), and not as "opposite to," with Sir Frederic Madden; for the former site of Roger's tomb is still indicated by an inscription on the southern wall. There is nothing opposite to it, but the distant north side; and the wall itself, cut away even below the surface, close to the left of the tomb, though it seems to have puzzled some antiquaries, almost beyond a doubt points out the exact spot where the "painted ambry" of Abbot Simon's day was once inserted.

Matthew Paris, a monk of St. Alban's from A.D. 1217 to 1259, was one of the first, and undoubtedly the most illustrious, of the historical writers of that house; indeed, we may safely say that none of our early chroniclers and historians, save only Eadmer and William of Malmesbury, are his superiors. And yet, singularly enough, his early celebrity was built, to a considerable extent, upon what in reality were the literary labours of another man; the 'Flores Historiarum,' which only of comparatively late years have been ascribed to their real author, Roger of Wendover (also a monk of St. Alban's), and extending from the Creation to A.D. 1235, the year of that writer's death. In employing Wendover's text as the basis of what has hitherto been known as his 'Historia Major' (an appellation to which Sir F. Madden strongly objects, preferring that of 'Chronica Majora'), down to the year 1235, Paris has from time to time interwoven matter of his own, and has then continued it with a Chronicle of his own compilation, extending to 1259, the year of his death; at such length, however, and with such minuteness of detail that, though ranging over a period of only twenty-four years, it more than equals in length the whole of the preceding hundred and sixty-nine (A.D. 1066-1235).
